One can analyze *ṣedeq-ṣĕdāqâ* references in the OT as applying to (1) Yahweh and (2) Israel and the individual (Hill 1967: 86–98) or to human activity or behavior and to God's activity (Ziesler 1972: 23–32; cf. *TRE* 12: 405–10). However, such analyses must not lose sight of the interrelatedness of the two. Human righteousness for Israel was rooted in God's righteousness, conceived either as gracious saving activity or as a gracious revelation of what is right. God's righteousness must not be seen as a punitive justice, because it also involves God's saving acts. The just or righteous person (*ṣaddîq*),on whom there is great emphasis especially in Psalms and Proverbs, is not to be isolated from Yahweh as righteous. While later and elsewhere one may be able to speak of relations of human beings with each other as a "secular" or "civil" concept of righteousness/justice and of relations with God as "religious," von Rad has argued that Yahweh's righteousness was "a continuous event directed towards Israel and was consequently a subject of proclamation," indeed "understood in an oddly spatial way, as something like a sphere, or power-charged area, into which men were incorporated and thereby empowered to do special deeds" (*ROTT* 1: 375–76).

The varied senses of the words from *ṣdq* may, in light of such an understanding, be traced out in various situations and types of literature in Israel's long history (*THAT* 2: 512–30; Reumann 1982: ##37–40), noting that, as justice in the world receded for the remnant of Israel, the apocalyptic hope for a righteousness to be revealed from God grew, as did attention to what righteousness and being just meant in a changing world after the return from exile, in the Persian and Greek eras.

The OT terms with which *ṣedeq* and *ṣĕdāqâ* were used, so as to create word-fields, must also be noted, especially the words, "justice" (*mišpāṭ;* Weinfeld 1985, who traces the expression to the realm of social policy; cf. Zech 7:9–10), "truth" and "fidelity" (*ʾĕmet, ʾĕmûnâ*), "steadfast love" (*ḥesed;* NT "grace"), "blessing" (*bĕrākâ*), and "peace" (*šālôm*). Though righteousness is widely spoken of as "a covenant concept" (*IDB* 4: 81–82; Hill 1967: 85–86; Ziesler 1972: 38–39, more precisely, "… originally forensic …, it has become a covenant word"), it is difficult to find passages that mention *ṣdq* and covenant in the same breath. Genesis 15 provides the most significant example: "Abram believed the Lord, and he reckoned it to him as righteousness" (v 6); "on that day the Lord made a covenant with Abram" (v 18). Generally the connection has been assumed from a more general "biblical theology" of the OT; such a connection remains tenable largely if one begins with covenant as the theme, and it may be undermined either if righteousness indeed has roots in the ANE concept of "order" or if "covenant" is a theological construct that emerged only late in the 7th century B.C. (Perlitt 1969). See COVENANT. The understanding of righteousness/justice could also change as *ṣdq* and other terms in its word-field were discussed in Judaism and put into Greek in the three centuries or so before NT times.

A particular emphasis, of importance for NT usage, involves the righteous person (*ṣaddîq*) who suffers. This motif of the *passio iusti* for the OT and intertestamental literature has been examined by Ruppert (1972a; 1973), particularly with reference to Jesus (1972b), and by Kleinknecht (1984) in terms of tradition history for the OT and Jewish literature, with particular reference to Paul. The data (Ruppert) are in Kleinknecht's "diachronic sketch" traced back to cultic use, as by Stuhlmacher (1965: 131); the relation of the person who prays to Yahweh has been disturbed by oppression (of enemies), and the appeal is for a demonstration of Yahweh's *ṣĕdāqâ* (Kleinknecht 1984: 32–33; cf. Pss 7:9; 14:5–7; 24:4–5; 31:2). The prophets developed this tradition, both before the Exile (Kleinknecht, 33–41; especially by Jeremiah), during, and after it (pp. 42–84). Note "the servant," God's righteous one, who "through his suffering" (reading *bĕrāʿātô*) "will justify many" (*yaṣdîq*,"work righteousness for many"), "and their guilt he shall bear" (Isa 53:11 NAB); or the emergence of a tradition about the violent fate of prophets in Israel (see first in Neh 9:26 and developed in the Deuteronomistic history; cf. 2 Kgs 17:7–20). The righteous sufferer also appears in the wisdom tradition (Job) and in prayers (Lamentations 3), especially psalms reflecting the thanksgiving ceremony or *tôdâ* (Pss 22:25–26; 32:11; 40:10, "I have told the good news of deliverance [*ṣedeq*]"; Psalms 50, esp. vv 6, 14, 23; 64:10–11 [—Eng 9–10]).

A striking reading of the OT evidence is presented by Walsh (1987: esp. 171–73), who invokes the theories on Israel's origins by Mendenhall and Gottwald. In contrast to a Canaanite view of gods, king, and justice (*mišpāṭ*),where *ṣedeq* meant security and abundance, "Elohistic Israel" (coalitions of *ʿapiru* in Canaan) developed a tribal sense of *ṣedeq* as "justice." These marginal outsiders combined with the "refugee slaves from Egypt, proclaiming the good news of Yahweh" (Walsh 1987: 47), to form "Yahwistic Israel." Thereby "the story of deliverance from Pharaoh … became the story of deliverance from the power of the Canaanite kings" (p. 47). The Sinai covenant spelled out Yahweh's judgments (*mišpāṭim*) for regulating life justly. The "peasants' revolt" that toppled Canaanite kings can be seen as "acts of *ṣedeq* effected by Yahweh on behalf of, and through, his peasantry" (p. 63; Judg 5:11). So God effects vindication (*nāqām;* Mendenhall 1973: 25–31; 69–104; 194–97). This clash of two different concepts of *ṣedeq*—"bread" versus justice—can be traced through Israel's history. The monarchy threatened to revert to "the Canaanite ideology of kingship" (Walsh 1987: 97) but was checked frequently by prophetic reproof of injustice (pp. 105–9) and later by the Deuteronomistic theology of history, where doing what is right in Yahweh's sight becomes the criterion, and where God acts to vindicate the divine *ṣedeq* and *mišpāṭ* (p. 130). The theme of justice and judgment, revolving around *ṣedeq, mišpāṭ,*and *nāqām*,can be traced forward into the NT, where it is the cross that causes a "sea change" in understanding.

Schulte (1972) in a source critical analysis of J has argued that justice/righteousness (*Gerechtigkeit*) was the theme of the Yahwist about 900 B.C. The OT material was, of course, mediated through developments and interpretations in emerging Judaism. See RIGHTEOUSNESS (EARLY JUDAISM). At times Jewish

and Christian usages were influenced by concepts in classical Greek, Hellenistic, and Latin thought. See RIGHTEOUSNESS (GRECO-ROMAN WORLD).

C. Jesus

1. Overview. Judging from the statistical importance and material significance of *ṣdq-terms* in the OT and emerging Judaism, one might expect that Jesus of Nazareth, who stressed the imminence of God's kingdom, would emphasize the concept of righteousness. However, the number of *dik*-words in the four gospels is quite limited. See Fig. RIG.02. The verb occurs only 7 times (twice in Matthew, 5 times in Luke), the noun *dikaiosynē* occurs 10 times (especially in Matthew, once in Luke, and twice in John); *dikē* does not occur at all. The adjective *dikaios* is more common (33 times). Luke also has once each the noun *dikaiōma* (1:6) and the adverb *dikaiōs* (23:41). The verb *adikein* appears only twice in (Matthew and Luke), the noun *adikia* 5 times (4 in Luke, once in John), and the adjective *adikos* also 5 times (4 in Luke, once in Matthew). These statistics become even less impressive when parallel passages are deducted and distinction is made between narrative (which may come from the evangelist) and sayings of Jesus (and even here the wording may not reflect actual sayings of the historical Jesus).

Statistically, therefore, one cannot assert that "righteousness" was a major theme for the historical Jesus, if such an assertion is based on the canonical gospels (and the noncanonical gospels do not change this picture). Like other concepts such as " 'covenant' relationship," which we might expect to be prominent, based on OT data and modern treatments of the Hebrew Scriptures (*IDB* 4: 80, 84–85, 91–93; cf. Ziesler 1972: 38–39, 131–33) or words like "gospel," which are prominent in Christianity after Easter (Fitzmyer 1982: #367), "righteousness" is a term sparsely used in the gospels. It is difficult to force the few references that may come from Jesus' own statements into a "forensic/ethical" pattern (Ziesler 1972: 128, 136: the verb = "vindicate" or has a declaratory sense; as to the noun, "righteousness is always a way of life"). In general, Jesus material will associate the terms with judgment, less commonly, if at all, with saving righteousness. The idea that God is righteous, though to be assumed from the OT picture of God, is rarely stated (cf. John 17:25).

2. The Jewish World of the Gospels. A number of references in narratives do describe righteous persons very much in the sense of the *ṣaddîq* in OT and Judaism. Thus Zechariah and Elizabeth were *dikaioi* before God, "walking blameless in all the commands and statutes (*dikaiōmasin*) of the Lord" (Luke 1:6; cf. Gen 26:5; Num 36:13; Deut 4:40); the point is stressed by Luke possibly to avoid the impression that their childlessness was due to any wickedness on their part (Fitzmyer *Luke 1–9* AB, 323). Similarly Simeon was "upright and devout" (2:25, *dikaios kai eulabēs;* later, Joseph of Arimathea is described as a Council member who was "just and good" [*agathos kai dikaios*], 23:50). The hope of such people was to live "in holiness and righteousness" (*en hosiotēti kai dikaiosynē*, a pairing common in Greek thought) before God (Luke 1:75). Luke portrays John the Baptist in 1:17 as an Elijah figure who will "turn the disobedient to the wisdom of the righteous" (*apeitheis en phronēsi dikaiōn*). While the verse incorporates Mal 4:5–6, about Elijah, the phrase cited would not be without appeal to Greek as well as Jewish readers; cf. *4 Macc.* 1:16–18, where *phronēsis* and *dikaiosynē*, along with courage and moderation/self-control (the four cardinal virtues), are listed as forms of *sophia*, which, in turn, results from education in the law.

In Matthew, Joseph is described as "a just man" (1:19) when he resolves to divorce Mary quietly and not shame her upon learning of her pregnancy; he is upright because he obeys the law (contrast Judah and David in 1:3, 6, who were not righteous in relations with Tamar and Bathsheba). The passage is complicated, however, by other interpretations that Joseph acted out of mercy, to avoid the punishment of stoning commanded for the woman and her lover (Deut 22:23–27), or that Joseph was showing awe before God's plan of salvation (Brown *John* AB, 125–28).

Herod, it is said, knew John the Baptist to be "holy and righteous" (Mark 6:20). Abel (Gen 4:8) is spoken of as "innocent" (*dikaios*), as is the blood shed by martyrs (*dikaion*, RSV "righteous," Matt 23:35). The centurion, according to Luke 23:47, confessed the dying Jesus to be *dikaios* (RSV "innocent"), as had Pilate's wife (Matt 27:19). Even the confession at Luke 23:47 could fit the "Jesus

level" of meaning, though at a later time *dikaios* might have taken on the further sense of the "Righteous One" (Fitzmyer *Luke 10–24* AB, 1520).

3. Sayings of Jesus. Some of Jesus' statements would fit very well with an audience marked by such OT-Jewish piety. He talks of "the just and the unjust" (*dikaious kai adikous,* in parallel with "the evil and the good") on whom God sends rain and sun (Matt 5:45; the verse may also reflect the sense of equality found in Greek thought about justice, and may be "a commonplace throughout the whole of antiquity" on "the cosmic fatherhood of God"; Betz 1985: 120). The parable about the Lost Sheep contrasts the repentant sinner with "the righteous who do not have need of repentance" (Luke 15:7). The parable of the Sheep and the Goats, whatever its origins, speaks of those on the right (*ek dexiōn*) as "the righteous" (*dikaioi,* 25:37, 46). Reference to "the resurrection of the just" (*dikaiōn*, Luke 14:14) is within the realm of Jewish apocalyptic expectations (beginning with Dan 12:2–3), as is Matt 13:43 ("the righteous will shine like the sun") and 13:49 (the angels separate the evil from the righteous).

Such sayings on the lips of Jesus criticize hypocritical pretensions to righteousness. "Woe to" those who "appear to people righteous outwardly but inwardly are full of iniquity" (*anomia,* lit., "lawlessness"; Matt 23:28); this is paralleled by a woe against scribes and Pharisees who "build tombs for the prophets and adorn the monuments of the righteous" (23:29) but who in their own day continue to murder prophets (who are by implication "righteous" or "innocent"; 23:34–35). Related are narrative references to people who claim to be righteous but do not behave thus (Luke 18:9, despising others; 20:20, pretending to be sincere).

Luke reports a number of phrases, sometimes Semitic in tone, that use *adikos/adikia.* In chap. 16 there is "the dishonest steward" (v 8, *oikonomon tēs adikias,* guilty of "official unfaithfulness" [*TDNT* 1:157]); "unrighteous mammon" (v 9, *mamōna tēs adikias;* v 11, *adikǭ mamǭna*); and a statement that the person "who is *adikos* in the least matter is *adikos* with much"; here "dishonest" is contrasted with being "faithful" (*pistos,* or "trustworthy," 10a). The term also comes up in Jesus' parable of the Pharisee who gives thanks that he is not like others, "extortioners, unjust (*adikoi*), adulterers" (18:11). The term here is general, unless a reference to the Ten Commandments (Exod 20:14–15; Deut 5:17–18) is seen, in which case the term may have the sense of "deceivers" or "cheats" (cf. Lev 19:13, LXX *ouk adikēseis ton plēsion;* 1 Cor 6:9). In a contiguous parable in Luke, also about prayer but linked in the present text with the question of who will be found faithful when the Son of Man comes (18:8, 14b), there is reference to an "unjust judge" (18:6, *ho kritēs tēs adikias*), who "neither feared God nor cared about other human beings."

a. Judgment. Only Luke reports a criticism by Jesus (16:15) of the Pharisees who loved money and scoffed at the principle "God *or* Mammon" (16:13). "You are the ones who (try to) justify (or "vindicate," *dikaiountes*) yourselves in the sight of human beings, but God knows your hearts, because what is exalted among humans is an abomination in the sight of God." The *hoti* clause ("because") sounds like proverbial wisdom (cf. Prov 16:5; 1 Sam 16:7). Their public almsgiving (cf. Matt 6:1–3) masks avarice (Mark 12:38–40 par). The saying threatens judgment on such public-reward-seeking Pharisees. While the statement itself might be traced back to Jesus as an isolated logion, Luke is fond of using *dikaioun* in this sense (cf. 10:29 and 7:24–28).

The note of judgment seen in these passages appears elsewhere in Jesus' message, using *dik*-vocabulary. At 13:27 the Lukan version of a Q statement (about the many who will not be saved once the door is closed) has the householder/*kyrios* saying, "Depart from me, all you workers of iniquity (*ergatai adikias*)." The parallel, Matt 7:23, has, "you who work lawlessness" (*anomian*). The words reflect Ps 6:9 (—Eng 8), where the context is that of a sufferer, whose petition Yahweh has heard, directing his enemies to turn away. Matthew is closer to the LXX. While Luke may have inserted a favorite term, *adikia,* Greek mss of the Psalter elsewhere parallel or use the two words as variants (e.g., 7:14 [LXX 15]). Matthew 12:37 (M) deals with "the day of judgment" (v 36). Then persons, including persecutors who attribute Jesus' deeds to Beelzebub (vv 24, 34), will be either individually justified ("you" sing., *dikaiōthēsẹ̄*) or condemned (*katatikasthēsẹ̄*) by their words. Cf. John 16:8–11, where sin, righteousness (*dikaiosynē*), and

judgment (*krisis*) are grouped together; judgment by Jesus (John 5:30) or others (7:24) is to be just. On the mood of bliss for the righteous sufferers and woes for sinners hereafter, cf. *1 Enoch* 96–105.

Of course, there are some verses that reflect "everyday use" of the terms. The verb *adikein* at Matt 20:13 means " (not) to wrong" a person, and at Luke 10:19 " (not) to hurt" someone, though the context here is that Satan "will not hurt you in any way." At Matt 20:4 the adjective *dikaion* means simply "that which is right or just."

b. Matthean Emphasis? Though some of the sayings above could go back to the historical Jesus, many of them belong to the thought of the later Church or of a specific evangelist. A test area has often been the 7 examples of "righteousness" in Matthew. All these instances of *dikaiosynē* occur in sayings by Jesus, but they are either unique to Matthew (3:15; 5:10, 20; 6:1; 21:32; M source or redactor) or are shared with Luke (Q) but have the word *dikaiosynē* only in the Matthean version (5:6; 6:33), where it may be redactional. However, several of the sayings could have come from Jesus. Matt 6:1 is very typical of the special sense for *ṣĕdāqâ* and therefore *dikaiosynē* that developed in Judaism: "Beware of practicing your piety (*dikaiosynē;* cf. 5:20) in the presence of other people." The specific example of piety immediately in mind is "almsgiving" (vv 2–5): public ostentation is contrasted with secret giving. The thematic verse at 5:20—that the righteousness of Jesus' followers must exceed that of the scribes and Pharisees in order for them to enter the kingdom of heaven—could also fit an OT emphasis, continued in Judaism, on *dikaiosynē* as ethical response to God in terms of God's will for what is right. The imperative in 6:33, "Seek first the kingdom and the righteousness of him [God]," with the promise, "and all these things shall be yours as well," parallels *dikaiosynē* with Jesus' central message of the kingdom. If the kingdom is God's reign that breaks in by divine action, then God's righteousness here would be a vindicating, saving work of God. But righteousness at 6:33 is better taken as the evangelist's addition (Guelich 1982: 345–57, 371–72) and will be treated below.

The threefold reference to a "righteous man" (RSV) in Matt 10:41b parallels a triple reference to a prophet in 10:41a, the whole being attached to a parallelism in 10:40 that reflects or combines a Q logion (= Luke 10:16) and a Markan statement (9:37 = Luke 9:48 and Matt 18:5). The Matthean context is the close of the address as the Twelve are sent forth to preach and heal, and so the reference is to receiving Jesus' personal emissaries (10:40–41): "The person who receives you receives me, and the person who receives me receives the One who sent me. The person who receives a prophet in the name of a prophet will receive a prophet's reward, and the person who receives a righteous man in the name of a righteous man will receive a righteous man's reward." The phrase "in the name of" means "aware that" or "because he is a (prophet)." The reward the prophet (gen. of origin) gives would be proclamation of God's message, and the reward from a righteous person would then be instruction in understanding that message (Hill [1965; 1967: 137–38] thinks *dikaioi* a quasi-technical term in Matthew's church for "teachers"; cf. 13:17, where "prophets and righteous persons" [*dikaioi* is not in the parallel at Luke 10:24] are said to have longed to see and hear Jesus' day, and 23:29, in light of Dan 12:3 and Qumran, "the Teacher of Righteousness"). The *dikaios* reference could, however, be to "pious, God-fearing upright people of the OT " (Ziesler 1972: 138), or it has been argued that here we have titles for Jesus, in parallel to "me," namely the Prophet (cf. Deut 18:15) and the Righteous One or Messiah (Albright and Mann, *Matthew* AB, 133–34). The last two interpretations of the verse could go back to the historical Jesus. But 10:41 is more likely redactoral (Gundry 1982: 202).

c. Three Passages. The most significant references in what Jesus said are likely (1) Mark 2:17 (and parallels), (2) a Q saying about wisdom, and (3) the parable of the Pharisee and the Tax Collector. The first passage reads: "I did not come to call righteous persons but sinners" (2:17 = Matt 9:13; Luke 5:32 adds "to repentance"). The contrast here between sinners and righteous has been noted above, as at Luke 15:7 (cf. Matt 5:45; 13:49). With regard to the historical Jesus, the reference could have been ironic or could have implied "righteous by the standards of the law, but I have come to call those they despise"; cf. the context (Mark 2:15–17), where scribes and Pharisees scorn Jesus' eating with tax collectors and sinners. The term may even be in response to the self-understanding of the Pharisees, that they were righteous compared with such people (cf. Reumann 1982: #224).

The Q statement (Matt 11:19 = Luke 7:35) in its Lukan form may be attributed to Jesus: "Wisdom is justified (*edikaiōthē*, gnomic aor) by all her children." The context is the response of "this generation" (7:31) to John the Baptist and Jesus. The former in his austerity, the latter in his gregariousness with tax collectors and sinners, are both rejected by the "lawyers and Pharisees." Yet *Sophia* (God) is vindicated and shown right by both John and Jesus and all in a long line of envoys; cf. Wisdom of Solomon 9–11 on how *Sophia,* who sits by God's throne (9:2–4), has punished the *adikoi* (10:3, cf. 20 *asebeis;* 11:20, pursued by *Dikē*) and rescued the *dikaioi* (10:4, 5, 6, 10, 13, 20; 11:14) (Schulz 1972: 386; Schüssler Fiorenza 1984: 132; cf. Luke 11:49–51 [Q], Wisdom sends prophets, whom Israel persecutes and kills, and 13:34–35 [= Matt 23:37–39] as a wisdom lament [Kloppenborg 1987: 139–47, 227–29: a Deuteronomistic concept of history]).

The parable of the Pharisee and tax collector (Luke 18:9–14) tells, in a somewhat overdrawn way, of a Pharisee who in his deeds exceeds the law's requirements and feels far superior to the *adikoi* (vv 11b–12), and of a tax collector whose prayer as a sinner is simply to throw himself on God's mercy. This latter person, Jesus concludes, "went down to his house justified (*dedikaiōmenos*) rather than the other" (v 14). There is considerable agreement (Reumann 1982: ##50, 247) that the parable is Jesus' own, not a Lukanized Paulinism. It provides another example of Jesus' "defense of his attitude toward Pharisees and toll-collectors in contemporary Palestinian society," a critique of Pharisaic "pursuit of uprightness or righteousness … by boasting or even by self-confident activity" (Fitzmyer *Luke 10–24* AB, 1184); we glimpse "Jesus' own attitude" that one is "justified" (declared/made upright) before God "by a contrite recognition of one's own sinfulness" and expression of it before God (pp. 1185, 1188). For *dikaioun* in this sense in Jewish texts, cf. $1QS^{b}$etc. 4.22 and 2 Esdr 12:7 (to be "accounted righteous" [*iustificatus sum*] is paralleled in a prayer with "find favor" in God's sight); and also note the spirit of Ps 51:1–17. A forensic context is provided by the preceding parable in 18:2–5 (6) about the unrighteous judge (*ho kritēs tēs adikias*) who finally heeds the widow's pleas for vindication (vv 3, 5, *ekdikein*), and by the likely later, allegorical addition in vv 7–8: God will "make vindication" (*ekdikēsis*, vv 7, 8; cf. 21:22, "days of vengeance," from Hos 9:7).

d. Summary. The Synoptic Gospels reflect the Jewish world of Jesus' day with regard to righteousness (Hill 1967: 139). He spoke of the just and the unjust (Matt 5:45) or righteous and sinners (Semiticizing expressions with *adikia* are found especially in Luke). In the style of his day he urged his followers to greater righteousness (Matt 5:20) and spoke of it in terms of piety (Matt 6:1), e.g., almsgiving. Yet Jesus' message about God's kingdom was especially addressed to "sinners" (Mark 2:17 and parallels), and he criticized in no uncertain terms those striving to justify themselves outwardly, hypocritically, and in a way derogatory toward those they termed *adikoi* Matt 23:28–35; Luke 16:15). He reserved praise for sinners who threw themselves on God's mercy; such are vindicated (Luke 18:14). In traditional terms Jesus could speak of the resurrection of the righteous (Luke 14:14; Matt 13:47), but the emphasis was even more on the judgment (Luke 13:27; Matt 12:37), particularly of those who persecute God's prophets and righteous ones (Matt 10:41).

Jesus likely saw John the Baptist and himself in this succession of persecuted prophets (Luke 7:35), but it is nowhere clearly stated that Jesus viewed himself as "the Righteous One" (see above on Matt 10:41). A picture in pre-Christian Jewish sources of a suffering and then exalted Righteous One (Schweizer 1960: 22–31) is a problematical mixture of motifs (Ruppert 1972b: 43–44; see also pp. 44–71 for the possible case that Jesus saw himself as a suffering prophet [like the righteous figure in Wis 5:1–7] who looked to God for vindication, even after a martyr death). That Jesus looked upon his impending death as salvific depends on whether, or how much of, the "ransom saying" (Mark 10:45) or the "passion predictions" (like Mark 8:31) are attributed to the historical Jesus (cf., e.g., Kleinknecht 1984: 167–77). There are only a few possible references using *dik*-terminology that allude to God's righteousness as a gift (Matt 6:33) and to God's justifying (better: vindicating) sinners (Luke 18:14, cf. vv 5 and 8).

4. Extending the Theme. Although many conclude that "righteousness really does not characterize what is new in Jesus' proclamation" (Dihle *RAC* 10: 306), some exegetes, looking ahead to the prominence of the theme in Paul, hold it "likely that Jesus' messianic life of righteousness provided the

extent and direction for his community's reflection on this theological concept" (Stuhlmacher 1986: 30). Jungel argued that Jesus' message, especially in the parables, concerned the kingdom of God and its presence as God's grace. Like the righteousness of God in Paul, it has eschatological character: Jesus looked forward to the imminent kingdom, Paul looked back to the eschaton brought "to expression as the revelation of God's righteousness in Jesus' death and resurrection" (Jungel 1962: 282). Both, however, viewed the law basically as the love command (Mark 12:28–31 and parallels; Rom 13:8–10) and gave faith a significant place (for Jesus, in miracle stories where faith is awakened, e.g., Mark 5:34; cf. also Lührmann 1975). It may be that "divine rule" and "right" inevitably go together, as from time immemorial in ancient religion (*Dikē*, Maat), and so "kingdom of God" and righteousness intertwine (Reventlow 1971: 114–15). But gospel passages do not support such a connection.

Different from Jungel's existential hermeneutic is Baird's (1963) stress on "justice" in the teaching of Jesus. The focus is not, however, on righteousness (*ṣdq*, pp. 44–45) but on judgment (*mišpāṭ*, pp. 42–44, 58–62), in terms of equity, love, and wrath. In the crisis that Jesus' coming brings, the righteous and sinners are separated (pp. 185–87). Here Jesus emerges as Judge incarnate. Walsh (1987: 148–49) would understand Jesus against a background of "*ṣedeq* and the belief in Yahweh's *mišpāṭ* found in the Scriptures." Stuhlmacher argues that Jesus brought "a new understanding" of God's righteousness and of righteousness before God (1986: 32). This came by his words and deeds, above all through forgiving sins and inviting sinners to table fellowship. Both Jesus' call to a life of love and his readiness to die a death that is "vicarious life-giving" (Mark 10:45) are involved. But even Stuhlmacher admits it is not until after Easter that Jesus was understood as "personification of God's saving righteousness."

D. Expounding Jesus' Cross

1. Post-Easter Reflection. Reflection on the passion and death of Jesus in light of the assertion that "God has raised him from the dead" (1 Thess 1:10; Gal 1:1; cf. 1 Cor 15:4) led to an understanding of the meaning of the crucifixion in terms at times of righteousness/justification. See also JUSTIFICATION. These early traditions took the form especially of creedal formulae or slogans, sometimes hymnic, to be confessed about the work and person of Jesus the Christ. The starting point here may have been the title "the Just (or Righteous) One," *ho dikaios* (cf. Acts 3:14; 7:52; 22:14; 1 Pet 3:18; 1 John 2:1), applied to Jesus, in contrast to the *adikoi* or unrighteous (1 Pet 3:18; cf. Rom 5:6–7, *hyper asebōn*), to whom he had ministered in life and benefited in death. Jesus also came to be spoken of as "our righteousness (*dikaiosynē*)" (1 Cor 1:30), and verbs from *dikaioun* were employed to tell how he had "vindicated" (1 Tim 3:16) or "justified" (1 Cor 6:11; Rom 3:24) believers, so that one could speak of our "justification" (Rom 4:25) or even our becoming "God's righteousness" in Christ (2 Cor 5:21). OT texts like Gen 15:6 and Hab 2:4 played no direct part, but *ṣdq* as "saving righteousness" and OT cultic concepts did.

2. Background. Williams (1975), focusing on Rom 3:24–26, would trace this understanding of Jesus' death as "saving event" back to Hellenized Christianity, i.e., a congregation of Hellenized Jews and Gentiles (p. 253). He assumes a concept of martyrdom where death purifies the people and the land, a concept mediated through *4 Maccabees* (1:11; 6:28–39; 17:21–22), a document he dates to ca. A.D. 35–40 in Antioch (pp. 183–202; 253). At issue is whether this concept in *4 Maccabees* of atoning, vicarious death can be explained sufficiently from OT and Jewish backgrounds, notably Isaiah 53 and 2 Macc 7:37–38 (*OTP* 2: 539), or whether it shows Greek influence, as is suggested by references in *4 Maccabees* to "divine justice" (*dikē;* 4:21; 8:22; 9:9; 18:22; cf. 8:14; 9:15; 12:12), therefore requiring Greek-Hellenistic ideas as the catalyst, such as "propitiatory sacrifice à la Iphigenia" (cf. Euripides, *Iphigenia at Aulus* 1383–84; 1553–55, the willing sacrifice, to placate the wrath of the goddess Artemis, noting *4 Macc.* 6:28, where the martyr's punishment "suffices" for the people). Most would trace the formulations to Jewish Christianity, relying on OT themes as developed in Judaism (Schweizer 1960: 32–41; Ruppert; Thyen 1970; Stuhlmacher 1965, but cf. 185–88, and 1986: 58–60, 63–65: perhaps a heritage from the circle around Stephen, Acts 7–8). Walsh (1987: 150) finds here a "sea change in the understanding of … *ṣedeq …* "

3. Seven Examples from the Epistles. Now embedded in NT letters, these "atonement formulas" or, better, *homologiae* about the meaning of Jesus' death exhibit some variety not only in the range of application for righteousness terms but probably also in backgrounds (Reumann 1982: ##60–75).

(1) 1 Pet 3:18, "Christ once for all (*hapax*) suffered (variant, "died") for (*peri*) sins, the Righteous One on behalf of those who are unrighteous (*dikaios hyper adikōn*)," could have been part of a longer hymn embracing Christ's manifestation (1:20), passion (cf. 2:22–24 = Isa 53:4, 5, 9, 12), death, and exaltation (3:19, 22); it was, in this case, akin to the next example.

(2) 1 Tim 3:16 includes as line 2 of a six-line hymn, likely of Hellenistic-Jewish Christian origin, the statement that Christ, "manifested in the flesh," was "vindicated (*edikaiōthē*) in the spirit." If the first line refers to incarnation, the second could reflect Jesus' baptism (cf. Matt 3:15 where the voice from heaven and the Spirit confirm that he fulfills "all righteousness"). But the hymn may begin with the resurrection. Then, in line 2, Jesus is presented as in the right, as the Justified One, exalted by God.

(3) 1 Cor 1:30 employs the noun *dikaiosynē* as one of several titles for Christ, "who became 'wisdom' for us from God, both 'righteousness' and 'sanctification, ' and 'redemption' (*apolytrōsis*)." The last three terms may be formulaic, used by Paul to lay a foundation for the discussion of wisdom that follows. "Christ crucified" (1:23) is "righteousness (from God)" for us. Schnelle (1983: 44–46) sees here "the righteousness marking the community, which has its basis in Jesus Christ," righteousness through baptism.

(4) 1 Cor 6:11 associates Christ as righteousness and sanctification clearly with baptism: "you were washed, you were sanctified, you were justified (*edikaiōthēte*) in the name of the Lord Jesus Christ and in the Spirit of our God." The words would have been spoken over baptized persons as a call to their new existence in Christ (cf. 1 Thess 5:5; Gal 3:26–28; 4:6–7; Rom 8:14–15). In particular, forgiveness of past sins is involved. That "you were justified" (aorist tense) is the climax of the formulation: a single act, declared/made righteous, and (with v 9) called to an ethical life of God's kingdom different from the unrighteous (Schnelle 1983: 38–44).

(5) 2 Cor 5:21, "The One who did not know sin [the sinless Christ], (God) made sin on our behalf, in order that we might become God's righteousness in him," is disputed as to origins. That 5:19–21 is a pre-Pauline hymn (Käsemann 1971a: 52–55) or that at least 5:21 is Jewish-Christian tradition (Kertelge 1967: 99–107; Stuhlmacher 1965: 74–78) has been denied in favor of Paul's own authorship (Hofius 1980a; 1980b; Fitzmyer 1982: #373). Furnish (*2 Corinthians* AB, 351) terms it "a Pauline re-working of traditional, probably Jewish-Christian theological notions." That Christ was "made sin" has been taken to refer either to the sin offering of Lev 4:21 (the bull is the sin offering [*hamartia*] for the assembly) (Wilckens *Romans* EKKNT, 1: 240; Stuhlmacher 1986: 58–60), or to Isa 53:10 (the servant as "an offering for sin") (Hofius 1980a). But the phrase has also been taken to mean no more than that Christ identified with sinful humanity (Furnish). It is possible that vv 18–21 were a "preformed credo," with redaction by Paul in vv 19b and 20c, with v 20 referring to Christ as "sin offering" (Martin *2 Corinthians* WBC, 138–51). In any case, "God's righteousness" is the dominant conclusion. Verse 21 assumes Christ as righteousness (1 Cor 1:30). The goal is that "we in him are righteousness," partaking of the new reality in Christ as new creatures (5:17), through baptism (Schnelle 1983: 47–50).

(6) Rom 3:24–26 (widely held to be a non-Pauline, Jewish-Christian assertion about the meaning of Jesus' death as expiatory) remains debated regarding its perimeters. Käsemann's 1961 proposal (cf. his *Romans* HNT, 95–99), as refined in subsequent discussion (cf. Reumann 1966; 1982: ##70–72; Williams 1975: 5–24), regarded vv 24–26a as (hymnic) tradition:

> [24]Being declared righteous (*dikaioumenoi*) as a gift (*dōrean*, which some assign to Paul along with "by his [God's] grace") through the redemption (*apolytrōseōs*) which is in Christ Jesus, [25]whom God put forward as an expiation (*hilastērion*) in his blood, for a demonstration of his [God's] righteousness, because of the passing over (better: with a view to remission) of former sins, [26a]in the forbearance of God.

Possibly employed in an annual reflection on Jesus' death using Day of Atonement terminology (*hilastērion* = Heb *kappōret*), perhaps used at the Lord's Supper or baptism, the formulation spoke of

Jesus' blood demonstrating God's righteousness even as sins are forgiven (v 25) and people being justified/redeemed (24). Williams (1975:19–56) would include in the formula in v 24 both *dōrean* and "by his grace"; in v 25 "by faith" (understood as Jesus' own faith), as well as in 26c the words *dikaion* and *dikaiounta ton ek pisteōs Iēsou*, i.e., God is "just/righteous and justifies/rightwises the person who shares Jesus' own faith or Jesus-faith." Further, he would understand *dikaioumenoi* in v 24 to refer adjectivally to "all persons" in v 23; in this way the whole formulation pertains to Gentiles. Williams' analysis thus includes in the pre-Pauline text, as most do not, the term "faith," both that of Jesus and that of all who share in it. Pluta (1969: 111) would also include "through faith" in the formula, which expressed "God's justifying fidelity to the New Testament *kappōret* Jesus Christ in the eucharist."

The analysis of Lohse (1955; 1973) has been particularly persuasive to some that v 24 is not part of the formula which Paul cites (so also Wilckens *Romans* EKKNT, 1: 183–84): only *apolytrōsis* in 24 is taken as tradition (cf. 1 Cor 1:30); the quotation then begins, as often, with a relative pronoun in v 25, "whom" (*hon*), not (as can occur) with the participle "being justified" in 24. (If *dikaioumenoi* is included, a subject such as "we" or "you" plus a main verb must be assumed in the original hymn or liturgy; perhaps, "because we are being justified, we await [cf. Rom 8:23] or have [cf. Col 1:14; Eph 1:7] redemption.") Attributing v 24 basically to Paul is supported also by Stuhlmacher (1986: 96) and Schnelle (1983: 67–72), for example.

Still debated also is the sense of *hilastērion* in v 25. Is it the "mercy seat" or ark in the OT (*kappōret*, on the Day of Atonement; Leviticus 16) or "expiatory sacrifice" (Lohse 1955: 152; 1973), stressing *4 Macc.* 17:21–22? (On the OT root *kpr*, see Janowski 1982; in favor of the view that Jesus here is equated with the *kappōret*, the lid of the ark as place of meeting, see Stuhlmacher 1986: 100–3.) Given these difficulties, Schnelle (1983: 70) settles for "means of expiation" as the sense (so also Wolter 1978: 21).

At the least, 3:25–26a associates God's righteousness with forgiveness through Jesus' death. If v 24 is included, justification/redemption is explicitly asserted. If Williams is correct, faith (on the part of Jesus and those justified) was a part of the formula.

(7) Rom 4:25 is less debated as a (Hellenistic-)Jewish Christian formulation. It refers to Jesus, "who was put to death for (*dia*, on account of) our trespasses, and was raised for (*dia*, with the goal of) our justification (*dikaiōsin*)." Jesus' death and resurrection mean sins forgiven and justification/rightwising (cf. Isa 53:11–12 as possible background). The past christological event grounds these soteriological consequences that occur "for us" (*hēmōn*, "our," at the end of each line) in baptism (Schnelle 1983: 72–74). To trace 4:25 (or 3:25) to Jesus via the saying at Mark 9:31 and passion/Lord's Supper material (among others, Popkes 1967: 263–66; cf. Kleinknecht 1984: 187) remains less than convincing to most critics. The connection in 4:25 of Jesus' resurrection with justification, otherwise unparalleled, can be traced thematically in terms of "acquittal by resurrection" and life for believers (Barth 1971: 20; Barth and Fletcher 1964).

4. Significance. The cumulative weight of these texts is to provide a starting point for NT use of righteousness/justification in Christology and soteriology (Reumann 1982: #76). Their appearance in Jewish (-Hellenistic) Christianity is not surprising, given the emphasis on *ṣdq* and the *passio iusti* in the OT and in certain strands of Judaism; but it must also be post-Easter, given the paucity of such terms on Jesus' part. Yet some of the concepts would not have been strange to the Greek world, and from there they had already penetrated Hellenistic Judaism (*4 Maccabees*). The formulations must be early enough—in the thirties or forties—to function as familiar, common tradition in Pauline communities, above all in Rome where the apostle had not labored when he wrote Romans; they were also pervasive enough to appear more broadly than in Paul's own letters (1 Peter; cf. 1 Timothy; "the Just One" in Acts). Thus these formulations can be termed part of early "apostolic Christianity," and they demonstrate that righteousness/justification was not merely a theme Paul picked up in a controversy with opponents in Galatia. The chief line of development will be, however, in Paul's theology, as this Jewish apostle writes to congregations of Jewish and Gentile Christians (see below). These righteousness/justification formulas stressed, among other things, the forgiveness of sins, redemption for the unrighteous, sanctification, and the Spirit, through the death (seen in martyr and cultic terms) and resurrection-vindication of the

Righteous One, Jesus, all granted via baptism; however, faith is not mentioned in the formulas themselves (except on Williams' reading on Rom 3:23–26), though justification by faith can be claimed as a commonly held conviction of early Jewish Christianity. See JUSTIFICATION. The ethical demand for righteous living is not explicitly stated in these pre-Pauline statements. Indeed, the starting point for Christian development of righteousness/justification as a theme (Dihle *RAC* 10: 307–13) is not the final judgment and the law's demand for righteousness but Jesus' death and vindication by God.

E. Synoptic Gospels, Acts, Johannine Corpus

While Jesus' passion, death, and resurrection shape the canonical gospels, the evangelists remain true to the fact that Jesus had employed *ṣdq* terminology only sparingly (see above). Most of the examples in the four gospels and Acts reflect OT-Jewish usages. In some cases *dik*-words are used in quite routine ways, without theological significance. Most examples discussed above occur only in one gospel.

1. Q Source. In Q (the sayings material common to Matthew and Luke) the sole example is the statement (in its Lukan form, 7:35; Matt 11:19 shows Matthean rewriting), "Wisdom is justified by her children." As indicated above, Q presented this picture as a statement of how the prophets, sent as representatives of God's own wisdom, are rejected; yet wisdom is vindicated by them, eschatologically. In Q, Jesus, as wisdom's messenger, becomes subordinated to a Son of Man Christology, standing, like his death, in the service of a proclamation of judgment on Israel (Hoffmann 1972: 180–90, 196–98; Kloppenborg 1987: 110–12, 115–17, 166–70).

2. Mark. Mark employs *dikaios* once in a positive sense to characterize John the Baptist as "just and holy" (in the evangelist's description of what Herod thought about him, 6:20) and once in the triple tradition logion (2:17b = Matt 9:13 = Luke 5:32), "I did not come to call righteous persons (*dikaious*) but sinners." This stands parallel with 17a, "Those who are well do not need a physician but those who are ill." Jesus' invitation is for sinners in need of forgiveness, not those self-content in their own rectitude; i.e., he calls tax collectors like Levi, not Pharisees (2:13–16).

3. Matthew. Matthew has a special interest in righteousness (see above for sayings material, narrative, and descriptive references; all except 20:13, "I do you no injustice," are treated in canonical order in Reumann 1982: ##226–43). The cumulative emphasis on righteous (and unrighteous) persons (1:19; 5:45; 13:17, 43, 49; 23:28, 29, 35; 25:37, 46; 27:19) and on what is right (20:4), as well as the sevenfold use of *dikaiosynē*, makes verses from Q and Mark stand out even more in Matthew's context.

Thus at 9:13 the Markan saying of 2:17 is repeated verbatim, though introduced by a connecting word, "*For* I did not come to call righteous persons but sinners." The context is still the call of a tax collector to follow Jesus (9:9–11, here named Matthew, not Levi), but the proverbial statement that preceded 17b in Mark, namely, "Those who are well do not need a physician but those who are ill" (17a = Matt 9:12), takes on added significance in light of the immense collection of miracle stories in chaps. 8–9, about Jesus as healer, who fulfills Isa 53:4 in the way "he took our infirmities and bore our diseases" (8:17). Between what were parallel sayings in Mark (2:17a and b), Matthew has placed an OT citation on Jesus' lips (Matt 9:13a), introduced by a rabbinic exhortation, "Go and learn what it means [in Hos 6:6, where God says], 'I desire mercy and not sacrifice.' " (Matthew repeats this quotation at 12:7; the shift in wording from LXX "mercy *more than* sacrifice" suggests a rejection of temple sacrifices.) The key word "mercy" then explains why Jesus calls "sinners."

The Q saying (Luke 7:35) about wisdom being justified by her children (emissaries like John the Baptist and Jesus) becomes in Matthew 11:19 part of a framework, with 11:2, around material concerning the Baptizer: John heard in prison about "the *works* of Christ" (11:2), and the closing then reads, "Wisdom is justified by her *works*" (11:19). In this way Matthew's version shifts the reference from "all the children" of wisdom, including John, to the miracles ("works") which Jesus as the Christ performs, presented in chaps. 8–9. This is part of Matthew's identification of wisdom as God's plan for salvation (Meier 1980: 124) or even with Jesus himself (cf. 23:34 with Luke 11:49; and 11:28–29 with wisdom's invitation in Sir 51:23–27).

In 10:41, about receiving "a righteous man" (see above), if there is a reference to Jesus as the "Righteous One" this is much more likely on the evangelist's level of meaning than on that of the historical Jesus (cf. 27:19).

The judgment theme mentioned above for the gospels and Jesus in general is, as is well known, especially emphatic in Matthew (cf. 12:37, being justified or condemned at the judgment depends on one's words; 12:7, if opponents of Jesus had known what Hos 6:6 means, they "would not have condemned the guiltless"). (What RSV translates as "justice" at 23:23 and 12:20 [=Isa 42:3] is another Greek word, *krisis.*)

The seven verses where *dikaiosynē* occurs on the lips of Jesus are the prime expression of the righteousness theme in Matthew. While 6:1 might, among others, be authentically from the Jesus level, the claim that all are redactoral or in verses composed by Matthew (e.g., Reumann 1982) finds considerable support (Gundry 1982; Luz *Matthew* EKKNT, 154). That does not mean, however, that the meaning in every passage need be the same. Numerous exegetes do take all of them to mean righteous human actions or relationships, a demand upon disciples to do their just duty (so Luz; Syreeni 1987: 207–11). Others find a varied meaning, sometimes for a divine gift or power, or they see both "God's actions with respect to men and the human actions that spring from God's" (gift and task), perhaps in a covenant setting (Schweizer 1975: 54–55). There is some agreement on the following analysis (Reumann 1982, where earlier literature is cited; Meier 1980: 38; Gundry 1982; Guelich 1982).

The concept of *dikaiosynē* (in the sense of obedient response to Jesus in terms of just and upright conduct) looms over much of Matthew's Sermon on the Mount as the central theme. So 5:20, "Unless your righteousness exceeds that of the scribes and Pharisees, you will never enter the kingdom of heaven," stands over the antitheses of 5:21–48. "Beware of practicing your piety (*dikaiosynē*) before others" (6:1) is the theme for 6:1–18, about almsgiving, prayer, and fasting. While, as in Hebrew, the term at 6:1 could denote almsgiving, it probably has a broader meaning of righteousness before God. The sense in 5:20 and 6:1 is clearly that of human actions, for it is "your righteousness" that is spoken of. Matt 5:10 probably has the same meaning: "Blessed are those who are persecuted for righteousness' sake," i.e., for their righteous conduct. Syreeni, who stresses the sense of demand throughout Matthew (cf. Przybylski), nonetheless speaks of a "defective, transitional conception of covenantal nomism" (1987:218) in Matthew compared with Tannaitic Judaism (Sanders), for while there has been a break with the Jewish variety, "a new Christian form of covenantal nomism has not (yet?) been conceptualized" (p. 212).

Matt 5:6, however, where the noun *dikaiosynē* is inserted as the object of "hunger" along with the verb "thirst" (contrast Luke 6:21), to yield "Blessed are those who hunger and thirst after righteousness, for they shall be satisfied," may mean "right conduct on God's side"; not human activity but divine exercise of justice, leading to eschatological vindication of the poor, meek, persecuted disciples (Gundry 1982: 70). This soteriological sense is especially likely if, behind the beautitudes at 5:3, 4, and 5 one sees, respectively, Isa 61:1 (good tidings for the afflicted [Heb *ʿănāwîm*, the poor]); 61:2 (all who mourn); and 61:7 (in your land a double portion). Similarly, Isa 61:6 (you shall eat the wealth of the nations) may lie behind Matt 5:6 (the hungry being satisfied). Then Isa 61:10 (where righteousness from God parallels salvation) might even suggest that Matt 5:10 has the further sense of those persecuted for their relationship with God, 5:3 and 10 thus forming an *inclusio* around the 8 second-person beatitudes (Guelich 1982: 84–88, 93, 102–3, 115–18).

The final example in the Sermon on the Mount literally reads, "Seek first the kingdom and the righteousness of him [God], and all these things will be added to you" (Matt 6:33; cf. Luke 12:31, "Seek his kingdom, and these things will be added to you"). The form is an imperative. But usually in Matthew the kingdom is God-given, eschatologically. This is the only instance in Matthew of "*God's* righteousness." And the verse closes with a promise. Hence, this verse also may, like 5:6, refer to the right conduct of God in giving the kingdom and righteousness (Gundry 1982: 118–19) or to "eschatological vindication or salvation by God" as well as "the life lived in keeping with the will of the Father," gift and demand (Guelich 1982: 346–47, 371–72). Involved would be the "imperatival indicative" so characteristic of Matthew (Strecker 1962).

When Jesus urged John to baptize him, "For thus it is fitting for us to fulfill all righteousness" (3:15), we have another example of doing what is right yet also fulfilling the plan of God (Meier 1980: 27: God's "saving activity"). With its reference to "us" (referring to John the Baptist and Jesus), the verse forms a sort of large *inclusio* with 21:35: "John came to you in the way of righteousness." While this could mean demanding an upright life or living in a righteous way, the phrase "way of righteousness" could also have a salvation-history sense (Meier 1980: 241–42): the course of God's plan that culminates in the Baptist and Jesus, who in Matthew often appear in tandem (cf. 3:2 and 4:17).

In summary, Matthew's references to righteousness yield a certain emphasis on God's eschatological gift of salvation (5:6; 6:33), with a definite stress on the response of disciples in terms of righteous living (5:10, 20; 6:1). Two other references (3:15; 21:32) could incorporate both senses (each of which has OT roots), but these may also reflect Matthean salvation history.

4. Luke-Acts. The books of Luke and Acts may be considered together in order to grasp the totality of the Lukan picture. The 53 examples of *dik*-terminology in the two books make this the second biggest grouping of such words in the NT (after Paul). Words from *adikein* also occur with relative frequency in both volumes. See Fig. RIG.02. All examples in Luke's gospel have been noted above except for 12:57 ("Why do you not judge for yourselves what is right?" cf. Acts 4:19). References to righteous people appear with some frequency in Luke 1–2, much as in Matthew. In L material in chap. 16 and 18:6 and 11 *adikos/adikia* appear, the noun often used in the genitive adjectivally ("steward of injustice").

Many of these same uses appear in Acts: "reward of wickedness" (*adikias,* 1:18); "bond of iniquity" (8:23); "resurrection of both just and unjust" (24:15; cf. Luke 14:14); *adikein* at 7:24, 26, 27 (to "wrong" someone) and 25:10, 11 (do wrong); *ekdikēsis* at 7:24 ("avenge"). Cornelius is termed "an upright and God-fearing" centurion (10:22); such a person who "does righteousness" (*ergazomenos dikaiosynēs*) is acceptable to God (10:35, i.e., who lives a devout life and gives alms). In contrast Elymas is an "enemy of all righteousness" (13:10). God's final judgment will occur "in righteousness" (17:31; cf. Pss 9:4; 96:13; 98:9). The ethics and eschatology that Paul is said to argue before Felix and Drusilla, "justice (*dikaiosynē*), self-control, and the coming judgment" (24:25), seem in the first two topics a nod to Greco-Roman understanding (cf. *Aristeas* 278).

Usually it is claimed that Luke-Acts touches on righteousness/justification in a theologically significant way only in the parable of the Pharisee and the Publican (Luke 18:9–14) and in a single verse at Acts 13:38 during Paul's sermon at Pisidian Antioch. One is cautioned against reading the first as more than "generic" roots for Paul's doctrine of justification by faith (Fitzmyer *Luke 10–24* AB, 1185), and the Acts passage is sharply contrasted with Paul's own view as presenting but "partial justification," which is equated with forgiveness of sins (13:38) and occurs "*also* by faith" along with the law (Vielhauer 1966: 41–42).

Luke writes at the intersection of both knowledge about Jesus and awareness of Paul. He is true to the Jesus tradition with its relatively minor emphasis on righteousness/justification (see above, on the Jesus level of meaning for Luke 18:9–14). He probably did not know Paul's letters or appreciate how significant *dikaiosynē* was for the apostle. But his limited references must be read not only in light of a situation (ca. 80–95) that was quite different from Paul's day, but also with respect to the themes of Lukan theology; and with a literary, narrative awareness of Luke's approach. Among the significant theological aspects are a Lukan emphasis on the forgiveness of sins (*aphesis hamartiōn*, Luke 1:77; 3:3; 24:47; Acts 2:38; 5:31; 10:43; 13:38; 26:18; cf. 4:18 "release … liberty"; Fitzmyer *Luke 1–9* AB, 223–24) and a sense of the Jewish law (and prophets) as divine prophecies but no longer a theological problem (Vielhauer 1966: 37–43). Further, Jesus dies as an innocent righteous sufferer (cf. the use of "the Righteous One" in Acts 3:14; 7:52; 22:14; the centurion's words at Luke 23:47; contrast Luke 23:41; Schweizer 1960: 32–41), indeed akin to the martyrdom (cf. 23:34 and 46 with Acts 7:60 and 59) of a Hellenistic *sophos* or wisdom figure (Karris 1985: 23–46; God's prophet of justice, who called for righteousness especially in the sense of almsgiving). There is no association of Jesus' death with expiating sin (Mark 10:45 is omitted; Acts 8:32–33 leaves out of the Isaiah quote 53:6 and 8d; only Acts 20:29 is a counterbalance). But there is no need for this connection, for God has always been forgiving

(Luke as "the gospel of great pardons," 7:36–50; 15; 19:1–10; cf. God's grace/graciousness as a theme). Yet "faith" is prominent (e.g., Acts 13:38–39), often along with repentance (Fitzmyer *Luke 1–9* AB, 235–39). Finally, it must be realized that the author of Luke-Acts, stressing such themes a generation after Paul, cannot (by the very genre of these two books) very well *discuss* doctrines: instead, he must teach by means of stories (Schweizer *Luke* NTD).

Thus it is in a ministry by Jesus programmatically described as forgiveness/release from sins (4:18) and exemplified in 5:20–24, that he declares, "I have not come (perfect tense) to call righteous persons but sinners *to repentance*" (5:32). As Levi's conversion (5:27–29) illustrates, this period is "the Lord's acceptable year" (4:19 = Isa 61:2a; cf. Lev 25:10 LXX *eniautos apheseōs*, RSV "a jubilee"). The Pharisees and scribes grumble at the way Jesus eats and drinks with tax collectors and sinners (7:30). The unit 7:29–35, abounding in *dik*-forms, contrasts how "all the people and the tax collectors 'justified God' (*edikaiōsan*, recognized God's justice or accepted divine righteousness) by having been baptized with John's baptism," but the Pharisees and tax collectors rejected God's plan and John's baptism (7:29–30). Whether through John or through Jesus "the friend of tax collectors and sinners" (7:34), "wisdom was justified (*edikaiōthē*, vindicated) by all her children." Simon the Pharisee cannot grasp how a sinful "woman of the city" could be forgiven and saved by faith (7:36–50). The grumbling of opponents continues (15:2; 19:7) in connection with the saving of the lost emphasized both in parables (15:3–32) and in the Zacchaeus narrative (19:1–10). The contrast between "the righteous" and tax collector-sinners is most vividly exemplified in Jesus' story about prayers at the Temple, between "those who trusted in themselves that they were righteous (*dikaioi*)" (18:9) and the sinner who goes home vindicated (*dedikaiōmenos*, 18:14, "justified"). So Jesus is portrayed releasing persons from sins and responding to criticism about this reversal of "righteous" and "sinners" (cf. Tannehill 1986: 37, 65–66, 103–9, 186–87).

In Acts the Lukan version of early Christian and Pauline righteousness that saves through Christ's death cannot be presented as a doctrinal proposition (because of the genre) or in Paul's terms, given Luke's distance from the conflict over whether the law of Moses is the means of salvation, his sense of a distant parousia and future judgment, and his view of Jesus' death. The Pauline word-field of cross and justification is not to be expected. But in the "Council" debate at Jerusalem Peter (not Paul) states what was seemingly a general early Christian position, "We (Jews) believe that we shall be saved (*sōzein*, as also in later Pauline letters, not *dikaioun*) through the grace of the Lord Jesus," as will Gentiles (15:11; cf. Menoud 1978).

It is in the sermon in Acts 13:16–41 that Luke's narrative version of righteousness/justification directly appears. The conclusion, "forgiveness of sins is being proclaimed through this (Jesus) to you" (13:38), is typical of the Lukan kerygma. Somewhat Pauline is v 39: "by him everyone who believes is freed (*dikaioutai*) from everything from which you could not be freed (*dikaiōthēnai*) by the law of Moses." The connection is with Jesus' resurrection (v 37), not his death. Vielhauer has overstressed contrasts with Paul's letters and fails to see Luke's view in its own terms as a later position on Jesus and "rightwising." Faith, to justify or free, appears here together with sin(s) and law. It is Jesus Christ who is proclaiming (cf. 26:22–23) through Paul that all are freed or justified before God from everything that separates from God, not by law but by believing (Weiser 1985: 328, 336–37).

5. Johannine Literature. Together with the six examples of *dik*-terms in the gospel of John may be considered the related and relatively more frequent references in 1 John (11; none in 2 and 3 John), and even the 21 instances in the book of Revelation. In broad terms the Fourth Gospel's one significant passage speaks of Jesus' vindication; 1 John speaks of Jesus the Righteous One who expiates sin and of "doing righteousness" as the proper response; and Revelation speaks of God as just, judging evildoers (Reumann 1982: ##254–65).

In the gospel of John, God is addressed as righteous (17:25). Jesus' judgment is just (5:30), and there is "no falsehood (*adikia*, dishonesty) in him" (7:18). He urges opponents to judge "with just judgment" (7:24, *tēn dikaian krisin*). This language is typical of OT usages and in chap. 7 becomes forensic and polemical. Such a law-court setting also appears in 16:8–11, where *dikaiosynē* occurs twice, in one of the Paraclete sayings in the Upper Room discourse. After departing, Jesus promises to send the Paraclete,

who "will convince/convict (*elegxei*) the world concerning sin and concerning righteousness and concerning judgment:

concerning sin (*hamartia*), because (or that) they do not believe in me;
concerning righteousness, because (or that) I go to the Father, and you will see me no more;
and concerning judgment, because (or that) the ruler of this world is judged" (vv 9–11).

The forensic language, including *Paraklētos*—which can mean legal advocate but here seems to be an accuser more than a helper or comforter—suggests a cosmic trial scene, appropriate to the Fourth Gospel's emphasis on judgment. The attempt to take the three nouns in vv 9, 10, and 11 to mean verdicts of guilt or innocence (*dikaiosynē*), in any case a judgment (Lindars 1970), does not fit either the context or John's understanding of what "the world" is (Carson 1979: 556–57). The Paraclete will show the unbelieving world to be wrong both about sin (the opponents' failure to believe in Jesus, 8:21–24, 45–46) and about judgment (for the ruler of this world is already cast out, 12:31–32). It is possible to take the reference to righteousness as referring to Christ's righteousness (Ziesler 1972: 131; Stenger 1979). Carson would take it ironically, of the world's assumed righteousness (1979: 558–60; cf. Rom 10:3; Phil 3:6–9; Matt 5:20). But the statement that Jesus is going to the Father suggests that vindication is meant, when the Righteous One (1 John 2:1) is "justified in the presence of his opponents" (Schnackenburg *John* HTKNT 3: 131, who feels that Jesus' righteousness is a fuller theme in John than this unique occurrence of *dikaiosynē* suggests). The disciples will see Jesus no more (v 10c), but they and the Paraclete will make this threefold witness.

In 1 John, God is (as in John 17:25) described as faithful and righteous (1:9), One who "will forgive our sins and cleanse us from all unrighteousness (*adikia*)." Likewise Jesus is righteous (2:1, 29; 3:7), in whom there is no sin (*hamartia,* 3:5; a term that 5:17 equates with wrongdoing [*adikia*]; cf. John 7:18). This threefold description of Jesus as the Righteous One is closely connected with expiation and forgiveness of sins (2:2; 3:5). Those who believe in Jesus are also termed righteous (3:7) and are characterized as "doing righteousness" (*dikaiosynē,* 2:29; 3:7, 10). Such a person is one who has been begotten/born of God (2:29; *dikaiosynē* is the consequence of being God's child, not the condition for it). See also 3:12, where Abel's deeds were righteous but Cain's were evil (cf. Brown *Epistles of John* AB, 209–10, 383–84).

The book of Revelation shares this pattern in that God (16:5) and God's judgments are described as just (15:3; 16:7; 19:2); Christ is said to judge in righteousness (19:11); and the Christian, described as righteous and holy (22:11), is encouraged to "do righteousness" (22:11), in contrast to the evildoer [*ho adikōn*] who does evil. Hence the holy God's judgments (*dikaiōmata*) have been revealed (15:4). Iniquities (*adikēmata*) are remembered (18:5), but "the righteous deeds (*dikaiōmata*) of the saints" are compared with the fine linen of the Bride (19:8). In the apocalyptic imagery there are several references to hurting or harming (*adikein*) the earth (7:2–3; 9:4, 10, 19; cf. 6:6) or God's witnesses (2:11; 11:5). That God avenges (*ekdikein*) is stated at 6:10 and 19:2.

F. Paul

1. Linguistic Overview. Some 45% of all *dik*-words in the NT occur in the Pauline corpus. Since only 21 (including *ekdikēsis*) occur in letters assigned to Paul late in his career or to other writers in the Pauline school (Colossians, Ephesians, 2 Thessalonians, the Pastoral Epistles, which will be treated separately in section G below), the bulk of the examples are in clearly genuine letters, over half occurring in Romans. A passage-by-passage analysis of all verses with *dik*-terms (Reumann 1982: ##77–162) reveals that the letters other than Romans and Galatians (which has 14 examples in its 6 chaps.) are by no means devoid of the them. In general, Pauline usage exhibits OT-Jewish roots and picks up post-Easter formulas of (Hellenistic-)Jewish Christianity which expounded the meaning of Jesus' death (see above). The lines of development are christological and soteriological, as well as eschatological and ethical.

To add to the picture all the *adikein* references means a further reflection of OT-Jewish usage. For there is the familiar contrast not only of the unrighteous (pagans—a theological, not an ethnic judgment [Dabelstein 1981]) with the saints/those sanctified and justified (1 Cor 6:1, 9, cf. 11) but also of human *adikia* with the truth (Rom 1:18, 29 [RSV wickedness]; 2:8; 1 Cor 13:6) and with God's righteousness (Rom 3:5; 6:13). One does not expect God to be unjust *(adikos),* though the theodicy question is raised at

Rom 3:5 and 9:14. The verb can mean "do wrong" (1 Cor 6:8; 2 Cor 7:2, 12; Gal 4:12) and "suffer wrong" (1 Cor 6:7; 2 Cor 7:12). Once Paul uses the noun ironically (2 Cor 2:13; cf. *TDNT* 1:151–52, 155–56, 160–61).

To bring in another related term: vengeance (*ekdikēsis*, Rom 12:19 = Deut 32:35; 1 Thess 4:6) belongs to God, not to human beings (Rom 12:19). But an earthly ruler is "God's servant, an avenger for (divine) wrath against the evildoer" (Rom 13:4). In the church community, disobedience is to be punished (*ekdikēsai;* 2 Cor 10:6), and the noun can mean punishment produced by godly grief (2 Cor 7:11; cf. *TDNT* 2:444–46).

2. Underlying Factors. Behind Paul's many references to righteousness/justification are several factors. It is necessary to appreciate these in order to understand his emphases on righteousness/justification.

a. Creedal and Hymnic Formulas. The creedal and hymnic formulas inherited from earlier "apostolic," especially Jewish, Christianity were one such underlying factor. Six of the 7 examples of such formulas cited above appear in Pauline letters, chiefly 1 and 2 Corinthians and Romans. Not Paul's own invention, "justification by faith is part of a Jewish-Christian theology" (Betz *Galatians* Hermeneia, 114, 115, 119). These earlier formulas exhibit a variety of backgrounds, especially in OT cult and sacrifice (2 Cor 5:21; Rom 3:25; 4:25), and reflect a variety of settings for use in congregational life, including baptism (1 Cor 6:11), hymns or creeds employed at worship (1 Tim 3:16 and others), and christological identity (1 Cor 1:30, "for us"). Some elements in the understanding of *dikaiosynē* in these (Hellenistic-)Jewish Christian texts would have been familiar to Paul's audiences through the synagogue; others (like cultic sacrifice) would have had some parallels in Greco-Roman life. If "covenant fidelity" was involved in any of these formulas, that would have been an alien theme to pagan ears and would have required clear explanation. The nuances that Paul's hearers would have brought to "righteousness/justice" language must also be kept in mind, including connections between *dikaiosynē* and faith (Dobbeler 1987: 102–14).

Therefore, much of what becomes the clearly articulated "Pauline doctrine of righteousness/justification" in Galatians, Philippians, and Romans must be accounted part of the inheritance Paul took over from earlier Christians, who created formulas about Jesus Christ and righteousness.

b. "God's Righteousness" (*dikaiosynē theou*). This phrase, which occurs in some of the pre-Pauline formulas (2 Cor 5:21; Rom 3:25, cf. v 26 "his righteousness"; 1 Cor 1:30, *apo theou dikaiosynē*), has, as a supposedly technical term in OT and Jewish apocalyptic literature, been taken as the starting point for Pauline development (Käsemann 1969; Stuhlmacher 1965; Reumann 1982: ##93, 133 [summary]). But reactions to this proposed background for the phrase—which occurs in Paul also at Rom 1:17; 3:5, 21, 22; 10:3; Phil 3:9, as well as in Matt 6:33, Jas 1:20, and 2 Pet 1:1, and possibly 2 Cor 9:8—have denied that the single OT reference (Deut 33:21, a verse Paul never cites) is the origin of Paul's usage (Lohse 1973:213–14) or that the Qumran data (1QH 4.30–32; 7.28; 17.20; 1QS 10.11–12; 11.2–3, 5, 9–12) are persuasive for fixing the Pauline sense (Lohse 1973: 214–17). The further contentions by Käsemann and pupils about *dikaiosynē theou*—that it means God's power or might (in terms of divine faithfulness to the covenant) and that it takes on a cosmic side (of God's loyalty to the whole creation)—must be taken with caution (Lohse 1973: 222–27). Although this corrective to an individualistic sense of justification should be welcomed, the phrase "righteousness of God" cannot be treated as a fixed apocalyptic phrase, or in isolation from other *dik*-terms in Paul. The genitive *theou,* though most likely one of "authorship"—righteousness that proceeds or goes forth from God (cf. Phil 3:9)—probably varies in sense, at times presenting an attribute or quality of God (subjective genitive, Rom 3:5) and also "righteousness before God" (objective genitive, cf. Rom 1:17; 2 Cor 5:21; cf. also Reumann 1982: #119; Cranfield *Romans* ICC, 95–99; and Wilckens *Romans* EKKNT 1: 86, 91–92, 202–33, who, like Lohse 1955: 227, stresses that in passages such as Rom 1:17, 3:21–26, and Phil 3:9–10, righteousness from God is also righteousness by faith).

c. Apocalyptic Context. A key for grasping Paul's understanding of righteousness is the apocalyptic context in which he wrote. But the concept of Pauline apocalypticism needs definition. Albert Schweitzer

(1931) employed eschatology of an apocalyptic sort to construct a logical (but mystical, though non-Hellenistic) Pauline theology. More recently Beker (1980) has made the apocalyptic language of Judaism, interacting with the resurrection of Jesus, the explanation for the coherent theme in Paul, an apocalyptic world view that unites the present triumph and lordship of Christ with the future triumph of God. The "apocalyptic dimension" of righteousness, as "both God's gift of salvation and his power that will encompass his whole creation," provides the basis for "Paul's hermeneutic of the lordship of Christ." The "symbol of righteousness" thus "constitutes the linguistic home of Paul's conversion experience because it was the language in which he received the Christophany and by means of which he broke with the Pharisaic life" and "righteousness under the Torah," though it is not Paul's only hermeneutic or master symbol (Beker 1980: 260–64).

But Paul wrote letters, not apocalypses, even though he incorporates parts of apocalyptic scenarios (1 Thess 4:15–17; 1 Cor 15:23–28) and writes of God's righteousness being "revealed" (*apokalyptetai*, Rom 1:17). He does use apocalyptic motifs, both from Christian tradition and probably directly from his own Judaism, but these he can then interpret through the themes of righteousness/justification (and reconciliation); cf. deliverance from "the wrath to come" in 1 Thess 1:9–10; 5:9, and then Rom 5:9–10; 8:31–39 (Schade 1981:47–49). Paul's eschatology does not begin with the future parousia but builds toward it, for Christ who justifies already reigns (Schade, 91–104, with regard to 1 Cor 15:20–28). Thus Paul's apocalyptic eschatology is of both the present and the future type, and he preserves "an irreducible tension between the 'already' and the 'not yet, ' which is generally absent from apocalyptic theology" (Keck 1984: 240). With regard to righteousness/justification, this means that we should sometimes expect to find "present realization" emphasized (Rom 3:24–28; 5:1), and sometimes its future aspect emphasized (Rom 5:9–10, "justification by faith as anticipation, as prolepsis," Keck 1984: 240; cf. Reumann 1982: ##141, 142, 147, 173). Indeed, one should probably regard as "apocalyptic" not only Käsemann's "cosmological interpretation" of righteousness/justification but also the interpretation of it in individual, anthropological terms: this is "forensic-eschatological" (Bultmann *BTNT* 1: 273–79).

d. The Pauline "Core." Phrases sometimes applied to Paul's notion of righteousness/justification label it the "essence of salvation" (*BTNT* 1: 271), the center of Pauline theology (Reumann 1982: ##192–216), or at least one of its "dominant perspectives" (Fitzmyer 1967: 79, 94–97; contrast 1982: ##403–7). Such prominence has likewise often been disputed, most commonly in preference for mysticisim (A. Schweitzer 1931: "in Christ") or salvation history (Stendahl 1963, but compare 1976: 23–40, 129–32, and Via 1971). Beker has spoken of the "coherent center" in Paul in a multiplicity of ways: as apocalyptic thought (1980: 15–16), the resurrection (p. 171), the lordship of Christ (p. 260), and the triumph of God (p. 355). While all such judgments may be influenced by later theological developments (or reactions to them), and while the quest for such a "center" reflects a desire for coherence amid contingent situations in Paul's varied letters, there is a case for arguing not only that righteousness/justification constitutes Paul's "proper" or "functional" Christology (Bultmann 1933: 262; Lührmann 1976; cf. Käsemann *Romans* HNT, 24; 1971b: 70–76), but also that it represents the center of Pauline soteriology. It rests on the extensive OT roots and pre-Pauline usage of the theme, on Paul's development of aspects of righteousness/justification, on its statistical frequence in a variety of applications, and on preponderance in Philippians, Galatians, and Romans. The endeavor of Sanders (1977: 434–42, 470–72, 543–52) to make "eschatological participation" central in Paul reflects nicely the apostle's eschatological emphasis and rests on a preference for "participatory" rather than "juristic" categories (even though Paul works with the latter and does not make such a distinction, p. 502). Admittedly, however, "righteousness by faith and participation in Christ ultimately amount to the same thing" (p. 506; cf. Reumann 1982: ##217–22, 408).

e. Baptism. The occasion for actualizing righteousness/justification in the lives of believers was baptism. This was true already in pre-Pauline praxis, as 1 Cor 6:11 shows (the aorist passive *edikaiōthēte* indicates the single event of baptism). The sequence in 6:11, "washed, sanctified, justified," may be found also in 1 Cor 1:30 in reverse: Christ is for us "righteousness, sanctification, and redemption" (Hahn 1976: 107–8; cf. Col 1:14; Eph 1:7, 14). Hymnic references with *dik*-terms may reflect at 1 Tim 3:16 Jesus'

baptism and at 1 Pet 3:18 (above, a possible *Sitz im leben* at baptism (cf. vv 20–21, "saved through water"). The view of baptism which Paul thus inherited likely maintained that a person was freed from sins through God's power to make righteous, which was connected with Jesus' death and resurrection and which was now available through baptism (1 Cor 6:11; Romans 6; Schnelle 1983: 101). In Hellenistic Christianity, notions that one was by baptism buried and raised with Christ through divine power may show mystery cult influence (Lohse 1965: 233–35).

Paul's particular contribution to baptism, in connection with his understanding of God's righteousness, lay in his emphasis on faith as the means for appropriating the salvatory event in Christ, rather than through transmission of a divine power or life force. To be baptized meant dying to sin's dominion and living obediently "in Christ," i.e., in Christ's body, the community of believers (Lohse 1965: 237–38). In this way baptism links righteousness/justification to ecclesiology. It is baptism which makes present for each individual the justifying righteousness of Jesus' death on the cross as a gift precisely for that person, thus preventing mere vague generalizing. But Paul's proclamation (cf. 1 Cor 10:1–13) also attacked magical interpretations of baptism as a guarantee of security. The use of *edikaiōsen* at Rom 8:30, "those whom God called he also justified … and glorified," probably also stems from baptismal tradition, as is suggested by the " 'image' of [God's] son" (v 29), which like "the glory," had been lost (3:23) and is now restored in Christ (cf. 2 Cor 3:18; 4:6; Käsemann *Romans* HNT, 245).

In later writings of the Pauline school (see below), righteousness/justification continued to be associated with baptism (Titus 3:4–7; Eph 4:24; 2:4–10, here with *sōzein*, "save," replacing *dikaioun*). But generally there was no overt connection made with "faith" (esp. in contrast to "law"), though "grace" and "forgiveness of sins" became more prominent (Hahn 1976: 95–104).

That Paul was himself baptized with a baptism involving the (pre-Pauline) understanding sketched above (cf. Rom 6:3; 1 Cor 12:13; Acts 9:18; Lohse 1965: 230–31) suggests that righteousness actualized in the lives of those joined to Christ was a factor in his Christianity from the outset. It is to be assumed in his message—but in varied reflections, not as a uniform and as yet fully developed doctrine (Schnelle 1983: 100–1)—before it becomes a topic of controversy in Galatians as to how one is justified/rightwised. Paul's identification of "righteousness by divine grace" with "righteousness by faith" represented a step beyond the earlier tradition. In some ways the post-Pauline usage was a return to the pre-Pauline view of baptism as a "washing" or rebirth (cf. 1 Cor 6:11; Titus 3:5–6; Hahn 1976: 104–5).

f. The Church (Community). Through baptism, the Christian community becomes apparent as the locus for the life of those justified/rightwised. To be washed/sanctified/justified places one in a group differentiated from the unrighteous (*adikoi*, 1 Cor 6:9–11). For even if some of the "justified saints" still do wrong (*adikeite*, 6:8), those now righteous are not to go on in their wrongdoing (6:7; Rom 6:1–2; Dahl 1977: 103–4). While Paul speaks of those in the Church of God as saints (holy ones, *hagioi*), elect and called (1 Cor 1:2) into the body of Christ, he never applies *dikaioi* ("righteous ones") to them, though he once employs the term for doers of the law who will be justified (= righteous before God, Rom 2:13; Reumann 1982: #124). Is this omission of *dikaioi* for Christians attributable to Paul's view that "no one is righteous" (Rom 3:10), that persons can be reckoned righteous by faith only through God's saving *dikaiosynē* (3:21–26) and thus justified (5:1, 9), and that this is not completed until the final judgment? Does this explain Rom 5:19, which states that by Christ's obedience "the many will be established as righteous (*dikaioi katastathēsontai*)" (cf. Gal 5:5; Käsemann *Romans* HNT, 157–58; Kuss 1957–78: 239)? Or does Paul's preference for the singular *dikaios* stem from the influence of OT citations (Gen 15:6 and Hab 2:4), as at Gal 3:11; Rom 1:17; and 3:26? The favored term is "believer(s)" (*pisteuōn, -ontes*, 1 Thess 1:7; Gal 3:22; Rom 1:16; 3:22).

An ecclesiology derived from righteousness/justification in Paul (Klaiber) has christology as its basis ("Christ our righteousness," 1 Cor 1:30) and baptism as the step that brings each individual into the corporate body of Christ. Baptism and faith, as complementary sides of the reception of salvation, bring one into a social, egalitarian community (Gal 3:25–29) where all have received the Spirit (1 Cor 12:12–13; Gal 3:1–5; Klaiber 1982: 182–90). This corporate realm or community of the Spirit is the place where

believers live out their existence in Christ, with "life because of righteousness" (Rom 8:10; cf. Klaiber, 106–12).

At the heart of Paul's thought is the justification of the ungodly (*asebēs*), which corresponds to the "creation of the church *ex nihilo*" by faith (Klaiber, 121; Romans 4, esp. vv 5, 9, 12, 16, 17, 23–24). Since this new community consists of Jews and gentiles justified by and through their faith (Rom 3:30), in which both groups regard Abraham as prototype (Rom 4:16; Gal 3:6–9), the phrases "seed of Abraham" (Gal 3:29; Rom 4:13, 16, 18) and *hyioi Abraam,* "sons (and daughters) of Abraham" (Gal 3:7) become significant (Klaiber, 29–30). This line of thought is carried further in chap. 5: those justified (*dikaiōthentes*) have peace with God and stand in grace and in the hope of sharing God's glory, even while suffering (5:1–3). The phrases "while still sinners … now justified by Christ's blood" and "while enemies … reconciled" (5:9–10) indicate the paradoxical contrast of "in the past" and "now" (while also pointing to future deliverance, "we shall be saved"). Also apparent is the universal significance of Christ's death for the entire world (cf. 2 Cor 5:19), a note sounded more fully in 5:12–21 ("for all persons") in terms of Christ's act of righteousness (*dikaiōma*) leading to "acquittal and life" (*dikaiōsis zōēs*) for all (5:18). "We" in this chapter suggests the corporate group of those justified, but the reign of grace "through righteousness to eternal life" (5:21) brings the Church into connection with the world.

There was, on the one hand, a sense of division from, or rejection of, the world in the concept of baptism as separation from those unrighteous who will not inherit God's kingdom (1 Cor 6:9–11). But Paul's development of Christ's act of righteousness in contrast to Adam's trespass, on the other hand, held out a far larger hope, ecclesiologically and cosmically, for the reign of grace through righteousness (Rom 5:16–21; 11:15). In the societal realm, the Church embodied justification and reconciliation by inclusion of Jew and Gentile, male and female, slave and free (Gal 3:28), for God's righteousness had broken down the barriers preventing access to God as well as the barriers separating human beings from one another (Klaiber, 122). Thus "the Pauline … doctrine of justification has a clear social relevance; it implies an understanding of what Christian community is, and it provides guidelines to show the members of that community how they ought to relate to one another" (Dahl 1977: 108). Such application precedes the polemical use of the theme in Galatians and can be said to find ecclesiological expression even where the concept does not appear in express words (Dahl, 110; Klaiber, 192). On this view, all offices of leadership and all ministries in the church community stand under the gospel as the experience of righteousness/justification in Christ, as do the gifts of the Spirit, grace for ministering, and concepts of what is right (*dikaion;* Recht, norms in community; members as instruments of righteousness, Rom 6:13–19)—all stand under Christ's lordship and ultimate judgment, in freedom but with responsibility to others (Klaiber, 195–97). In such a way the justification of the ungodly is said to shape ecclesiology.

g. Soteriology and Ethics. The two chief concerns of Pauline passages using "righteousness" terminology are soteriology and ethics (cf. the frequent distinction between God's righteousness and human righteousness [Ziesler 1972: 32–36, 162–63, 212] or between the "forensic" and the "moral" uses). Soteriological and ethical examples of *dik*-vocabulary will constantly be noted below. Paul, of course, also had other ways of expressing his gospel of salvation besides righteousness/justification (Reumann 1982: ##192–216), though these themes interrelate.

His ethic likewise included a variety of emphases, some forms of which, strikingly, do *not* use or only rarely employ terms from *dikaioun.* Such language never occurs, for example, in *Haustafeln* or in virtue lists but does appear in vice lists: Rom 1:29 (*adikia;* cf. 1:32, God's just decree, *dikaiōma*); 1 Cor 6:9 (*adikoi*); possibly Gal 5:22–23, if "fruit of the Spirit" there can be equated with "fruit of righteousness" (Phil 1:11, on which, see below), but even then righteousness is the "umbrella" or "source" term, not one virtue among many; note also Phil 4:8 (*dikaios* in a Stoic listing) and Rom 14:17 (righteousness, peace, and joy, possibly ethical, in a pre-Pauline statement). It is to be emphasized that "for Paul ethics is not a matter of paraenesis for the justified but rather the justification of the ungodly transforms the ethical situation of the doer with respect to the obligatory good [in the law, e.g.] and its ground [God], and with respect to the doer himself and his fellows [the community]"; the "righteousness of God apart from the law altogether" is what frees the believer to act freely (Keck 1976: 209; cf. pp. 206–7; cf. Haufe 1957).

It is now clear that the origins for Paul's extensive use of righteousness terms are not to be sought in a single cause (such as conflict with Judaizers), nor need one choose between the either/or of antithetical use of rabbinic terminology by Paul versus OT (LXX) usage. Rather, influential roles were played by pre-Pauline formulas, OT exegesis by Paul (of Gen 15:6; Hab 2:4; or Ps 143 [LXX 142:2], at Gal 2:16 and Rom 3:20), Paul's own religious experience (Philippians 3), disputes with "Judaizers" (Galatians, see below), possible Qumran influences (which at the least show how varied were contemporary Jewish views, in addition to those known from rabbinic sources), and even Greco-Roman conceptions of righteousness (as synonymous with *eusebeia/hosiotēs;* Rom 1:18, ungodliness [*asebeia*]; Dihle *RAC* 10:313). Given this many influences and the wide variety of situations addressed in Paul's letters, one should not expect in his writings a monolithic single sense for righteousness/justification. Paul's refinement of this doctrine which he "held in common with others" was to stress faith, not simply Christ, grace, and baptism; he used specific OT texts so as to exclude works of the Law as a condition and to include all, Jews and Gentiles, under his theology-grounding theme (cf. Dahl 1977: 96–97, 108).

3. Paul's Letters Generally. Apart from the three letters by Paul that especially deal with righteousness/justification (Galatians, Philippians, Romans), the other four unquestionably assigned to him by modern scholarship (1 Thessalonians, 1 and 2 Corinthians, Philemon) only occasionally employ *dik*-terms. 1 Thessalonians, that initial experiment in Christian communication by letter between apostle and struggling community, and then 1 and 2 Corinthians (or the fragments of several letters embedded in them; see Reumann 1982: ##86–88, 97, 107, 113 for possible significance of such theories for the topic) are too oriented respectively to specific situations in Thessalonica and Corinth to call for any massive development of the theme of righteousness (but cf. Fung 1980). Philemon is too brief and concerned with the problem of the slave Onesimus to allow such references. As a practice in all his letters, Paul employs the noun *dikaiosynē* in preference to the adjective *dikaios,* and the noun in particular senses, not just the adjectivally derived ones of "being upright" and "doing right" (Wilckens *Romans* EKKNT 1: 209).

a. Pre-Pauline Formulas. Pre-Pauline statements about righteousness are incorporated into significant passages of 1 and 2 Corinthians. In 1 Corinthians the christological sense is found at 1:30, of Christ as *dikaiosynē* for us, and in 6:11, "You were justified." The Corinthians were likely already familiar with both aspects, and the references served as basis for discussion of what was under dispute: Christ as God's wisdom (1:17–3:23) and (in chap. 6) the community's relation to the ungodly (*adikoi,* 6:9, in a set tradition cataloging those who will not enter the kingdom of God).

In 2 Cor 5:21, perhaps the heart of chaps. 1–9, there occurs the earliest of 10 Pauline references to "God's righteousness" (once in Philippians, 8 times in Romans). It deals not only with the basis for appeals concerning reconciliation with God (5:20–6:10) and with the Pauline apostolate (6:11–7:3), but also with the Corinthians' participation in the collection project (chaps. 8 and 9; Furnish *2 Corinthians* AB, 348–49). In its immediate context, this "soteriological credo" with which Paul works (v 21 about rightwising) is expanded not only by use of "new creation" (5:17) and "reconciliation" language (5:18–20) but also by reference to "salvation" (6:2). "Cosmic reconciliation" in vv 18–21 is grounded in Jesus' death for all (vv 14–15), and the mechanics of how the formulation in v 21 is to be explained include identification of God with humankind "through Christ" (18, cf. 19), as "representative" figure ("one … for all," 14, 15), with an "interchange" or transference (so that Christ becomes "sin[-offering]" and we become "the righteousness of God," v 21). The reconciliation that results is the message, the content of ministry, and the ground and content of appeal (Martin *2 Corinthians* WBC, 141–51). If in v 19 "not counting (*logizomenos,* reckoning, as in Rom 4:3–12) their trespasses against them" is taken as an insertion by Paul into traditional material (Martin, 139, 142, 145, 154), then there is a reminiscence of OT verses about righteousness/justification (Gen 15:6; Ps 32:2, as at Rom 4:3, 8). Further, Paul has there introduced a "framework of justification," and this "idiom of justification" clarifies how, in reconciliation, " 'righteousness' is God both setting men and women right with himself and justifying himself" (Martin, 149, cf. 139–40).

In the contents of 2 Corinthians as a whole, the description of Christians as "the righteousness of God" (5:21) may be further reflected at 6:14: "What partnership have righteousness and lawlessness?"

Whatever the origins of 6:14–7:1 (and the tendency in the commentaries by Furnish [383] and Martin [195] is to see a non-Pauline, perhaps Essene, composition used by the apostle), in the redacted letter this first of five antitheses—which parallel *dikaiosynē* with light, Christ, the person who is faithful (*pistos*) or a believer, and the temple of God (6:14–16), all of which "we," the community, are—seems to have a practical ethical sense. The case for seeing here "God's gracious gift of acquittal" or justification depends on reading in other aspects of *dikaiosynē* from 11:15 and Romans (cf. Martin, 198).

b. OT Background. An OT background for righteousness may thus appear in 2 Cor 5:19. It could also have appeared, but does not, at 1 Thess 5:8. There Paul reflects Isa 59:17 about God putting on "righteousness as a breastplate, and a helmet of salvation on his head." But while the two items of armor are kept, a triad of qualities which have been mentioned at 1 Thess 1:3—faith, love, and hope—are inserted with reference to Christians: "put on the breastplate of faith and love and for a helmet the hope of salvation." God's righteousness in Isaiah becomes in 1 Thess 5:8 the Christians' faith and love. Indeed, at 1 Thess 1:3 it was the Thessalonians' "work of faith (*ergon tēs pisteōs*) and labor of love" that was mentioned. This sense, of "a deed rising from faith," is "studiously avoided" in Paul's later letters, "when the problem of the Judaizers has surfaced," and *pistis* is never again so connected with *ergon* (which came then to imply "deeds of the law," Rom 3:28), but is connected rather with righteousness from God (Fitzmyer 1982: #377).

2 Cor 9:9 is an explicit quotation from Ps 112:9 [LXX Ps 111:9] about the person whose "righteousness abides for ever." In the original Hebrew and LXX, this is a reference to the benevolence or almsgiving of the righteous person (112:6). It may be cited here to characterize how Paul hopes the people in Achaia (9:2) will respond abundantly to the "good work" (9:8) of the collection for the saints in Jerusalem. Use of *dikaiosynē* in this way would also appeal to the Greco-Roman audience in Corinth and Achaia, for it could suggest "equality," a basis for appeal that Paul has used at 8:13 (*isoteμs*), "your abundance at the present time supplies their wants, so that [someday] their abundance may supply your want, that there may be equality"; cf. Lührmann *TRE* 12: 417). But v 10 presents God as the subject. If God is also the subject of v 9 (so H. D. Betz *Corinthians 8–9* Hermeneia, 111; Martin *2 Corinthians* WBC, 291; cf. Furnish *2 Corinthians* AB, 448–49), then we have a second reference to "God's righteousness" in 2 Corinthians, and a well-documented Hellenistic theme of "God the provider" is in view (Betz, 112–13). Furthermore, 9:10 uses a phrase (here italicized) from Hos 10:12 LXX, God "will multiply your seed and increase *the harvest of your righteousness*" (or "fruits of righteousness," *genēmata tēs dikaiosynēs hymōn*). Again the OT sense can be paralleled in Greek thought: "the earth willingly teaches righteousness to those able to learn, for to those who serve her better she yields more good things" (Xen *Oec.* 5.12). In context the "produce" would be an abundant collection for Jerusalem. In this "agricultural argument," Paul here employs "God's righteousness" in v 9 to provide the basis for the "human righteousness" of the Corinthians in v 10 "by establishing its economic basis" (Betz, 114). Others have seen in God's righteousness in v 9 a forensic sense so that "Paul is building on God's justifying action," and the response of the Corinthians is a token of their "right relationship to God" (Martin, 291); or "their charitable act is a part of that larger righteousness of God by which they themselves live and in which they shall remain forever" (Furnish, 449, noting that Hos 10:12 LXX reads "sow for yourselves righteousness, gather in the fruit of life," paralleling *dikaiosynē* and "life").

c. Righteousness as Salvation. This notion is indicated in certain of these passages (cf. above on 2 Cor 5:21–6:2; 2 Cor 9:9 in some interpretations; and, less likely, 6:14), based upon Christ (1 Cor 1:30) as righteousness and redemption. In the midrash on Exod 34:29–35 found in 2 Corinthians 3—possibly a sermon Paul gave in synagogues—the *a minori ad maius* contrasts include the ministry (RSV "dispensation") of death, condemnation, and what fades away versus the ministry of the Spirit, righteousness, and what is permanent (3:7–11; Martin, 58–59). This superior "ministry of righteousness" (3:9, subjective genitive, "based on *dikaiosynē*"), embodied here in Paul and colleagues (3:6), offers, according to various interpretations, God's power against death and condemnation, entry into new creaturehood, God's whole intervention in Jesus and its benefits, and forensic righteousness in human lives (Reumann 1982: ##92–94; Martin, 63). Noteworthy are the coordination of righteousness with Spirit

(3:8, 17–18) in contrast with Sinai and law (in terms of "old covenant"; *nomos* never occurs in 2 Corinthians), and the connection with apostolic office. Paul's "conception of apostleship is closely tied to his conception of the gospel, at the center of which is Christ's death, interpreted as an act of justification"; in this chapter "Paul's commitment to the idea that justification comes as a gift is fundamental to the argument, and sometimes rises to the surface (e.g., 3:3, 6, 7, 9)" (Furnish, 229, 228). Related is the designation of the opponents in 2 Cor 11:15: they disguise themselves as "ministers of righteousness." This likely reflects their claim to moral rectitude and status as "apostles of Christ" (v 13) and of "Righteousness" (perhaps God or Christ; it is too speculative to try to reconstruct their distinctive teaching, if any, on justification). Paul, with primeval and apocalyptic overtones (the serpent and Eve, Satan as angel of light, vv 3, 14; Kleinknecht 1984: 292–93), rejects these "false apostles."

The phrase at 2 Cor 6:7, "with the weapons of righteousness for the right hand and for the left," depicts the mission of God's true servants in military terms (cf. 1 Thess 5:8, above). 2 Cor 6:4–10, possibly from a source, uses rhetoric familiar to Stoics and the Greek world (v 6, virtues catalogue; 4b–5, list of tribulations) but also akin to Jewish apocalyptic thought (cf. *2 En.* 66:6, virtues and afflictions in which "the righteous" walk). For "weapons of righteousness," appeal has been made to the Cynic philosopher's "weapons of the gods" (Furnish, 346) and to Qumran apocalypticism (battle standards inscribed "Truth of God," "Righteousness of God" [*ʾēl ṣedeq*], and "Right Hand of God," 1QM 4.6–7; Kleinknecht, 264–65, who also [p. 268] sees here the "righteous sufferer" fighting in God's battle). The righteousness phrase at 6:7 marks a turn from 18 items introduced by the Greek preposition *en,* most of them forms of suffering or character traits, to means (now introduced by *dia*) for God's servants to endure in their paradoxical existence (vv 7–10). While a sense of moral strength may adhere to *dikaiosynē* in v 7 (Ziesler 1972: 161), the translation "weapons that God's righteousness has provided" (Furnish, 346) is supported by connection with the Holy Spirit (v 6) and "the word of truth" and "the power of God" (i.e., the gospel) in 7a (cf. Martin, 178–79); this equips the minister for what follows (7b–10). The passage is at least partially autobiographical of Paul.

d. Ecclesiological Applications of Righteousness. These have already been touched on through references in these passages to the apostolic ministry and, through the use of "we" at points, to the community (2 Cor 3:9; cf. vv 6, 12, 18; 6:7; 6:14, cf. 16; contrast 11:15).

e. Apocalyptic Tones. At times such tones can be heard (cf. above, on 2 Cor 11:15 and 6:7; also 5:20–6:2, "now is the day of salvation," present eschatology). Paul's passing remark in 1 Cor 4:4, "I am not aware of anything against myself, but I am not thereby acquitted (*dedikaiōmai*)" —made in the context of a discussion of apostolic ministry—relates justification (v 4) with future judgment (v 5), when God, not human consciences, will pronounce acquittal and commendation.

f. Autobiographical References. Paul's references to himself can be seen in 1 Cor 4:1–4 ("I"), in 1 Thess 2:10 (our conduct toward you believers was "holy, righteous, and blameless [*hosiōs kai dikaiōs kai amemptōs*]," a natural combination in the first two adverbs for a Greco-Roman audience), and in 2 Cor 5:20; 6:3–10 (cf. 1 Cor 4:9–16), 11–13; 7:2–4.

g. Ethical Aspects. The ethical aspects of *dik*-vocabulary stand out most in these letters. 1 Thess 2:10 claims that Paul's own life among converts was "holy and righteous" (*hosiōs kai dikaiōs*, a traditional combination in Greco-Roman morality). He describes the community as "righteousness" in contrast to unbelievers (2 Cor 6:14). "The unrighteous" (*adikoi*) is a term for those outside the Church (1 Cor 6:1; cf. 5:12–13), not as a moral judgment (as if their courts lacked justice) but as a contrast with "believers" who are righteous. Yet *adikoi* can also be the key term in a list of those who practice vices that exclude one from the kingdom (1 Cor 6:9). The verb *adikein* is used by Paul in the sense of "do wrong" (1 Cor 6:8; 2 Cor 7:12), "wrong" someone (2 Cor 7:2; Phlm 18), and in the passive "suffer wrong" (1 Cor 6:7; 2 Cor 7:12). The noun *adikia* can also be employed in the sense of a wrong committed (1 Cor 13:16; 2 Cor 12:13, ironically, "Forgive me this wrong!"). The adverb *dikaiōs* is once used in paraenesis, "Sober up, rightly" (1 Cor 15:34) or "as you ought" (BAGD). The sense of "benevolence" for *dikaiosynē* (2 Cor 9:9–10, RSV note) has been discussed above. Use of *isotēs*, "equality," at 2 Cor 8:13–14 may also reflect the Greek sense of *dikaiosynē*, though it scarcely suffices (Dihle *RAC* 10: 235); Lührmann (*TRE* 12: 418)

would see the *isotēs* theme reflected chiefly in references to "no distinction" between Jews and gentiles (i.e., all are sinners, Rom 3:22; 10:12).

4. Philippians. This epistle is significant for its firsthand description of Paul's personal experience with two kinds of righteousness, that of his own, based on law, and that from God (*tēn ek theou dikaiosynēn*), "which is through faith in Christ" (*dia pisteōs Christou,* 3:9 RSV). The context in chap. 3 is warning against "evil-workers" who are "enemies" of the cross of Christ" (3:2, 18–19). Yet the content is not simply polemical but rather an assertion of true identity for the community in Christ now (3:3) and at the coming of the Savior Jesus Christ (3:20–21). Within the *inclusio* framed by 3:2 ("look out") and 4:1 ("therefore … stand firm"), Paul does not employ OT scriptural proof (as in Galatians and Romans) but autobiographical narrative ("I," 3:4–14). This apology presents first his life as a zealous Pharisee (vv 4–6): Saul of Tarsus was "blameless (*amemptos*) as to righteousness under the law (*dikaiosynēn tēn en nomō*, 3:6)." But in a great reversal of values he learned to consider all as loss in comparison with being found in Christ (vv 7–11).

Within this *narratio*, the proposition espoused in vv 9–11 is presented through a doubly chiastic structure (Reumann 1982: ##110–11) that (1) contrasts "my own righteousness based on law" with that from God through faith (v 9), and (2) relates knowing the power of Christ's sufferings and resurrection to Paul's own baptismal experience ("becoming like him in his death"; cf. 1 Cor 6:11; 12:3; Rom 6:4) and to his hope to "attain the resurrection from the dead" (Phil 3:12). It is possible that the background for Paul's use of righteousness in Philippians 3 lies in Jewish proselyte baptism and the *ger ṣaddîq* (or "righteous proselyte") who accepts the covenant, circumcision, and obedience to all the law (Sanders 1977: 200, n. 96, 206), as in the Thirteenth Benediction (in contrast to the Twelfth), as developed by Jewish agitators threatening Philippi (Schenk 1984: 302–3). More debatable is the assertion that ascent of the convert into the heavenly world is involved—compare "resurrection" (3:10 *anastasis, exanastasis*) and "upward call" (3:14) with 1QH 3.19–22; 11.11; 15.17 and *Joseph and Aseneth* 15.4–5 (Schenk, 303–5).

Righteousness/justification in Philippians 3 includes both gift ("from God," v 9) and power (v 10), though Paul makes clear he has not obtained "perfection" or resurrection (3:12–16); hence he directs the implication of his experience in Christ into ethical channels (vv 15–17; 4:1). The passage is emphatic that faith is the way one receives this righteousness from God: "through faith in Christ" (v 9, RSV); it is "righteousness from God that depends on faith to know Christ" (3:9, *dikaiosynēn epi tę̄ pistei*), an "unambiguous instance … of a justification 'pronounced' on the basis of the believer's faith" (Cosgrove 1987: 667, n. 34). Although Paul speaks here in first person singular, there is reflection of the corporate aspect of being "in Christ" through address to the brothers and sisters (3:13, 17; 4:1) and use of we/us (vv 15–16, 20 "our commonwealth").

The ethical side of this righteousness/justification is to be seen in 1:10–11, the prayer that the Philippians "may approve what is excellent (*ta diapheronta*) and may be pure and blameless (*aproskoptoi*) for the day of Christ, filled with the fruits of righteousness which come through Jesus Christ (*karpon dikaiosynēs ton dia Iēsou Christou*) …" The fruit (sing.) is ethical, the genitive one either of origin (Ziesler 1972: 151; cf. Prov 11:30; Amos 6:12) or of authorship; indeed "of righteousness" may be equated with "through Jesus Christ" (Schenk, 121–23). Reference to "the day of Christ" suggests the forensic tone of the last judgment. More concretely, 4:8 includes "things righteous" in its list of six virtues, all characteristic of Hellenistic popular morality: "whatever is true, honorable, just (*dikaia*), pure (*hagna*), lovely, gracious, if there is any excellence (*aretē*), any praiseworthiness, continue to take these things into account." But the term are subordinated not to *aretē* as chief virtue (as they would be in Greek thought) but rather to eschatology (4:5, "the Lord is at hand"), the promise of God's peace (vv 7, 9b), magnaminity to all (v 5a NEB), and Paul's own teaching and example as norm (v 9a; cf. the narrative of 3:4–17). Phil 1:7 uses "it is right (*dikaion*)" in the sense of what is proper and just, although it does so in an "I" section (vv 7–9a), "right for me" in Paul's partner-relation with the Philippians in the gospel.

5. Galatians. Some see justification by faith as the predominant theme (Brinsmead 1982: 200–202; Walsh 1987: 156–64; Fung *Galatians* NICNT, 315–20), reflecting the controversy over how righteousness/justification comes about (2:21)—whether by Christ's death and through faith, or in the

sphere of law, through "works." It also reflects the controversy over *who* is justified, persons of faith (3:7) or those who perform all things that are in the law, including circumcision (3:10–14; 5:2–4; 6:13–15). At issue for Paul is "the truth of the gospel" (2:5, 14), the proclamation about Christ crucified (1:4, 16; 2:20; 3:1) and about "the faith" (1:23), with which his own status as an apostle or messenger sent by Christ is intertwined (1:1, 15–17, 19; 2:7, 9). In the polemics Paul rebukes Cephas (Peter) for breaking table fellowship with Gentile Christians at Antioch (2:11–14), appealing to the Galatians to stand firm in the freedom they received (5:1, 13) and to live and walk in the Spirit (5:16, 25) that was granted when they responded to Paul's gospel proclamation and were baptized (1:6, 11; 3:1–5, 23–29; 4:8–9, 13, 15). Righteousness/justification is no new topic for those involved in the discussion. After all, "justification by faith is part of a Jewish-Christian theology" (Betz *Galatians* Hermeneia, 114–15, 119) which Paul shared with Peter and other Jewish Christians (2:15–16) and with the Galatians (3:2, 24–29; Fung *Galatians* NICNT, 112–13, 126–27). But how does it now apply to Gentiles, in the face of demands by other missionaries that the Galatians add to faith "works of the law"?

Paul's *propositio* comes in 2:15–21 as part of his address to Peter at Antioch (NIV; Fung)—or more likely an extension of it (RSV; NEB). For the first time in his extant letters Paul fleshes out what "we (Jewish Christians) know" as the gospel, doing so in *dik*-terms: "a person is not rightwised/justified (*dikaioutai*) on the basis of (*ex*) works of law but only (cf. NEB) through faith in Jesus Christ (*dia pisteōs Iēsou Christou*)" (v 16a). This negative, then positive, statement is reiterated twice more. "We too have come to believe in Jesus Christ (*episteusamen* + *eis* + accusative, which Fung [*Galatians* NICNT, 138, n. 30] thinks may be a Christian coinage) in order that we might be rightwised/justified on the basis of faith in Christ (*ex pisteōs Christou*) and not on the basis of works of the law" (v 16b). The final assertion (16c) uses as scriptural proof wording from Ps 143 (LXX 142):2 (italicized here): "for by works of the law *no* human being (*sarx*) will be rightwised/justified." In this movement from general principle to "our" experience to OT support, it is unlikely that v 16a represents Christian "covenantal nomism" about Jesus as Messiah where only certain laws like circumcision are rejected (so Dunn 1983; contrast Fung *Galatians* NICNT, 116 n. 23). Instead, the implications of OT-Jewish ideas about righteousness and judgment, as reworked in light of Jewish-Christian formulas about Jesus' death and righteousness, are here being applied with regard to Gentiles (Betz *Galatians* Hermeneia, 116–17). Paul insists that for all, Gentiles included, the soteriological medium is Christ, not law (Cosgrove 1987:661, 664; "the law and the doing of the law are impotent to produce righteousness," 662; cf. 3:11). The particular demands raised by the opponents in Galatia, with regard to observances the law calls for, causes Paul to stress faith (Reumann 1982: #100).

In 2:17–18 Paul defends his position against the charge that such a view of righteousness encourages sinning: "if we, while seeking to be rightwised/justified 'in Christ, ' be found, even we ourselves, to be 'sinners' [in the Jewish sense, v 15, of those not observing the law], has Christ then (as opponents charge) become 'an abettor of sin'?" This cannot be, Paul replies. The premise about "gentiles/sinners" is false. The phrase "in Christ" (v 17, *en Christō*) "introduces the corporate, communal side of righteousness/justification (Betz *Galatians*, 119–20), the new sphere of life for believers. The issue of table fellowship (2:11–14) also shows the social context and issue of church unity. Verses 19–20 bring in the positive point that justification (by God's grace, v 21a) means life. Verse 21 reiterates that *dikaiosynē* (righteousness/justification) results not from law but from Christ's death. In vv 19–20 the result of justification as life is presented autobiographically ("I," though also applicable to all believers), with reference to baptism as background ("died," "crucified with Christ," "I live"; Brinsmead 1982: 73–75, 141, 157, who sees circumcision as a "sacrament" of the opponents, pp. 139–61; Schnelle 1983: 54–56; cf. 3:26–28; more cautiously, Kertelge 1967: 242) or as the principle by which Paul interpreted baptism in Rom 6 (Betz *Galatians*, 123).

Galatians 3, as a *probatio*, presents confirmations of the new status of the justified believers in Galatia. The results of the gospel Paul proclaimed about Christ crucified, about righteousness, and about faith (3:1, 2, 22–25) include the gift of the Spirit (inconceivable without the declaration of "justified," Williams 1987a), divine working of miracles (3:2–5), fulfillment of the covenant promise to Abraham (3:15–18),

and status as sons and daughters, heirs and heiresses, "in Christ" (3:25–29). One particular proof is scriptural, from the OT story of Abraham (3:6–14, 16–18, 29). Use of Gen 15:6 by Paul in 3:6 was likely necessitated by his opponents' citation of it. That Abraham "believed God and it was reckoned to him as righteousness" was variously interpreted in Judaism. See RIGHTEOUSNESS (EARLY JUDAISM), and Fig. RIG.01. Those who in Galatia stressed works of the law and circumcision (3:10; 5:2; 6:13) possibly combined Abraham's faith with his deeds (Betz *Galatians,* 139, 141) or viewed his faith in 15:6 as "a meritorious work" (Fung, 135). Paul instead makes "Abraham who had faith" (3:9, *tō̧ pistō̧ Abraam*) the prototype of all persons of faith (*hoi ek pisteōs,* 3:6, 9), Gentiles also being included in God's blessing on him (3:8, 14).

The negative proposition of 2:16, repeated in 3:11, is contrasted with an OT citation (italicized below) from Hab 2:4, another verse with a varied history of interpretation in Judaism: "No one is justified before God by the law (or "in the sphere of the law," Cosgrove 1987: 662), for '*the person who is righteous by faith shall live.*' " Paul's interpretation, which differs from the several in Judaism and Heb 10:38–39, is marked by his view of faith, *ek pisteōs* (vv 7, 8, 9, contrast 10 *ex ergōn nomou*), which he has defined in 2:16c as "believe in Jesus Christ." Gal 3:24 repeats that "Christ came in order that we might be justified *ex pisteōs,*" in contrast hypothetically to righteousness by law which could bring life (3:21, contrary-to-fact condition). The manner in which Paul employs the Abraham material gives a salvation-history sweep to the gospel that the OT Scriptures proclaimed (3:8) concerning righteousness and faith (Fung, 153, 319–20).

The single use of *adikein* in 4:12 ("you did me no wrong") adds nothing significant on righteousness, but 5:4–5 does. With reference to those in Galatia "trying to get justified/rightwised [conative present, cf. 2:17] in the realm of law," Paul says, "you have become severed from Christ, you have fallen from the sphere of grace" (5:4). In contrast, "we (the believing community) are awaiting (an eschatological term; Phil 3:20; Rom 8:19, 25), by the Spirit (Gal 3:2, 3, 5, 14; 4:6), on the basis of faith (*ek pisteōs;* 2:16; 3:2, 5, 7, 8, 9, 11, 12, 22, 24; cf. 3:14, 26), the hope of righteousness." Out of half a dozen interpretations for *elpida dikaiosynēs* here (cf. Fung, 224–28, who prefers "the hope to which the justification of believers points them forward"; cf. Ziesler 1972:179–80), a future-eschatological aspect of justification is most likely (Reumann 1982: ##104, 147, cf. 398; Cosgrove 1987: 653–54, 669–70) when those things that God has declared will be fully realized, for righteousness is not at the believer's disposal.

That Paul's gospel of righteousness as salvation has implications for ethical actions is readily apparent in Galatians (5:6–6:10; Haufe 1957), but *dik*-vocabulary is not involved in the ethical sections of this letter.

6. Romans. Paul's epistle to the Romans presents the righteousness of God (1:17; 3:5, 21, 22, 25, 26; 10:3; Williams 1980) as coherent center of a letter in which Paul may reflect on experiences in Greece and Asia Minor, some knowledge of the situation in Rome, and possibly the state of Christianity in Jerusalem. This centrality of righteousness/justification is particularly apparent when eschatological aspects of the phrase are kept in mind (with Beker), and it is regarded as "a code-term for the consistent vision of the salvific triumph of God" (Soards 1985:108–9). The genitive in *dikaiosynē tou theou* is best taken as one of authorship (cf. Phil 3:9), which shades at times into a subjective genitive, "righteousness as an attribute of God" (3:5), and which functions in other passages so as to provide for human beings a righteousness/justification that holds up at the final judgment (3:22, 24; 10:3; cf. 5:19; 3:20). It is at times spoken of as a "faith righteousness" (*ek* or *dia pisteōs*) apart from works for those who believe (1:17; 3:21, 22; 10:4, 6, e.g.; Wilckens *Romans* EKKNT 1: 204–5). The concept is not simply individualistic (Bultmann 1964, though it addresses individuals [Grässer 1984: 231–33]). It has a corporate, if not cosmic, side (Käsemann 1969), although its depiction as "power," especially as "God's power as Creator" (Stuhlmacher), can be overdone (Lohse 1973: 223–26; cf. Stuhlmacher 1986: 91–92, n. 16, 108–9, nn. 60, 63). In spite of the paucity of covenant references in Paul, the understanding persists of "righteousness in covenantal terms" (*IDB* 4:91–99; P. Achtemeier 1985:61–66, "rectitude by trust"). Danker (1972) has sought to show commercial "contract language" in Romans (3:5, God's fidelity to "contractual obligations"; 4:3–5, "put down [righteousness] to one's account").

One can view "the righteousness of God" (8 of the 9 or 10 occurrences of *dikaiosynē theou* in Paul occur in Romans), especially the four examples in 3:21–26, as the basis for the entire letter, or at least for 1:16–5:21 (Wilckens 1: 119–208). Or it has been argued that a chain of phrases, creedal in nature, shapes chaps. 5–8 (Fuchs 1949: 115–18):

[We believe in] Jesus our Lord,
who was put to death for our trespasses
  and was raised again for our justification (4:24–25),
who is at the right hand of God,
  and who intercedes for us (8:34cd),
  through whom we have access to God (5:1–2).

A clear guide is the use of pre-Pauline formulas, likely known at Rome. The formula at 3:24–26 and the phrase *dikaiosynē theou* in the formula at 2 Cor 5:21—as developed in Romans (Wilckens 1: 207–8) and leading to the use of the phrase at 3:5 in the sense of God's own righteousness—account for the outline that emerges: theme (1:16–17); Gentiles and Jews alike under God's wrath (1:18–3:20; "our *adikia* serves to show God's *dikaiosynē*," 3:5); the righteousness of God (*dikaiosynē*) as justification of the ungodly, through faith (3:21–5:21); the effects thereof (chaps. 6–8), especially for Israel (chaps. 9–11) and in believers' lives (12:1–15:13).

The theme of Romans is stated as the gospel in terms of "God's righteousness" and "righteousness by faith" (1:16–17). This gospel about God's Son, and for which Paul is set apart (1:1–3, 9) and which he is eager to preach in Rome (1:15–16a),

is the power of God for salvation to everyone who has faith, both to the Jew first and to the Gentile.
[17]For the righteousness of God (*dikaiosynē theou*) is being revealed in it (*en autō apokalyptetai*) through faith for faith (*ek pisteos eis pistin*). As it is written, "The person who through faith (*ek pisteōs*) is righteous (*dikaios*) shall live" (Rom 1:16b–17).

Apocalyptic eschatology, scriptural fulfillment, universal concern for all people, God's power at work to save, the gospel's content as God's *dikaiosynē*, and the triple emphasis on faith are apparent. Insofar as the gospel is "about God's Son" (1:3–4, 9), "the doctrine of justification" here becomes "the specifically Pauline understanding of Christology" (Käsemann *Romans* HNT, 24). The sense of the genitive "of God" (1:17) remains to be defined by later references, but the salvific sense of God's righteousness as "gospel" is clear. The words *ek pisteōs* in v 17a derive from the same phrase in v 17b (= Hab 2:4, the only example of the phrase in the LXX); in v 17b it goes with *dikaios* (RSV; NEB "justified through faith"; contrast KJV "live by faith"). These words, together with *eis pistin*, have been taken to mean growth in faith; "from the faithfulness of God to the faithfulness of believers"; the obedient faith of believers (Gal 3:2; Rom 3:22) which leads to proclamation of God's righteousness to the world (Rom 1:5; Wilckens 1: 88, 205: reception and address); or as a hendiadys for the sphere of faith (TEV: "faith alone, from beginning to end"; cf. Corsani, [1984], whose evidence suggests an eventual contrast to law and works [4:16; 9:32; 10:5–6]).

Is a part of this gospel also "the wrath of God" which, according to 1:18, "is being revealed (*apokalyptetai*) from heaven against all ungodliness and human wickedness (*adikia*)"? Some find a single process here, either in light of OT oracles about salvation and judgment (Herold 1973) or by understanding *en autō* again in v 18 ("in it," i.e., when the gospel is proclaimed; Wilckens 1: 102). But *gar* in 1:18 can be claimed to begin a new section, and the phrase "from heaven" is to be taken as a contrast: divine wrath is revealed not in the gospel proclamation about Christ but by God's apocalyptic actions apart from Christ (Käsemann *Romans* HNT, 35; Schade 1981: 47–48).

A number of *dik*-words are employed in Paul's indictment in 1:18–3:20 of both Gentiles and Jews as sinners before God. A distinction is made between "God's *dikaiokrisia*, 'righteous/just judgment' (2:5), which affects the wicked" and God's "*dikaiosynē*, by which he justifies the sinner" (Fitzmyer 1982: #389). Note *adikia* at 1:18 ("wickedness by persons who by their wickedness suppress the truth"); 1:29 ("filled with all manner of wickedness"); 2:8 (those who "obey wickedness"); and 3:5 ("our wickedness"). Twice the relatively rare word *dikaiōma* is used, for "God's decree" for Gentiles (1:32) and

for "the precepts of the law" for Jews (2:26). Both adjective and verb occur at 2:13: "not those who hear the law (are) righteous (*dikaioi*) but the doers of the law will be justified/rightwised (*dikaiōthēsontai*)." But Paul's conclusion, enunciated from Scripture (Ps 14:3; cf. Eccl 7:20), is that before God "no one is righteous (*dikaios*), no, not one" (3:10); "no human being will be justified in God's sight" (Ps 143:2, LXX 142:2), Paul adding "by works of the law, since through the law comes knowledge of sin" but not salvation (3:20). The law is thus declared impotent to produce salvation (Cosgrove 1987: 664; cf. 7:7–8; 8:3). Words like *adikia, apistia,* and *ethnē* (2:14, 24) represents a theological judgment that includes Jew as well as non-Jew under sin (3:9; Dabelstein 1981).

In 3:1–9 Paul asserts the particular dilemma he sees for the Jew in the face of God's righteousness and righteous judgment. The passage is cast in dialogue form with questions a Jewish opponent might raise and that were likely posed against Paul in Christian circles:

Jewish faithlessness does not nullify the faithfulness of God (v 3);
our wickedness (*adikia*) serves to show the *dikaiosynē* of God (v 5);
through my falsehood God's truth abounds (v 7);
do evil that good may come (v 8).

Paul dismisses the last item as a slanderous charge (cf. 6:1–2); the condemnation of such people "is just" (*endikon*). In v 5 "the justice of God" denotes an attribute, that God keeps faith to promises made; "covenant fidelity or loyalty" on God's part is thus the common recent interpretation, even if *diathēkē* is not mentioned here (but cf. 9:4; 11:27). Yet the problem is that "the Jew" described in chap. 2 has "broken covenant" by being unfaithful and guilty of wickedness (3:3, 5). Paul's emphasis is, "Let God be true, though every one is false" (3:4), citing Ps 51:4 (LXX 50:6) in 3:5:

That thou [God] mayest be justified (*dikaiōthęs*) in thy words,
and prevail when thou art judged.

Paul's theodicy maintains that God is not unjust (*adikos*) in inflicting wrath on us (v 5), for God will judge the world. The solution is to point to God's *dikaiosynē* as saving righteousness (3:21–26), manifested in the cross of Christ as expiation for sins, establishing God as just and one who justifies even the ungodly who believe.

The heart of the argument is 3:21–31, built around the formula quoted at 3:24–26a, as redacted by Paul: God put forward Jesus as a means of expiation, thereby exhibiting God's righteousness as salvific, remitting sins; thereby people are declared righteous as a gift, through the redemption in Christ Jesus. This righteousness of God is now eschatologically manifested apart from works of the law, although attested in Scripture by both law and prophets (3:21, 28). It is a God-kind of righteousness, available through faith in Jesus Christ, for all who believe in Jesus (3:22; 25 *dia pisteōs;* 26 *ton ek pisteōs Iēsou;* 27 *dia nomou pisteōs;* 28 *pistei;* 30 *ek pisteōs, dia tēs pisteōs;* 31 *dia tēs pisteōs*), everyone, Jew and Gentile alike (3:22–23, 29–30). "Faith" is thus taken up in a massive way for the first time since 1:16–17 (cf. 3:2–3). God has demonstrated his righteousness in this present time, i.e., "he is righteous (*dikaion*) even in (cf. Blackman 1968) rightwising (*dikaiounta*) the person who lives by faith (*ek pisteōs*, Hab 2:4 = 1:17) in Jesus" (3:26). The One God will from now on justify circumcised and uncircumcised by faith (3:30). This momentous paragraph—which uses *dikaiosynē* 4 times, *dikaioun* 4 times, and *dikaios* once—stresses God's action in Christ's death. This saving righteousness is christologically oriented and is received by faith (*pistis, pisteuein* 9 times; see below for further interpretations). It is "righteousness by faith" for sinners before God the Righteous One (Wilckens 1: 199–202).

Does not this view of God as "justifying the ungodly" (4:5) wreck all usual expectations and norms, including that of "covenantal nomism" (cf. Exod 23:7 LXX, *ou dikaiōseis ton asebē;* RSV "I will not acquit the wicked")? Paul turns to Scripture (and in this way upholds the law, 3:31) to support his case that "to the person who does not do works but who believes in the One who justifies the ungodly, his faith is reckoned for righteousness" (4:5). The case of Abraham is cited from Gen 15:6: it is not that he was justified by works (4:2), "but Abraham believed, and it was reckoned to him *eis dikaiosynēn*" (4:3) while he was still uncircumcised, before "works of the law." Abraham exemplifies "righteousness without works" (4:6). His faith was reckoned to him for righteousness (4:5, 9), by God's grace (*kata charin,* v 4;

Heidland 1936: 118–28; *TDNT* 4:290–92). In Abraham's life, circumcision was a later "sign or seal of the righteousness which he had by faith," so that he was father of all "who thus have righteousness reckoned to them" (v 11). "The righteousness of faith" (*dikaiosynē pisteōs*) comes via God's promise, not law (v 13). The point of this parade example is reiterated: Abraham, in all vicissitudes over a promised heir, never weakened in faith but was strengthened in faith (4:19–21); "hence it was reckoned to him for righteousness" (4:22), words written for us "who believe in the God who raised our Lord Jesus from the dead" (4:24). The unit is climaxed by use of the pre-Pauline formula at 4:25 about Jesus "put to death for our transgressions and raised for our justification (*dikaiōsin*)."

In chaps. 5–8 (Reumann 1982: ##142–54) Paul goes on to discuss what the experience of God's saving righteousness as faith-righteousness means in terms of the future and the new life under the Spirit for those rightwised/judgment. *Dik*-terms are as frequent in chaps. 5, 6, (7), 8 as in 3:21–4:25. Because Christians have been justified by faith-righteousness (5:1) through God's rightwising by means of Christ's death (5:9; Christ died for the unrighteous; cf. vv 6–7), believers have peace with God and the hope of future glory (5:1–2). This "eschatological dimension of justification by faith" (Wolter 1978) lets them live amid afflictions, bolstered by the Spirit as representative of God's love. In contrast to Adam, trespass, sin, law, and judgment, Christ means acquittal (*dikaiōma*, 5:16) and life (v 18, *eis dikaiōsin zōēs*), the free gift of righteousness/justification (v 17), through Christ's act of righteousness (*dikaiōma*, 18), so that (v 19) "many" (potentially "all" who believe; cf. vv 18, 12; 11:32) will be established as *dikaioi* (at the judgment; cf. Käsemann *Romans* HNT, 157–58; "will become" [Wilckens 2: 328]; RSV "will be made righteous"). Thus grace reigns, through *dikaiosynē*, resulting in the life of the age to come for them (v 21).

Chaps. 6–8 move logically to "living out the righteousness of God" (Bryne 1981) by those acquitted or "freed (*dedikaiōtai*) from sin" (6:7), who are now (6:18) "slaves to Righteousness" (i.e., of God; Cranfield *Romans* ICC, 322; cf. 8:33, "the God who justifies"). Once " 'free' with regard to righteousness" (6:20, not bound by, devoid of, it) and instruments of *adikia* (6:13), they are now "weapons of and for God's righteousness/justice" (6:13), obedient to *dikaiosynē* (v 16), which results in consecration or sanctification (v 19) as the daily task of living out justification (Käsemann *Romans,* 183). Justification, sanctification, and salvation represent "three effects of the Christ-event," each with "a past, present, and future aspect" (Fitzmyer 1982: #398; contrast Donfried 1976). The contextual setting in Romans 6 for the discussion of ethical aspects of *dikaiosynē* in social life is baptism as means of entry into the Church (6:3–14; Wilckens *Romans* 1: 233; 2: 5–42). The law, though important to save (8:3), remains *dikaios* in its commandments (7:12), and its just requirement (*dikaiōma*, 8:4) is to be fulfilled among Christians, under the Spirit, in terms of love. For "your spirits are alive because of righteousness" (8:10, RSV) or, literally, "the Spirit (means) life (cf. v 6; 10:5) on account of justification" (cf. Wilckens *Romans* EKKNT 2: 132–33). Of all the terms which Paul incorporates in the lyric outburst of 8:29–30 (about those whom God foreknew, predestined, called, justified, and glorified), it is the verb *dikaioun* which covers everything from "call" to final glory and which Paul has discussed the most in Romans. But those vindicated in the judgment will be those conformed to the image of Christ, his cross and suffering (Cosgrove 1987: 667–69).

In Romans 9–11 and its horizon of salvation history Paul returns to the problem of Israel already posed in 3:1–9, in light of the experience of righteousness/justification for all those who believe. The problem is taken up especially in 9:30–10:21 (Müller 1964). Does God's choice, among Abraham's descendants, of Isaac, not Esau, or now of Gentiles, along with some Jews, mean "injustice (*adikia*) on God's part" (9:14)? No, for everything depends on God's mercy (9:16). One may label 9:1–23 a "justification of God" or theodicy (Piper 1983), though *dik*-terms are not used. As in Phil 3:9, two kinds of righteousness are then contrasted, that "from faith" and that involving law, as if based on works (9:32), to which Israel did not attain, though Gentiles did take hold of faith-righteousness (9:30).

Rom 10:3–4 reiterates the contrast: Israel's people, because ignorant of *tēn tou theou dikaiosynēn* and seeking to establish their own righteousness, did not submit themselves (cf. 6:13, 18) to the righteousness of God; Christ, "the end of the law" (in the sense of its temporal end or goal or both), means righteousness (Kertelge 1967: 97–98) for everyone who believes. Thus 10:5–13 contrasts righteousness based on law (*ek nomou*)—about which Moses writes that the person who obeys the law will live by this

righteousness (Lev 18:5; cf. Gal 3:12; Rom 2:13)—and righteousness based on faith (*ek pisteōs*), which says, in words reminiscent of Deut 30:11–14, that if you believe God raised Jesus as Lord, you are justified (*pisteuetai eis dikaiosynēn*) and saved. The attempt to make "but" (*de*) in v 5 a connective, so that the two kinds of righteousness are equivalent (Badenas 1985), extends the meaning of *telos* in v 4 as goal only by ignoring Galatians as evidence for Paul's view and for the works/faith contrast here. (On the textual history of 10:5, see Lindemann (1982), who prefers the reading in Nestle-Aland, 26th ed.; cf. KJV, NEB: "For Moses writes of the righteousness which comes from law: 'The person who does these things [which the law demands] will live by them' "; "legal righteousness" [NEB] in v 5 and righteousness-by-faith [vv 6–8] are being contrasted scripturally. Dunn (1988) sees continuity as well as discontinuity in Paul's use of the OT here.

Although 12:1–15:13 provides specific paraenesis for those righteous by faith (cf. Cranfield *Romans* ICC, 592–94, 824), *dik*-terms are few. Rom 14:17 may reflect early (baptismal, catechetical) tradition: the kingdom of God is not food and drink (cf. vv 13–16, on Christian freedom) but righteousness (given in Christ, 3:21–26), which leads to peace (5:1) and joy (5:11), all in the Holy Spirit (see above on 8:4, cf. 8:2). The admonition in 12:19, "Do not avenge (*ekdikountes*) yourselves" but give way to (God's) wrath, rests on Deut 32:35 where God says, "Vengeance (*ekdikēsis*) is mine," which appears here in what is a Christian prophetic application (Käsemann *Romans*, 349; cf. 13:4, in a unit reflecting the political philosophy of the Jewish Diaspora: a ruler is God's servant, an avenger [*ekdikos*] or agent for wrath against the evildoer; Käsemann, 354, 358). Williams (1980: 285–89) suggests that 15:7–13 supports the sense of *dikaiosynē theou* as "God's fidelity to the promise(s) to Abraham" which he finds throughout Romans: Christ is a servant from the Jews to confirm the promises to the fathers for the sake of God's truth (15:8–9), i.e., confirming the fidelity/truthfulness/righteousness of God presented in 3:1–7. Haufe (1957) can speak of "the ethical 'doctrine of justification' in Paul" on the basis of an overall theological analysis, not via use of righteousness/justification language in the ethical sections.

7. "The Faith of Jesus Christ." The Gk phrase *pistis Iēsou Christou,* which is prominent in such passages about righteousness as Gal 2:16, 20; Rom 3:22, cf. v 26; Phil 3:9, has traditionally been interpreted as "faith *in* Jesus Christ" (*objective* genitive), as generally above; so, e.g., Betz *Galatians* Hermeneia, 117; Cranfield *Romans* ICC, 203; Fung *Galatians* NICNT, 114–15. Periodically, however, in a number of recent treatments, the genitive has been taken as *subjective*, "Jesus Christ's faith" but with varying nuances. See JUSTIFICATION; FAITH (OF CHRIST). According to some, it is the faith Jesus exercised historically and now exercises, but including genitives of authorship, origin, and object (Valloton 1960). Taylor (1966) argued that Galatians reflects the Roman legal device of *fidei commissum*: God the testator has given an inheritance to Abraham and to Christ and ultimately to the Gentiles; Christ's faith shows his reliability as trustee (rejected by Hays 1983: 213–18). According to Johnson (1982), this refers to Jesus' obedience, especially his faithful death (but Rom 5:18–21 uses *hypakoē*, not *pistis*, of Jesus). Sometimes both Jesus' faithfulness and human trust/faith in his death and resurrection are included in the phrase.

While grammatically either an objective or a subjective genitive is possible, Hultgren (1980) has reasserted arguments for "faith *in* Christ." In Phil 3:9, alongside *dia pisteōs Christou,* the phrase *epi tē pistei* provides an "unambiguous instance" of "justification 'pronounced' on the basis of the believer's faith" (Williams 1987b: 667, n. 34). Gal 2:16 explains *pistis Iēsou Christou* by "we have believed in (*eis*) Jesus Christ." Similarly at Rom 3:22, "all who believe" is added. Paul never says, "Jesus Christ believed …" Theologically, the subjective genitive serves in most of its interpretations to make faith, as well as righteousness, a gift (Thüsing and Rahner 1980: 147–50). Williams (1987b) extends this so that "the faith of Jesus himself" (*pistis Christou*) becomes the way which Christ pioneered that which believers take as their own (*pistis*).

8. The "Pattern of Religion." In Paul's seven acknowledged letters there appears to be a pattern of religion that Sanders (1977) has described as "eschatological participation" in Christ. But this amounts to what Paul himself called "righteousness by faith" (p. 506), true righteousness expressed in participationalist categories. This Pauline pattern was *"an essentially different type of religiousness from*

any found in Palestinian Jewish literature" (p. 543, italics in original). In particular, "righteousness terminology" has to do here with "transfer," how one gets into the (Christian) community, not with "maintenance of status," how one *stays* in (p. 544). But Paul's view, Sanders argues, was not sustained, and Christianity became a new form of what Judaism was: "covenantal nomism" (p. 552). This reading of the evidence indicates a uniqueness in Paul's use of *dikaiosynē* and also points to its post-NT fate.

G. Later Pauline Letters

Dik-vocabulary continues in most of the other Pauline documents, but sometimes with changes that augur the widespread loss in the Church Fathers of Paul's distinctive eschatological "righteousness of God" and "justification by faith."

1. 2 Thessalonians (Reumann 1982: #84). This epistle speaks typically of God's righteous judgment (1:5, *dikaias kriseōs*), i.e., when it is right (*dikaios,* 1:6) that God " 'inflict vengeance (*ekdikēsin*) upon those who do not know God' (cf. Isa 66:15 LXX; Jer 10:25) and on 'those who do not obey' (cf. Isa 66:4) the gospel of our Lord Jesus Christ" (1:8). Their punishment (*dikē*, penalty) is described in 1:9. Similar imagery occurs in the parousia passage (2:1–12): Satan will come "with all deceit of wickedness" (2:10, *adikias* is a genitive of origin); but all will be condemned "who did not believe the truth but took pleasure in *adikia*" (2:12). God, gospel, and truth are thus contrasted with Satan and *adikia*.

2. Colossians. In the epistle the vocabulary of righteousness occurs only in the *Haustafeln* section on slaves and masters. The former (and perhaps the latter too) are admonished: "The wrongdoer (*adikōn*) will be paid back for the wrong he/she has done (*ēdikēsen*)" (3:25). Masters are told (4:1), "Grant what is right (*to dikaion*) and equity (*isotēta*, fairness) to your slaves." The language reflects popular Greek moral philosophy.

3. Ephesians. Paul's distinctive themes are preserved far better in Ephesians, but at the loss of the verb "to justify/rightwise"; in the slogan-like statements in the hymnic 2:4–10, the verb *sōzein*, "save," is substituted ("by grace you are saved," 2:5; "by grace you are saved through faith," 2:8). Both verbs are in the perfect tense, reflecting the tendency in Ephesians away from future judgment and toward present salvation in the Church. This outlook frees *dikaiosynē* for use in the area of ethics (Lührmann *TRE* 12: 418): "this is right" (*dikaios;* 6:1); "all that is good and right (*dikaiosynē*) and true" (5:9); "the breastplate of righteousness" (6:14); and "the new person created after the likeness of God in true righteousness and holiness" (*en dikaiosynę̄ kai hosiotēti tēs alētheias*, 4:24, a combination common in Greek ethics). But 4:24 may also reflect baptismal language and thus also the righteousness and holiness given at that "new creation" (cf. 1 Cor 6:11); as may 5:9, an ethical exhortation to the baptized as children of light (cf. 5:8, 14). Eph 6:14 has been taken to refer to *dikaiosynē* as one of the four cardinal virtues or to "being clothed with righteousness" (Isa 59:17; cf. Reumann 1982: ##167–73).

4. Pastoral Epistles. These epistles preserve Paul's sense of justification as a past experience (Titus 3:7) connected with the Christ-event (1 Tim 3:16) and actualized for Christians in baptism with the gift of the Spirit (Titus 3:4–7). As in Ephesians, "saved by grace" or mercy is emphasized (Titus 3:7; 2:11), indeed in antithesis to our deeds (Titus 3:5; 2 Tim 1:9), but it is no longer necessary to say "deeds of the law." "Faith" continues in a Pauline sense (1 Tim 1:16; 2 Tim 1:12), not as *pistis Iēsou Christou* but "*pistis* which is 'in Christ Jesus' " (1 Tim 3:13; 1:14; 2 Tim 1:13), as "what is believed," i.e., the faith of the Church (1 Tim 3:9; 4:1). Righteousness is at times connected with the day of the Lord and judgment (2 Tim 4:8). Above all there is emphasis on Christians' living righteously between their baptism-justification and Christ's future appearance (Titus 2:12–14; 1 Tim 6:11; 2 Tim 2:22; 3:16). Terms from *adikein* are much rarer in the Pastoral Epistles than in the other Pauline letters. Only *adikia* is found: "Let every one who names the name of the Lord depart from iniquity" (2 Tim 2:19; cf. Sir 53:3; *T. Dan.* 6.10).

Basic are the earlier hymns and hymnic passages incorporated in the Pastorals. For 1 Tim 3:16, Christ "was vindicated (*edikaiōthē*) in the spirit." Titus 3:3–7 describes how God our Savior "saved us (cf. Eph 2:4–10), not because of deeds done by us in righteousness" (an LXX phrase; obedient performance of what God commands does not save), but by God's mercy, through baptism, where the Spirit is "poured upon us through Jesus Christ … that, having been justified (*dikaiōthentes;* cf. Rom 5:1) by That One's grace, we might become heirs in hope of eternal life." See further 2 Tim 1:9–10; Titus 2:11–14 (God's

grace has appeared, training us to renounce irreligion [*asebeian*] and "to live sober, upright, and godly [lives; *dikaiōs kai eusebōs*] in the world"; and the last line in the possible baptismal hymn at 2 Tim 2:13, "If we are faithless, That One remains faithful, for he cannot deny himself" (cf. Rom 3:2–4).

Baptismal paraenesis, perhaps Jewish Christian, from occasions when such hymns are sung, may thus lie behind some of the admonitions, as at Titus 2:12 (live righteously), 1 Tim 6:11 ("Pursue righteousness, godliness [*eusebeian*], faith, love, steadfastness, gentleness" [LXX language; cf. Isa 51:1, RSV "deliverance"; Rom 9:30–31]), and 2 Tim 2:22. While open to many interpretations, 2 Tim 3:16, on one of the purposes of Scripture as "training in righteousness" (*paideian tēn en dikaiosynę̄*), "suggests that baptismal instruction (in doctrine and/or ethics) accompanied the gift of righteousness (Titus 3:7). Clearly ethical is Titus 1:8 (the bishop must be "upright"). The statement about "law" (*nomos*) at 1 Tim 1:8–9 is striking: it is "good, if one uses it lawfully," for "it is not laid down for a just person (*dikaiǭ*) "but for lawless and disobedient people, the ungodly (*asebesi*) and sinners, those ungodly (*anosiois*) and godless …" The principle that "law is not for the sake of the just or good" reiterates a Pauline theme in Greco-Roman terms (Quinn 1982: #434). The eschatological "crown of righteousness" (2 Tim 4:8) which the "righteous Judge" will award at the day of the Lord may mean a crown that consists of righteousness as God's gift or a crown for an upright life (Quinn, #437).

Hellenistic vocabulary associated with righteousness appears at 1 Tim 2:8 (lift holy [*hosious*] hands in prayer); Titus 1:8 (*hosios,* after *dikaios,* as a quality of character); and in the host of references to *eusebeia,* which may accompany or replace *dikaiosynē* at times in the Pastoral Epistles (1 Tim 2:2; 3:16; 4:7, 8; 5:4 [verb]; 6:3, 5, 6, 11; 2 Tim 3:5; 3:12 [adverb]; Titus 1:1).

The developments in the Pastoral Epistles have been variously explained (Luz 1976: 367–68, 376–82; Reumann 1982: ##188–91). Most likely involved were the change in eschatological perspective and new deeds as the church settled down in the Hellenistic world.

H. Other New Testament Writings

1. 1 Peter. Written to Christians under persecution, this letter shares many features common to early Christian thought in general and to Paul's letters, though not the verb *dikaioun.* A hymnic, creedlike passage refers in 3:18 to Christ who "once for all died (or suffered) for sins, the Righteous One for the unrighteous" (*dikaios hyper adikōn*). Another verse, 2:24, also possibly from hymn fragments in 2:21–25, tells how "Christ suffered for you" and "*bore our sins himself* in his body on the tree, in order that we might die to sins and live to righteousness (*tē dikaiosynę̄,* "*zēsomen*); by whose *stripes we are healed*" (italicized words from Isa 53:4, 12). The context, like so much in 1 Peter, is baptismal (cf. Rom 6:10–11, 18–20). Here, "live to righteousness" suggests either a baptismal gift or what is right in God's sight or both soteriology and ethics. The same passage speaks of Christ giving over (himself, his cause) to God, "the One who judges justly" (*dikaiōs,* 2:23). "The eyes of the Lord are upon the righteous" (*dikaious,* 3:12 = Ps 34:17), here interpreted as the Christians, who may "suffer for righteousness' sake" (3:14; cf. Matt 5:10–11). In the latter phrase, *dikaiosynē* can suggest "for God or Christ's sake" (cf. 2:19–21; 3:15; 4:16) but more likely means "for doing what is right" (3:13, literally, "zealous for the good"). The judgment looms over all, both God's household and those who do not obey the gospel of God (4:17); "if the righteous (*dikaios*) is scarcely saved, where will the impious (*asebēs*) and sinner appear?" (4:18 = Prov 11:31). Christian household servants may suffer unjustly (*adikōs,* 2:19). Nonetheless, emperor and governors are affirmed, "who are sent by him for punishment (*ekdikēsin*) of evildoers and praise of those who do good" (2:14).

2. James. Like Paul and Matt 6:33, the epistle of James refers specifically to *dikaiosynē theou* (1:20, RSV "the anger of man does not work the righteousness of God"). But the sense is "the righteousness which God demands" (Ziesler 1972: 135), doing justice (before God); contrast "work/commit sin" (2:9). It is not apocalyptic, covenant fidelity (so Stuhlmacher 1965: 192–93). The usage is OT-Jewish, not via Paul. An isolated wisdom saying at 3:18 speaks of "the harvest of righteousness," i.e., that comes from righteous conduct or consists in righteousness. References to the righteous person (*dikaios*) who prays (5:16) and is condemned and killed (5:6) also reflect OT-Jewish tradition ("the righteous sufferer" theme). The description in 3:6 of the tongue as "an unrighteous world" (*ho kosmos tēs adikias*) remains obscure.

The famous diatribe in 2:14–26 argues against righteousness by faith in favor of justification by works, though Paul's "works of the law" are not mentioned. Involved here are understandings different from those of Paul about works, *pistis,* and even God (2:19). The author of James has also adopted a different exegetical tradition regarding Gen 15:6 (Jas 2:23), which is here combined with Genesis 22 (Jas 2:21; see Fig. RIG.01). Here, he writes, Abraham "was justified by works, by offering up Isaac upon the altar, was he not?" (v 21). In this way faith is seen to be completed by works, so that 15:6 was fulfilled: "it (Abraham's works; or faith and this deed) was reckoned to him as righteousness" (2:23). Hence the conclusion, "A person is justified by works and not by faith alone" (2:24). A further example is given about Rahab (Joshua 2), as developed in Jewish tradition: "the harlot was justified by works, in that she received the Israelite messengers (spies) and sent them on their way" (2:25). The epistle of James may be arguing against a version of Paul's teaching as developed by pupils of his, and may even represent an attempt to defend Paul's own views by stressing that faith inevitably includes obedience and "fruit" from righteousness (Phil 1:11; so Reumann 1982: ## 266–83; 413–14). Laws (*James* HNTC, 4, 16–19, 36–38, 128–34) holds that "law" in James is unlikely "the Jewish Torah in its entirety"; the writer represents a form of Christianity independent of Paul, of a "God-fearer" variety, and opposes quietism which relies on a (misused) slogan about "faith alone." (See Scaer 1983 for the view that James writes as "apostle of faith," prior to Paul in use of Gen 15:6.)

3. Hebrews. With its emphasis on Christ's sacrificial death "once for all" (*ephapax*) and exhortations to lethargic Christians, the epistle to the Hebrews employs *dik*-terms more times than any other General Epistle, though it never employs the verb *dikaioun* (see Fig. RIG.02). If Hebrews can be described as "a word of exhortation" (*logos tēs paraklēseōs,* 13:22), it also calls for skill in "the word of righteousness" (5:13, *logou dikaiosynēs*), i.e., teachings about Christ and faith as well as moral imperatives for life (Reumann 1982: #286 on varied interpretations). Some specific references to "righteous (ness)" come directly out of the OT: 1:9, God's son "loved justice" (*dikaiosynēn,* Ps 45:7, of Israel's king, now applied to Christ); 8:12, under the new covenant, God will be merciful toward iniquities (*adikias;* Jer 31:34); 10:30, God says, "Vengeance (*ekdikēsis*) is mine" (Deut 32:35); and 10:37–38 (where Hab 2:3–4 plus Isa 26:20 [LXX] is quoted). The OT text is here christologized, for it is not "the vision" (2:3) but "the Coming One" (Jesus at the parousia; Heb 10:37, cf. 9:28) who "shall not tarry." This eschatology undergirds the main point, an appeal to those (literally "we") of faith to "live by faith" (Hab 2:4 = 10:38, cf. v 39).

Such a connection between every "righteous one" (*dikaios*) of God and "faith" (*pistis*) sets the stage for the parade of examples of those who, in Israel's past history, lived by faith (chap. 11). Abel (v 4) is specifically said to have "received approval as righteous" (*dikaios,* an interpretation of Gen 4:4, variously taken to refer to his conduct or belief [*Tg. Neof.*; discussion in Reumann 1982: ##290–91]). Noah (v 7) is described as having become "an heir of the righteousness which comes by faith" (*tēs kata pistin dikaiosynēs;* that Noah was righteous is explicitly stated in Gen 6:9). The phrasing in 11:7 is not Pauline. Oddly, Abraham (vv 8–19) is not connected with righteousness, and only in the general summary at v 33 (they "enforced justice" [RSV, *eirgasanto dikaiosynēn* = Heb *ʿāsâ ṣĕdāqâ*]) does a *dik*-word appear in Hebrews 11. The concept of *pistis* in Heb 11:1 remains debated: Luther and RSV see here a reference to a subjective phenomenon, "the *assurance* of things hoped for, the *conviction* of things not seen," while others see a reference to a more objective phenomenon, "the *reality* of goods hoped for, the *proof* of things not seen" (Fitzmyer 1982: #416; contrast Thompson 1982 and O. Betz 1987).

Other references in Hebrews clearly reflect the OT-Jewish tradition. God is not unjust (*adikos,* 6:10). The name Melchizedek is said to mean "king of righteousness" (7:2, *ṣdq*). There were "regulations" (*dikaiōmata*) under the first covenant (9:1, 10), which could not "perfect" worshippers. But now, through Christ, in spite of persecution and the need for discipline, there is a promised yield, "the peaceable fruit of righteousness" (12:11). Among the eschatological expectations at Mt. Zion (12:22–24), with Jesus the mediator of a new covenant, is an intriguing reference to "spirits of just men made perfect" (12:23 RSV, *pneumasi dikaiōn teteleiōmenōn*). If read as referring to the pious of the OT, the phrase could suggest the "perfectly righteous" (*gĕmûrîm ṣaddîqîm*) of rabbinic thought here interpreted apocalyptically. See

RIGHTEOUSNESS (EARLY JUDAISM). But since the OT persons of faith were not to be perfected "apart from us" (i.e., the Christians), the reference could be to deceased Christians perfected through Christ's passion (2:10; 5:9), a part of "the assembly of those firstborn enrolled in heaven" (12:23). Hebrews thus achieves a way of using righteousness terminology, against an OT background, different from any other sort of NT Christianity.

4. Jude and 2 Peter. Jude refers once (v 7) to "punishment (*dikēn*) of eternal fire" on Sodom and Gomorrah, but 2 Peter contains a dozen examples of *dik*-root terms (Reumann 1982: ## 306–14). The phrase "righteousness of God," noted in Paul, Jas 1:20, and Matt 6:33, occurs with a new variation at 2 Peter 1:1, in the address to "those who have obtained a faith of equal standing (*isotimon*) with ours in the righteousness of our God and Savior Jesus Christ *dikaiosynē tou theou hēmōn kai sōtēros Iēsou Christou*)." While this may mean God's justice or fairness (Käsemann 1964: 173), it is here "the righteousness of … *Christ.*" The biblical (or Hellenistic) concept may thus be recast more christocentrically. The document further presents "the way of righteousness" (2:21) or truth (2:2) in which walked such figures as Noah, who "heralded *dikaiosynēs* (the righteousness God wills, 2:5)," and righteous Lot, who "was vexed in his righteous soul" (2:7–8). But "the Lord knows how to rescue the godly (*eusebeis*) … and to keep the unrighteous (*adikous*) under punishment until the day of judgment" (2:9). Sinners who love "gain (or reward) for wrongdoing" (*adikias,* 2:15) "suffer wrong (*adikoumenoi*) for their wrongdoing" (2:13). God's promise for those who live in holy, godly ways includes "new heavens and a new earth (Isa 65:17; 66:22), in which righteousness dwells" (3:13), a messianic vision of justice. Note also the frequent use of *eusebeia* for "godliness" (1:3, 6, 7; 3:11, with "holy" conduct).

I. After the NT

Amid all its variety in the canonical writings, righteousness/justification achieved its greatest importance in quite early (Hellenistic-)Jewish Christian formulas about the meaning of the Christ event (see D above) and then in the letters of Paul (see F above), who developed the meaning of *dikaiosynē (tou theou)* and of being rightwised/justified to new heights by his use of the Hebrew Scriptures and their sense of God's saving righteousness, now seen in Christ. There were also significant applications of the terminology in Matthew, James, the Pauline school, 1 John, 1 and 2 Peter, and Hebrews (resumé in Reumann 1982: ##336–46, chart #335). Few NT topics exhibit such vitality and widespread linkage with the OT.

The subsequent history of *dik*-terms in Christianity is characterized by (1) loss of the Hebraic sense of *ṣdq* and replacement by the Greco-Roman sense of "distributive justice" and impartiality or equanimity (*aequitas*) and (2) the fortunes of the Pauline doctrine of righteousness/justification. Change in eschatology, as well as loss of OT perspective, meant that the early and Pauline understandings could not be fully sustained. The Apostolic Fathers, for example, preserved some of the sense both of God's redeeming righteousness (*1 Clem.* 32.4; *Barn.* 13.7 and, with future reference, 4.10; *Ign. Rom.* 5.1; *Phld.* 8.2) and of ethical demand (*1 Clem.* 48.4; 31.2; 10.7; and 12.1 [faith and hospitality]; *Barn.* 1.2, 4; 4.11; 5.4; 20.2). Typical of the dominant mixture is *2 Clem.* 19.3, "Let us therefore do righteousness in order that we may be saved at the end" (Reumann and Lazareth 1967: 88–93).

Yet Paul's sense did not totally disappear in the Greek fathers, especially when they commented on Paul. Origen called Christ *autodikaiosynē*, "Himself righteousness" (PG 14. 212B), and Chrysostom on Rom 3:26 spoke of Christ as "the proof of God's righteousness" in that "he makes others who are rotting away in sin suddenly righteous" (PG 59.9 485D). The "gift" character of God's righteousness was widely recognized (Stuhlmacher 1965: 15–16, 18), but, as in fathers like Theodore of Mopsuestia (ca. 350–428), it was held that one makes one's own the righteousness God gives by work and imitation (Reumann 1985: 635). Benz (1951: 291) has claimed that "the East accepted the Paul of the Corinthian Letters, while the West accepted the Paul of the Letter to the Romans." In any case, Augustine and Luther, among others, championed Paul on righteousness/justification. A modern OT theology like von Rad's (*ROTT* 1: 370–83, 392–95) and a NT one like Bultmann's (*BTNT,* 270–85) show why any biblical theology must focus upon *ṣdq/dikaiosynē.*

For the history of righteousness after the NT, see Subilia 1976; Reumann 1985: 632–35, with bibliography in the notes and in 1982: 9, n. 11. For justification, see McGrath 1986 and (after the Council of Trent) Ziesler 1972: 1–16. For *dikaiosynē theou* specifically, Stuhlmacher 1965: 11–73; Müller 1964: 5–27.

RIGHTEOUSNESS, TEACHER OF. See TEACHER OF RIGHTEOUSNESS.

RIMMON (DEITY) [Heb *rimmôn* (רִמּוֹן)]. The name of the Syrian god in whose temple (*bêt*) Naaman the Syrian general goes to worship (2 Kgs 5:18). The text suggests that Naaman, now cured of leprosy and a staunch devotee of Yahweh, is under some compulsion to accompany the Syrian king in worshipping the Syria deity. For this, he begs forgiveness from Yahweh. See HADADRIMMON.

RIMMON (PERSON) [Heb *rimmôn* (רִמּוֹן)]. Benjaminite, the father of Baanah and Rechab, the assassins of Ishbosheth (2 Sam 4:2, 5, 9). The identification of his home city Beeroth remains uncertain. It had been one of the Hivite towns which joined the Gibeonites in allying themselves with Israel (Josh 9:17) and was reckoned as part of Benjamin (Josh 18:25; 2 Sam 4:2). Speculation that the murder of Saul's son was somehow a result of his father's atrocity against the Gibeonites (2 Sam 21:2) is undercut by the biblical text's own hints at motivation (2 Sam 4:1, 8–10) and its careful identification of Rimmon as an Israelite.
RICHARD D. NELSON

RIMMON (PLACE) [Heb *rimmôn* (רִמּוֹן)]. Var. EN-RIMMON; RIMMONO; RIMMON-PEREZ. A common place name in ancient Israelite territory.

1. En-rimmon ("pomegranate spring"), a town originally ascribed to the tribal territory of Simeon (Josh 19:7; 1 Chr 4:32), eventually composed part of the Negeb district of Judah (cf. Josh 15:32, where the MT mistakenly distinguishes "Ain" from "Rimmon"). In postexilic times, Jews reportedly settled in En-rimmon and other villages in S Judah (Neh 11:29). The town is mentioned in Zech 14:10, a late apocalyptic oracle promising the exaltation of Jerusalem over the land of Judah. The phrase stating that Judah will be leveled "from Geba to Rimmon southward" seems to imply that Geba and Rimmon were then considered to be the N and S extremes of Judah, respectively.

Eusebius' *Onomasticon* located a town called Erimmon 16 Roman miles S of Eleutheropolis. Since a site named Khirbet Umm er-Rammamin (16 km NE of Beer-sheba) now exists in this vicinity, a number of scholars identified this tell with En-rimmon (e.g., Abel, *GP* 3: 318). Recent excavations, however, have shown that er-Rammamin was not occupied during the biblical period (Kloner 1983: 71). It is quite possible, however, that the toponym "Rimmon" may have shifted to er-Rammamin from nearby Tel Halif, 1 km to the N (Borowski 1988). This site exhibits substantial remains from biblical times (Iron Ages I–II and the Persian period), is in close proximity to two fine springs (hence, the name "Ain"), and has produced a pomegranate-shaped ceramic bowl. Thus, Tel Halif (M.R. 137087) now seems the most promising candidate for the location of En-rimmon.

2. The N village of Rimmon assigned to the patrimony of Zebulun (Josh 19:13. The MT term "Rimmon Hammethoar" is not a place name but should rather be read "… Rimmon, and bends toward …"). The village seems to have been proclaimed one of the Levitical cities, though the MT of Josh 21:35 reads "Dimnah," an otherwise unknown toponym. Since other manuscripts read "Remmon," it is likely that the Hebrew letter *reš* was once mistakenly written as a *dalet* during textual copying. This idea is supported by

the fact that 1 Chr 6:62 (—Eng 6:77), part of a document virtually identical to the Levitical cities list, mentions "Rimmono" as a town of Zebulun. The biblical site is usually identified with modern Rummanah (M.R. 179243), 9 km N of Nazareth.

3. Rimmon-perez. A camping site of the wandering Exodus tribes, located somewhere between Rithmah and Libnah (Num 33:19–20). The modern site is unknown, but seems to lie in the vicinity of the Negeb or the Sinai deserts.

4. The Rock of Rimmon (Heb *sela‘ harimmōn*—"pomegranate rock"), an outcropping of rock or a cave in the vicinity of Gibeah. After the ambush and massacre of Benjaminite Gibeah by Israelite soldiers, 600 surviving Benjaminite warriors reportedly fled into the desert and found refuge at the Rock of Rimmon (Judg 20:45–47). Four months later, the Israelite tribes successfully reconciled themselves to the exiled Benjaminites by sending messengers to the Rock of Rimmon, where they offered their brother tribesmen women captured during raids on Jabesh-gilead and Shiloh (Judg 21:13).

Generations later, during the Hebrew revolt against the Philistines, Saul and 600 of his men retreated to Gibeah of Benjamin (1 Sam 13:15) and at some stage of the battle camped "on the outskirts of Gibeah under the Rimmon, which is in Migron" (1 Sam 14:2). Most interpreters translate the verse to mean that Saul and his force camped under a pomegranate tree, but this is unlikely for logistical as well as security reasons. It is more likely that the verse refers to the same inaccessible "Pomegranate Rock" near Gibeah as is mentioned in Judges. The fact that each story mentions 600 endangered soldiers finding refuge at Rimmon suggests that the same folklore motif, attached to this geographical feature, has found its way into both stories.

Most commentators identify the Rock of Rimmon with the village of Rammūn, 9 km NE of Jaba‘. In view of the close proximity of the Rock of Rimmon to Gibeah implied in each biblical story, a location much nearer to Jaba‘ (see GIBEAH) than Rammun would seem necessary. Rawnsley (1879: 119) proposed that the "pomegranate tree" might have stood near the el-Jaia cave in the Wadi es-Ṣwenīt, 2 km E of Jaba‘. It is more likely that the cave itself, some 30 m high, pitted on the inside with hundreds of small caves and holes and thus resembling a split pomegranate, is the Rock of Rimmon. Its defensible position in the Wadi es-Swenīt (see MIGRON) and its huge size make it an ideal refuge for embattled warriors.

PATRICK M. ARNOLD

RIMMON, HORVAT (M.R. 137086). Known in Arabic as Kh. Umm er-Ramamin, this site in the S Shephelah has been identified with RIMMON mentioned in Josh 15:32; 19:7; 1 Chr 4:32; Neh 11:29. The biblical site is actually Tel-Halif, about one-half mile N of Horvat Rimmon. The present site was first settled in the 2d century B.C.E. and the new settlement took over the name from the tell. Eusebius (Klosterman 1904: 88, line 17; 146, line 25) mentions "Erimmon" as a large Jewish village 16 miles S of Beit Govrin (Eleutheropolis). In the Latin translation, Hieronymus defined its location more precisely in the Darome (i.e., S Judea): the distance of 16 miles ascribed by Eusebius is actually that between Eleutheropolis and Rimmon, 26 km along the ancient road between these two settlements. The name of the site Rimmon is also mentioned by various Jewish sources and sages.

The archaeological results of the excavation correspond to the ancient writings. Excavations on behalf of the Israel Department of Antiquities during 1978–81 revealed a settlement of 7 strata and a synagogue containing 3 principal strata. Remains of the earliest synagogue were fragmentary and comprised patches of a plaster floor dated numismatically to the middle of the 3d century C.E. The size and plan of the building were not clear, but the many decorated architectural fragments found smashed and scattered over the site probably originated from this building.

In the second half of the 4th century, a new synagogue was built. It was rectangular in plan and measured 13.5 m N–S by 9.5 m E–W. This synagogue reused the W wall of the earlier building, but new

walls were built along the N, S and E sides. A rectangular *bema* adjoined the N wall which faced Jerusalem. The floor of the synagogue was a layer of plaster laid upon a foundation of small field stones. In some areas this plaster covering was studded with small yellowish pebbles giving a granular effect. This same granular plaster was also found on the walls. The entrance to the building was probably from the S and we can assume the existence of some sort of fore court or narthex adjoining the entrance.

At a later date, sometime at the end of the 5th century or beginning of the 6th century, the synagogue was repaired and the enclosing walls of the complex strengthened. Ten pillar bases were inserted into the floor, dividing the hall into a central nave and two side aisles; the foundation trenches were carefully repaired to match the floor. This synagogue was in use for about 100 years, during which time the space along the W side of the hall became a dump or, perhaps, a storage area for broken and discarded objects no longer used in the synagogue, as well as for objects intended for future use. These pieces included several fragments of different candelabra, jewelry and personal artifacts. Buried among these finds were two small pottery jars containing (respectively) 12 and 35 gold coins which spanned a period from the 4th century to the beginning of the 6th century. Hidden in a wall in the S half of the same area, a third hoard was found containing coins contemporary with the others. Scattered all over the floor were hundreds of bronze coins having fallen, no doubt, from their original hiding places.

Around the year 600 C.E., the synagogue was repaired and brought to the final form we see today. The same architectural plan was retained but the floor of both the synagogue hall and narthex was paved with rectangular slabs of stone. These slabs were laid in straight rows in a N–S direction. This symmetry was broken in the center of the floor where the stones were laid to form a square carpet. Five 6-petaled rosettes were engraved on these stones. Above the rosettes and facing Jerusalem to the N, a seven branched candelabrum (menorah) was incised. This synagogue was abandoned some time at the end of the 7th century C.E.

AMOS KLONER

RIMMON-PEREZ (PLACE) [Heb *rīmmōn pāreṣ* (רִמּוֹן פָּרֶץ)]. See RIMMON.

RIMMONO (PLACE) [Heb *rîmmônô* (רִימּוֹנוֹ)]. See RIMMON; DIMNAH.

RING [Heb *ṭaba‘at* (טַבַּעַת)]. A term used most frequently in the tabernacle texts of Exodus in reference to small circular fittings used in various furnishings of the Tabernacle. The movable appurtenances were carried by poles inserted into "rings" attached to the ark (Exod 25:12, 14, 15; 37:3, 5), the golden table (Exod 25:26, 27; 37:13, 14), the golden incense altar (Exod 30:4), and the altar of burnt offering (Exod 38:5, 7). The rings of the ark and the table were gold, in keeping with those golden cultic objects used inside the Tabernacle; and the altar rings were apparently bronze, the material used for the courtyard objects. Also the wooden bars, overlaid with gold, that served as the frames for the Tabernacle were fitted with gold rings for the poles used to carry the frames (Exod 26:29; 36:34). See also TABERNACLE for a discussion of these frames and rings.

The fabrication of the ephod and the breastplate, two special items of the high priestly garb and so made of the most costly materials and highest levels of workmanship, involved the use of gold rings (Exod 28:23, 24, 26, 27, 28; 39:16, 17, 19, 20, 21). The rings were part of the intricate way these two items were joined.

The materials collected to use in making the Tabernacle included signet rings (Exod 35:22), as did an offering made after the defeat of the Midianites (Num 31:50). A similar use involves the earrings collected by Aaron for making the golden calves (Exod 32:2, 3; cf. Gen 35:4). Rings were clearly a luxury

item (cf. Esth 1:6; Isa 3:21; Jas 2:2); and signet rings also involved legal or economic transactions (Gen 41:42; Esth 3:10; 8:2, 8, 10). See also JEWELRY.
CAROL MEYERS

RINNAH (PERSON) [Heb *rinnâ* (רִנָּה)]. A son of Shimon and a member of the tribe of Judah (1 Chr 4:20). Myers states that the list in which Rinnah's name occurs (1 Chr 4:16–20) is preexilic (*1 Chronicles* AB, 29). This is because of the presence of place names such as Ziph and Eshtemoa which are not included the province of Judah in Nehemiah's time. In 1 Chronicles 4, the Chronicler is not concerned to delineate an exact genealogical line from Judah for the listed names. This larger genealogy is an historical detour because it suddenly takes the reader back into the historical period prior to the end of the genealogy of David in chap. 3.
JAMES M. KENNEDY

RIPHATH (PERSON) [Heb *rîpat* (רִיפַת)]. "Son" of Gomer, and "brother" of Ashkenaz and Togarmah (Gen 10:3). The occurrence of this name in 1 Chr 1:6 as *dîpat*, as attested in a majority of Hebrew manuscripts, reflects a scribal error in distinguishing the similar consonants *dalet* and *reš.* The LXX and Vulgate, however, confirm the reading as *rîpat.* Neither the meaning nor the geographical location of this name have been determined. Josephus (*Ant* 1.126) identifies Riphath with Paphlagonia (Franxman 1979: 105–6). Although there is no evidence for this, the identification with a region in Asia Minor, not unlike that proposed by Josephus, is suggested by Riphath's association with Ashkenaz, who may be identified with the Scythians (Yamauchi 1982: 63), and with Togarmah, who may be identified with the Assyrian Til-garimmu on the border of Tabal (Westermann 1984: 506).

RICHARD S. HESS

RISSAH (PLACE) [Heb *rissâ* (רִסָּה)]. One of the camping sites for the Israelites as they journeyed through the wilderness (Num 33:21, 22); Rissah is part of a list of sites used by the Priestly writer. The location of most of these sites is unknown. It is possible that Rissah is to be identified with the Rasa mentioned in the Peutinger Tables, placed 32 miles NNW of Aila, between Aqabah and Gypsaria. Abel (*GP* 2: 214) identifies Rissah with Kuntilet el-Gerafi, between Qseimé and Aqabah, NW of the mountain Rueisset el-Negin. However, any identification of the site of Rissah is entirely speculative.
SIDNIE ANN WHITE

RITHMAH (PLACE) [Heb *ritmâ* (רִתְמָה)]. One of the camping sites of the Israelites as they journeyed through the wilderness (Num 33:18, 19); Rithmah is part of a list of sites used by the Priestly writer. The location of most of these sites is unknown. Abel (*GP* 2: 214) places Rithmah in an area 30 miles W of the gulf of Aqabah, but its exact location remains uncertain. Gray (*Numbers* ICC) notes that Rithmah is part of a class of names derived from plants, and may be related to the Heb *rōtem*, "broom plant."
SIDNIE ANN WHITE

RIZIA (PERSON) [Heb *riṣyā* (רִצְיָא)]. A descendant of Asher, named in the genealogy of 1 Chr 7:39. Missing in Syriac, this figure appears neither in the parallel genealogies of Asher in Genesis 46 and Numbers 26 nor elsewhere in the Hebrew Bible. Since his father Ulla stands detached from the preceding names in the genealogy, scholars have suggested that Ulla may be a textual corruption of Shua, Shual, Amal or Ara.

While such unique names are often considered as fabrications of the Chronicler, Johnson (1969: 64–66) suggests that they are derived from military census lists, themselves drawn up in genealogical fashion.

RIZPAH (PERSON) [Heb *riṣpâ* (רִצְפָּה)]. The daughter of Aiah and concubine of Saul ben Kish, first king of Israel. She bore Saul two sons, Armoni and Mephibaal (Mephibosheth). Nothing is known of her life during Saul's reign. During Eshbaal's brief reign, she became the focus of Abner's unsuccessful attempt to depose his inexperienced nephew and rule Israel in his stead (2 Sam 3:7). By having sexual relations with the former king's concubine, Abner tried to lay claim to the throne by virtue of his possession of the royal harem. During the early years of David's joint reign over Israel and Judah, Rizpah's two sons were ritually executed along with the five sons of Merab, Saul's eldest daughter, in an effort to end a three-year famine that had been plaguing the land (2 Sam 21:1–14). See ARMONI. Rizpah is reported to have kept a vigil over the seven dead bodies, keeping away birds and animals of prey until rain fell and ended the drought—from mid-April until October or November. David then is said to have had the bones of the seven victims gathered up, and to have had them buried along with the exhumed bones of Saul and Jonathan, who had been buried in Jabesh-gilead, in the family ancestral tomb located in Benjamin at Zela.

ROADS AND HIGHWAYS. This entry consists of two articles that survey the ancient road systems that ran through Palestine and that connected Palestine to the larger world of the ANE. The first article covers the pre-Roman period, while the second covers the road system of the Roman period. See also LIMES, ROMAN.

PRE-ROMAN ROADS AND HIGHWAYS

Prior to the advent of Roman technology and political inclinations, it is difficult to differentiate precisely between roads and highways. In Roman terms, of course, "road" denoted the course of local or regional travel, which tended to follow the natural configuration of terrain; which designated a route of communication that normally was not cleared, engineered, or maintained; and which was not specifically constructed to include the conveyance of vehicular traffic and often was incapable of handling vehicles. On the other hand, "highway" denoted the course of travel on an international scale, which traversed terrain of all sorts, which signified a route of communication that was deliberately opened, constructed, and maintained; and which was capable of sustaining traffic of any kind.

Now while some of these points of differentiation were present already in the pre-Roman world, roads and highways cannot so easily be dichotomized before the Romans. Certainly, in addition to countless tracks, paths, and local/regional roads, the ANE possessed transportation arteries capable of conveying travelers over hundreds, even thousands, of miles. Texts from every major section of the Near East attest to the reality and ubiquity of international travel, just as textual and archaeological records of foreign commodities exhumed at numerous ANE sites suggest that international travel was quite extensive. Nevertheless, the same term in a given language may be used to signify an entire range of transportation options, from international arteries to local tracks and winding paths (e.g., Akk *girru, ḫarrānu, urḫu;* Heb *derek, ʾōraḥ;* Gk *hodos*), and the clearing, paving and maintaining of roads is only sparsely attested in the ancient world, and often these references pertain to roads within or in the immediate environs of a particular city.

A. How Ancient Roads and Highways Can Be Reconstructed Today

In view of the fact that even a remnant of a paved road or highway connecting ANE towns is practically unknown before the Roman era, and that no map of roads or highways across the Fertile Crescent is attested prior to the Roman period, one may legitimately question whether communication systems from the earliest biblical epochs can be reconstructed at all with any degree of confidence. Though there are extremely diverse and complex issues inherent in responding to this question in any comprehensive manner, scholars who have attempted to trace out ancient highways tend to follow a combination of four lines of evidence. These include (1) geographical determinism, (2) literary documentation, (3) archaeological attestation, and (4) Roman milestones.

By "geographical determinism," scholars mean to suggest that in the ANE, there were certain largely unchanging physiographic and/or hydrologic factors which determined—except where temporarily or partially contravened by geopolitics or in isolated cases of unlawful movement—that routes followed by caravans, migrants, or armies remained relatively unaltered throughout extended periods of time. In general, it would appear that the lowland areas offered the least hindrance to human movement and the most scope for the development of trade networks or the deployment of troops. By contrast, deeply incised canyons cut by sometimes raging rivers were an impediment to travel to be avoided in all periods or, if unavoidable, to be forded at places offering a minimum of difficulty. The quagmire of disease-infested swamps, the sterility and blazing heat offered by desert zones, or the badlands of congealed lava were formidable obstacles to be shunned at any cost. Densely forested mountain slopes, oftentimes with twisting gorges, were consistently navigated at passes, however narrow or hazardous those passes might have been; alternatively, where mountain ridges could be straddled for great distances without the interruption of gorges or valleys, they tended to be employed for travel in all periods. The need to commute between copious sources of fresh water was a prerequisite for travel during all epochs. Accordingly, even though we do not possess an ancient map of the Near East, the location of main roads at least can be logically inferred with a high degree of probability, especially when the principle of geographic determinism is augmented by other lines of evidence.

Literary documentation often enables a scholar to delineate a highway with greater specificity. This documentation may derive from the Bible; the Apocrypha; extrabiblical ancient sources (Egyptian, Assyrian, Babylonian, Persian, Greek, Roman); classical writers (e.g., Herodotus, Ptolemy, Eusebius, Strabo, Josephus, Pliny the Elder); early Christian itineraries (e.g., the Pilgrim of Bordeaux, Egeria, Theodosius, Antonius Martyr, Arculf, Bede the Venerable, Willibald); Arab geographers (e.g., Ibn Khurdadbih, Yaqubi, Istakhri, Ibn Haukal, Mukaddasi, Nasir-i-Khusrau, Idrisi, Yakut, Abulfeda, Ibn Battuta); Crusader and post-Crusader writings (e.g., Saewulf, Daniel the Abbot, Fetellus, Peter the Deacon, John of Wurzburg, Theoderich, Rabbi Benjamin of Tudela, Jacob de Vitry, Burchard of Mt. Zion, Marino Sanuto, Rabbi Eshtori Haparhi, Rabbi Menahem, Ludolph Von Suchem, John Poloner, Felix Fabri); and early modern to modern pioneers or geographers (e.g., Quaresmio, van Kootwijck, Seetzen, Burchardt, Robinsons, Niebuhr, Smith, Thomsen, Ritter, Tobler, Conder, Abel, Musil, Dalman, Albright, Glueck). Some of these literary sources attempt to survey a portion of land or an itinerary route using both distance and direction; these sources may cite in the equivalent of miles or hours/time the distance between two or more known points in a way that can be reconstructed only by presupposing a particular intermediate course (e.g., Old Babylonian itinerary texts; Old Assyrian caravan and *dātum* ["caravan tax"] texts; Hittite itinerary texts; Neo-Assyrian royal annals; Herodotus' or Xenophon's descriptions of the Persian Royal Road; Greek and Roman itineraries; Eusebius's *Onomasticon*). At times these sources may describe a route in terms of intervening natural terrain (e.g., along a certain bank of a given river; near a canyon, ford, tar pit, or oasis; adjacent to a named canal, island, or mountain) or a noteworthy point of interest along the way. Towns along a route may be described as forming part of a certain district or as being contiguous to a given province, sharing common grazing lands, sending communications via fire signals, or coming simultaneously under the control of a certain king.

Approximate distances between towns, together with a presumed route, may be inferred from texts which speak of a king or a courier taking his daily rations at point A on one day, at point B on the next, at point C on the third day, and so on. An army or caravan may be given a prescribed number of days' rations in order to undertake a particular journey, or a specific trip is said to have been completed in an expressed number of days. As a group, these sources were not composed for the purpose of enabling someone to trace out absolutely ascertainable highways. They are extremely wide-ranging sources; the geographical details they provide are many, varied and occasionally mistaken; and they do not offer the same degree of detail for all regions within the ANE. Still, the cumulative value of these sources is critical, because they often supply precise details upon which a road or highway can be plausibly reconstructed, or they will give a nuance that can be gainfully employed when combined with other lines of evidence.

In addition to geographical determinism and literary documentation, archaeological attestation can help reconstruct ancient roads and highways. Identifying an archaeological site as a result of unambiguous data exhumed from the ground makes possible a more precise understanding of literary texts which mention the place, and provides a fixed geographical point. For example, because Laish/Dan (Tel Dan) was positively identified from an inscription excavated at the site, greater specificity is automatically conferred upon journeys like those of Abraham (Genesis 14), Ben-hadad I (1 Kings 15; 2 Chronicles 16), and upon texts detailing the itinerary of tin traders which mention this place as a stop along the route (other Canaanite towns identified by this means are somewhat limited [e.g., Arad, Beth-shan, Gezer, Gibeon, Lachish, Taanach], but the phenomenon is rather common in Syro-Mesopotamia). Even where the ancient name of a town is unknown, archaeological remains can bespeak the type of occupation the site may have experienced, which once again could be helpful in reconstructing routes. A palace unearthed on a site, for instance, may allow the inference that a royal or provincial capital was involved (e.g., Tell Brak in the Habur triangle), whereas a small but nevertheless heavily fortified site may suggest a garrison or fortress town (e.g., Tell Barri and Tell Majdal in E Syria). A discernible sequence of a similar type of site, such as the string of New Kingdom Egyptian forts discovered SW of Gaza (Gardiner 1920: 99–116; Oren 1982–83: 20–24; 1984: 7–44; cf. bas reliefs of Seti I [*ANEP*, 106]), may enable one to trace out the probable regional course of a roadway. On a wider scale, archaeology may disclose settlement patterns during particular periods. For example, many MB Age sites within Canaan were adjacent to established transportation arteries, whereas this does not appear to have been the case for EB Age settlements. Similarly, a cluster of MB Age settlements aligned the banks of the Upper Habur River in Syria, whereas no such concentration is known immediately before or after this era. This kind of information is useful if settlement patterns can be linked to causes of movement to the area. For example, should movement to these Middle Bronze sites be ascribable to migrations and should emigration location(s) be known, this might presuppose certain routes which were capable of sustaining domesticated animals with pasturage and migrants with food, while at the same time virtually eliminating other routes. There were, of course, many possible climatological or sociological factors that produced migrations in antiquity, but the point remains that people and animals had to eat off the land as they moved. Or second, should movement to these sites be archaeologically linked to trade—possibly as a result of recovered objects that were foreign to the region (e.g., Egyptian scarabs; cylinder seals in Canaan) or of trading commodities that were not native to the entire ANE (e.g., tin; amber; cloves; cinnamon; spikenard; silk; cotton)—different criteria for reconstructing highways would then obtain. The geographical source of these objects or commodities, and the date(s) for the passage from one point to another, could suggest who was involved, where markets and intermediate *entrepôt* were located, and therefore, what the possible routes were. And where such trade was carried on for extended periods, somewhat fixed commodity routes can be traced (e.g., Baltic amber route from Europe; silk route from SE Asia; spice route from W Saudi Arabia). Often this kind of archaeological evidence can be nuanced by literary documentation, as in the case of tin itinerary texts which spell out itinerary stations across the Fertile Crescent in the MB Age. Thirdly, should movement to these sites be linked archaeologically to military invasion (e.g., discovery of a monumental victory stele, or of a destruction layer that can be synchronized with an earthen rampart constructed against the exterior of a city wall), yet a third set of criteria might be

implied. The demands of military strategy, troop maintenance, and material procurement were such that some areas would be nearly immune to any army. Archaeology most recently has been helpful to scholars who are on a quest to trace out ancient roads and highways by providing aerial photographs that can detect rudiments or even short segments of roadways that have not become completely obliterated.

A fourth line of evidence for reconstructing ancient roads and highways is Roman milestones, though erecting guideposts along roadways predates the Roman period (Olmstead 1964: 271, 334, 555–56; Jer 31:21). For Roman milestones in Canaan, see Thomsen (1917), Avi-Yonah (1936), Goodchild (1948–49), Dar and Applebaum (1973), Isaac and Roll (1976, 1982) and Roll (1983); for Roman milestones in Asia Minor, consult French (1981–88). To date, between 450 and 500 milestones have been found in modern Israel, of which about 120 bear inscriptions. These date as early as A.D. 69 (Vespasian), though specimens dating as early as A.D. 56 are known from modern Lebanon, and early reports of road repairs are recorded on milestones recovered from Jordan. These milestones precisely mark the location of Roman highways, which frequently followed the course of much earlier roads and highways. Locations and inscriptions of milestones give evidence that certain towns were linked in the same sequence as recorded in earlier literature. For example, some 25 milestones representing 20 different mile-stations have been discovered along a stretch of the Roman coastal highway between Syrian Antioch and Ptolemais (OT Acco). Inasmuch as some of the same towns located along that highway were said to have been visited by Shalmaneser III on the return from his campaign in Israel (841 B.C.)—a campaign in which the Israelite monarch Jehu was required to pay tribute (*LAR* 1: 243)—the milestones enable one to discern the road employed by the Assyrian monarch. In this case, the correct route of his campaign was confirmed by the discovery of Shalmaneser's victory monument carved into a cliff alongside the mouth of the Dog River (Nahr el-Kalb), just S of Byblos (cf. Astour 1971: 383–89). Similarly, these same milestones enable one to configure the opening phases of Sennacherib's famous 3d campaign (701 B.C.), in which the Assyrian boasts that he "shut up Hezekiah in Jerusalem like a bird in a cage" (*ANET*, 287). Likewise these stones permit one to trace out the course through N Canaan taken by Ramses II, Tiglath-pileser III, Esarhaddon, Alexander the Great, Cestius Gallus, Vespasian, and the Pilgrim of Bordeaux.

B. Where Principal Ancient Highways Were Located

For studies on the location of ancient roads of Babylonia and Assyria, see Sachau (1882), Musil (1927), Stein (1940), Lewy (1952), Goetze (1953; 1964), Jacobsen (1958), Leemans (1960), Hallo (1964), Oppenheim (1970), and Sarianidi (1971); for roads of Syria, consult Dussaud (1927), van Liere and Lauffray (1954–55), Moortgat (1959), Kessler (1980), and Beitzel (1990); for roads of Egypt, refer to Brugsch (1879), Simons (1937), Helck (1971), and Murnane (1985); for roads of Canaan, see Dalman (1916), *WHAB*, Forbes (1965: 131–92), *LBHG*, 43–63, Boraas (*HBD*, 1086–91), and Dorsey (1990); and for roads of Asia Minor, consult Anderson (1897), Gelb (1935), Woodbury (1941), Garstang (1943), Goetze (1957), Calder and Bean (1958), Birmingham (1961), Starr (1963), Mellaart (1968), and Winfield (1977).

1. Great Trunk Road. What was unquestionably the most important highway in the ANE is sometimes referred to as the Great Trunk Road; it passed from Egypt to Babylonia and to frontiers beyond, and vitally linked every part of the Fertile Crescent in all periods. See Fig. ROA.01. This highway began at Memphis (Noph), near the base of the Nile delta, and passed the Egyptian towns of Ra῾amses (Tell ed-Dab῾a) and Sile (Tell Abu Seifeh?) before arriving at Gaza. Gaza was a fortified emplacement on the edge of Canaan that was an important Egyptian provincial capital and that sometimes served as a launching pad for Egyptian campaigns through Palestine and Syria. This southwestern-most sector of the highway was of paramount importance to Egyptian security: It was called the "way of Horus" in Egyptian literature (e.g., Sinuhe; Merikare; Papyrus Anastasi I, *ANET*, 21, 416, 478, respectively). In the Bible this segment of the road was known as the "way to the land of the Philistines" (Exod 13:17).

From Gaza the highway stretched to Aphek/Antipatris, located at the springs of the Yarkon River; the effusion of these springs constituted a serious obstacle to movement, forcing most traffic to its inland (E) side. See Fig. ROA.02. Continuing in a northward direction and skirting the menacing sand dunes and seasonal marsh of the Sharon plain, the roadway was inevitably confronted by the barrier of Mt. Carmel.

Several passes through Mt. Carmel afforded passage from the Sharon plain to the Jezreel Valley on the N. The shortest of these passes, known today as the Aruna pass (Nahal ʿIron), was the one most frequently used. The N end of this pass, where it opened into the Jezreel Valley, was dominated by the instalation city of Megiddo. This passageway was of major importance in every historical period without exception; it is not an exaggeration to assert that it was one of the most militarily strategic points in all the SW Fertile Crescent.

At Megiddo, the highway broke into at least three branches. One branch led to the Mediterranean Sea at Acco, and then ran northward along the Sea as far as Syrian Antioch (i.e., the highway of the milestones cited above). A second option from Megiddo turned eastward, following the contour of the N flanks of the Mt. Carmel and Mt. Gilboa ranges, before arriving at the strongly garrisoned city of Beth-shan, across the mouth of the Yarmuk River. This section of the highway most likely ran along the edge of the Jezreel Valley during the dry season, but took to the higher ground to avoid the marshiness during the winter months. But at Beth-shan, the highway veered N and proceeded up the Jordan River valley for about 15 miles, before it came to the S end of the Sea of Galilee. It then extended northward along the W shore of the sea as far as Chinnereth/Gennesaret, near Capernaum. (By the NT era, many travelers would have crossed the Jordan River just N of Beth-shan, and made their way across the Yarmuk River valley and the Golan plateau before arriving at Damascus.) A third option from Megiddo stretched diagonally across the Jezreel Valley on a line created by a volcanic causeway. The highway passed between Mt. Moreh and the hills of Nazareth and skirted Mt. Tabor's SE perimeter, before beginning a northward trek as far as the Horns of Hattin. From there, the road veered eastward, traversed the Arbel Pass with its sheer cliffs, finally bursting onto the plain along the NW shore of the Sea of Galilee, where it joined the highway from Beth-shan. This third option may have seen limited usage throughout the rainy seasons of the OT era and, in any event, it underwent a slightly circuitous modification in the Roman period; this branch is not pictured on the Peutinger map, the sole surviving specimen of a road map from the Roman era. See next article.

At Chinnereth/Gennesaret, the highway proceeded up the W flank of the Rosh Pinna dam, a volcanic blockage responsible for creating the Huleh swampland, and approached the preeminent fortress city of Hazor, which guarded Canaan's northernmost sectors. One of the largest tells in all of Canaan, Hazor appears to have served as a provincial capital during the Late Bronze Age; the city figures prominently in Egyptian literature of the period, in the tablets from Tell el-Amarna, and in the Bible (Josh 11:10). From Hazor, the highway turned NE in the direction of Damascus, hugging the outliers of the Anti-lebanon range and attempting to avoid the basaltic land surface of the upper Golan and the Hauran. From Damascus, the road continued its northward trek along the E slopes of the Anti-Lebanon as far as the city of Qatna, from which the highway essentially followed the course of the Orontes River as far as Hamath, where it set off on a N course, passing Ebla and arriving at Aleppo. There the roadway curved sharply to the E and ran to the city of Imar/Emar, located along the W bank of the Euphrates River. The highway then followed the Euphrates River flood plain to a point just N of Babylon, where the river could more easily be forded. Continuing southward through Babylonia, the highway trekked past Uruk and Ur, before finally arriving at the head of the Persian Gulf.

2. King's Highway. Another road that intersected Bible lands was known in the OT as the King's Highway (Num 20:17; 21:22; cf. *CAD* H: 108a *ḫarrān šarri*] for how this expression can be applied to a number of Mesopotamian roads) and outside the Bible as the Sultan's Highway or Trajan's Highway (Via Nova Traiana). It was the Emperor Trajan who converted this route from a road into a bona fide highway in the 2d century A.D. The highway stretched from the head of the Red Sea near Ezion-geber and essentially rode the watershed of Edom and Moab, passing the cities of Bozrah, Kir-hareseth, Dibon and Heshbon, before coming to Amman. See Figs. ROA.01 and ROA.02. It made its way from Amman across the Gilead and Bashan plateaus to Damascus, where it joined the Great Trunk Road.

3. Assyrian-Hittite Road. A highway to carry Assyrian economic and military interests into Asia Minor is known from the early 2d millennium B.C. From any of the cities which alternately served as the Assyrian capital, the highway most likely swept westward as far as the Wadi Tharthar. From there, it

essentially followed the contour of the wadi as far as the S edge of the mountain (Jebel) Sinjar, where the highway veered W and went to the Habur River. Following the northwestward course of that river valley past Tell Halaf to a place near modern Samsat, where the Euphrates River was easily crossed, the highway then cut through a major pass in the Taurus mountain range, passed through the Elbistan plain, staying fairly well clear of the headwaters of the Ceyhan River, and eventually came to the strategic Hittite city of Kanish. See Fig. ROA.01. From Kanish, the highway proceeded across the central Anatolian plateau, past the cities of Derbe, Lystra, Iconium, and Antioch in Pisidia, before ending in the direction of the Aegean Sea. Along its descent to the Aegean, the highway intersected Laodicea, Philadelphia, Sardis, and Pergamum. From Pergamum the roadway ran parallel with the Aegean coastline as far as the city of Troy, which was situated on the threshold of Europe.

4. Persian Royal Road. Herodotus (5.52–54) describes a route which he calls the "Royal Road" (cf. *CAD* G: 90b [*girri šarri*] for a similar expression in Akk); his delineation does not always contain sufficient or precise detail as to enable one to trace out a specific course, and in at least one place his account is completely garbled. Nevertheless, he speaks of a road that ultimately linked the cities of Sardis (W Asia Minor) and Susa (Persia), one that was joined by a network of hostelries and some 111 intermediate stages (for Assyrian evidence of such stages, see Eph'al 1986: 104, a road that stretched about 1, 500 miles and took almost three months to traverse on foot, though the distance could be covered by the rapid courier system in only nine days (Herodotus 8.98; cf. Esth 3:13–15; 8:10, 13–14). From Sardis, with its connection to the Aegean Sea and points W, the road ran through the provinces of Lydia and Phrygia as far as the Halys River where, the historian notes, there was a strong fortress. See Fig. ROA.01. This segment, therefore, is likely to have passed near to Gordium and modern Ankara, before traversing Cappadocia by a loop and arriving at the Euphrates River at modern Malatya. Crossing the Euphrates at the direct ford there, the road then navigated two high passes within the Taurus mountain range and proceeded southeasterly to the city of Diyarbekir, where the Tigris could more easily be ferried. Once on the E side of the Tigris, the road more or less followed the course of that river valley, being hemmed in by the adjacent mountain ranges, past a few other streams which feed the Tigris, as far as the vicinity of Nineveh. Taking advantage there of receding mountains and an extended steppe land to the E, which is really a continuation of the Mesopotamian plain, the road set off on a SE course in the direction of Arbela, crossing the Upper Zab (called the "Tigris" by Herodotus) along the way. Continuing along the W outliers of the Zagros mountains, the roadway passed the city of Arrapha (modern Kirkuk), crossed the Diyala ("Gyndes" of Herodotus) and Kerkha ("Choaspes" of Herodotus) Rivers, and eventually came to the important city of Susa, situated on the W bank of the Karun River.

Xenophon (*Anabasis* 1.1–10; cf. *Cyropaedia* 8.6.17–18) gives the important S branch of this road, which fairly closely followed the course of the westernmost sector of the earlier Assyrian-Hittite road past the cities of Antioch in Pisidia and Iconium, as far as Derbe. From this city, however, the Persian roadway continued eastward and navigated the mighty Taurus range through the slender Cilician Gates, proceeding S past Tarsus and around to Syrian Antioch. The road turned sharply at Antioch, and advanced E to Aleppo, where it joined the Great Trunk Road and ran to points E.

ROMAN ROADS

Roman roads were constructed for the use of the military organization in the provinces. The economic benefits which may have resulted from their existence were a by-product rather than a primary aim in their construction. This must be kept in mind when assessing the pattern of the roads in any province. Naturally, various factors determined the course of the roads anywhere. These include the topography, the geography of settlement (itself dependent on natural geography), geopolitical factors within the province and in the larger area, and the means of transportation and level of technology.

Apart from the remains of pavement and the milestones frequently referred to below, the following sources provide relevant information about the Roman road system in Judea, the Negeb, and Arabia: (1) the Peutinger Map (for which see: *Tabula Peutingeriana, Codex Vindobonensis 324, Vollständiqe*

Faksimile-Ausqabe im Originalformat [Graz 1976]); (2) various ancient itineraries, including (a) the *Itinerarium Antonini Augusti* (Parthey and Pinder 1840; Cuntz 1929), and (b) that of Theophanes, a member of the staff of the *praefectus Aegypti* who traveled to Antioch (ca. 320; Roberts 1952; Rees 1968), and (3) certain Christian itineraries, including (a) that of the traveler from Bordeaux (Cuntz 1929), (b) that connected with the obituary of St. Paula (Jerome, *ep.* 108), and (c) that of Theodosius (Geyer 1965: 113–25).

A. History of Research

During the last century, the surveys carried out by Conder and Kitchener on behalf of the Palestine Exploration Fund resulted in a comprehensive and detailed conception of the network of Roman roads in Palestine. The publications and maps of the British *Survey of Western Palestine* still serve as a source of information for current research, particularly since many of the features which were then recorded no longer exist. As interest in the subject increased, the French scholars Clermont-Ganneau, Germer-Durand, Sejourné, and later Vincent and Abel extended the research to the milestones along the roads and deciphered and published many inscriptions mainly in the periodicals *Echos d'Orient* and *Revue Biblique.* These activities formed the basis of an understanding of the chronological development of the system.

Further fieldwork was carried out by German scholars, Schumacher, Dalman, Kuhl, and Alt. P. Thomsen (1917) assembled all the existing information on roads and milestones in the Roman provinces of Syria, Arabia, and Judea. From the 1930s until the 1960s, Avi-Yonah continued publishing new milestone inscriptions and summarizing the available evidence in various publications and maps (in *QDAP* and *IEJ*). From the 1950s onward comprehensive studies of specific roads were undertaken and published: the Legio-Sepphoris road by Hecker, the Jerusalem-Jericho road by Beauvery and Wilkinson, the Antipatris-Caesarea road by Dar and Applebaum. The studies of Aharoni, Rothenberg, Harel, and Meshel have contributed to the understanding of the Roman road network in the Negeb. Since 1970 the Israel Milestone Committee has been active in the field, affiliated with the International Curatorium of the *Corpus Miliariorum.* The committee carries out a systematic survey of all the extant remains related to the road system and prepares the inscriptions for publication in the *Corpus Inscriptionum Latinarum,* vol. xvii.

B. The Road Network

The road system of Palestine was an integrated system of N–S and E–W routes. Where these intersected there were important junctions which developed into towns such as Caesarea Philippi, Diocaesarea, Scythopolis, Caesarea, Neapolis, Antipatris, Diospolis, Nicopolis, Eleutheropolis, Hebron, Jericho, and the legionary base at Legio. One of the main junctions naturally was Jerusalem, which became the center of the system W of the Jordan because of its political and, hence, military importance, serving as it did as legionary headquarters for two centuries (Kuhl 1928). The system in the Negeb consisted of three routes which ran roughly parallel, following the curving coastline of the Mediterranean and fanning out as they progressed southward. Four other routes running diagonally from NW to SE merged with the former roads and with the system in Transjordan to the E. The natural focus of three of the diagonal roads was the great port city of Gaza. The cities of Berosaba, Elusa, Nessana, Oboda, and Mampsis lay at the nodal points of the network in the Negeb.

1. Roads in Judea. In its fully developed form the road system in Palestine consisted of four N–S arteries intersected by a series of E–W roads. See Fig. ROA.03. The N–S arteries include the following:

(1) The coast road from Antioch in Syria to Ptolemais/Acco (Goodchild 1948). From there, via the coastal towns of Caesarea–Apollonia–Jaffa, it continued to Jamnia–Ascalon–Gaza and, finally, to Alexandria in Egypt (Alt 1954).

(2) The Caesarea–Antipatris road (Dar and Applebaum 1973) which continued to Diospolis–Eleutheropolis with branches leading to the Hebron area and to Berosaba.

(3) The road along the watershed: Diocaesarea–Legio (for this section, see Hecker 1961)–Neapolis–Jerusalem–Hebron, with branches heading toward Berosaba and Mampsis (Dalman 1925; Sejourné 1895).

(4) The road through the Jordan valley from Caesarea Philippi, probably along the E bank of the Jordan and the Sea of Galilee, to Scythopolis and thence to Neapolis or, alternatively, to Jerusalem via Jericho (Beauvery 1957; Wilkinson 1975).

The series of E–W roads that intersected those arteries include the following:

(1) Tyre–Caesarea Philippi–Damascus (in Syria).

(2) Ptolemais–Diocaesarea–Tiberias (Roll 1986) and from there to Gadara and the Roman provincial capital of Bostra in Arabia. It crossed the river Jordan over a bridge with ten arches (Irby and Mangles 1844: 90 ff.).

(3) Caesarea–Legio–Scythopolis (Isaac and Roll 1982). It continued to Pella and Gerasa in Arabia.

(4) Caesarea–Sebaste–Neapolis–Coreae (Ilan and Damati 1974–75: 43–53) and from there to Philadelphia on the *Via Nova Traiana.*

(5) Jaffa–Neapolis (Roll and Ayalon 1986).

(6) Diospolis–Neapolis (Roll and Ayalon 1986).

(7) Antipatris–Gophna–Jericho. At Gophna this road crossed the main Neapolis–Jerusalem road.

(8) Jaffa–Diospolis–Beth Horon–Jerusalem–Jericho, and from there to Esbus on the *Via Nova Traiana.* For the Beth Horon road, see Oelgarte 1918.

(9) Diospolis–Nicopolis–Jerusalem (Abel 1925).

(10) Ascalon–Eleutheropolis–Jerusalem (Alt 1929; Kallai 1969).

(11) Gaza–Eleutheropolis, and from there to the mountains S of Hebron.

2. Roads in the Negeb. The road system in the Negeb consisted essentially of (a) four roads generally running NW–SE, and (b) three other roads which ran NE–SW. See Fig. ROA.03.

a. The NW–SE Roads. The four roads running through the Negeb generally from NW to SE include the following:

(1) Gaza–Aila (Arabic: Darb el-Ghaza). It ran S to Quseima, where it turned SE toward Kuntila. It approached Aila either via Ras en-Naqb and the ascent W of Aila or via Ma‹aleh Shaharut and Yotvetah (Meshel 1981).

(2) Gaza–Elusa–Oboda–Petra (Negev 1966; Meshel and Tsafrir 1974–75). This was originally a Nabataean road which continued to be used in the Roman period (Cohen 1982).

(3) Gaza–Moabitis. Passing by Berosaba and Mampsis it reached Charakmoba (Kerak) and Rabbatmoba on the Trajanic road (see B.3; Negev 1969).

(4) The road from Jerusalem to S Transjordan: Jerusalem–Hebron–Mampsis–Tamara (Hazevah), descending to the Arabah in two stages by elaborate stepped ascents (Ma‹aleh Deragot and the Scorpion Pass; Harel 1959). From Tamara the route headed for Aila, with branches heading toward the copper mines at Feinan and Petra (Aharoni 1954; 1963; cf. however, Rothenberg 1967: 109–171; Applebaum 1971: 211–23).

b. The NE–SW Roads. Three roads ran followed this general course: (1) the continuation of the coast road: Ascalon–Gaza–Rhinocorura; (2) the route from Hebron to Sinai: Hebron–Berosaba–Elusa–Nessana; and (3) Mampsis–Oboda–Quseima, crossing the southernmost cultivated area of the Negeb.

3. Roads in Arabia. The caravan routes of the Nabatean kingdom formed the initial basis for the Roman highway system in Arabia. This system was reinforced and enlarged after the annexation of the region in A.D. 106. Over 300 inscribed milestones in Arabia (Bauzou fc.) signify the existence of a

complex transportation lattice that was an integral part of the E road system that connected Judea and adjacent territories.

The main artery was the *Via Nova Traiana* constructed between A.D. 111–114 under the emperor Trajan. It connected the capital of the new province of Arabia located at Bostra in S Syria with the port of Aila (Aqaba) on the Red Sea, a distance of 350 km. For much of this distance it presumably followed the old "King's Highway" (Num 20:17) on the Transjordanian plateau from Petra to Charachmoab (Kerak), Rabbathmoba (Rabba), Dibon, Madaba, Esbous, and Philadelphia (Amman) on its way to the N. In the S, the road ran from Petra through Sadaqa and Humayma to Aqaba (Graf 1990). Until A.D. 181, Petra served as the *caput viae* or central point for marking distances; afterwards, it was replaced by the capital city at Bostra (Bauzou 1988). See Fig. ROA.03.

Petra was a major nexus for a number of other routes. The *Darb ar-Rasif* ran along the edge of the al-Sher‹a escarpment overlooking the Wadi Arabah to the W and past a number of old Nabatean caravanserai on its way to Petra. This road was not paved, but marked by two stone walls still visible between Kh. al-Sa‹ud and Qana, an important spring located on the edge of the escarpment above Humayma. It is without milestones, but appears to have been in use during the Roman period. At least two other routes are marked by milestones between Sadaqa and Petra, one of which must have constituted a segment of the Trajanic road (Graf 1989). Nabataean settlements align all of these routes. Petra was also connected by a number of old E–W Nabataean caravan routes to Gaza on the Mediterranean and the Sinai and the Nile Delta in Egypt (Zayadine 1985).

In the N, the cities of the Decapolis were also interconnected with the Judaean-Arabian road system. Here Gerasa (Jerash) was the major nexus, with branches leading from it to Adraha (Der‹a) in the N, Pella to the NW, and Philadelphia in the S (Mittmann 1970: 133–63). The route running from Ptolemais (Akko) across the lower Galilee was connected via Tiberias with the E–W road running to Gadara (Umm Qeis), Capitolias (Beit Ras), Adraha (Der‹a), and Bostra, the capital of Arabia (Bauzou 1985). Pella could be reached from Caesarea by the road via Legio and Scythopolis (Isaac and Roll 1982). These routes are best known from the Peutinger Map, which displays the Roman road system of the Antonine period. Philadelphia (Amman) was connected by an E–W route to Neapolis, Caesarea Maritima, and from Esbus a road stretched to Jericho and Jerusalem. In the NE, Bostra, which served as headquarters of the *Legio III Cyrenaica*, was the major crossroads upon which five highways from all directions converged.

The central sector of Moab was also connected with several E–W routes that led to and around the Dead Sea to the W. The Peutinger Map shows a road leading from Rabbathmoba (Rabba) via Zoara to Thamara (Hazeva) at the SW area of the Dead Sea. The so-called "ascent of Luhith" (Isa 15:7) that led up the Jordanian rift to the plateau (Mittmann 1982) could make part of this road.

The S terminus of the Trajanic road was connected with an E–W route between Aila (Aqaba) and Clysma on the Suez. It is known in later sources as the Darb al-Hajj, but may also be identified with "the way to Mount Seir" (Deut 1:2). No traces of the Roman road have been discovered, but it is known from the Peutinger Map (Mayerson 1981). A desert route extended from Aila towards Hejaz and S Arabia.

The important oasis of Azraq was the nexus of several routes even farther to the E. It appears to have been connected to Bostra via a route that ran S from Salkhad to Imtan and Deir el-Kahf, and by two other roads via Umm el-Qottein and via Qasr al-Hallabat (Kennedy 1982: 137–97). It has been assumed that Azraq was also connected with the *strata Diocletiana*, a road connecting Palmyra and Damascus, but there is no evidence it extended as far S as Azraq (Bauzou fc..). A recently discovered milestone at Azraq does suggest that Azraq was connected with a route that ran deep into the desert depression of the Wadi Sirhan at least as far as Dumah (modern al-Jauf), where Roman military activity in the Severan era is known (Speidel 1987).

A N–S road running to the E and parallel to the *Via Nova* has also been proposed on the basis of random finds of milestones beginning S of Lejjun and running on a line toward Jurf al-Darwish and Udhruh (Thomsen 1917: 57–59). Since these finds were made in conjunction with nearby castella and legionary camps, they suggest this route was a military road that ran along the desert fringe that probably was established during the Tetrarchy.

Although these routes were the main arteries of the *provincia Arabia,* numerous other subsidiary routes also existed. Most of these were for local and regional traffic.

C. The Development of the System

The chronological development of the system can be traced insofar as it is reflected by the discovery of dated milestones. Two provisos must be made. First, roads may have been constructed without accompanying placement of inscribed milestones. The problems cannot be discussed fully, and it will be assumed here that the full organization of a Roman road, physically and administratively, is marked by the earliest series of milestones. Second, it cannot always be assumed that specimens of the earliest series have survived. In what follows, emphasis will be laid on obvious patterns which seem to characterize general developments.

No milestones dated before the reign of Claudius have been found anywhere in the E provinces beyond Anatolia. This is also true for Judea.

1. The Time of Claudius-Nero. Veterans of four legions were settled in a new colony in Ptolemais-Acco, in Syria but bordering on Judea. Next the coast road from Antioch to Ptolemais was constructed and marked with milestones "from Antioch to the new Colony of Ptolemais." These are dated A.D. 56. This was the first Roman road marked by milestones in Syria. It was a project apparently undertaken for security reasons: under Claudius there were dangerous troubles between Jews and Samaritans which were investigated on the spot by Ummidius Quadratus, governor of Syria (*WHJP* 1: 458–60, 462ff.; Isaac 1990: 322).

2. A.D. 69. In A.D. 69, M. Ulpius Traianus, commander of the legion X Fretensis is mentioned on a milestone of the Scythopolis–Legio road (Isaac and Roll 1976). As explained elsewhere, the construction of this road, part of a major strategic route, facilitated communication between the legionary winter quarters at Caesarea and Scythopolis. It appears that the road probably continued to Pella and Gerasa, since milestones of A.D. 112 discovered between these cities mention restoration of the road (Thomsen 1917: nos. 215, 216, 218a, 220; Mittmann 1970: 157 f.). The road was built in a period when the Romans were not actively pursuing the war in Judea due to the civil war being fought elsewhere. The army remaining in Judea therefore had nothing else to do and were kept busy on this road project. So far this milestone has remained a unique specimen. This itself is exceptional, since most milestones in Judea belong to a series represented by more than one text. There are no further traces of road construction related to the years of the First Jewish Revolt. As noted below, there are literary references to the activities of legionary road builders, but these must be distinguished from the systematic activity in peacetime which resulted in the placement of milestones.

3. The Flavians, Trajan. There are no milestones of these years (A.D. 72–117) in Judea. This is remarkable, for there are Flavian milestones in Cappadocia and Syria, and in Arabia, Trajan constructed his major road from the N to the S of the new province (see B.3 above). It was often assumed that the First Jewish Revolt was followed by substantial work of this nature. There is no evidence of this, and it may be concluded that Flavian interests focused on the more important province of Syria while the reign of Trajan was marked by activity in the new province of Arabia.

Following the annexation of the new province of Arabia, one legion was stationed at Bostra in the extreme N of the province and a road was constructed from Bostra to the Red Sea. The construction of the road is recorded on milestones of 111 and 114. All milestones known by 1917 are listed in Thomsen 1917: 1 ff., Map 1. For information on the construction of the road to be derived from the milestones, see Pekry 1968: 140–42.

The text emphasizes the connection between the annexation and the construction of the road. The milestones date the completion of the project, not its beginning, and it may be assumed that the construction began immediately after the annexation in 106. A well-known papyrus of March, 107, refers to soldiers cutting building stones not far from Petra (P. Mich. 465–66; text, translation and discussion also in *ANRW* 2/8: 691 f.). This shows that the army was constructing something, probably the road, at the time.

4. Hadrian. In Judea at least twelve roads were first marked by milestones from this period, all dated to 120 and 129/130, well before the outbreak of the Bar Kokhba Revolt. No milestones have been discovered which date to the years of the revolt. The series of 129/130 is contemporary with the emperor's visit to Judea. This shows increased Roman activity in the province. The garrison was doubled and, according to Cassius Dio, the decision was taken to found the Roman colony of Aelia Capitolina at Jerusalem. In Arabia at least one new road was constructed under Hadrian in 120: a road from Gerasa via Adraa to Bostra (the section Gerasa–Adraa [Der'a] has been explored by Mittmann 1964: 113 ff.). The section Adraa–Bostra has not so far produced any milestones but only a building inscription recording the construction of a bridge at at-Tayyibeh, dated 163/4 (Bauzou 1985: 151, and map, fig. 1). There is no doubt that the section Adraa–Bostra was part of the road already in Hadrian's time, for the milestones count the distance from Bostra. A road from Caesarea on the coast to Scythopolis and probably onward to Gerasa had already been built in 69 (see C.2 above). The section Gerasa–Scythopolis was repaired in 112 and the section from Scythopolis westward in 129. This provided the legion in Bostra with organized access into the Decapolis. Under Hadrian a legion was based at Legio-Caparcotna, and roads were built to provide an organized link with the legion at Bostra.

5. A.D. 162. This is by far the most extensive series attested in Judea, so far numbering 31 milestones. In Arabia two milestones were set up with identical texts. It has been suggested that there was a connection with the Parthian campaign of Lucius Verus which started in the winter of 161/2. This does not contradict what has been said above: no milestones were set up during times of war inside the province. However these matters are interpreted, there are two complementary facts to be considered about the milestones of A.D. 162: first, an extraordinarily large number of stones in the region dated to this year; and second, milestones of Marcus Aurelius are extremely rare elsewhere. Another such series found in several provinces reflects preparations for Severus Alexander's Persian campaign, in 231–33.

6. Septimius Severus. Milestones of several years during his reign have been found in Judea. There is some evidence that the inscriptions were produced by the citizens of the towns in the neighborhood where they are found. A study of the coast road in Syria has shown that there was a change of organization in 198 (Goodchild 1948). In Arabia there is evidence that the army first moved into the NE desert in the reign of Severus, occupying positions at Uweinid and Azraq and building a road from Azraq to the north (ca. 200–202; Kennedy 1980).

As observed in previous publications, the chronology of the milestone-texts suggests that they are related to events outside of the province of Judea. Apart from the series of 162 there are series which coincide with imperial visits to the area (129/130 and 198). Some series are mere declarations of loyalty, such as that of Perinax or the stones dated to 324–26. There was a short period when milestones were produced as a matter of routine instead of special initiative, from 198 until the death of Caracalla.

There are no milestone inscriptions in Judea later than the reign of Constantine. In Arabia a few inscriptions proclaiming support for Julian the Apostate are the latest in date.

Finally, there are hardly any milestones in the settled area of Judea of the Tetrarchs and their successors. This coincides with the demilitarization of the province in this period. In Syria and Arabia, where the army was not withdrawn but reorganized, there are many inscriptions (Isaac 1990: 162ff.). The Roman road system was originally developed by the army for its own use. It was later maintained for the army by the local population. This road system continued to serve the local population and other armies in later periods, and it was not substantially restored or expanded until the 20th century.

D. Wartime Construction

As observed, there are no milestone inscriptions in Judea clearly related to the major wars between Rome and the Jews in the 1st and 2d century. That certainly reflects the fact that this sort of organization did not belong to wartime activities. Of general interest, however, are two passages in Josephus' *Jewish War* which describe the activities of legionary pioneers who prepared the way in advance of the regular troops on the march (*JW* 3.6.2 §118; 3.7.3 §141).

E. General Characteristics of Judean Roads

In the plains and valleys, roads followed an alignment as straight as possible, familiar from aerial photographs all over the empire. However, when possible the engineers avoided laying out a road through densely wooded lands or marsh-lands. In mountainous areas a route over the watershed or halfway up the slope was preferred to the narrow valleys or river-beds: both for security reasons and because the roads are harder to maintain in low lying terrain which tends to be flooded in winter (representative examples of sections across roads may be found in Roll and Ayalon 1986: 125–29). Passes and ascents were constructed with great care, and were often provided with steps built or cut into the bedrock (notably in the case of roads leading up to Jerusalem). Bridges were constructed where needed.

Milestones were found along the major roads, organized for the use of the army and traveling officials. It goes without saying that there were numerous other roads and some of these have been explored, but only the presence of milestones is unequivocal proof that we are faced with a public highway. They were ideally placed at distances of one Roman mile (i.e., 1482 meters = 4862 ft), but in practice distances appear to vary. In Judea the distances are measured from the main towns, usually from the center. It is to be noted that both in Judea and in Arabia far more milestones have been found in the settled area than in the desert.

ISRAEL ROLL

ROBE. See DRESS AND ORNAMENTATION.

ROCK OF ESCAPE (PLACE) [Heb *sela‘ hammaḥlĕqôt* (סֶלַע הַמַּחְלְקוֹת)]. A place in the wilderness of Maon where David escaped from Saul (1 Sam 23:28), often associated with Wadi el-Malaqi (Gold *IDB* 2: 126; Lee *ISBE* 2: 130). Apparently the site featured an unusual rock or cliff foundation. The major discussion about the site, however, concerns the etymology of the Hebrew term *ḥālaq*, its meaning in this passage (Lee *ISBE* 2: 130; Klein *1 Samuel* WBC, 232; BDB, 325), and its relationship to the physical features of the site. Some of the major translations include "Rock of Divisions," "Rock of Slipperinesses," or "Rock of Escape." While the debate concerning the etymology of the term continues, the passage may reflect a popular etymology of that day (Klein *1 Samuel* WBC, 232). Perhaps the context of the passage reflects some hint concerning the intent of the writer. Saul, in pursuit of David and his men, was on one side of the mountain and David on the other (1 Sam 23:26), the setting being perhaps that of a formation with two parallel cliffs so situated that David's escape seemed impossible. However, while Saul was closing in on David, his mission was interrupted by a Philistine raid (v 27) which allowed David to escape.

ROCK OF ETAM. See ETAM, ROCK OF.

RODANIM [Heb *rôdānîm* (רוֹדָנִים)]. Var. DODANIM. The Rodanim were said to be one of "the sons of Javan," along with "Elishah, Tarshish and Kittim" in 1 Chr 1:7. Were this the only reference to these people, scholars would identify the location with the island of Rhodes. The difficulty arises when one consults Gen 10:4 where the fourth son of Javan is said to be Dodanim. However, even here the Sam. Pent., and some mss of the MT read Rodanim. It is easy to see how the confusion arose, since Heb *reš* and *dalet* are easily confused. The combined textual evidence for 1 Chr 1:7 is overwhelmingly in favor of Rodanim (with only the Syr Peshitta reading *dûdanîm,* in an obvious harmonistic attempt with Gen 10:4; the Targum to 1 Chr 1:7 does read *wdrdny‘*, which looks like a compromise solution of incorporating both readings). So what is the preferred reading? The *lectio difficilior* would favor reading Dodanim for Gen 10:4 and Rodanim for 1 Chr 1:7. However, the principle of the more difficult reading is only valid for

intentional errors, such as scribal harmonizations and the like. The accidental substitution of a *dalet* for a *reš* would not be taken into account by the *lectio difficilior.* The most likely external referent for the biblical passages is the island of Rhodes. Some recent attempts to identify them with the *dnn* peoples of various inscriptions of the ANE are marred by the simple fact that the spelling does not correspond to what we would expect from comparative Semitics. Neiman (1973: 121) and Berger (1982: 60) have proposed that we identify the Dodanim with the Greek city Dadona, but this is too obscure to carry much weight. In conclusion, we would read Rodanim for both 1 Chr 1:7 and Gen 10:4, with Rhodes as the referent. The danger of taking "son of" too literally in both the table of nations in Genesis 10 and 1 Chronicles 1 must be pointed out. Both "sonship" and "brotherhood" were terms which could be used very loosely to refer to broader relationships than kinship, such as members of a common treaty (cf. Wenham *Genesis 1–15* WBC, 215; Ross 1980: 344–46). Hence the biblical authors, in listing Rodanim as a "son of" Javan, were describing their perception of some kind of cultural relationship between the Greeks and the inhabitants of Rhodes, in this instance perhaps based on kinship, but not necessarily so.

ROGELIM (PLACE) [Heb *rōgĕlîm* (רֹגְלִים)]. A town in Transjordan from which Barzillai came to escort the restored king David to the Jordan River (2 Sam 19:31). Rogelim means "treaders," i.e., fullers, people who cleaned, bleached, or dyed wool or cloth, and who may also have traded in textiles. This could indicate Rogelim's local industry, but does not help to locate the site. Judging by the goods the three men (i.e., Shobi, Machir, and Barzillai; 2 Sam 17:27) brought to David, Barzillai was probably wealthy. Since no royalty is implied, his wealth may have come from the local industry or agriculture, suggesting that Rogelim was a fertile area. The food brought to David suggests farmland. The phrase "came down" suggests that Rogelim was in the hills. If one assumes that Barzillai was a Gileadite living in Gilead, Rogelim could have been in that area. Lodebar (2 Sam 17:27) is usually seen as being in Gilead, and Rabbah (2 Sam 17:27; assuming it was the capital city of the Ammonites) was not far away. One might assume, however, that all three men were within some reasonable distance from Mahanaim where David had taken refuge.

Gilead itself has a variety of geographical meanings—Bashan N of the Yarmuk, Transjordan S of the Yarmuk, the area S of the Jabbok, the area between the Yarmuk and Jabbok. Abel (*GP* 2: 437) suggested Rogelim was Tell Barsina on the S side of Wadi er-Rujeileh in E Gilead (M.R. 223215). The site is ca. 5.5 miles SW of Irbid, and ca. 0.5 miles N of Mahanaim. Abel inferred this identification from the similarity of the name, Barsina, with the name Barzillai, and the similarity of the name of the wadi (i.e., er-Rujeileh) with Rogelim.

However, Glueck (1951: 176–77) found no evidence at Barsina of settlement before the Roman period. He instead proposed to identify Rogelim with Zaharet Soq'ah, which was a strong Iron Age I fortress.

HENRY O. THOMPSON

ROHGAH (PERSON) [Heb *rohgâ* (רָהֻגָּה)]. A descendant of Asher listed in 1 Chr 7:34. He is named as the son of Shamer, who perhaps is to be identified with Shomer (7:32). Rohgah does not appear elsewhere in Scripture and is attributed with no offspring. The verse in which this name appears bears several textual problems. First, the consonantal text gives the name as *rwhgh*—perhaps to be pronounced

rôhăgâ—while the Masoretes have vocalized it as *rohgâ.* Second, the MT reads "Ahi and Rohgah," but subsequent translators have divided the consonants of this phrase differently, to read "… his brother, and Rohgah."

JULIA M. O' BRIEN

ROMAMTI-EZER (PERSON) [Heb *rōmamtî ʿezer* (רֹמַמְתִּי עֶזֶר)]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Romamti-ezer received the twenty-fourth lot cast to determine duties (1 Chr 25:31).

Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, *rōmamtî* is the first person sing. *Poʿlel* perf. form of the verb *rûm.* Reading *ʿezer* as the direct object and considering the conjunction attached to *rōmamtî,* one could translate the name Romamti-ezer as "I will exalt [my] helper." It would form part of the third line of the liturgical prayer as reconstructed by scholars. For a reconstruction and translation of the prayer, a summary of interpretative possibilities, and bibliography, see ELIATHAH.

J. CLINTON MCCANN, JR.

ROMAN ARMY. Roman control of Greater Syria (including Judea) lasted for seven centuries, being founded largely on the powerful and effective forces she established in the region. The character, organization, size, and distribution of those forces developed and changed over that long period. The army left by Pompey the Great in his new province of Syria in 63 B.C. was rather different from that of Septimius Severus ca. A.D. 200 and very different from that stationed in the region on the eve of the Islamic invasion and the Battle of the Yarmuk in A.D. 636. The dynamics of change derived from the political and social evolution of the Roman Empire, from developments in military technology, tactics and strategy, and the altered perception of the role of the forces in the region.

The elements of the Roman army with which the inhabitants of the region would have been most familiar were the Legions and the Auxilia; sailors of the Fleet were normally only found along the coast. In addition, for more than a century and half after Pompey, the troops of various client states in the region also had a role to play and were prominent in their own regions or more widely in times of war.

The change in the Roman army from the 1st century B.C. to the 2d A.D. may be summarized in three broad phases of overlapping development. For a generation after Pompey, Roman control was assured by the establishment of a number of Legions in the area which could call upon the armies of allied states in time of rebellion or external war. The next period saw the addition of large numbers of supplementary troops (the Auxilia) serving permanently alongside the Legions and in Roman pay. Finally, progressively from the end of the 1st century B.C. onwards, the various allied states were eliminated, their territory (and armies) brought under direct Roman control. The annexation in A.D. 106 of the last of these allied states, the kingdom of the Nabateans, left military control entirely in the hands of Legions and Auxilia.

In general, the central forces were those permanently based in Greater Syria. From time to time, however, reinforcements were drafted from other provinces; from Cappadocia and Egypt in particular, but also from as distant as the provinces of Africa and Europe.

The subject may now be considered in two parts: the character and organization of the Roman army in general, then the army in the Near East with special reference to the NT period.

A. Late Republic and Early Empire

1. Legions. The military success of the Roman Republic had been founded on the effectiveness of her citizen armies, equipped as heavy infantry and organized into legions. The precise numerical strength of the full legion in the Late Republic is disputed, round numbers of 5,000 and 6,000 being found in the literature, but most scholars prefer the former.

During the Republic, by law, all male Roman citizens between the ages of 17 and 46 were liable to be called upon to serve for periods not normally exceeding six years at any one time. Most recruits were conscripted in rotation but increasingly in the 1st century B.C. generals could count on volunteers to form at least a significant nucleus of an army. Troops were required both to provide regular garrisons in distant provinces and to fight in wars. They were equipped by the state but the cost was deducted from their pay. At discharge, men would return to their farmsteads or could hope their general would persuade the Senate to reward them with a grant of land in Italy. The numbers of men under arms varied considerably as circumstances required in the last fifty years of the Republic (80–30 B.C.) but was seldom less than twenty legions.

The end of the Republic brought a change. Augustus, the first emperor, sought to create military institutions better suited to what had become a great Mediterranean-wide power and no longer a small city state. A fully professional, long-service, army was formed, recruited largely from volunteers and gauged more closely to Rome's long-term requirements than had been the case previously. More than half of the legions in service during the civil wars of 44–30 B.C. were disbanded by Augustus and a further three were destroyed in a disaster in Germany in A.D. 9. By the close of Augustus' reign (A.D. 14), there were twenty-five. This number rose to twenty-eight by the end of the century, to thirty in the early 2d century and thirty-three by ca. A.D. 200.

The Republican practice of giving legions numbers and distinctive epithets reflecting characteristics (*VI Ferrata*, "Ironclad"), former service (*IX Hispana*), the emperor under whom they were formed (*III Augusta*) continued in the empire. Increasingly, too, many individual legions remained in the same province—if, indeed, not in the same fortress—over long periods of time (e.g. *Legio III Augusta* was based in the province of Africa from ca. 30 B.C. for at least four centuries and *VI Victrix* was based at York in Britain for three centuries). From the outset, all of these legions were permanently based in the provinces, usually in one of the frontier provinces; not until the end of the 2d century A.D. was one (*II Parthica*) stationed in Italy itself.

Recruits in the imperial period still had to be Roman citizens, but a growing number of replacements in the legions were drawn from provincial sources. Some of these came from the growing numbers of Italians who had settled abroad on their own initiative or in the many colonies established by Julius Caesar and Augustus. Others—after the time of Claudius (A.D. 41–54) in particular—were recruited from the sons of provincial auxiliary soldiers. Still others, especially in the East where there were relatively few Italian settlers, were recruited from natives who were enfranchised to make them eligible. By the end of the 2d century, there were relatively few legionaries of Italian origin. Legions began recruiting within their own region. As a result, the major legionary groupings—Britain, the Rhine, the Danube, the East, Egypt and Africa—took on regional characteristics.

Conditions of service were relatively good. Recruits signed on for a long period—initially sixteen years but soon increased to twenty then twenty-five—but in return received regular pay, periodic bonuses, and a discharge bounty. For most soldiers, everyday service conditions and prospects were far superior to those generally available outside the army. In service, the legionary soldier was usually accommodated in permanent forts (but cf. below) whose timber barracks gave way in the later 1st century A.D. to stone-built ones; forts not only provided basic amenities but even bath houses. Medical care was provided, the soldier was fed well and regularly, and clothing and equipment was charged to him but provided by the state.

Outside his military base, the legionary's spending power made him a person of some importance. Moreover, part of his pay and bonuses was compulsorily saved for him which, together with his discharge gratuity, provided the means for him to settle comfortably. Legal privileges and tax exemptions for the veteran gave added status and provided an additional impetus to would-be recruits. A serious disincentive to enlistment was that the state forbid marriage for a serving soldier. The theory, presumably, was that by obliging soldiers to live and work together without any recognized external ties, their esprit de corps and mobility were enhanced. Despite the ban, the state accepted that many soldiers would father children and some would establish families whose status could be legitimized after discharge.

The effectiveness of the Roman legions was due to various factors. As heirs to centuries of steady success their morale was high, but systematic training and harsh discipline played a vital part. Prospective recruits were first screened for suitability—legal status as well as stature and general health. There were regular training sessions with various weapons, parade ground maneuvers, and route marches. Equipment included mail (later segmented plate) armor, a helmet, short sword, dagger, spear(s), and a large curved rectangular shield (replacing an earlier oval one).

The legion itself was internally flexible and efficient on the battlefield. Each probably consisted of ten cohorts of 480. These in turn were divided into six centuries of 80 men (not the 100 implied in the name), subdivided into small units, *contubernia,* of eight men, who roomed and messed together. There were in addition some 120 mounted men attached as scouts and despatch riders for a total of ca. 4,920. Later in the 1st century A.D. the first cohort was reduced to five centuries but each now of double strength (160), giving a paper strength of 5,240.

The handful of most-senior officers were relatively inexperienced. The commander or legate, was an aristocrat, a member of the Roman Senate (except in Egypt, where only equestrian prefects were appointed), most commonly in his thirties and usually appointed for three years. He would probably have seen some previous military service, but at least a decade before and not necessarily for much longer than six months to a year. Subordinate to him were six tribunes, one of whom was of senatorial family, the other five from equestrian families. The latter were commonly in their early thirties, had already gained some experience from the command of an auxiliary regiment for three years and could remain another three years as legionary tribunes. The senatorial tribunes could serve for as little as six months.

The real professionals of the legion were the centurions, sixty of them, one for each century. Most centurions were promoted from the ranks; others came in as direct appointments from the equestrian order or transferred from the elite units in Rome. Promotion over a long career could take a man from junior centurion, *hastatus posterior,* of the tenth cohort to first centurion of the first cohort, *primus pilus.* There was no fixed period of service for a man once he reached the centurionate—he could stay till he died. *Primipilares,* however, served only a year at that rank before proceeding perhaps to be camp prefect (*praefectus castrorum*) (third in command after the legate and senatorial tribune), commanding one of the prestigious cohorts of troops in Rome itself (below), or beginning on an equestrian career with the possibility of governing a small province or even entering the Senate.

The attractions of the army are well illustrated, especially for the officers. Apart from the career prospects, it was financially very advantageous. The first stage in promotion took a man to *sesquiplicarius,* which earned him pay and a half, and next came the *duplicarius* or double pay. The financial attraction of the centurionate, however, was that the pay was probably some 16 times that of the basic legionary salary. In short, a centurion had both considerable military and social status and wealth. Finally, of course, men could move between units, especially if promotion was involved or a reinforcement draft required in an emergency.

2. Auxilia. When the armies of the Roman Republic were called upon to fight outside Italy from the late 3d century B.C. onwards, they came into contact with peoples whose military traditions were rather different from their own. Rather than develop forces to counter the light infantry, mounted troops, archers, and slingers of their new opponents, they preferred rather to employ some of these new peoples as mercenaries. The practice became more common when the mass extension of Roman citizenship in the 80s B.C. integrated many former Italian allies into the legions; it accelerated during the last decades of the

Republic, especially the civil wars, with some provincial units remaining in existence for long periods and seeing distant service. Major developments came with Augustus who continued to enroll short-service bodies of auxiliaries under their own tribal leaders, but also many others recruited from among subject provincials as part of the permanent establishment.

The organization of these auxiliary troops differed in some significant respects from that of the legions. The size of each unit was small: cavalry were grouped as *alae* and infantry as *cohortes.* The exact strength of the various types of regiments differed, but all were initially defined loosely as "quingenary," i.e., approximately 500 strong; from the time of Nero onwards a few large military, "thousand strong," regiments appear. Internal organization involved dividing cavalry into sixteen squadrons (*turmae*) of thirty, each commanded by a decurion assisted by NCOs; among the infantry, cohorts were divided as in the legions into six centuries of eighty men each. An innovation was the creation of mixed regiments, *cohortes equitatae,* whose strength was probably made up of 480 infantry in six centuries and 120 mounted men in four squadrons. Auxiliaries were paid less than legionaries, perhaps less than half for an auxiliary infantryman. On the other hand, auxiliary cavalry were better paid, perhaps as much as a legionary. Pay, food, clothing, accommodation, and the improved conditions of everyday life such as the regimental bath buildings available to auxiliaries too, were attractive to those whose warlike instincts needed an alternative outlet after the incorporation of their homeland into a Roman province. Even more attractive was the prospect of Roman citizenship. In the middle of the 1st century, probably under Claudius (A.D. 41–54), the previously occasional practice of rewarding deserving auxiliaries with Roman citizenship was made standard. This usually occurred after about twenty-five years, although service continued indefinitely. By the end of the 1st century A.D., however, the term of service had been fixed at twenty-five years with an automatic grant of honorable discharge together with Roman citizenship for the soldier and, retrospectively, any family he had acquired illegally. There was no gratuity, but the attractions of obtaining Roman citizenship for themselves and their descendants was considerable.

Auxiliary regiments were recruited from throughout the empire. Some such as the Cretan and Syrian archers, Numidian and Gallic cavalry, Balearic slingers, and Raetian spearmen brought prized fighting techniques; most provided simply useful and cheap manpower. Initially, they retained their distinctive equipment and weapons; in time, most infantry and cavalry at least were equipped in a common fashion. More specialized units—archers, slingers, *dromedarii,* and heavy cavalry—inevitably retained a distinctive character. Like legions, auxiliary regiments were given numbers and names, the latter often describing their ethnic origin, particular expertise, or former service; e.g., *Ala I Gallorum, Cohors I Hemesenorum Milliaria Sagittariorum Equitata,* and *Ala I Thracum Mauretana.* Regiments often served at a distance from their homeland; indeed, their loyalty was more assured if they did so. However, through local recruitment to fill vacancies, many such units gradually lost their original ethnic character. Unlike legions, whose personnel after Augustus' time were largely volunteers, auxiliary regiments would often have consisted originally of pressed men and thereafter received drafts of recruits which included some of the same. Like legionaries, auxiliary troops had opportunities for promotion and transfer.

Alongside these permanent formations, Augustus and his immediate successors also made use of regiments brought to their service for fixed periods by native chiefs. Various Gallic regiments in particular served in this way as did units recruited by German chiefs beyond the frontier. With the assimilation of most such warlike elements, this practice died out within the empire but continued beyond the frontiers, not just with German mercenaries but with Thracians and Moors and even with the retainers of Parthian refugees.

With the exception of those units which fought under their own tribal leaders, auxiliary regiments were commanded by Roman officers from Italy or the provinces. Initially, a wide range of men took command, from legionary centurions to the younger sons of senators. By the latter half of the 1st century A.D., however, there was a regular hierarchy of posts for the equestrian class with a sequence of posts as tribunes of cohorts or prefects of cavalry regiments. Such men not only held two or three of these posts but each for as long as three years at a time. As with senatorial officers and generals who were appointed

because of who they were, these equestrian officers were not necessarily able, but they did at least gain much more experience of military affairs than senatorial amateurs.

As regards numbers, there is the testimony of Tacitus that such units were both more vulnerable than legions and constantly being formed or disbanded as required. He reports (under the year A.D. 23), however, that their overall strength was about that of the legions, i.e. ca. 125,000, about 250 regiments. Cheaper to maintain and easier to recruit from a much bigger manpower pool, their numbers rose more rapidly than those for the legions. In the mid-2d century there were approximately ninety cavalry regiments (seven of them military) and 300 cohorts (forty of them military and the total equally divided between purely infantry units [*peditata*] and mixed infantry and cavalry [*equitata*]).

Auxiliary units were distributed widely, mainly in the frontier provinces but also in those provinces without legions (e.g., Mauretania). In the Augustan period and for a short time thereafter, some were brigaded along with legions in the same fortresses. Gradually, as legions moved into individual fortresses, auxiliary units were split off too, a few, however, into multiple regiment forts. Their smaller size made it easier to move them, and although some units stayed in particular provinces for several generations, there was far more movement among them.

In peacetime, auxiliaries probably carried out most of the day-to-day patrolling and policing. In time of war, they were no less prominent than the legions, even shouldering the brunt of fighting in battles.

3. Fleets. Under the Republic, fleets had been built as required in time of war or to check piracy. Augustus established permanent fleets, first in Gaul at Forum Julii (Fréjus), then moved to Italy to two great bases at Ravenna and Misenum, which had some 10,000 men each. Subsequently, smaller fleets were created on the English Channel, the Rhine and Danube, the Black Sea, the Levantine coast, at Alexandria, and on the Red Sea. Detachments were certainly outposted to other ports.

Recruits came from noncitizen sources. Like auxiliaries, they were granted citizenship after discharge (finally set at 26 years), and generally enjoyed very similar terms of service. Commanders were drawn from the equestrian order.

With little evidence of piracy after the close of the Republic, the function of these fleets seems mainly to have been to police the seas and convoy transports of grain or troops.

4. Forces in Rome. Under the Republic there had been no troops quartered in Rome. Augustus, however, formed the Praetorian Guard of nine cohorts, each probably ca. 1,000 strong. It was subsequently increased to twelve cohorts and briefly to sixteen before settling at ten in the later 1st century. Finally, at the end of the 2d century, the size of each of the ten cohorts was increased to, probably, 1,600. Initially only three cohorts were based in Rome, but from A.D. 23 all were quartered there in a specially built camp, the *Castra Praetoria*.

Service was highly coveted. Recruitment was restricted not just to Roman citizens but to those from Italy and the older colonies and provinces such as Gallia Narbonensis and Macedonia. Pay was initially twice that of legionaries and later apparently 3 times; service was for twelve (later sixteen) years. Conditions in Rome were highly attractive and men went to war only under the emperor or one of his immediate family. Praetorians could be promoted to centurionates in legions and their tribunes were an elite, too, drawn from former chief centurions of the legions who had progressed up through the tribunates available in the other forces in Rome and who might go on to an equestrian career. The force as a whole was commanded by one, sometimes a pair, of Praetorian Prefects, men who had reached the pinnacle of an equestrian career and enjoyed the trust of the emperor in the sensitive task of providing for his general security. Cohorts took turns at guarding the palace but in practice close protection was provided by the German Bodyguards of Augustus and, later, the provincial troops of the Special Mounted Forces (*Equites Singulares Augusti*) (1,000 men), also based in Rome.

The three Urban Cohorts formed by Augustus were charged with policing the capital. Several others were subsequently formed, and individual cohorts were outposted to Ostia and Puteoli in Italy, and later to Carthage and Lyons. Their strength was initially cohorts of 500 or 1,000—certainly it became 1,000 and, in the late 2d century, probably, 1,500–1,600. Recruits were Roman citizens, serving twenty years,

Tribunes commanded cohorts and were responsible to the emminent senator who had been appointed prefect of the city.

Seven cohorts (3,500, perhaps 7,000 men from the outset) of paramilitary fire fighters, the *Vigiles*, recruited from freedmen and serving for periods of six years, were distributed around the city.

5. Allied Armies. From the Late Republic onwards, various petty rulers were recognized by Rome both within the directly administered territories of provinces and around the periphery of the empire as a whole. In time of war, they could be called upon, or expected as a token of friendship, to provide troops at their own expense for the duration of campaigns in their own vicinity. For the period under discussion, the most numerous and best attested of these rulers and their armies are in the East and they may conveniently be discussed now in that context.

Administering the armed forces was a major undertaking. The imperial bureaucracy in Rome oversaw the appointment of provincial governors and the commanders of legions and auxiliary units, and determined their distribution. Troops had to be paid and provision made both for extraordinary payments on state occasions and for gratuities and the regular issuing of discharge diplomas to auxiliaries. Within the provinces the governors oversaw recruitment, inspected troops, and were involved in their payment and discharge. The best known account is that of Hadrian's governor Arrian, who, during his governorship of Cappadocia, carried out an inspection by sea of the coastal forts and garrisons along the Black Sea coast of his province.

Every unit generated a great deal of paperwork ranging from the rosters showing the daily duties of each individual to pay records. Many such documents have survived, especially among the papyri of Egypt, but the largest and most informative single group are the records of the *Cohors XX Palmyrenorum* discovered at their base of Dura Europos on the Middle Euphrates. The language of such documents is Latin, and that was the language of the army as a whole. Nevertheless, most troops were not native Latin speakers. In the East, many legionaries were Greek- rather than Latin-speaking, while auxiliaries everywhere spoke their own tongue—Celtic, German, Thracian, and Aramaic. After 25 years service, even non-Latin speakers will have acquired a considerable familiarity with Latin. The other avenue for Romanization of the non-Italian element was through religion. In practice, Italians and Westerners in general adopted many native deities, not least the mystery cults of the East. Nevertheless, religion was an important element in everyday military routine and it involved for everyone some acquaintance with the old gods of the Classical Pantheon.

The appearance of Roman troops and their campaign practices are known partly from descriptions in the pages of such writers as Polybius, Caesar, and Josephus. A great deal of information, however, is derived from the discovery of pieces of equipment and from artistic representations. Figured tombstones can be useful but relief sculpture is especially valuable, not least the famous representations of campaigning armies of the 2d century A.D. which may be seen on the triumphal arches of the emperors Augustus, Titus, Marcus Aurelius, and Septimius Severus and on the celebrated columns of Trajan (98–117) and Marcus Aurelius (161–80).

B. The Roman Army in the East

1. Background Developments. In 133 B.C., the king of Pergamum in W Asia Minor, bequeathed his realm to Rome. From this gift, Rome created her first province beyond the Aegean—the province of Asia (129 B.C.). During the subsequent century, Roman armies campaigned throughout Anatolia as far as the Caucasus Mountains, then down through Mesopotamia, Syria, and into Egypt. By 30 B.C. much of this region had been brought under Roman control, the political geography of which was a scattering of provinces among and beyond which lay the territories of a number of petty rulers allied to Rome and largely dependent on her support and goodwill. In the same period, the more urbanized and peaceful provinces such as Asia and Bithynia, were demilitarized. A few troops remained, but mainly to assist and protect the governors and their senior officials. The main concentrations of troops moved eastwards, to Galatia, Syria, and Egypt. Major changes followed in the 1st century A.D. as most allied states of Asia Minor and Greater Syria were eliminated, their territory absorbed into an existing or newly created province. Galatia lost its legionary forces at an early stage, but Cappadocia, a new military province, was

created on the Turkish Euphrates instead; Syria remained the most-important military province in the entire East, but around it appeared new provinces—Judea in A.D. 6 (renamed Syria Palaestina in the early 2d century A.D.), and Arabia in 106. Provincial boundaries were varied occasionally, and at the end of the 2d century Syria itself was split into two smaller provinces, Syria Coele and Phoenice, and two new provinces were created in northern Mesopotamia, Osrhoene and Mesopotamia.

2. The Role of the Army. Troops were allocated to specific provinces to provide security. The emphasis within that broad definition varied according to local conditions and over time with changing circumstances. Initially, a new region had to be garrisoned to deter rebellion. Later, the size of force would depend on the extent to which the population had to be policed and it had its resources protected from banditry or external threat. In Syria, the large populations of a few great cities certainly represented potential difficulties. Where there were large Jewish elements in the urban population, there was an additional problem arising from the hostility between the "Greek" and Jewish communities. Notable flashpoints in the East were Alexandria and Antioch, but all of the cities of the Phoenician coast from Sidon to Ascalon had such troubles. In the Jewish homelands, deep-seated religious sensitivities and a rapid disillusionment with the realities of Roman rule, made the entire region unsettled. Especially sensitive and requiring close supervision were the occasions of the great festivals of Passover and Pentecost which brought huge numbers of visitors from all over the empire and beyond. Banditry—endemic to the region (see Luke 10:30 and Acts 21:38), could have political overtones and interacted with religious problems to create frequent unrest. In the absence of special forces of police or a regular militia, the task of containing banditry fell to the regular troops of the Roman army or the forces of allied rulers. See BANDITRY. Localized insurrections also were common and there were fierce and bloody rebellions in A.D. 66–70 and 132–35. The numbers and distribution of troops tells the story.

In NE Syria, Rome faced the only other great power on her frontiers, the Parthian Empire. Wars were in fact infrequent, but there was often tension and each was capable of inflicting great harm on the other. Whereas the early province of Syria was allocated only two legions, Augustus greatly increased the army of the E frontier. Syria was now assigned four legions (ca. 20,000 men) and an unknown number of auxiliary regiments. All were now seasoned professional soldiers. After the annexation of Cappodocia in A.D. 18, the dispute between Rome and Parthia over the kingdom of Media (lying between the new province and Parthian Media) became more acute and forced the stationing of an even larger army on the Upper Euphrates.

Many troops would have been stationed around Antioch, and there were detachments—perhaps only temporarily—in various other cities. Apamaea (the Hellenistic military base), Tyre, and Damascus are mentioned, and unrest or insurrection led to Jerusalem being garrisoned by Roman legionaries on various occasions during the generation between Pompey and the victory of Augustus.

Until the late 2d century A.D., the army seems to have consisted of 3 legions, 8 cavalry regiments, and 19 or 20 infantry regiments. The overall total of about 30,000 men was probably little different from the Augustan period, although the proportion of auxiliaries may have been greater.

By this time, most allied states were made into new provinces. Much of the former Herodian territories was transformed into the province of Judea and allowed a garrison of auxiliary troops largely formed out of the army of Herod and his sons. After the First Jewish Revolt (66–71), a legion was established in Jerusalem. After the Second Jewish Revolt (132–35), Hadrian placed a second legion in the Vale of Jezreel. The army in the province in the later 2d century was some 17,000. Finally, in A.D. 106, the Nabatean kingdom was annexed and became the core of the province of Arabia with a legion; the total garrison was probably about 8,000–10,000.

By the death of Hadrian (A.D. 138), there was only one legion more than under Augustus—nine now, but the distribution reflected an altering strategy and preoccupations. The three legions in Egypt under Augustus had been reduced to one, giving a total of ca. 13,000 legionaries and auxiliaries there in the early 2d century; Galatia no longer had a legionary garrison. The East from Aegean to Egypt had some 90,000 troops, but most were now in frontier provinces. The striking exception was Judea/Syria Palaestina with no frontier but a huge garrison.

Local recruitment had gradually orientalized the legions. In the 2d century, the units which dominate the army lists for the eastern provinces are those recruited in Asia Minor (Phrygians, Galatians, and Paphlagonians) and Greater Syria itself (from Chalcis, Damascus, Palmyra, Arabia Petrea, and the cities of Judea/Palaestina). There seem to have been major recruitment drives in the Syrian region at the time of Nero's wars in Armenia and later in connection with the suppression of the Jewish revolt. Until the First Jewish Revolt, Jews were exempted from conscription, but the practice changed after that time.

In the early Julio-Claudian period the legions were concentrated in N Syria. By the 2d century, they were strung out from north to south and largely along the eastern periphery of the provinces—Satala, Melitene, Samosata, Cyrrhus, Raphanaea, and Bostra; the anomaly is Judea, with legions at Caparcotna and Jerusalem. Few auxiliary units can be located, but if Judea is any guide, in the 1st century many were placed in the towns of the region and a few strongpoints.

Unlike the western provinces, the military camps of the East are difficult to find. Troops were often quartered in the many towns of the region and were billeted directly on households. That was unwelcome and unsatisfactory and the solution was either to construct a camp next to a town or take over an entire quarter. Examples of both practices can be seen at Bostra where the early 2d century legionary fortress was established on the N side of the city, and at Dura Europos, where the late 2d century camp was developed inside a walled off part of the town. The proximity of soldier and civilian would be a mixed blessing. Undisciplined behavior and petty tyrannies by soldiers are a common refrain in ancient documents in general. On the other hand, soldiers brought useful spending power from their regular pay and occasional bonuses. After retirement, relatively few soldiers in the East were established in formal military colonies. Caesar and Augustus founded several in Asia Minor, but in Syria there were only three. Berytus (Beirut) and Heliopolis (Baalbek) were apparently refounded by Augustus after the civil wars. Claudius founded Ptolemais (Akko) in ca. A.D. 53/4. Later, Vespasian made Caesarea a colony but without the introduction of veterans.

3. The Military Background to the NT. In the general absence of community-based forces in the Roman Empire, soldiers were used to maintain law and order. The consequences were predictable. Much petty disorder went unchecked; military intervention, when it came, was heavy handed and often bloody. Inevitably, soldiers were treated warily, with fear, distrust and dislike. Ancient sources in general depict the soldier as despotic. In Syria, and most particularly in Judea, there was an additional factor. Because Jews were long exempted from military service to Rome, they had no family links and few shared values with the troops in the province (but cf. below). The parable of how one should react when pressed to carry a pack for a mile (Matt 5:41) symbolizes the common perception of the petty tyrannies of the military.

The situation was more difficult still in Judea. The Hasmonaean rulers of the region had employed native Jewish troops extensively. Herod the Great had likewise used many Jewish recruits in the civil war in which he had overthrown his Hasmonean rival, Antigonus; his final success, however, was built in part on foreign mercenaries and—not for the last time, on Roman troops. The war was long and bloody, and Herod was subsequently ruthless in consolidating his position. Between 37–30 B.C. his position was underpinned by a legion Antony based at Jerusalem; however, this was withdrawn by Octavian when Roman forces were reassigned in the East.

The elite units in Herod's own pay were foreign mercenaries. Already during the Antonian phase he had recruited non-Jewish troops in Judea as well as Ituraean forces from Mt. Lebanon. Then, in 30 B.C., Octavian made him a gift of 400 Gauls, till recently employed by Cleopatra (Jos. *Ant* 15 §217; *JW* 1 §397). Such western troops were evidently prized; a generation later, Gallic, German, and Thracian regiments were the principal guards at his funeral (Jos. *Ant* 17 §198). Within his kingdom, he was able to enroll troops from among his fellow Idumeans, from Samaria and Trachonitis, and from among the "Greek" inhabitants of his cities. There were Jewish troops too, though the best known were not indigenous but the 500 archers who had fled from Babylonia with their chief Zamaris and his family shortly before Herod's death (*Ant* 17 §24). The size of his royal army is not clear: certainly several thousand in addition to military colonists acting as reservists.

Like other allied rulers before and after him, Herod seems to have modeled his forces in part at least on Roman military practices. Units seem to be cohort sized (500), and some of his senior officers—the tribune Volumnius, and the cavalry and infantry commanders, Gratus and Rufus—bear Roman names. The loyalty of these troops was further guaranteed by his generous land grants to them, many being established in colonies to secure themselves and the neighborhood. The largest and best known was Samaria, renamed Sebaste in honor of the Emperor Augustus, to which were allocated 6,000 colonists, many of them veterans. Others were located at Gaba (known as "City of the Horsemen") east of Mt. Carmel, and at Heshbon, beyond the Dead Sea in Perea. Farther afield, at least 2,000 Idumeans were settled in their home territory. Three thousand were settled in Trachonitis and were destroyed in a rebellion in 10–9 B.C.; their successors, the Babylonians of Zamaris, were established as colonists at Bathyra in Batanea.

As well as these secure islands of military colonists, Herod established fortresses to watch over the population. In Jerusalem it was the Antonia fortress and a citadel in the upper city; east of Jerusalem and in the Jordan Valley were strongholds at Cyprus, Herodium, Hyrcania, and Alexandrium; on either side of the Dead Sea were his fortress palaces at Masada and at Machaerus on the borders of the Nabatean kingdom. There were probably other detachments based in his new city of Caesarea and in Idumea, where the likely forts and fortresses were at Arad, Malatha, and Oresa. See HERODIAN ARMY.

After Herod's death in 4 B.C., there were uprisings in his kingdom, and his army split in its loyalties over the succession of his sons, whom the non-Jewish troops—including 3,000 Sebastenians (from Samaria-Sebaste)—supported. In response, Augustus had a Roman legion from Syria installed in Jerusalem. However, when the rebellion flared up more fiercely, this legion was itself besieged by the rebels and had to be rescued by the return of Quinctilius Varus, the governor of Syria, with much of his provincial army. Just as Herod himself had supplied troops in ca. 25 B.C. to support a Roman campaign into the Arabian peninsula and had gone with a fleet to join a Roman campaign to the Bosporus in 14, Varus now called upon the forces of the various allied rulers in the region to support him in Judea. However, the troops sent by the Nabatean king were more intent on revenging age-old enmities and were soon sent away. The uprising spread from Jerusalem into the Perea, Idumea, and Galilee and required the combined efforts of the loyal Herodian troops and Varus's army. Much of Jerusalem was damaged or destroyed, the city of Sepphoris and numerous towns and villages, especially in Galilee, were sacked. The legion was retained in Jerusalem, probably until the return of Archelaus.

Because of these events, the installation of Herod's sons in various parts of his kingdom was even more dependent on non-Jewish mercenaries. Prominent in Josephus's account of the uprisings of 4 B.C. are the Sebastenians and Trachonite archers; curiously, the European mercenaries are never mentioned again.

Within ten years, the tetrarch Archelaus, who had obtained Judea, Samaria and Idumea, had been removed by Augustus and his territories formed into a province under a prefect. These governors had no legionaries at their direct disposal but relied instead on the Caesarean and Sebastenian regiments formed by Herod. These troops are not actually mentioned under either Archelaus (4 B.C.–A.D. 6), the Prefects (A.D. 6–41), or Herod Agrippa I (A.D. 41–4) when he briefly recovered his grandfather's kingdom. However, at Herod's death in 4 B.C. Josephus reports that Herod's cavalry and infantry commanders, Rufus and Gratus, supported the Romans with "3,000 Sebastenians." They are almost certainly the predecessors of "the regiment of Caesarean cavalry (500 men) and five regiments of Sebastenian infantry (2,500 men)" stationed at Caesarea in 44 (*Ant* 19 §356–66).

With the creation of a province in A.D. 6, the royal forces were apparently incorporated into the Roman army as auxiliaries. The major force consisted of 3,000 cavalry and infantry originally raised in Sebaste and Caesarea, named now (if not already under their romanophile Herodian masters) *Ala I Sebastenorum* and *Cohortes I–V Sebastenorum*.

The prefects of Judea also removed the seat of government to Caesarea, where at least some of the Sebastenian regiments are later attested. It is at Caesarea too that the *Cohors (II?) Italica* was to be found ca. A.D. 40. An unnamed cohort was based in Jerusalem and the various strongholds probably retained

their Herodian garrisons. Extra troops were certainly brought to Jerusalem during the great religious festivals.

The troubles of Judea under these prefects became progressively more severe. Unrest and uprisings caused by provocative action by the governors, required military action. The major forces in Syria, however, were little in evidence. In 37, Vitellius advanced through Galilee on his way to Arabia Petrea. Not until 40, however, when the Emperor Gaius ordered his own statues set up in the Temple at Jerusalem, did troops from Syria intervene in the province of Judea directly.

Virtually nothing can be said of the forces of Herod's other sons in their respective segments of the former kingdom. Since Philip's tetrarchy included the difficult lands beyond the Sea of Galilee, he presumably needed to maintain his father's military arrangements. He died in 37, and his forces would have been briefly under Roman control until given to Herod Agrippa I. Herod Antipas rebuilt and fortified Sepphoris in his Galilean lands and founded and fortified Betharamphtha/Julias in the Perea. That he maintained the frontier fortress at Machaerus and had an army is revealed by the events surrounding the flight of his Nabatean wife and Antipas' defeat in battle by her father. The event provoked a Roman invasion of Arabia Petrea—apparently through Galilee, though it was called off when news arrived of the death of the Emperor Tiberius (A.D. 37). Antipas himself, was deposed in 39.

Herod Agrippa I inherited first the recently annexed territories of Philip (37), then those of Antipas (39), and finally (41) the province of Judea itself. Since he certainly took over the Sebastenian regiments which had been "Roman" for a generation, there is no reason to doubt that he also acquired the forces of his uncles in their former tetrarchies. With a royal army restored, he soon appointed his own commander and was proceeding to refortify Jerusalem when instructed by the suspicious governor of Syria to desist. With Agrippa's death in 44, the new Roman governors, now called procurators, to whom the entire kingdom passed, would have taken charge of the royal forces, converting them into formal auxiliary regiments of the Roman army. Explicit evidence is given in the case of the Caesarean and Sebastenian regiments at Caesarea who, despite the Emperor Claudius' anger at their behavior, were allowed to remain in the province.

The procurators, provocative and violent, used their forces ruthlessly to put down all opposition. A striking feature of both governors and their troops is the extent to which they were anti-Jewish. The procurator Cumanus, for example, took the part of the Samaritans though they appear to have been the aggressors; his successor, Felix, supported the Greeks of Caesarea against their Jewish fellow citizens. Two major affronts to Jewish sensibilities were provoked by soldiers; one when a soldier on duty during Passover exposed himself to the crowds and later when one publicly destroyed a Torah. The regiments are not named, but they were plainly non-Jewish.

The loss of life in disturbances and riots in the cities was considerable and the countryside became ever more lawless. In a deteriorating situation, the governors of Syria had to intervene more frequently both to restore order and curb the procurators. Cassius Longinus went to Jerusalem with troops from Syria in 45/6; in ca. 52 Ummidius Quadratus had to end the Jewish-Samaritan fighting; finally, in 66 there was Cestius Gallus's intervention with a legion and his subsequent disastrous retreat from Jerusalem. The planting of a new Roman colony with legionary veterans at Ptolemais, on the very edge of the Judean province, was another sign of growing concern. It was in this context that the Apostle Paul's imprisonment at Caesarea took place.

The outbreak of the First Revolt in 66 was the occasion of major and protracted intervention by Roman forces. In describing events, Josephus reveals the military arrangements in the province at that moment. In addition to forces at Jerusalem and Caesarea, there were, as might have been inferred, garrisons in Herod the Great's fortresses at Cypros, Masada, and Machaerus. Otherwise unknown are the regiment of cavalry and one of infantry at Ascalon, derived perhaps from forces Salome may have had when the city was given to her after Herod's death.

Immense forces were mustered by Rome to suppress the Revolt. Josephus provides the clearest descriptions. In 67 Vespasian mustered an army at Ptolemais: *Legio X Fretensis* from Syria and *V Macedonica* and *XV Apollinaris* which had been transferred to the East only a few years earlier during

Nero's eastern war, from Moesia and Pannonia respectively. The auxiliary units included the Sebastenians from Caesarea, one regiment of cavalry and five of infantry. In addition there were five *alae* and eighteen cohorts from Syria. None are named, but one is otherwise known to have been the *Ala Gaetulorum.* Ten of the cohorts are said to have been "milliary." The neighboring allied kings were there in strength; Antiochus of Commagene, Sohaemus of Emesa, and Herod Agrippa II each provided 2,000 archers and 1,000 cavalry; Malchus, the Nabatean king, sent 5,000 infantry (mainly archers) and 1,000 cavalry. Apparently some 50,000 in total; Josephus says 60,000. In 70, when Titus took command, his forces had been depleted by detachments drawn off by Vespasian to wage his civil wars in the West, but were then augmented by an additional legion, *XII Fulminata* (which had been devastated in Cestius Gallus's retreat in 66), and by further troops from Syria and Egypt. No total is given.

After the war, the province was raised in status and given a major garrison. Henceforth the governors were senators and a Syrian legion, *X Fretensis,* was based in the ruins of Jerusalem, though with a probable detachment at Caesarea. Eight hundred legionary veterans were established as colonists at Emmaus, near Jerusalem. The Sebastenian regiments whose behavior had done so much to cause the revolt, were placed. Most information comes from discharge diplomas, but the earliest is for 86, and names only two *alae* and four cohorts. The two *alae* suggest the composition of the new garrison. The *Ala Gaetulorum,* is known to have fought in the war, presumably now retained; the *Ala I Thracum Mauretana* is thought to have arrived after the war in exchange for the *Ala Sebastenorum* which subsequently appears in Mauretania. Other regiments arrived in later years and some left to go to Egypt or Arabia (created in 106), suggesting a certain amount of mobility. The ethnic character of the new troops is unclear. Spanish and Thracian regiments dominate in the later 1st century, but the 2d century saw many more eastern regiments: Phrygians, Galatians, Damascenes, and Nabateans, and even a regiment of Sebastenians again. Many of the western regiments are likely to have lost their original ethnic character before arriving in Judea/Palaestina, but that is less likely to have been the case with the oriental units. The total is not known, but is unlikely to have been less than the 3,000 Sebastenians removed from the province.

There was a major change in Hadrian's reign (117–135). The status of the province was raised with ex-consuls as governors and a second legion installed. This permanent addition was a Syrian legion, *VI Ferrata,* established at Caparcotna near Megiddo. Initially, however, it may have been preceded by a new legion, *II Traiana*.

The Second Revolt (132–35) again saw huge additional forces drafted in. The garrison of what was now called Syria Palaestina remained at two legions after the war, though the numbers of auxiliary units may have increased. Discharge diplomas of 139 and 186 list three *alae* and twelve cohorts (ca. 7,000 men) and two *alae* and seven cohorts (ca. 5,500 men) respectively. The overall total in the 2d century may have been some 17,000 troops. Units are attested at various times at Hebron, En-Gedi, and Haifa, and possibly at Emmaus and Sebaste.

Beyond the Jordan were further troops. First, with the creation in 53 of a kingdom for Herod Agrippa II over Trachonitis, Batanea, and Gaulanitis (further cities and lands were added later), Judea lost some territory and the king reestablished a royal army. Inscriptions give some clues as to the character of that army, in particular its officers—though plainly native to the region, some the descendants of the Babylonian colonists, often bore Roman names (e.g. Modius Aequus, T. Mucius Clemens, and Lucius Oboulnius). It is tempting to regard this as a consequence of these regiments having been incorporated into the Roman auxilia in 37 and between 44–53. During the First Revolt, Herod Agrippa II contributed 3,000 men, the equivalent of six regiments. Most Hellenistic cities beyond the Jordan were part of Syria, and one at least—Gerasa—had *Ala I Augusta Thracum* in garrison for a time after the First Revolt. After 106, Gerasa and some of these other Hellenistic cities, became part of Arabia, which received a garrison of a legion, *III Cyrenaica,* and several thousand auxiliaries; some transferred from Judea, which apparently received two regiments of the Nabatean royal army (*Cohortes IV* and *IV Petraeorum*), attested on a discharge diploma of 139.

4. The Roman Army in the Bible. The presence and activities of the Roman army are mentioned or implied frequently in the NT. The adoption of the term "legion" to explain large numbers reflects this

awareness; thus the man whose name is Legion, from all the devils which possessed him (Luke 8:30), and the observation of Jesus concerning his Father sending a dozen legions of angels to save him (Matt 26:53). Of course, some of the references are to the troops of allied rulers. The Massacre of the Innocents (Matt 2:16), would have been the work of Herod's royal troops—perhaps from Jerusalem or Herodium. Later, Herod Antipas sent a soldier of his guard to behead John the Baptist (Matt 6:27), and it is again Herod's soldiers who mistreated Jesus in Jerusalem after Pilate discovered he was a Galilean and handed him over to the tetrarch's jurisdiction (Luke 23:11). Later, it was the soldiers of Herod Agrippa I who arrested and put Peter under guard in Jerusalem (Acts 12:4). Interestingly, the Herodian soldiers were organized into watches of four men, modelled presumably on a Roman *contubernium* of eight men. We may envisage that when Herod Agrippa II entered the Roman province—as he did when making his courtesy call on the procurator Porcius Felix at Caesarea in ca. 52 (Acts 15:13), he came attended by troops. An interesting royal soldier is the centurion at Capernaum who sought Jesus' aid to cure his servant/son; he is described as being a friend of the Jews and of having built the community's synagogue (Luke 23:11; cf. Matt 8:5–13, John 4:46–53). His rank, centurion (*hekatontarchos*), further illustrates the Roman model of these forces of the allied rulers. In Jerusalem itself were to be found the Temple Guards. They appear at Gethsemane (John 18:3, 12) and were presumably the force behind Paul's persecution of the early Church (Acts 8:1–3).

It is largely the regular army of the Roman governors which is mentioned in the Gospels and in Acts. The references are at their vaguest in the account of the arrest and crucifixion of Jesus, improve with Peter's ministry in his homeland and are most informative with Paul. Pilate's soldiers flog and mock Jesus in the court of the governor's headquarters (Matt 27:26–37 = Mark 15:21), subsequently crucified him, one of them stabbing him with a spear (Matt 27:35 = Mark 15:24 = Luke 23:36–47 = John 19:17) and later put a guard over the tomb (Matt 27:62–66; 28:11–15). The location of the flogging is said to be the *praetorium* (Mark 15:16) which was probably the Antonia fortress near the Temple Mount, rather than the Herodian palace in the SW of the city, where the procurators probably took up residence when in Jerusalem. See PRAETORIUM. Pilate's force is described as a cohort (*speires*), all of which was called together to witness the punishment (Mark 15:16 = Matt 27:27). The only individual identified is an unnamed centurion in charge of the crucifixion (Matt 27:54 = Mark 15:39 = Luke 23:47).

A single passage dealing with the ministry of Peter is useful. "At Caesarea there was a man named Cornelius, a centurion in the Italian cohort, as it was called" (Acts 10). Two *Cohortes Italicae* are attested, but both rather later. This passage gives the earliest reference (A.D. 40) to what is probably the *Cohors II Italica voluntariorum civium Romanorum* and locates it at Caesarea. In the second half of the century—perhaps after the Jewish Revolt—it was part of the Syrian army. In 40 it was evidently part of the prefectural army. The titles suggest that in origin at least it was composed of Roman citizens who were in some sense "Italian"; the only other known soldiers of the regiment are, however, Semites from Philadelphia (Amman). Cornelius himself is described in terms which make it clear that he was not Jewish but was probably one of those Gentiles attached to Jewish communities who were not proselytes but "God-fearers" (*theosebeis*), Reminiscent, in fact, of the centurion whose servant Jesus had cured at Capernaum. Because Josephus regularly depicts the troops in the province displaying a general insensitivity towards the Jewish religion, indeed, often an open partiality for the non-Jew, the accounts of these two officers provide useful counterbalance. Just as interesting, he has servants, a family, and a home in Caesarea—illustrating how the ban on marriage was widely ignored. Given the apparent origin, the regiment is unlikely to have been inherited from Herod and Archelaus, but, rather, to have been introduced by the prefects of Judea, and as such is evidence that the provincial garrison under the prefects was more than just the former royal troops.

Paul's rescue from a mob in Jerusalem ca. 58 and his subsequent imprisonment and transfer to Rome brought him into close association with the Roman army. In Jerusalem he was rescued by the intervention of the tribune (chiliarch) of the cohort in the city and taken to its barracks (Acts 21:31–23:23). The tribune, Claudius Lysias, astonished to discover that Paul is a Roman citizen by birth, admits that he had had to purchase his citizenship. The obvious inference is that the tribune was a provincial, perhaps an

easterner (he speaks Greek), commanding an auxiliary regiment. Paul was subsequently escorted to Caesarea by troops of the Jerusalem garrison. Acts gives their number as 200 infantry, 70 cavalry, and 200 dexiolabois. The meaning of the last is not known; "spearmen" or "light-armed" are guesses. The numbers are interesting, however. The infantry stayed with Paul only as far as Antipatris and he may not have known their exact numbers; the cavalry were with him as far as Caesarea, and the figure may be precise or very close. The overall number is striking, representing the equivalent of an entire cohort. The implication is that Lysias had a force at his disposal which was mixed infantry and cavalry and that he had more than just a single cohort. A possible explanation is that because of the crowds in Jerusalem for Pentecost, the normal modest garrison was reinforced to cope with the turmoil and possible disturbances.

After his long imprisonment at Caesarea, Paul was handed over to Julius, a centurion of the *Cohors Augusta* (*speires Sebastes*), who, together with some other soldiers, escorted him on his sea journey to Rome. Julius is plainly a Roman and his unit is attested serving in the Syrian Hauran in the 80s in the army of Herod Agrippa II. It would seem that the procurator, Porcius Felix, who was then entertaining Herod Agrippa II and his sister Berenice at Caesarea, agreed to send Paul to Rome under escort of some of the king's troops, evidently a very Romanized unit, perhaps with Roman officers. In Rome, these troops will have been housed in the Castra Peregrina. Though uncommon, such exciting journeys to the capital for provincial troops occurred from time to time. For Judea, for example, Josephus twice reports the Syrian governor Quinctilius Varus (7/6–4 B.C.) sending prisoners to Rome who would have required escorts (*Ant* 17 §303 and *JW* 2 §77, 83). The same would have been true when a later governor, Quadratus (48–52), sent a number of high-ranking prisoners to Rome.

ROMAN CHRISTIANITY. See CHRISTIANITY (CHRISTIANITY IN ROME).

ROMAN COLONIES (JUDEA). Roman colonies (*Coloniae civium Romanorum*) were founded as early as the 4th century B.C. Originally they were modest settlements consisting of some 300 families sent to settle in various places in Italy. They remained part of the Roman state, and the settlers retained their citizenship. In the 2d century large colonies of Roman citizens were founded with a population of 2,000 to 5,000 settlers, usually in newly conquered territory. Although still part of the Roman state, they were

organized as cities with their own local authorities. In the Gracchan age (163–121 B.C.) and thereafter, Roman colonies were often established outside Italy so as to provide the city proletariat or veteran soldiers with land. The greatest number of veteran colonies were founded in various provinces in the age of Caesar and Augustus. These were planted either on unoccupied sites or imposed on existing cities. The last veteran colonies were founded in the reign of Hadrian (A.D. 117–38). In the mid-1st century a related development took its inception, namely, granting the status of *colonia civium Romanorum* to provincial communities without settlement by Roman veterans. The most important consequence of this was that Roman citizenship was conferred on part of the citizens of such a community—those who had fulfilled certain civic offices in the colony. In the E provinces, grants of colonial status are attested from the second half of the 1st century through the 3d. Acquiring the rank of a *colonia* also considerably enhanced the prestige of a town. The grant might include additional privileges such as the *ius Italicum,* which provided for the same rights as colonies in Italy, including exemption from direct taxation of land or persons.

A. Berytus and Heliopolis

Veterans were settled at Berytus (Beirut) in 14 B.C. by Agrippa, although epigraphic evidence may suggest an earlier date (after Actium and before 27; *CIL* III 14165.6). The legal status of Heliopolis (Baalbek) is a matter of controversy. Either it was founded as a separate colony by Augustus (27 B.C.–A.D. 14), or it was part of the territory of Berytus until the reign of Septimius (A.D. 193–211), when it is on record as a separate colony (references and discussion by Rey-Coquais *IGLS* 6.34, n. 9; and 1978: 51). The Romans were faced with banditry based in the mountains and along the coast, and it has been argued that it was the task of the veterans to suppress it. However, it was quite difficult to solve such problems. While the settlement of retired soldiers in the fertile plain would guarantee a loyal and reliable presence there, military forces would have to operate in the mountains in order to fight within the bandits' own territory and in order to keep the roads safe. This included the difficult road through the mountains which linked Berytus with the Beqaʿ valley.

A famous inscription originally set up at Berytus honors an equestrian officer who was dispatched by the governor of Syria at the beginning of the 1st century to destroy a fortress of Ituraeans in the mountains of Lebanon (*CIL* III 6687; *ILS* 2683; Gabba 1958: 52–61, Pl. 3). The officer, it may be noted, later became *quaestor, aedilis, duumvir,* and *pontifex* of the colony. Berytus served as base of operations just as the colony of Ptolemais-Acco did in 67. In 4 B.C., Berytus provided Varus, on his way to Judea, with 1,500 infantry troops (*JW* 2.5.1 §67; *Ant* 17.10.9 §287). These were local citizens who formed a militia (there is also evidence of such militias from other towns). In 66, such units from several Syrian cities joined the forces of Cestius Gallus when he marched against the Jews (*JW* 2.18.9 §502, 506). They were very poor fighters. Inscriptions also testify to the presence of soldiers on active service at Heliopolis. The epigraphic material clearly shows the social and cultural impact of the veteran settlement in both centers and in their territory far into the 3d century. Veterans were settled in and around cities and in the Beqaʿ valley, but not in the mountains. These became crown land, as apparent from numerous Hadrianic inscriptions referring to imperial forests (fully published and discussed in *IGLS* 8.3).

One has the impression that urban and rural development was a slow process. Dated inscriptions are not found in substantial numbers before the second half of the 1st century A.D., almost a century after the foundation. The road system in the region is marked by milestones of the 2d century. Whatever the status of Heliopolis before Septimius Severus, it was taken over by veterans in the time of Augustus. It is therefore of interest to see what the inscriptions from Heliopolis tell us of the urban development of this town and its vicinity (*IGLS,* vol. 6). Here, too, evidence is lacking of an immediate or early development following the settlement of veterans. The earliest imperial texts from the area date to the second half of the 1st century A.D. On the other hand, we are informed that Herod of Judea built exedras, porticos, temples, and forums in Berytus and Tyre (*JW* 1.21.11 §422) Agrippa I built an extraordinarily expensive and beautiful theater at Berytus, where he also built an amphitheater at great expense, as well as baths and porticos. He donated public spectacles and provided great numbers of gladiators for the amphitheater (*Ant* 19.7.5 §335–37). Agrippa II built (another?) expensive theater at Berytus. He donated annual public

spectacles costing thousands of drachmas. He gave grain and distributed olive oil to the citizens and adorned the whole city with statues and replicas of ancient sculptures (*Ant* 20.9.4 §211). Epigraphical confirmation has been found in the form of an inscription which records the restoration by Berenice and Agrippa II of a building erected by Herod the Great (Cagnat 1928: 157–67; cf. *ANRW* 2: 135–63; pl. ii.5).

Public inscriptions set up by the town are in Latin, as would be expected in a Roman veteran colony, even in the East. There is less published material from Berytus than from Heliopolis, but even there inscriptions are in Latin (e.g., Lauffray 1944–45: 13–80, esp. 60; 67f.; 77). There are very few in Greek and none date earlier than the 4th century (*IGLS* 6: nos. 2740, 2827ff., 2830ff.). Inscriptions set up by private individuals tend to be in Latin as well. It is clearly significant that Latin is used by civilians in the surrounding territory (*IGLS* 6: 2894, 2904, 2908ff., 2925, 2955).

There are many inscriptions which show that citizens of the colony combined army careers with local office. Some of them reached very high positions, including membership in the Roman Senate (*IGLS* 6: 2781, 2786ff., 2793–2795). Many citizens of the colony have names which reflect long-standing citizenship (*IGLS* 6: 2714: L. Antonius Silo; 2716: L. Julius Severus; 2781: L. Antonius Naso). On the whole purely Latin names are far more frequent than Greek, Semitic, or mixed names, and this is true for the inscriptions from the town itself as well as for those from the territory.

It is clear that the impact of the settlement of legionary veterans was quite remarkable for its long-lasting intensity. The existence of a distinguished school of Roman law at Berytus has always been seen as an indication of the Latin character of this town. Epigraphical evidence proves that the effects of the settlement of veterans on the social and cultural life of both Berytus and Heliopolis, both in the towns and the surrounding territory, lasted at least until the 4th century.

B. Ptolemais (Acco)

A Roman colony was established at Ptolemais (Acco) in Syria-Phoenicia following serious trouble between Jews and Samaritans in the reign of Claudius (A.D. 41–54; *HJP²* 1: 458–60, 462). An investigation was carried out on the spot by the governor of Syria, and the prefect of Judea was dismissed ca. A.D. 52. Veterans of the four Syrian legions were settled in a new colony at Ptolemais between 51/2 and 54. The last precolonial coin-issue of Ptolemais dates from A.D. 51/2 (Kadman 1961: nos. 86–90; Seyrig 1962: 39; note the founder's coins with *vexilla* [military ensigns] Kadman 1961: no. 92). The foundation by Claudius is mentioned by Pliny (*HN* 5.17.75): "*Colonia Claudi Caesaris Ptolemais, quae quondam Acco* …" A new road was constructed from Antioch in Syria to the colony. Milestones of A.D. 56 record the construction of a road "*ab Antiochea ad novam coloniam Ptolemaida*" (Goodchild 1948: 91–123, esp. 126). Together, these items prove the date of the foundation of the veteran colony.

Admittedly, the connection between the troubles in Judea and these measures has not been proven (Josephus does not mention the foundation of the colony); however, the chronological sequence indicates a causal connection. Ptolemais lay just N and W of the boundary of Judea and was situated between the sea and the hills of Lower Galilee which were occupied by Jews. It had the last good harbor N of Caesarea and was the last major town to be passed when traveling from Syria to Judea along the coastal road. Ulpian (*Dig.* 15.1.3) describes it as lying between Palaestina and Syria. "*Ptolemaeensium enim colonia, quae inter Phoenicen et Palaestinam sita est, nihil praeter nomen coloniae habet.*" The last part of this sentence suggests that the colony had no additional financial privileges such as the *ius Italicum* (see above), or the exemptions from taxation enjoyed by Caesarea and Aelia Capitolina. Perhaps it received *ius Italicum* in the reign of Elagabalus (A.D. 218–222), for city coins of his reign show Marsyas (Kadman 1961: no. 163), but this cannot be taken as proof of such a grant.

The town proved useful in A.D. 67, when it served as Vespasian's base of operations. It was precisely such a function which a veteran colony could fulfill. Only after the complete subjugation of Galilee did Vespasian move his headquarters to Caesarea (*JW* 3.2.4 §29; 4.2 §64; 9.1 §409). The veterans at Ptolemais could not possibly fight the rebellious Jews, but they could provide the Roman army with a reliable base. The establishment of a veteran colony at Ptolemais clearly must be distinguished from the granting of privileges, also under Claudius, to several towns including Tiberias, which received the name "Claudiopolis."

The foundation of the colony involved both drastic reorganization of the territory and land grants to veterans. The land, whether bought or confiscated, was taken from its original possessors, and the infusion of veterans entailed the imposition of a new local leadership. Unlike the mere grant of a new name, it was a project to the disadvantage of the existing population. Otherwise, little is known of this city. There are not many inscriptions, but the few that have been found fit the pattern established at Heliopolis. 1946: 85, n. 2). Families of distinction may have lived in the city, since it produced at least one distinguished person: the consul Flavius Boethus, governor of Palestine (A.D. 162–66), known from the works of Galen as a scholar and philosopher with an interest in medicine (Smallwood 1981: 552).

C. Vespasian's Organization of Judea

"About the same time Caesar sent instructions to Bassus and Laberius Maximus, the procurator, to dispose of all Jewish land. For he founded there no city of his own while keeping their territory, but only to eight hundred veterans did he assign a place for settlement called Emmaus …" (*JW* 7.6.6 §216 as translated and interpreted by Isaac 1984: 44–50). In this passage, often misunderstood, Josephus wants to emphasize that Vespasian gave instructions to sell all confiscated land in Judea. No Jewish land was granted to foreign settlers, because he did not establish a new Flavian city (i.e., a veteran colony) to replace Jerusalem. Josephus explicitly mentions the modest settlement at Emmaus (Luke 24) as an exception. The site can be identified without doubt with modern Moza. It must be emphasized that this was not a settlement with the status of a *polis*, let alone of a Roman colony. It does not appear in the lists of Roman colonies in the *digest* and did not issue coinage. It is today in one of the most fertile and pleasant valleys around Jerusalem, well watered with ample farm land and situated on the main road from the coastal plain to the city. Even this veteran settlement—it was too small to receive the status of a colony—has left an imprint. The village still bore the name "Qolonia" in the 19th century and the tombstone of a girl with a Roman name was found on the spot, inscribed in Latin (Landau 1967: 369).

Caesarea received colonial status from Vespasian, but it is clear that this was not accompanied by the settlement of veterans in the town (Isaac 1980–81: 39–43). It was a reward for support in the Jewish War and probably commemorated the fact that in Caesarea Vespasian was first proclaimed emperor by his own troops—hence the name of the colony: *Colonia Prima Flavia Caesarea.* The grant of colonial status had a profound impact. It meant that all citizens of the town received Roman citizenship; tax privileges were granted as well, as appears from two passages in the *digest* (Paulus *Dig.* L 15.8.7; Ulp. *Dig.* L 15.1). This, then, was the first "titular" colony established in the E part of the empire.

Another Roman colony which must be discussed here is Aelia Capitolina at Jerusalem, founded in the reign of Hadrian, an act which, according to Cassius Dio, was the cause of the Bar Kokhba Revolt. It is true that veterans of the legion X Fretensis settled in this colony, but the town remained at the same time the headquarters of the legion. It would therefore be futile to claim that veterans who settled there guarded the region, since a proper legion had its base there. The nature of the colony is intriguing. After 70 Jerusalem became a legionary base. Hadrian refounded the city as a Roman colony, and this led to an anomaly: the existence of both an army base and a Roman colony in the immediate proximity. It has been shown that veteran colonies were normally founded at, or alongside, the site of a legionary base only *after* the legion had moved on elsewhere, leaving the military site vacant (Mann 1983: 60–63). What little evidence there is indicates that the citizens of Aelia Capitolina were veterans of the legion X Fretensis. This may be concluded from colonial coinage with *vexilla* and the emblems of the legion (Kadman 1956: nos. 1 [*vexillum*]; 5 [eagle on shaft]; 6 [boar]). The small number of inscriptions of the period suggests the same (see below). Hadrian, therefore, created an anomalous situation.

It is not clear whether Hadrian did anything to build up Aelia as a city, but the establishment of a veteran colony had advantages from a Roman point of view. It would induce discharged soldiers of the legion to settle there, especially since it enjoyed the same exemption from taxation as Caesarea (Ulp. *Dig.* L 15.1.6; Paulus, *dig.* L 15.8.7). The veterans and their descendants would be a focus of loyalty in the middle of Judea, and the latter might, like the citizens of Caesarea, provide the provincial army with recruits.

There are not many inscriptions from Aelia Capitolina, but it is worth observing that all 16 inscriptions datable to the period from the destruction in 70 until Constantine are in Latin. These include two military inscriptions set up before Hadrian (*AE* 1978: 825; *CIL* III: 13587), a number of honorary inscriptions for emperors (*CIL* III: 116 [6639]), one inscription for a legionary legate (*CIL* III: 6641 [12006a]), a few tombstones of veterans (*CIL* III: 14155.3; *AE* 1939: 157; Iliffe 1932: 123, no. 4), and, most significant, tombstones of civilians inscribed not in Greek but in Latin with Roman names (Thomsen 1922: no. 179; *CIL* III: 14155.4; Thomsen 1941: no. 182a). While the Byzantine inscriptions (far greater in number) are written in Greek, the pattern formed by the pre-Constantinian inscriptions reminds one of that observed in the material from Heliopolis. Aelia Capitolina apparently showed the characteristics of a veteran colony in the East. Its citizens spoke Latin and preferred to be identified with Rome rather than with the Hellenized Orient. The legion was still in Jerusalem in the mid-3d century, as is shown by a city-coin Herennius Etruscus with emblems of the legion (Hill 1914: 100, no. 104). Eusebius (ca. 260–340) mentions the legion as based at Aela on the Red Sea in his time (*Onomast.* 6, 17–20).

D. Septimius Severus

Severus changed the status of many places in the area, often as a reward or punishment for attitudes during the civil war with Niger (*Dig.* L 15, 1 and 8). In Syria-Palaestina Beth Guvrin and Lydda received city status and became, respectively, Eleutheropolis and Diospolis (for city coinage of Eleutheropolis; see Spijkerman 1972: 369–84; for Diospolis, see Hill 1914: 141, nos. 1f.; Rosenberger 1975–77: 2.28–31; 3.80: more than 10 types from Septimius Severus to Elagabalus). Because of the lack of archaeological and epigraphical material from these towns, they cannot be discussed, profitably but there is no reason to assume that more than a change in legal status was involved. Sebaste received the status of a Roman colony (Paulus, *Dig.* L 15.8.7) between 201 and 211, as apparent from the colonial coinage, probably in 201/2 (Hill 1914: xxxix, 80, nos. 12 f.; the latest precolonial coinage dates to 201/2). Nearby Neapolis was temporarily deprived of city status because of its support of Niger in 194. It is possible that there was a connection between the temporary punishment of one city and the enhancement of its neighbor.

At this time Sebaste was splendidly rebuilt. To this period belong the temple in its later form, the forum, colonnades, a basilica, a columned street, the theater, and the stadium. It has been assumed that there was a connection between the grant of colonial status and a subsequent building program. However, the excavators of Sebaste have concluded that several elements of the program were perhaps already in existence, that is to say that they preceded the change in status. The buildings are not dated by any inscriptions. It is quite possible that the prosperity of the citizens of Sebaste gave them the means to carry out a substantial building program for themselves. It is more likely that these circumstances contributed to the decision to grant colonial status than that the latter was accompanied by imperial munificence of which there is no record.

An inscribed architrave block from the basilica mentions *strategoi*, the common Greek term for the *duoviri* (two-person criminal courts) of a Roman colony (Reisner, et al. 1924: 250, no. 7 and Pl. 59c). One military inscription from the area of the temple has been assigned to the Severan period, though it is not clear on what grounds (ibid., p. 20 no. 30).

Severus organized the new province of Mesopotamia. Several cities there received colonial status from this emperor or his successors, including Singara, Rhesaina, Nisibis, and Carrhae. Nothing is known beyond the fact of the grants themselves. Rhesaina may have been the base of the legion III Parthica, because the name of the legion appears on its coins. This colony would then have been organized after the pattern of Aelia Capitolina, being a town with colonial status where a legion was based. The other legionary base, Singara, where the legion I Parthica was stationed, received colonial status at an uncertain date.

Under Severus, Caracalla, and Elagabalus, the status of many cities in the eastern provinces was changed, but there is no evidence that this involved more than formal or administrative measures (Kindler in *INJ* 1982–83: 79–87; Jones 1971). In Judea, for instance, both Emmaus and Herod's foundation of Antipatris received city status from Elagabalus (on Emmaus, see Jones 1971: 279 and n. 72; *HJP²* 1: 512–

13n; for coins from Antipatris, all from the reign of Elagabal, see Hill 1914: xv.11; Meshorer 1985: nos. 149–52).

In Syria the cities of Sidon, Tyre, Damascus, Laodicea, Emesa, and Palmyra received colonial rank or additional privileges, as recorded in *Dig.* L 15.1.1; 8.7 and on the coinage Hill 1914: 182, 238, 258, 269, 286). The *Digest* explains that in some cases measures were taken by Septimus Severus to reward or punish cities for their role during the war with his rival Niger.

BENJAMIN ISAAC

ROMAN EMPIRE. The final overthrow of the Roman Republic and the inauguration of the Roman Empire, in which power was concentrated in one man, was a process, not a single event, but the culminating event was the victory of Julius Caesar's adopted son, Octavian, over his chief rival for power, Marcus Antonius (Mark Antony), at the Battle of Actium (31 B.C.). Antony fled with his ally Cleopatra, queen of Egypt, to her capital Alexandria, where the following year both committed suicide, and Octavian reorganized Egypt as a Roman province. Moving carefully to avoid alienating Roman upper-class opinion by making his supreme autocratic power too obvious, Octavian restored the outward forms of the Republic, which had virtually ceased to function according to the rule of law over the previous 30 years, but took for himself the title of *princeps,* or 'first citizen', and the name Augustus, which had solemn religious overtones. As a result, the regime which he established (he still had 45 years to live after Actium, and so had time to build strong foundations), and which survived into the 3d century after Christ, was commonly known as the Principate. Augustus himself and his immediate successors did not commonly use the title *imperator,* "emperor," but all adopted the name Augustus, which thus became equivalent to a title.

A. Sources for the History of the Roman Empire

For the death throes of the Republic, we have relatively full contemporary sources, particularly in the letters and speeches of Marcus Tullius Cicero, who was however put to death by Octavian and Antony (42 B.C.). Accounts of the next 12 years, until the deaths of Antony and Cleopatra, must be treated with suspicion, as likely to reflect Octavian's propaganda. Thereafter, until his own death in A.D. 14, our sources are uneven, and again one must be aware of possible distortion. We have a year-by-year history by Cassius Dio for most of Augustus' reign, written long after the event in the early 3d century. Suetonius in the 2d century wrote biographies of Julius Caesar, Augustus, and the next 10 emperors, that of Augustus being the longest. The poets of the period, especially Virgil, Horace, and Ovid, testify to the intellectual life of the period and to the climate of opinion at Rome. Augustus himself left his own version of his achievements (the *Res Gestae*, cf. Brunt and Moore 1967) to be set up in front of his mausoleum in Rome, with copies in the principal cities of the empire. But Augustus remains an enigmatic figure, and there are many insoluble problems in the history of his reign, especially chronological. We often cannot ascribe precise dates to his actions or legislation, and the inner workings of dynastic policy and intrigue have fascinated modern scholars (cf. Syme 1939), particularly because Augustus' control of such things ensures that we can never know for sure.

With Augustus' death begins the greatest of Latin historical works, the *Annals* of Tacitus, which continues, with gaps where our manuscripts are defective, to the death of Nero (A.D. 68). Tacitus' *Histories* cover the earlier part of the civil war which followed, but end in 69. Thereafter we lack any good narrative source to serve as a guide, though Cassius Dio survives in an abridged version down to his own day, and we still have Suetonius down to A.D. 96. The continuation of Suetonius, covering the 2d- and 3d-century emperors and known as the *Augustan History* (published in the Penguin translation series as *Lives of the Later Caesars*), is however a late-4th-century historical fiction.

On the other hand, epigraphic evidence (evidence from inscriptions, mostly on stone) becomes increasingly copious until the 3d century, when the breakdown of public order causes a sudden and dramatic collapse of the epigraphic habit (MacMullen 1982). Common types of inscriptions include epitaphs, dedications, building inscriptions, decrees, speeches by the emperor, commemorations of public events, and other official documents. The desert climate of Syria, the Negeb, and above all Egypt has also preserved records, such as personal letters and financial archives, as well as official records, on papyrus. All of this material gives us an insight into the daily life of the empire, and the epitaphs and papyri in particular let us glimpse the lives and concerns of ordinary people, who are not much represented in the literary sources (Jones and Milns 1984). Most surviving writers were senators of their hangers-on, whose view of affairs tends to be upper-class and centered on Rome, although in the 2d century occurs a revival of Greek literature, still upper-class, but based in Greece and Asia Minor rather than in Italy.

Christian writings form a separate category. The NT works show us the underside of Roman administration. We see Roman judicial procedures and punishments from the point of view of those subject to them, not from that of the Roman magistrates who administered them (Sherwin-White 1963). The early Christians, like Jewish writers of the period, are invaluable for insights into many facets, casually revealed, of social and economic life; scholars have become increasingly aware of their value to the historian of the Roman Empire, quite distinct from their value for theology or for the history of the early Church or of Judaism.

So far we have dealt only with verbal sources. Art and archaeology have their own contribution to make. Art historians have shown how sculpture and architecture embody the values of the governing classes. The coinage displays official portraiture and imperial propaganda. Excavation has brought to light buried towns, not only famous sites like Pompeii and Herculaneum, buried in an eruption of Mt. Vesuvius and thus preserved in a time capsule (A.D. 79; cf. Grant 1971), but many other small towns throughout the

empire. Much of the center of Rome itself has been laid bare, though some major ancient sites like Alexandria remain inaccessible beneath modern cities. Archaeologists have also excavated country villas, harbor installations, aqueducts, army camps, and many other sites, including cemeteries, both pagan and Christian. In assessing archaeological evidence, however, the scholar needs to be aware of the cultural and financial constraints which make the archaeological record very uneven (Wells 1984: 46–50). What we know may not reflect what once was there, so much as what chance has brought to light or modern political or other interests have chosen to look for.

B. Growth and Extent

After defeating his chief rival, Mark Antony, in 31 B.C., the future emperor Augustus set to work to reorganize the empire so successfully that, when he died 45 years later (A.D. 14), power passed smoothly to his designated successor, the emperor Tiberius, and the Augustan settlement in its essentials survived well into the 3d century, when it collapsed in civil war that pitted the garrison of one frontier province against another in the interest of rival claimants, weakening both the frontier defenses and the economy. Neither the frontiers nor the economy ever fully recovered, although the emperor Diocletian, having fought his way to the top in 284, restored order; divided the empire into E and W halves; and inaugurated a more openly despotic form of rule. His work was continued by Constantine, the first Christian emperor (306–37, at first in partnership, but sole ruler from 324 onwards), who established Constantinople, the ancient Byzantium, as the E capital. The W Empire could not survive the German pressure on the frontiers and by the end of the 5th century had been carved up into Germanic kingdoms; the E Empire survived until 1453, when the Turks captured Byzantium.

Augustus, said the historian Tacitus a century later, left the empire fenced about by the ocean and far-off rivers (*Ann.* 1.9). He completed the conquest of Spain, which the Romans had begun over two centuries earlier, and made the Atlantic, the English Channel, and the North Sea Rome's boundary in the West, from the Straits of Gibraltar to the Netherlands coast. The invasion of Britain was not begun until nearly 30 years after his death. Across central and eastern Europe, the Rhine and Danube formed a frontier between Rome and the German tribes, although the Roman sphere of influence and often the Roman legions operated beyond them. Asia Minor (modern Turkey) and Syria were Roman up to the river Euphrates, which represented the boundary with the Parthian empire to the East (Millar 1981). Syria was the base for Rome's control of the area, and the governor of Syria was the most powerful Roman general and administrator in the East. Judea, which Augustus had chosen to govern through a client king, Herod, became a province after Herod's death. In any case, client kingdoms were de facto part of the Empire, though with a different juridical status (Braund 1984).

Egypt was made a province after Actium, and Augustus and his successors kept it under close personal supervision, partly because Egypt and the province of Africa (roughly modern Tunisia) were the granary of Rome, without whose wheat the city of Rome itself would have starved. The whole North African coast was under Roman control, and the desert tribes of the Sahara were no threat. The city of Carthage, once Rome's great rival until wiped off the map in 146 B.C., was refounded, and soon rivaled Antioch in Syria and Alexandria in Egypt as the second city of the empire after Rome. The population of Rome was around 1,000,000 in Augustus' day, and perhaps more later; Alexandria, Carthage, and Antioch are commonly estimated to have held between 300,000 and 600,000. It is notoriously difficult to be sure.

The Mediterranean was a Roman lake (*mare nostrum,* they called it, "our sea"), piracy had been suppressed, the tribes beyond the frontier did not come to pose a serious threat until the empire was weakened by civil war and anarchy in the 3d century. In all this time, nowhere but in the East did the Roman Empire face another organized power of similar magnitude, and there the Parthians were constantly weakened by dynastic rivalry. The empire seemed to contemporaries very secure, and the gods willed it so. Horace, Augustus' poet laureate, told the Romans, "Because you are servants of the gods, you rule on earth" (*Carm.* 3.6.5); his friend Virgil stressed Rome's divine mission to rule, "to build civilization upon a foundation of peace, to spare the conquered and destroy proud aggressors" (*Aen.* 6.852–853, trans. R. D. Williams).

By the time when Christ was born, soon after the middle of Augustus' reign, a traveler could go from Jerusalem to Lisbon on the Atlantic, or from the upper Nile to the English Channel, without leaving the empire. Travel was slow (Wells 1984: 150–53), but he needed no passport—a purseful of Roman coins was acceptable anywhere. There was one system of law (different, however, for Roman citizens and noncitizens), and in the towns, at least, and in his dealings with the Roman administration, the traveler needed only two languages: Latin in the West and Greek in the East, where it had been the *lingua franca* since the conquests of Alexander the Great three centuries before. Local languages of course survived: Aramaic and other Semitic tongues in the East, Coptic in Egypt, Punic (also a Semitic language), and Berber in North Africa, Celtic in Western Europe (MacMullen 1966b; Millar 1968). The upper classes in these areas would be bilingual, if not trilingual or multilingual, and the peasants might speak only their own native tongue. Christian bishops, like Irenaeus of Lyon in Gaul and Augustine of Hippo in Africa, make it clear that they needed Celtic or Punic if they were to reach all of their flock.

Not only local languages, however, but many local customs persisted, especially in religion, where local deities continued to be worshipped, often superficially Hellenized or Romanized. The towns and cities, however, and the propertied classes in general for the most part embraced Roman rule, Roman law, Roman nomenclature, Roman architecture and a Roman style of life (Stambaugh 1988). The great line of social cleavage was between rich and poor, not on nationalistic lines. We hear virtually nothing of nationalistic protests against the occupying, colonialist power, such as we are familiar with in the 20th century. The main exception was the Jews, whose fiercely monotheistic religion could not accommodate pagan worship, including the worship of the emperor, which rapidly became almost universal, and whose sense of national and cultural identity made Judea notoriously difficult for the Romans to understand or to govern effectively (Smallwood 1981).

C. Government

The emperor was an autocrat whose word was law and whose relationship with his subjects was highly personalized (Millar 1977). This was obvious to political observers even in Augustus' day, however much he might strive to veil his autocracy in traditional constitutional forms, and by the early 3d century the lawyer Ulpian can state it simply as a legal principle: "What has pleased the emperor has the force of law" (Wells 1984: 232). In normal times, an emperor nominated his successor, and no emperor ever passed over his son, if he had one, though an adoptive son, previously a nephew or stepson, might take precedence of a son by blood. In the first two centuries, the dynastic principle was broken only three times: once on the death of Nero, when civil war and the so-called Year of the Four Emperors (69) ensued; once on the murder of Domitian (96), who left no heir; and again on that of Commodus (193), which led to civil war once again.

Below the emperor was the Senate, which served as his Council of State and increasingly as the organ whereby he caused law to be made. It also acquired important judicial functions (Talbert 1984). By the end of the Republic, it was composed primarily of ex-magistrates, and Augustus systematized the senatorial career (*cursus honorum*) in such a way that 20 men annually were elected quaestor, usually about the age of 25, and thereby entered the Senate. Then they might become aedile or tribune, and at about 30, they could stand for the praetorship (normally twelve posts a year). Quaestors were mostly concerned with financial matters, aediles with municipal administration, praetors with judicial affairs. Ex-praetors might hold various posts, especially in the provinces, including governorships of smaller provinces and appointments in command of a legion.

At the age of 42, or much sooner for those specially favored by the emperor, a man might aspire to the consulship. The two consuls who took office each year on 1 January were the nominal heads of state, and the consulship was eagerly sought, even down into the later empire, when it had become a mere title of honor largely devoid of power. It ennobled one's family: broadly speaking, the descendant of a consul was a *nobilis,* and a man without consular ancestors in the male line, like Cicero or indeed Augustus, was known scornfully as a "new man" (*novus homo*). The consuls gave their name to the year in the official calendar, so that 44 B.C. was dated "in the consulship of Gaius Julius Caesar and Marcus Antonius." If a consul died in office or resigned, a suffect consul (*consul suffectus*) was appointed to complete his term.

Suffect consulships were considered less distinguished, but from 5 B.C. onwards it became standard for the consuls of the year to resign halfway through and let suffects take their place in order to increase the supply of ex-consuls for the specifically consular posts in the public service, like the governorships of major provinces and, as the empire went on, an increasing number of administrative jobs at Rome, which were reserved for men of consular rank.

Praetors and consuls possessed *imperium,* as did ex-magistrates holding a special appointment, such as the governorship of a province, which they were considered to hold as a substitute for a praetor or consul (*pro praetore* or *pro consule*). *Imperium* is an untranslatable term signifying the right to command in war, to administer the laws, and to inflict the death penalty (subject to a Roman citizen's right of appeal, originally to the people, later to the emperor). The *imperium* of propraetors and proconsuls was normally restricted to the province to which they were appointed. (A province, *provincia,* originally meant a defined sphere of action, not necessarily geographical, as we might say in English, "the interpretation of the law is the province of the courts"; but by the end of the Republic, it normally meant a specific territory such as the province of Asia or of Gallia Narbonensis, i.e., Provence and Languedoc.) In the Late Republic, it occurred that one proconsul might have his *imperium* defined as greater (*maius*) than another's, so that it was clear who prevailed in case of disagreement.

D. Roman and Non-Roman: Citizenship and Law

Roman law was one of the greatest achievements of Roman civilization, with enormous impact on the legal systems of all countries of W Europe and the Americas, and of other countries and international bodies influenced by them (Crook 1967; Watson 1970). The written record goes back to the Twelve Tables (ca. 450 B.C.), a primitive code for a relatively primitive, largely agricultural society. The body of law then developed through legislation and through magisterial edict. The praetor, i.e., the annually elected magistrate responsible for administering the law, used to publish the principles whereby he intended to be guided during his year of office, and his edict thus came to have the force of law. During the Late Republic the judicial system evolved into one where cases were settled not so much by the sheer forensic brilliance of the rival advocates, as by appeal to precedent and to the interpretations of learned jurists. Under the Empire, and particularly in the 2d and early 3d centuries, the law attracted some of the most able minds in the Roman world, by no means confined to Italy: Salvius Julianus, whom the emperor Hadrian (117–38) commissioned to edit the praetor's edicts, came from Pupput, modern Hammamet, in Tunisia, and Berytus (Beirut) was one of the most famous Roman law schools from the 3d century onwards. By this time, the emperor had become recognized as the ultimate fount of law, but the rules of law prevailed in the courts, and the apogee of Roman law was its codification by the emperor Justinian in 6th-century Byzantium.

Most modern legal systems are territorial and, at least in principle, egalitarian; that is to say, everyone is subject to the law of the place where he or she happens to be, and the law is meant to be the same for everybody. In contrast, Roman law was a law based on personal status, which, as it were, you carried around with you. So there was one law for Roman citizens and a different law for noncitizens, both in criminal and in civil cases, and persons were explicitly awarded different treatment according to their social status (Garnsey 1970). Slaves had no rights in law at all. This can all be exemplified in a famous letter written by the younger Pliny, governor of Bithynia and Pontus in NW Asia Minor about 110, to the emperor Trajan, in which he describes action taken against local Christians who had been denounced to him, action which the emperor approves (*Ep.* 10.96–97). Those of the accused who refused to abjure their religion were summarily executed if they were not citizens, but citizens were remanded for trial in Rome. Two slave women were routinely tortured in the course of the investigation. Pliny admits that he finds the Christians innocent of any crime, except that of being Christians and refusing to worship the gods, including the emperor. The privilege accorded to the citizens and based on a specific law which went back to Augustus (Sherwin-White 1963: 57–70) recalls Paul's successful appeal from arbitrary punishment and from the jurisdiction of the governor of Judea to the emperor in Rome some two generations earlier (Acts 25:11).

The distinction between citizen and noncitizen was gradually whittled down during the 2d century and abolished early in the 3d by the Constitutio Antoniniana, to be replaced by a more-rigid distinction than before between the wealthier classes (*honestiores*) and the rest (*humiliores*). In the early Empire, however, citizenship was important not only because of the right of appeal which it conferred in criminal cases, but because of the status of the citizen in private law. Only children of a valid marriage between two citizens were born citizens, all others normally taking the status of the mother. Citizens came under the provisions of Roman law in all matters concerning personal status, inheritance, property ownership, and business contracts. Citizenship might for various reasons be conferred on those not born with it, such as service to the state or to some individual Roman governor. Paul was a citizen by birth, so that one of his ancestors must have been granted citizenship, perhaps as a large contractor supplying the Roman army in Syria with tents. Sons of legionaries, who could not legally marry, were often granted citizenship on enlistment into the legions themselves (Campbell 1978). Service in auxiliary regiments was rewarded with citizenship on discharge. Many cities had a status which conferred Roman citizenship on municipal magistrates. Slaves formally manumitted by Roman citizens also received citizenship ipso facto. A register of citizens was kept, but Paul's case suggests that it was not usual for citizens to carry documentary proof of citizenship with them.

E. Role of Provincial Governors

Under the Empire, certain provinces were assigned to the emperor, who governed them through deputies, mostly men of consular or praetorian rank, holding the title of *legatus Augusti pro praetore*, appointed by the emperor for as long as he chose and responsible only to him. Other provinces, of which the most important were Africa and Asia, continued to have proconsuls or propraetors appointed by the Senate for a one-year term. The emperor however always had *imperium maius*, so that he could overrule a senatorial governor at will. The more-important provinces, whether imperial or senatorial, were usually governed by ex-consuls, those of secondary importance by ex-praetors. The governor was also commander-in-chief of any troops stationed in the province. Commanding a Roman legion was normally a job for a senator, but some of the emperors' lesser provinces, which had troops to maintain public order, but not a whole legion, fell into a third category, where the governor was not a senator, but of equestrian rank, with the title of prefect in the early 1st century but procurator later. Syria, for instance, the key to the E frontier, was an imperial province whose legate was always a trusted and experienced soldier. Judea, until Vespasian reorganized the legionary dispositions in the East, had merely an equestrian prefect or procurator, since the forces under him did not amount to a legion, so that he might have to call for help from the legate of Syria and his legions if Judea got out of hand. Egypt was also equestrian, but a special case, because alone of the equestrian provinces in the early Empire it had a legionary garrison; senators were even debarred from entering the country without the emperor's permission.

Except in the great military commands, such as Syria and the provinces along the Rhine and Danube frontier, a governor was more concerned with financial and judicial questions than with military affairs (Garnsey 1968; Burton 1975). He had to maintain public order, but this was not normally a major problem—Judea was exceptionally turbulent. On the other hand, he often had very little force at his disposal; hence the need to step in and suppress disturbances ruthlessly, before they could get out of hand, without too much concern for asking who started the disturbance. The Christians often suffered as disturbers of the peace, not because they started disturbances themselves, but because their enemies did, and a governor might think it prudent to suppress the disturbance by suppressing the cause of it, i.e., the Christians. We see this in what happened to Paul in Jerusalem and in Pliny's treatment of the Christians, referred to above. The governor had the right of *coercitio*—the right to order anyone to stop what he was doing even if there was no specific law against it—if he judged it likely to cause a breach of the peace. Only Roman citizens were exempt from summary punishment and even execution at the governor's discretion for disobeying such an order.

F. Social Inequalities

Not even in theory did the Romans regard all men as equal (to say nothing of the women). Apart from the distinction between citizens and noncitizens already alluded to, birth and wealth counted for a great

deal (MacMullen 1974). By the 2d century, the distinction between the propertied classes (*honestiores*) and the rest (*humiliores*) was enshrined in law and recognized by a different scale of punishments for each. This distinction essentially replaced that between citizen and noncitizen after the Constitutio Antoniniana in 212 conferred citizenship on virtually all free inhabitants of the empire. There was a property qualification for office, from membership of the most-insignificant municipal councils up to the Senate itself. The senatorial qualification was set by Augustus at 1,000,000 sesterces, but this was habitually exceeded. The younger Pliny, about whose finances we are reasonably well informed (Duncan-Jones 1965), did not consider himself rich (*Ep.* 2.4), but is estimated to have been worth over 20,000,000. The two largest private fortunes that we hear of are set, in round figures, at 400,000,000.

Membership of the equestrian order, below the Senate, required a capital of 400,000 sesterces, and many men qualified. The cities of Gades (Cadiz) and Patavium (Padua), for instance, each had 500 knights in Augustus' day (Strabo 3.169, 5.213). Also under Augustus (8 B.C.), we hear of a freedman who in his will, despite losses in the civil wars, left 60,000,000, plus 4,116 slaves, 3,600 pairs of oxen, and 257,000 head of other cattle (Pliny, *HN* 33.135). Compare this with the pay of an ordinary legionary, fixed by Augustus at 900 sesterces a year, or the daily wage of a laborer: St. Matthew gives the wage of the laborers in a vineyard as 1 denarius a day, which is 4 sesterces (Matt 20:1), and this may be exaggerated, since a passage in the Babylonian Talmud, for instance, implies that Rabbi Hillel made only half that as a woodcutter in King Herod's day (Wells 1984: 202–5).

The safest investment was land, and probably most rich men, like the younger Pliny, derived most of their income from their estates. Trade was generally looked down on, and senators were prohibited from engaging in it, but even senators participated vicariously by financing others, especially their own slaves and freedmen (D'Arms 1981; Pleket 1983). Freedmen who made their fortunes tended to emulate their social betters by investing in land, as did the fictional Trimalchio (Petron. *Sat.* 76). Only in Italy were slaves used extensively in agriculture, but everywhere they were an accepted part of life, employed not only for the most menial tasks, but for many of what for us are honorable professions, like teaching, accounting, or medicine. Household slaves could usually count on getting their freedom in middle life, and slaves whom their masters hired out or set up in business would expect to buy their freedom out of their savings (Bradley 1984). Once free, since slavery was not based on color, there was nothing to distinguish the ex-slave from the freeborn man or woman.

The urban poor and the peasantry often had a harder life and less chance of bettering themselves than the better sort of slave did. Conditions in the slums of a big city like Rome outdid those in Victorian London, and the 2d-century physician Galen writes vividly of the malnutrition and distress which he had seen in the countryside in time of famine (de Ste. Croix 1981: 14). The magistrates, from the emperor down, combined savagely to repress dissent. Crucifixion, torture, and condemnation to the mines or to the wild beasts in the arena were routine punishments for those who threatened the established order, whether recalcitrant slaves, poor men turned to brigandage, or those deemed subversive, like the Christians (MacMullen 1966a; Hopkins 1983; Wells 1984: 262–78). The Roman order and prosperity were based ultimately on organized terror.

COLIN M. WELLS

ROMAN IMPERIAL CULT. The Roman imperial cult may be defined as the offering of divine honors to a living or dead emperor. With antecedents in Egypt, Persia, and Greece, the ruler cult developed further in the Republic (Taylor 1931: 35–57), especially under Julius Caesar (Weinstock 1971), and in the time of Augustus (Taylor 1931: 142–246). Beginning with Tiberius, emperor worship played a major role in the origin and spread of Christianity (Jones in *ANRW* 2/23/2: 1023–54).

Tiberius. Tiberius resisted all honors offered to himself (Rostovtzeff 1930) and his mother, Livia (Grether 1946). In 25 C.E. he refused to permit the province of Farther Spain to build a temple in his name, declaring in a famous speech to the Senate: "I am a mortal, and divine honors belong only to Augustus, the real savior of mankind" (Tacitus *Ann.* 4.37–38; Étienne 1958: 420). Suetonius (*Tib.* 26.1) referred to an edict issued by Tiberius which forbade other forms of deification, including swearing allegiance and the erection of statues. Nevertheless, the title *divus* appeared on a denarius of Tiberius and a papyrus from 37 C.E. called him "son of the god" (Cuss 1974: 139).

Caligula. Gaius, nicknamed Caligula because of the "little boots" he wore as a boy, proposed that Tiberius be deified, but the Senate refused, citing strained relations during his last years. Convinced of his own divinity, Caligula demanded that he be worshiped. He believed he was the incarnation of Jupiter, and appeared in the dress of other gods and goddesses. Temples were erected in his honor at Miletus and Rome (Dio Cass. 59.11.12 and 28.1–2). Following his sister Drusilla's death in 38 C.E., Caligula had her deified, aided by a senator who swore under oath that he had seen her apotheosis, or ascent into heaven (Dio Cass. 59.11.3).

When Alexandrian Greeks ordered images of Caligula set up in the synagogues of that city, a delegation of Jews led in 39 C.E. by Philo complained to the emperor. Philo noted that while Jews could not worship Caligula, many of them did regard him as "savior and benefactor" (*Legatio* 75–114 and 349–67; Price 1984b: 184, 209). That same year, Caligula further offended Jewish monotheistic attitudes by ordering Syrian legate Petronius to erect a huge bronze statue of himself in the Jerusalem temple. Fortunately, Petronius' delaying tactics and the intercession the following year of Jewish king Agrippa caused the emperor to abandon the project (Smallwood 1957).

Caligula was not deified following his assassination by officers of the imperial guard—in fact, only the intervention of his successor and uncle, Claudius, prevented the Senate from declaring him "an enemy of the state."

Claudius. Like Tiberius, Claudius generally refused divine honors, but, in a famous letter to Alexandria in 41 C.E. (Barrett 1989: 47–50), while claiming that the establishment of priests and temples is "a prerogative to the gods alone," he did permit the erection of statues to himself and his family throughout

the city. In his introduction to this letter, the Egyptian prefect urged reading it in order to appreciate "the majesty of our god Caesar" (Charlesworth 1925). Despite Claudius' stance in the Alexandrian letter with regard to temples, one was erected in his honor in Britain following a Roman victory there (Tacitus *Ann.* 14.31). In addition, there is evidence of Claudius' being called "lord" (Cuss 1974: 59) and "savior of the world" (Scramuzza 1940).

Nero. Nero had Claudius deified, the first emperor to be so honored since Augustus; but the influential philosopher Seneca, in a clever satire called the *Apocolocyntosis,* ridiculed the idea of Claudius as a god (Altman 1938). From 65 C.E. on, Nero was depicted on coins as "god," and as "Apollo the Lyre Player," and wearing the radiate crown of a deified emperor (Charlesworth 1950). In 55 C.E. the Senate set up a statue of Nero in the temple of Mars Ultor (Tacitus *Ann.* 13.8.1)—the first time since Caesar that an emperor had been directly associated with a god in Rome. In 65 C.E. he rejected a proposed temple to "the divine Nero," citing the tradition that only dead emperors were divine, but he did erect in his place a hundred-foot bronze statue of himself as the sun with a star-shaped crown.

The imperial acclamations by which Nero was greeted had divine overtones, e.g., "Our Apollo … by thyself we swear" and "O Divine Voice! Blessed are they that hear you!" (Dio Cass. 62.20.5 and 63.20.5). In a Boeotian inscription from 67 C.E. Nero was called "lord of the whole world" (Deissmann 1927: 354), further evidence that "lord" was a prominent title in the imperial cult (Jones 1974: 85). When the king of Armenia greeted Nero in 66 C.E. as "master" and "god," the emperor agreed that he was indeed close to divinity (Dio Cass. 63.14). Before he committed suicide, Nero had been declared "an enemy of the state" by the Senate. He was never consecrated, although he did deify his wife Poppaea and their infant daughter.

Vespasian. Nero's successor, Vespasian, generally refused divine honors, although on his deathbed in 79 C.E. he joked: "I suppose I am becoming a god" (Suet. *Vesp.* 23.4). He had earlier dedicated a temple to Claudius (Suet. *Vesp.* 9.1) and was regularly called "lord" (Cuss 1974: 61) and "savior" (Scott 1936: 21). Vespasian's son and successor, Titus, had him consecrated, and a temple to the deified Vespasian was erected in Rome.

Titus. Titus was hailed as "savior of the world" (Deissmann 1927: 364) and was consecrated by his brother, Domitian, who succeeded him. As deifying members of the imperial family was becoming a common practice, Titus consecrated his sister Domitilla (Scott 1936: 45–48).

Domitian. Domitian insisted on being recognized as a divine *deus praesens,* an important term in emperor worship (Cuss 1974: 139). Coins show him seated on a throne as "father of the gods" (Abaecherli 1935), and a huge marble statue of himself in Ephesus became the focal point of the imperial cult throughout Asia Minor.

Domitian insisted on being addressed, by letter or in person, as "our lord and god" (Suet. *Dom.* 13; Scott 1936: 88–112) and all who refused were punished. That his persecution extended to Christians is clearly reflected in the book of Revelation (Scherrer 1984). Emperor deification, including offerings of incense, prayers, and vows, was now obligatory and used as a means to identify followers of the Christ. After his death in 96 C.E., statues of Domitian were destroyed by angry senators and he was declared "an enemy of the state." Many of his official decisions were rescinded by his successor, Nerva.

Trajan. Trajan became emperor in 98 C.E. and had his predecessor consecrated. Generally, he rejected divine honors, but he did allow a temple to be erected in his name at Pergamum, and after 100 C.E. his name began to be linked with that of Jupiter. In the year 112 C.E. Christians in Bithynia and Pontus were investigated by the Roman legate Pliny the Younger. In a famous letter to Trajan (10.96) Pliny wrote (Scott 1932):

> This is the course that I have adopted in the case of those brought before me as Christians. I ask them if they are Christians. If they admit it I repeat the question a second and a third time, threatening capital punishment; if they persist I sentence them to death … All who denied that they were or had been Christians I considered should be discharged, because they called upon the gods at my dictation and did reverence, with incense and wine, to your image which I had ordered to be brought forward for this purpose.

Trajan then offered this reply (10.97; Bickerman 1968):

> You have taken the right line, my dear Pliny, in examining the cases of those denounced to you as Christians, for no hard and fast rule can be laid down, of universal application. They are not to be sought out; if they are informed against, and the charge is proved, they are to be punished, with this reservation—that if anyone denies that he is a Christian, and actually proves it, that is by worshiping our gods, he shall be pardoned as a result of his recantation, however suspect he may have been with respect to the past (Bettenson 1947: 5–7).

When Trajan died in 117 C.E., his apotheosis was attested in several traditions, and he was deified by his successor, Hadrian.

Hadrian. Hadrian was frequently identified with the Olympian Zeus and permitted the erection of temples and statues in his honor (Raubitschek 1945). The easy deification of his twenty-year-old Bithynian lover, Antinous, who had drowned in the Nile in 130 C.E., was a scandal for both Jews and Christians. Coins depict Hadrian's apotheosis and that of his empress Sabina who preceded him in death.

Antoninus Pius. Under Hadrian's successor, Antoninus Pius, the demand to offer sacrifice before the emperor's statue had become a test of Christian loyalty to the state. Noncompliance led to the death penalty, as it did in the case of Polycarp, bishop of Smyrna, who, having refused to say "Caesar is lord" and offer incense to Antoninus' image, was sentenced to death by burning (156–57 C.E.; Barnes 1967). Following his death in 161 C.E. Antoninus Pius was consecrated by the Senate and his successor, Stoic philosopher Marcus Aurelius, and coins depicted his apotheosis and that of his empress, Faustina (Mattingly 1948).

Marcus Aurelius. Under Marcus Christians were executed at the Festival of the Three Gauls. A special ruling of the Senate allowed imperial cult priests to use "condemned prisoners" in the arena instead of the more expensive gladiators (Oliver and Palmer 1955). Marcus had no sympathy for Christians. They were brave, but blindly obstinate (*Meditations* 11.3). In 178 C.E. the Platonist philosopher Celsus, in his "True Doctrine," criticized Christians for refusing to offer "due honors," including sacrifice to the emperor, especially since "whatever you receive in this life you receive from him" (Origen *Cel.* 8.55–67). Among the Christian statements of defense was that of Tatian who, in his "Address to the Greeks," ridiculed Hadrian's deification of his lover Antinous and declared that, while he will give human kings human honor, he will worship God alone. Marcus was succeeded by his son, Commodus, who deified his father and struck coins depicting his apotheosis.

Commodus. Commodus, degenerate like Caligula, Nero, and Domitian before him, demanded divine honors (Oliver 1950). He received acclamations and a large gold statue was erected in his honor (Dio Cass. 73.15.3 and 74.2.3). During Commodus' first year (180 C.E.) twelve Christians in Africa refused to swear a loyalty oath to him and were beheaded (Cuss 1974: 61). A few years later, Roman senator Apollonius declared himself a Christian, refused to swear an oath to "our lord Commodus the emperor" or to offer sacrifice to his image, and consequently was sentenced to death by beheading. Commodus died in 192 C.E. and was condemned by the Senate. He was, however, later consecrated by Septimius Severus.

Septimius Severus. Severus accepted the divine title "lord" and married Julia Domna, daughter of the Sun priest at Emesa, thereby bringing the empress into the imperial cult. She was deified following her death in 217 C.E. Tertullian, in his "Apology" (197 C.E.), argued that Christians need not offer sacrifice to the emperor who is only human. They could swear by his health or safety, but if he is ever referred to as "lord," there must be no implication of his divinity. Hippolytus of Rome, in his "Commentary on Daniel," claimed Christians suffered the death penalty for refusing to worship the gods (4.51). Men were burned and their bodies thrown to beasts, children were killed, and women were treated with shame.

Decius. In 249 C.E., Decius restored the worship of consecrated emperors and demanded offerings and oaths in his honor. The following year he issued an edict which resulted in the first general persecution of Christians since everyone in the empire was required to offer sacrifice to the gods and to obtain a certificate from a local commissioner confirming same (Clarke 1969).

Valerian. The persecution of Decius was revived by Valerian who, in 257 C.E., issued an edict ordering Christian bishops, presbyters, and deacons to offer sacrifice to the gods. The following fall Cyprian refused to do so and was beheaded (*Acta proconsularia* 3–4).

Diocletian. Diocletian came to the throne in 284 C.E. and attempted to revive the imperial cult by claiming special protection from Jupiter and demanding that he be called "lord and god." According to both Eusebius (*Hist. Eccl.* 8.7–13) and Lactantius (*De mort. persec.* 15.4–5) all Christians who refused to sacrifice to the gods were sentenced to death or hard labor in the mines.

Constantine. During the time of Constantine, Christianity became the only recognized state religion and enjoyed protection by imperial favor. Christians now comprised half the empire's population and were no longer required to bow to its emperor. Instead, he bowed to their Christ.

A. Religion as a Structural Element of Culture

1. The "Bearers" of Roman Religion. A sociological approach to the question of cults and cultic activity might well be organized around the highly practical division found in Festus (284 L), between public and private worship. Public acts of worship (*sacra religionesque publicae,* Cic. *de har. resp.* 14) included not only those performed in the name of the *populus* by magistrates and state priests but also those carried out by local associations, e.g., the *montani* or *pagani,* as part of the total community. Private worship took place in the name of *familiae, gentes* (extended families or clans), and corporations.

Scholars have given relatively little attention to the *gens,* in contrast to the *familia* and the state, as a religious community. Despite this, one should not underestimate the role of the *gens,* especially during the early republic and toward its end. The history of the *gens,* worship, and burial rights are what drew the individual *gens* together, as Cicero explained: "It means much to share in common the same family traditions, the same forms of domestic worship, and the same ancestral tombs" (*de off.* 1.17 §55 [LCL]). *Gens*-oriented special cults are known for, e.g., the *Nautii* (Minerva), die *Potitii* and *Pinarii* (Hercules), the *gens Aurelia (Sol),* and *gens Claudia* (Saturn). Other cults linked the name of the *gens* to a minor deity: the *gens Ancharia* venerated a goddess *Ancharia; Numeria* was honored by the *gens Numeria; Hostia* or *Hostilina* by the *gens Hostilia;* a certain *Domitius* by the *gens Domitia.* As early as 1935, Carl Koch pointed out that Jupiter was the only figure in the Roman pantheon of gods "for whom one can with near certainty say that no *gens*-oriented cult existed" (Koch 1935: 24). The rapprochement between the *gens*-related Italic *Veiovis* cult and the "roman Jupiter" toward the end of the Roman republic probably served to give voice to new claims, the claims of the *Julia* family.

Roman experts on sacred law seem to have distinguished between those public cults in which the community was represented by magistrates and priests and those in which all citizens participated: Antistius Labeo says (Festus 235 L), "Public cults are those which all citizens celebrate, and are not attributed to a particular family: *Fornacalia, Parilia, Laralia, Porca praecidanea.*" The examples given here include both those in which the general populace was represented only in a definite, organized manner (e.g., the *Fornacalia* within the framework of the curial structure) and those in which the citizens participated directly (e.g., the *Parilia*). In the latter case, in the *atrium Vestae* "means of purification" (*suffimenta*) were distributed to all citizens—a *communio sacrorum* in a very material sense. The excerpt

from Festus omits mention of the type of ceremony that seems regularly to have encouraged participation by "all" citizens, e.g., the *supplicationes* applied by the Sibylline books are propitiatory rites. It is emphasized by Augustus in his summary account, for example, that "… all the citizens … have unanimously and continuously offered prayers at all the *pulvinaria* for my health" (*Mon. Ancyranum* 9.2 = Brunt and Moore 1967: 23).

Alongside the large number of religion-oriented groupings to which a Roman belonged by obligation of birth (e.g., *familia, curia*), function (e.g., *miles: religio castrensis*), or home (e.g., *pagus: paganalia; compitum: compitalia*), there were only a few that one could join by choice. Among the latter the *collegia* were most important. These were cult societies (Waltzing 1895–1900) which the *socii cultores* could enter as if entering an "association." The *lex collegii* established the duties and financial contributions expected of members, prescribed the cultic activity, and structured the conduct of members' meetings. Many Greek and oriental cults appear to have established themselves at Rome initially in the juridical form of the cult association. After the affair of the *Bacchanalia,* the Senate repeatedly intervened to control the freedom to organize such associations. Toward the end of the Republic, the *collegia funeraticia* (funerary societies) seem to constitute a special case among the cultic associations. These were self-help organizations of the poor and slaves who, in line with family cults (Gladigow 1985: 126ff.) took as their task the burial of deceased members and the religious observances at their graves.

2. The State: Priesthoods. Priests were the mainstay of the state cult of the Romans. Either as individual priests or as members of priestly *collegia* or *sodalitates* they carried out the liturgy or, in certain instances, advised and assisted magistrates in their liturgical duties (e.g. as augurs or haruspices). The ancient system of Roman religion, oriented toward liturgy and priesthood, can be divided into three areas: "ritual, auspices, and the third additional division consisting of all such prophetic warnings as the interpreters of the Sibyl or the soothsayers have derived from portents and prodigies" (Cic. *de nat. deor.* 3.5 [LCL]). Specific groups of priests corresponded to this part of the Roman state religion: "provisions for priests omit no legitimate type of worship. For some are appointed to win the favour of the gods by presiding over the regular sacrifices; others to interpret prophecies of the soothsayers … But the highest and most important authority in the State is that of the *augurs,* to whom is accorded great influence" (Cic. *de leg.* 2.30 [LCL]). In the Augustan period the term *quattuor sacerdotum amplissima collegia* (i.e., the four significant priesthoods), which virtually comprehended the Roman cult structure, developed. These four were the *pontifices,* the *augures,* the *quindecemviri sacris faciundis* (used from the Sullan period onward; previously the *decemviri,* or *duoviri*), and the *septemviri epulones* (formerly *tresviri*).

With the exception of the *virgines Vestales,* all priestly offices could be held for life and were exempt from military service (*vacatio militiae*). The office of *Rex sacrorum* was considered incompatible with the magistracy; otherwise there was no fundamental prohibition against holding both priestly and magistrate's offices. This meant that no specific priestly class developed at Rome and the political realization of religious ideas could be achieved to a certain degree through the personal union of magistracy and priestly office. Priestly positions were never incorporated in the fixed cycle of offices (*cursus honorum*), although a clear tendency to begin the cycle with a priestly office is visible (*ANRW* 2/16/3: 2328–31). If this was not possible, a priestly office was assumed after having entered the magistracy.

Priests were appointed partly through direct appointment (*captio* of the Vestals by the *Pontifex maximus*), partly through cooptation and, after the end of the 3d century B.C., through limited popular vote. Holding several priestly offices was possible, yet in the republican period this was uncommon: that Caesar was simultaneously *Pontifex maximus* and *augur* was unusual for the Late Republic. The later Empire, especially the 4th century of the Christian era, saw massive accumulation of priestly offices.

Among the great *collegia* the *collegium pontificum* surpassed all others in importance. It consisted of the *pontifices* (9–16 positions), the *Rex sacrorum* (or *Rex sacrificulus*), the *flamines* (3 *flamines maiores,* 12 *flamines minores*), and the *virgines vestales* (6 positions with the *vestalis maxima* at their head). Responsibility for discipline and power of punishment for the entire priestly college rested with the *pontifex maximus* but the old priestly regulations placed the *Rex sacrorum* and the *flamines maiores (Dialis, Martialis, Quirinalis)* ahead of him in rank (*dignatio*). After Augustus assumed the office of

Pontifex maximus in 12 B.C., it remained firmly attached to the emperor's office. A *promagister* then took charge of the regular administration of the college of priests.

The *collegium augurum* ranked only slightly lower than the priestly college (*ANRW* 2/16/3: 2146–312). Like the priests, the number of augurs grew from 9 to 15 and finally to 16 under Caesar. The augurs played an important role in the self-understanding of the Romans, who considered themselves to be the most religious of all people (*religiosissimi mortales*, Sall. *Cat.* 12.3; cf. Cic. *de nat. deor.* 2.3.8). As guardians of technical matters (*disciplinam tenere*) and interpreters of the entire divination system (in the form of *decreta* and *responsa*), they were closely linked to the magistrates and to all state ceremonies that had to be carried out *auspicato* with augury. As *interpretes Iovis Optumi maxumi* "interpreters of Jupiter the Best and Greatest" (Cic. *de leg.* 2.20) the institution of the augurs constituted the interface between the Roman Jupiter and the Roman state.

3. Personal Religion. Scholars have too-quickly classified Roman religion as the paradigm for a cultic religion, "the 'mere cult acts' view of Roman Religion" (Phillips 1984: 292). This has led them to neglect the limited sources that ascribe individual attitudes, experiences, or even "belief" to the Romans. W. Ward Fowler (1922), who tried to counteract the conventional view, remained isolated and without resonance. Because intimate scenes like the one mentioned by Plautus (*Aulularia*, 24), in which a girl worshipped the *Lar familiaris* out of a sort of heartfelt need (and was rewarded for her devotion) do not fit the conventional portrayal of Roman religion, they have never been set forth in an integrated manner. The meditations that P. Cornelius Scipio regularly carried out, alone in retreat in the temple of the Capitoline Jupiter (Liv. 26.19.5; Gellius 6.1.6), fit this category (Seguin 1974). However so does the well-attested custom of honoring a sacred image by touching one's hand to one's lips (*adorandi gratia manum labris admovere*) not only in a temple but even when passing by a temple (*ANRW* 2/16/1: 579–80). These are scarcely forms of veneration required by proper liturgical practice; rather they are acts of personal religiosity that developed as expressions of religious needs alongside the generally obligatory *sacra privata* and *sacra publica.* A Roman man or woman might also sit in quiet prayer at the feet of a sacred image, remain there for a long time, and tell his or her problems to the deity (as is done in Propertius 2.28.46).

4. Household and Family Religious Observances. The most broadly institutionalized forms of personal religiosity were the household cult (*sacra domestica*) and the family cult (*sacra familiaris*). Domestic gods were the typical "traveling deities" that accompanied people as their living situations changed. In the "founding myth" of Roman religion, Aeneas took, from among all the Trojan deities, only "his" *di penates* with him to Lavinium. Cicero attractively explained the significance of the house for the practice of Roman religion in *De domo sua* in the following way: "Within its circle are the altars, the hearths, the household gods, religion, observances, ritual; it is a sanctuary so holy in the eyes of all, that it were sacrilege to tear an owner therefrom" (109). As part of their daily lives individual Romans practiced and experienced their religion *in the house* (Wissowa 1912: 33–34). Nilsson (1951: 3.285) with a certain appropriateness, described "the domestic religion" as "the most Roman of all cults of the Roman Religion."

At the center of the household religion were the *di penates*, a collective name for all deities honored in the house; the *lar familiaris* (since the Augustan reform, the *lares familiares*), taken from rural settings; the deities connected to the *penus* and hearth of the house; and the *genius* of the *pater familias.* In a Roman house the *lares* and *genius* were normally honored in an *Aedicula (lararium).* Especially the *lares* were incorporated into a form of daily piety observed by all members of the household, they were remembered with small offerings from the table, were involved in family celebrations, and the *bulla* of the eldest son, who put on the *toga praetexta*, was deposited with the *lares.* The consistent separation of household and public cult (Kaser 1955: 51ff.) was blurred by an innovation of Augustus, which ordained that the genius of the emperor be venerated between the two *lares* in the *compita Larum.*

The family cult was also the natural point of departure for the veneration of the dead and of graves (Cumont 1965; Toynbee 1971). At the end of the year, during the *Parentalia* (13–21 February) the dead of the household were collectively honored as *divi parentum* (later *di parentes*). Food, salt, and wine were

carried to the graves, which were decorated with flowers and wreaths. It is noteworthy that the Romans never transformed the cult of the *di parentes* into a cult of divine ancestors of the clan. A family's self-portrayal took place at the *pompa funebris,* in which the portrait masks of the ancestors were carried. The close linkage of the cult of the dead with the *familia* seems to have obviated a need for differentiated conceptions of the hereafter among the Romans (Gladigow 1985).

B. Elements of Roman Religion

1. Concepts of God. Based on a special type of Roman gods H. Usener (1896) attempted to set out a theory about the origins of concepts of god. He introduced into the study of the history of religions the terms "momentary gods" (*Augenblickgötter*) and "special gods" (*Sondergötter*). To illustrate the category of "special gods" he used such Roman deities as the *Vervactor* (who was responsible for the first breaking of the soil), the *Raparator* (responsible for the second plowing), all the way to the *Conditor* (responsible for storing the grain). Of Usener's terms only that of the "special god" has survived, often being used synonymously with "functional god," although precisely Usener's examples from Roman religion show that these "special gods" were not "functional gods." What characterized the Roman "special gods" is that they were related to stages in a process, not to logical functions. This may reveal a fundamental property of Roman religiosity: divine activity, for the Romans, was recognizable in specific points in time, in concrete historical actions (Latte 1926–27; Altheim 1937). The deities "revealed" themselves not in time-transcending ontology but through their activity in particular, concrete situations. The institutionalized contact Romans had with their gods took corresponding form: taking place at specific points in time, reacting, keeping a certain distance. For this reason the Roman "special gods" can hardly be interpreted as survivals of an imperfect, undeveloped stage of human conceptions of deity; rather they should be viewed more as distancing and systematizing priestly constructs at the edge of a fully developed and functioning polytheism.

Roman reports of the manifestations of gods, e.g., reports of the appearance of *Aius Locutius* (Liv. 5.32.6; 5.50.6; 5.52.11), shed light on, it seems, a specific model for reacting: one does not try quickly to identify what one has heard (in this instance) with a specific god and relate it to what one knows by means of an epithet; rather, one permits it to stand in its singularity: *Aius Locutius.*

2. The Gods and Their Cults. At the center of the Roman pantheon stood Jupiter, the god of the celestial brightness and at the same time the god who legitimated all important political acts through the auspices and who, under the dual name *auspicium imperiumque* stood behind the power of magisterial lordship. A series of epithets connected him to hills and hilltop cults (*Iuppiter Fagutalis* [on the *mons Oppius*]; *Iuppiter Viminalis, Iuppiter Elicius* [Aventine], *Iuppiter Feretrius* [Capitoline], etc.). To him the Ides, on which it was bright day and night, were dedicated; the dedication days for several of his temples occurred on the Ides (*Iuppiter Optimus Maximus, Iuppiter Victor, Iuppiter invictus*). Celestial events and weather occurrences were connected to Jupiter the god of heaven—the epithets name and swear by him as *Iuppiter Fulgur, Lapis, Summanus, Tonans, Elicius,* as well as *Pluvialis* or *Serenus.* As is often the case, the god of heaven was also linked to the control of oaths, contracts, and legal affairs (Petazzoni 1956). As city- and state-god, *Iuppiter Capitolinus* attracted a number of functions to himself (Fears 1981): the sacrifices required of the consuls upon entering office were directed to him as was the first sacrifice a Roman made when he donned the *toga virilis* (toga of manhood). The *ludi Romani* were devoted to him and the triumphal parade of a victorious general led to *Iuppiter Capitolinus.* In the 3d century a number of temples that describe Jupiter as god of battles were vowed and built to Jupiter: *Iuppiter Victor, Stator,* perhaps also *Propugnator.*

In Rome, in comparison to Jupiter in his role as the central state deity, those deities which otherwise in Latin culture would carry similar political-military characteristics were clearly subordinate—especially *Quirinus* but also Mars. Participants in the liturgies remained aware of Mars as god of war, but the auspices of war themselves proceeded from *Iuppiter Optimus Maximus* and focused the war upon him. Although Mars was responsible for the area *extra pomerium,* the materially significant cultic and legal activities were oriented toward Jupiter: the fact-finding process was understood as undertaken under authority of Jupiter, and even the *ver sacrum,* which was devoted to Mars by the Italic tribes, was

promised to Jupiter by the Romans in 217 B.C. (carried out in 195 B.C., but because of a mistake repeated in 194 B.C.).

Of the female deities Juno enjoyed the greatest veneration. Her image stood at first in the left cell of the temple of the Capitoline triad; on the other side of the statue of Jupiter was an image of Minerva. Juno (*Iuno Iugalis, Pronuba, Domiduca, Cinxia, Unxia, Fluvionia, Lucina*) probably developed from a female deity in this grouping to a city goddess and eventually to *Iuno Regina* (*ANRW* 2/17/1: 168 ff.). Minerva took a different route: from what was probably a Sabine goddess who early on was portrayed iconographically as a city goddess, she became the patroness of artisans (*artifices, fabri; ANRW* 2/17/1: 203–32).

Unlike Jupiter, *Vesta,* through her function as *Vesta populi Romani Quiritium,* became a deity who secured the existence of the state (*ANRW* 2/17/1: 276–99). The fire in the visible part of the *aedes Vestae* (temple of Vesta), tended by the vestal virgins, and that in the innermost part of the pledge of Roman rule (*fatale pignus imperii Romani*) guaranteed—insofar as they were maintained and properly dealt with—the continued existence of Rome. Just as the auspices linked Jupiter to political activity, so Vesta was brought into contact with the entire sacrificial process by means of the *mola salsa* (see B.7 below).

Ianus (Janus) seems to have been an ancient god of high rank. Like Jupiter, Mars, *Quirinus,* Neptune, and *Liber,* he was addressed as *pater* (father). In Roman liturgy all that remained were the rules that he should be named first, even before Jupiter, when several deities were addressed, and that the *Rex sacrorum,* the highest ranking priest in the Roman hierarchy, should be his sacrificial priest. In Rome, *Ianus* was connected especially with archways; the *Ianus Geminus* or *Quirinus* between the Forum and the *Argiletum* received the most attention: in time of war the gates were opened; in peacetime they remained closed.

Among the Greek gods one of the first to be taken up by Romans was Apollo (Gagé 1955). When the temple to Apollo located on the *prata Flaminia* but outside the *Pomerium* was constructed is not known; in 431 B.C. it was replaced at the same location by a temple promised in 433 B.C. to Apollo and *Latona* in the wake of a plague. At first Apollo was worshipped as *Apollo medicus.* Only in the 2d century did his character change in the direction of the delphic deity. This process reached a conclusion in 28 B.C. with the construction by Augustus of the temple to Apollo on the Palatine hill. The newly assembled collection of Sibylline books, which had been kept in the temple of the Capitoline Jupiter, were now preserved beneath the image of Apollo.

Greek deities were taken up in Rome from the 5th century B.C. onward as the result of alliances, emergencies, and propitiations of portents. The ancient liturgical and temple religion of Rome was fueled not by conversion and revelation or by triumphant arrival of a god and devout confession, but lived from the transferrence of cult observances in and following emergency situations: plagues, defeats, threats of war, propitiation of portents and omens. A temple was even built on the basis of an aedilistic penalty process. We offer here only a few examples of this specifically Roman form of a sturdily empirical approach to the gods: *Castor* and *Pollux* received a temple in the Roman Forum after the battle at Lake Regillus in 484 B.C. After consulting the Sibylline books, *Ceres* was promised a temple in 496 B.C., together with the *Liber Pater* (erected 493). Mercury was given a temple, outside the *Pomerium,* which had been the place of worship for a *collegium mercatorum* (Combet Farnoux 1980). The oldest datable temple to Venus can be traced to a judgment with monetary penalty handed down against adulterous matrons in 295 B.C. In 293 B.C. the Sibylline books recommended, in the wake of a plague, that the *Aesculapius* cult be brought to Rome; his temple was consecrated in 291 B.C. Hercules, who was first worshipped in the context of a *gens*-oriented cult, was taken under state religious oversight in 312 B.C. and received a temple in 218 B.C. on the basis of instructions from the Sibylline books. In 205 B.C., during the second Punic war, the Sibylline books recommended that the cult of the *Mater deum Magna Idaea* (*ANRW* 2/17/3: 1500–35) be accepted at Rome; she received her temple on the Palatine hill in 191 B.C. In the religious history of Roman warfare *Fortuna* played a special role: as *Fortuna publica populi Romani, Fortuna Equestris, Fortuna huiusce diei,* or *Fortuna Redux,* she received numerous temple dedications as the result of wartime perils or successes.

3. Cult Images and Temples. Only a temple, or at least a sacred image, of the deity could ensure the lasting presence of a god in a city—in the view of Romans and of the ancient world in general. Varro's report that the Romans worshipped the gods without images for 170 years after the founding of the city (fr. 18; *ANRW* 2/16/1: 80–103) probably is best explained as an idealization of Roman origins and can be applied concretely to the appearance of Etruscan terra cotta images on the Capitoline hill. The thesis that early Roman religion was basically aniconic is as unlikely as the parallel thesis that the Romans initially practiced no animal sacrifices. However, it is incontestable that there were some Roman gods that lacked images, even after the historical record begins. Within the historic period a religious image, in some instances a nonanthropomorphic object of worship, was an essential part of a temple (*ANRW* 2/16/1: 568 ff.; general information in *ANRW* 2/17/2: 1032–1199).

The central rites of the temple service, provisioning, showing hospitality, and worshipping all were oriented toward the sacred image in the cult niche or *cella.* The animal sacrifices carried out on an altar in front of the temple (as in Greece) also were directed toward the sacred image inside (Vitruvius 4.9) and as a rule, were probably performed with the doors of the temple standing open.

After the 3d century B.C., a temple building (*aedes*) constructed on a *templum,* erected and maintained for the sake of the state and provisioned and guarded by an *aedituus,* became the dominant form (*ANRW* 2/16/1: 574 ff.). The acceptance of Greek deities on the basis of instructions from the Sibylline books appears to have made a temple into one of the prerequisites for approbation of a cult.

4. Acts of Worship, Ritual Procedures, Festivals. As with nearly all pre-Christian religions, the main element of Roman worship was the sacrifice: *rem divinam facere* "to attend to divine matters" was practically synonymous with "to sacrifice." The actions surrounding the sacrifice, complex in themselves, also involved the most diverse intentions (Gladigow 1984): a gift to the deity "to placate with a gift the wrath of the gods" is the way Cicero described the goal of sacrifice in *de leg.* 2.22); feeding the deity with anything from a portion of the plant and animal sacrifice to a regular meal (Cato *de agr.* 83.131); propitiation (*piaculi gratia*); purification (*lustratio*). Cereal, material, or votive offerings involved relatively little ceremony. In contrast, a properly performed animal sacrifice was a complex ritual with a precisely established sequence of actions that could extend from the purification of the participants and the examination of the sacrificial animal (*probatio hostiae*) through approximately two dozen steps leading up to the *profanare,* the consumption of the meat by the participants in the ritual.

These formal requirements of animal sacrifice and the necessary technical skills soon placed this activity in the hands of specialists. In addition to the priests or lords of the sacrifice there were *victimarii* who, as public servants (*apparitores*) for the state cult, formed their own college. Among the *victimarii* was the *popa,* who stunned the animal, and the *cultrarius,* who opened the jugular vein. *Camilli,* usually eldest sons in the case of private sacrifices, assisted generally. At state sacrifices, flute players were generally present; they also formed a *collegium* (*CIL* VI 2191).

The behavior of the animal immediately before the sacrifice and during the killing was of particular significance as an omen, which provided another reason to entrust the work to specialists. Mistakes and *omina* during the sacrifice could jeopardize achieving the goal of the sacrifice or bring forth negative prognostications. When the animal had been properly (*rite*) killed, its body was opened and an examination of the health of its organs (*extispicium*) carried out. If this examination yielded negative results (*hostia sine litatione caesa*), the entire ritual had to be repeated until a favorable omen was received (Liv. 41.15.4).

Although a sacrifice was an element in nearly all complex rituals, the accentuation and "message" of the ritual shifted with increasing complexity. In the case of the *lectisternia,* a ritual introduced upon the instructions of the Sibyllines, the hospitality and table fellowship of the gods was primary. In the *supplicationes* the fact that the entire populace was called upon to sacrifice in all temples played a growing role. The supplications already had absorbed a processional element, which was also characteristic of the border cults in the form of processions around the fields (*ambarvalia lustratio pagi, amburbium*). Complex rituals like the *Lupercalia* or the *Equus October* integrated nearly all ritual elements in to a composite whole, in which the elements of drama and competition and genuine theatrical

productions took center stage. The public games (*Ludi Romani, plebei, Florales, Apollinares, Ceriales, Megalenses*) were rituals that had been expanded in time and content. Their significance as entertainment should not be played off against their religious meaning. At the center of the *Ludi Romani*, the most important Roman games, were the *pompa circensis*—the procession of the images of the deities on *tensa* into the *Circus*—and the games and contests that took place there "before the eyes of the gods." The high degree of religious significance attached to the *Ludi Romani* and *plebei* is indicated by the fact that the rule of *instauratio* applied to them; i.e., in the event of a mistake in the ceremony, the entire process had to be repeated. Livy reports that on one occasion, "the Roman Games in their entirety were repeated three times, the Plebeian Games five times" (38.35.6).

5. Oversight of Cultic Activity and Religious Policy. The Roman state did not interfere in either family or *gens*-oriented religion. However the censors as well as the priests were formally responsible to see that the family cults continued (Cic *de leg.* 2.9.22). Few actual reports of state penalties for neglect of religious responsibilities are known; the most prominent penalty was that which Cato carried out against L. Veturius, ejecting him from the equestrian order. Another, indirect, way to control family rites lay in the priestly implementation of inheritance law. The priests were concerned in cases of *adoptio* and *adrogatio* as well as in the regulation of inheritances that the family cult not die out "so that the memory of them not die out at the death of the father" Cic. *de leg.* 2.19.48).

Overall one can say that legal penalties against Romans who did not participate in *sacra popularia* were unknown in the Roman republic (Mommsen 1899: 567ff.). A report by Dio Cassius (51.19) that nonparticipation in the liturgy for the birthday celebration of the consecrated Caesar was punishable with a monetary fine and the death penalty is unique. Only in the year 249 A.D. was a single, general obligation to religious observance put into effect and enforced—by Decius. In this instance, each Roman citizen was required to sacrifice "to the gods"; the performance of this act was to be certified by a *libellus* (certificate).

The Romans not only established institutionally an openness toward "new" deities that was typical of polytheistic religions, but they also connected it in a characteristic way with the divination and propitiatory system of Roman religion. This was carried out institutionally, under supervision of the Senate, by the *duoviri*, later by the *decemviri*, and finally by the *quindecemviri sacris faciundis* and the *Libri Sibyllini* (Sibylline books). According to a legend of the 2d century B.C. *Tarquinius Superbus*, on the advice of the augurs, bought Greek ritual books offered to him by an old woman (according to Varrio [Lact. *inst.* 1.6.10]; Dion. Hal. 4.62; Gellius 1.19; Gagé 1955). These *libri Sibyllini* were kept in chambers under the temple of Capitoline Jupiter until 83 B.C.; a new collection assembled in 76 B.C. to replace the old books, which had been burned, was placed by Augustus in the temple of Apollo on the Palatine hill in 12 B.C. Only the *viri sacris faciundis* were permitted access to these religious books and then only after approval from the Senate in the wake of a special portent which could not be expiated or appeared not to be capable of expiation (procuration) by the *patrius ritus.* This carefully controlled system (announcing of a portent, a Senate decision, the expert opinion of the *viri sacris faciundis*, and another Senate decision) gave rise to a large number of innovations in Roman religion.

Thus the plague of 399 B.C. was expiated, on advice of the *duoviri sacris faciundis* through a *lectisternium* (reclining feast) for Apollo and *Latona*, Hercules and Diana, Mercury and Neptune. The very ancient custom of entertaining the gods publicly in this way became an established cult form following the *graecus ritus* (Greek rite). These *lectisternia* were repeated in 364, 349, and 326 B.C., and one additional time, for the same reason. In 293 B.C. the cult of *Aesculapius* was brought to Rome, again because of an epidemic and on advice of the Sibylline books. After the defeat at Lake Trasimene, Venus and Ceres appear for the first time in a *lectisternium* commanded by the Sibylline books in 217 B.C. Likewise as the result of consulting the Sibylline books the *Mater Magna* of Pessinus was received in a festive arrival in Rome in 204 B.C. Because of the incest of the Vestals in 114 B.C. a temple to *Venus Verticordia* was established in Rome as a propitiatory measure. The influence of the Sibylline books on the development of Roman religion was considerable, but one should not overlook the fact that these *libri fatales* (Liv. 5.14.4; Cancik 1983: 562 ff.), kept under lock and key, could only affect religious policy by

way of the Senate's decision to consult them, interpretation, expert opinion (*responsum*), and a second decision by the Senate. They are a pattern for a religious institution that channeled and clarified anxieties to bring about a religious and political propitiation (Gladigow 1979).

Restrictive measures against cults were not absent from Roman religion. In the most diverse forms and for various reasons limits were placed on the *Mater magna, Bacchus,* and *Isis* cults. Measures taken ranged from prohibition of refinancing and penalties carried out through inheritance law to complete proscription (Vermaseren 1981).

6. Mythology. Only after Wissowa (1912) clearly distinguished Roman from Greek elements in Roman religion was it apparent that Roman religion had no mythology comparable to that of the Greeks, no genealogies of gods, no sexual liaisons of gods, and no offspring of the gods. All evidence indicates that the repression of mythology was a conception of Roman religious policy, a theological program of the leading priesthoods. This, at least, was the way Greek contemporaries viewed it (Dionys. Hal., *Ant. Rom.* 2.19); they admired the basis of Roman religion for that reason (Polybius 6.56). The conditions under which this process of "demythologizing" of the Roman pantheon took place can best be illustrated by the deity that stood in the center of the Roman state cult: *Iuppiter Optimus Maximus.* Through a religiously and politically motivated process of creation the cult of the Roman Jupiter, and with it the cults of the other state deities, was separated from the world of Italic and Greek mythology. Jupiter's cult belonged to the all-encompassing sphere of the state and society, which was kept separate from all other possible links to *gens*-oriented special cults and the privileges and expectations that grew out of them (Koch 1937). The "arena of revelation" for Roman state deities was not a prehistory, not a mythological history predating Rome, but rather the common, obligatory Roman history or the meaningful events of the present.

7. Structures of Roman Polytheism: Calendar, Systems, Theology. The general absence of a Roman mythology—a mythology that would hand down and set forth plausibly a set of inner relationships within the Roman pantheon—meant that other constructive institutions within Roman religion had to carry more weight. The temporal ordering of worship through the calendar was an important aspect of priestly "systematic theology" (Sabbatucci 1988), alongside the spatial organization of religion—temples within or outside of the *pomerium;* within the city at a central, even elevated site (Capitoline, Palatine, Aventine hills); or in a peripheral location. Superimposed on these systems were laws that governed the financing of temples used for worship (state cults took place *publico sumptu* [at public expense], which is why the Senate was very cautious in making *dedicationes*), regulations governing the use of temples (e.g., women were excluded from the worship of Hercules at the *ara maxima* and from the Silvanus cult; men were excluded from the cult of the *Bona Dea*), and rules governing the cooperation and assistances of the priesthoods. In addition to these structuring elements of Roman state religion a very concrete form of "implicit theology" is found in the rituals and ritual instructions, especially in the structure of complex rituals. Thus *Vesta,* the *Vesta*-religion, was linked by the *mola salsa* to all those cultic acts that involved animal sacrifices, i.e., the majority of cultic acts. *Mola salsa* was produced from spelt and brine (*muries*) by the Vestal Virgins in May and was also distributed to the populace three times during the year. This "material systematizing" of the *Vesta* cult corresponded to the ritual prescription that, at all sacrifices, *Vesta* should be named last—and thus with special honor, like *Ianus*'s place at the head of the list—in the series of deities addressed. Similar material cross-referencing is visible in the ashes of the calves slaughtered in the *Fordicidia,* which preserved by the Vestals and distributed at the *Parilia,* formed the bean straw and the blood of the *equus October.*

Non-genealogical connections between the deities were achieved through processions, which linked temples (and gods), e.g., in the procession of 207 B.C. (Liv. 27.37.11; Cancik 1986: 255–56) the temple of Apollo at the *Porta Carmentalis* was linked to the temple of *Juno Regina* on the Aventine hill. *Lectisternia,* ritual entertainments, joined gods and goddesses in a (primarily) public cult act according to Greek models. Apollo and *Latona,* Hercules and Diana, Mecury and Neptune appeared together in a propitiatory ritual mandated by the Sibylline books in 399 B.C.; the same rite with the same conjunction of deities was to be repeated four times. In 217 B.C., as Hannibal stood before Rome, a *lectisternium* with twelve deities was held at the behest of the Sibylline books. It brought together according to the Greek

pattern six pairs of gods (Jupiter-Juno, Neptune-Minerva, Mars-Venus, Apollo-Diana, Vulcan-Vesta, and Mercury-Ceres) who later found a place as *Consentes dei* in a portico of the Forum.

Probably the theologically most significant grouping of Roman deities was found in the so-called Capitoline triad of Jupiter, Juno, and Minerva. Here, in a religious and political statement that seems to have had neither Greek nor Etruscan nor Roman prototypes (Radke 1987: 226 ff.), representatives of the Latin and Sabine components of Roman state-building were joined to Jupiter toward the end of the 6th century B.C. The three were found a suitable architectonic setting in a temple with three *cellae* but, as far as the sources reveal, did not received any common worship. As the Roman ideal of the state grew in self-confidence, the Capitoline triad was pushed to the side as *Iuppiter Optimus Maximus* became the integrating center of Roman self-understanding; the two goddesses were gradually given functions separate from the triad.

The triad Ceres, Liber, and Libera provided competition for the Capitoline group in a time of political tension within Rome. At the *secessio plebis in montem sacrum,* the new triad of gods with their temple outside the *pomerium* on the Aventine hill became a political center for the *plebs,* whose temple officials (*aediles*) delivered the point of departure for the plebeian special magistracy of the aedileship.

Alongside these institutionalized results of systematizing, theological conceptions and programs a rich system of documentation, above all by augurs and priests, secured the tradition and professionalism of the interpretations. The archive of the priests was of greatest significance for the general religion (Rohde 1936). It preserved formulas (*carmina*), instructions and documents (*leges*), and ceremonial directions for the entire *ius sacrum.* The records were precise and pragmatic and seem not to have hesitated to regulate the financing of individual cultic acts. Numa, at least, left to the *Pontifex* documents that not only regulated the rites but also their financing (Liv. 1.20.6). From the 2d century B.C. there was an abundance of Roman writings, largely under Greek influence, on the gods, the cult, the sacred laws, and the prehistory of Roman religion. This genre of writings reaches its height in M. Terentius Varro, whose *antiquitates rerum divinarum,* dedicated to the *Pontifex* C. Iulius Caesar, document both the end of the religion of the Roman republic and the restorative themes of the Principate era.

C. System and History

In Roman religion one can trace the development and structuring of a polytheistic system under changing territorial, social, and political conditions. Channeled into *vota, leges templorum, decreta,* and *responsa* and exhibited paradigmatically in historiography, empiricism was incorporated into the religious system. A definite phase of the territorial development of early Rome became part of the ritual of the *Septimontium:* with processions to the *Palatium (Germalus), Velia, Fagutal, Sucusa, Cermalus, Oppius, Cispius* (the names vary in the sources) hills, the status of Rome before the "City of the Four Regions" was recalled. Another phase, the conflicts with the Latin cities, can be detected, for example, in the status of the *Feriae Latinae* with their complicated ceremonial, or, of lesser significance, in the *commune Latinorum templum* of Diana on the Aventine hill.

Up to the end of the republic, both city-building and territorial expansion as well as class tensions remained within Roman religion's range of adaptability and responsiveness. The framework for this adaptability seems to have been the fact that the Romans considered themselves the "most religious of mortals," or, as Cicero put it, *religione ... multo superiores* "with respect to religious observance … for superior" (*de nat. deor.* 2.3.8), when compared with others. Based on this fundamental understanding, empiricism entered Roman religion and did so completely in accord with Roman self-interpretation, something rarely seen in other cultures. Threats, defeats, victories, anomalies of nature, and social conflict were explicit causes for intervention in the traditional status of the cult. Under state regulation, the Romans took up "alien gods" and "experimented" with new forms of worship (e.g. *supplicationes, lectisternia, ludi*), when the occasion arose. The "mythological poverty" of Roman religion did not deprive Roman polytheism of any of its flexibility. Dealing with auspices and portents provided for a steady and clearly conceived interpenetration of state and religious activity, which admitted a wide spectrum of alternatives and innovations.

———

A. The Author and Name of the Epistle

This epistle identifies its author as "Paul … [the] apostle" (1:1). Although a few persons in past centuries have questioned the Pauline authorship of the Epistle to the Romans, no one in recent years has successfully challenged the epistle's authenticity. Not only do all agree that the apostle Paul was the actual author of this magnificent letter that bears his name, but this epistle is used as the standard against which the authenticity of other epistles attributed to Paul is measured.

As is the case with all of the Pauline Epistles, this work derives its canonical name from the recipients of the letter and not from the name of its author. According to 1:7a, the apostle Paul addressed this epistle to "all God's beloved in Rome" (NRSV). Although some ancient mss omit the phrase "in Rome" in 1:7, the weight of the ms evidence favors the inclusion of this specific place indicator. The omission of the phrase "in Rome" is probably a later attempt to enhance the universal appeal of this epistle.

B. The Place of Romans

It is difficult to overestimate the significance of the Epistle to the Romans. Coming at a crucial point in the career of the apostle Paul, Romans represents the longest extant Pauline epistle and the most complete exposition of the Pauline gospel. Moreover, this lengthy epistle currently occupies a prominent place in

the canon of the NT and has had a profound and lasting impact on the Christian faith. It is little wonder, then, that Romans has received more scholarly attention than any other Pauline epistle.

1. In the Christian Church. Paul's Epistle to the Romans has been first and foremost in the lives of many Christians. The first words that Augustine of Hippo read, after hearing a child next door say, "Pick it up, read it," were from Romans (i.e., 13:13). As a result of this incident, Augustine was immediately converted to the Christian faith (*Confessions* 8.12) and went on to become the most influential theologian of the next millennium. The first NT lectures that Martin Luther gave, after becoming a doctor of theology at the University of Wittenberg, were on the Epistle to the Romans (1515–16). The outcome of Luther's struggle to understand this epistle was the Protestant Reformation, which had a dramatic impact not only on the Christian church but also on all of Western civilization. And the first major writing in the prolific career of the Swiss theologian Karl Barth was a commentary on Paul's Epistle to the Romans (1918) whose impact was like the falling of "a bomb on the playground of the theologians" (Karl Adams). This commentary represented a break with the prevailing schools of theological thought and inaugurated a new era of theological investigation in the 20th century. In a very real sense, then, Romans has been a source of inspiration and reform since its composition. In the early Church, during the Middle Ages, and on into modern times, Romans has left its indelible mark.

The Epistle to the Romans has also contributed significantly to the history of Christian doctrine. Almost every influential Christian thinker has dealt with Romans. Origen, Thomas Aquinas, and Philip Melanchthon, to mention only a few, wrote noteworthy commentaries on Romans. And numerous theological notions have been derived solely or in part from Romans. Augustine acquired his idea of original sin from Romans 5, Luther gained his understanding of justification by faith alone from Romans 3–4, John Calvin obtained his doctrine of double predestination from Romans 9–11, John Wesley got his distinctive teaching on sanctification from Romans 6 and 8, and Karl Barth learned of the importance of the righteousness of God from Romans 1 and 2. In short, this epistle has exerted a powerful influence on all branches of the Christian Church, and its impact on the lives and thought of prominent Christian thinkers through the years has been second, perhaps, only to the canonical gospels.

2. In the NT Canon. In the current arrangement of NT books, Romans follows immediately after the four gospels (Matthew, Mark, Luke, and John) and Acts. In its present position, therefore, Romans is the first epistle in the NT as well as the first of thirteen epistles in the NT ascribed to the apostle Paul. Because the present ordering of the Pauline Epistles is based roughly on the length of the writings—from the longest to the shortest, first those addressed to churches (Romans to 2 Thessalonians), then those addressed to individuals (1 Timothy to Philemon)—the position of Romans in the canon indicates to the reader that Romans is Paul's longest extant epistle to a church.

But Romans has not always occupied this prominent position, for the order of the epistles within the Pauline corpus has varied throughout the ages. Romans was the fourth of ten Pauline Epistles in the mid-2d century canon of Marcion, and Romans is listed last among the letters of Paul in the Muratorian canon of ca. A.D. 200. In fact, Romans does not appear in canon lists in its present position at the head of the Pauline corpus until the 4th century and later.

But even after it assumed its position of preeminence among the letters of Paul, Romans, contrary to the present English order, was not the sixth book of the NT nor did it follow Acts. In the 4th-century uncial ms cod. Sinaiticus (and also in the 6th-century ms cod. Fuldensis) Romans comes immediately after the four gospels and before Acts, an order that was followed in the Greek NT of the Complutensian Polyglot Bible printed in 1514.

In almost all Greek mss of the NT, however, the seven Catholic Epistles (James; 1 and 2 Peter; 1, 2, and 3 John; and Jude) follow Acts and precede the Pauline Epistles. In these mss, therefore, Romans is the thirteenth book of the NT, and it follows the epistle of Jude. This placement of Romans and the rest of the Pauline corpus may have been due in part to Paul's view that he was "the least of the apostles" (1 Cor 15:9), whereas the Catholic Epistles were associated with the so-called "pillars" of the apostolate (Gal 2:9). But the fact that Paul's writings were addressed to specific churches and persons may also have made them less appealing than the more general address of the Catholic Epistles.

In its present position as the first Pauline work in the NT, Romans serves as an introduction to Pauline thought. Moreover, because of its present position following Acts, the detailed treatment of the missionary career of Paul in the second half of Acts serves as an introduction to the Pauline corpus. In the current arrangement, therefore, Acts ends with Paul in Rome (Acts 28:16–31), then follows the Apostle Paul's Epistle to the Romans.

3. In the Career of Paul. Romans also occupies a significant place in the career of the apostle Paul, for it was written relatively late in the life of Paul. At the time of writing Paul admits that he has completed his mission to the eastern Mediterranean world, having "fully proclaimed" the gospel of Christ "from Jerusalem and as far round as Illyricum" (15:19 NRSV). Paul then informs the Romans that he is heading to Jerusalem with aid for less fortunate believers in that region (15:25).

A relative chronology of the Pauline Epistles can be constructed by means of references in Paul's genuine epistles to the Jerusalem collection. This collection was inaugurated at the apostolic council described in Galatians 2, when Paul agrees to "remember the poor" (Gal 2:10). The collection was introduced to the Corinthians in 1 Cor 16:1–4, where Paul provides directions for collecting money. Then in 2 Corinthians 8-9 (esp. 8:6, 10; 9:1) Paul exhorts the Corinthians to complete what they have begun. When Paul writes Romans, he is ready to travel to Jerusalem with what has been collected among the gentile believers in Macedonia and Achaia (Rom 15:25–26). Prior to the time of writing Romans, therefore, Paul had already written Galatians, and 1 and 2 Corinthians, in addition to 1 Thessalonians (believed to be Paul's earliest extant epistle), and perhaps Philippians as well.

Moreover, Romans is heavily indebted to those epistles that have gone before. As G. Bornkamm (1963: 2–14) has rightly pointed out, a number of topics that are present in Paul's earlier epistles surface in Paul's Epistle to the Romans. Among those topics are justification by faith and not by works of the law (Galatians 3–5; Philippians 3; Romans 1–4); the fatherhood of Abraham (Galatians 3; Romans 4); Adam as the head of the old order of humanity and Christ the head of a new order (1 Cor 15:21–22, 45–49; Rom 5:12–19); the church as Christ's body composed of diverse elements (1 Corinthians 12; Rom 12:4–8); the need to exercise personal freedoms with consideration for the consciences of others (1 Corinthians 8–10; Romans 14–15)—to name only a few. But in Romans, Paul does not merely reiterate these ideas; rather he reformulates and refines them. Romans, therefore, evidences a greater theological maturity than the other Pauline Epistles.

Although we do not know this from Paul's own writings, the visit to Jerusalem that Paul announces in Rom 15:25 results in his being taken into custody briefly in Jerusalem (Acts 21:27–23:30) before being transferred to Caesarea, where Paul remained in prison for no less than two years (23:31–26:32). Having appealed to Caesar (Acts 25:11) Paul is then conducted to Rome (Acts 27:1–28:16), where he remains in custody for two years (Acts 28:17–31) until his execution ca. A.D. 62, a few years before the Neronian persecutions of A.D. 65–68. With this chronology in mind, Romans was written at the height of Paul's apostolic career, ca. A.D. 55–57.

Paul probably wrote this epistle from the city of Corinth. In 2 Cor 1:16, Paul tells the Corinthians that he intends to depart from Corinth for Judea once the gentile offering is complete. Then, at the time that Paul announces to the Romans his impending trip "to Jerusalem with aid for the saints" (Rom 15:25), the collection is complete, and the Roman province of Achaia (whose capital is Corinth) is named as a prominent contributor (Rom 15:26). Moreover, if chap. 16 is accepted as part of the original epistle (see discussion below), then Paul's commendation to the Romans of the deacon Phoebe from Cenchreae (16:1–2), which is the eastern seaport of Corinth, is another reason for believing that this epistle originated in Corinth.

It would appear most likely that Paul composed his Epistle to the Romans during his final three-month stay in Corinth (see Acts 20:2–3) not long before his departure for Jerusalem. The Epistle to the Romans, therefore, is the apostle's last epistle as a free man, and coming at this late stage in his life, Romans represents Paul's mature thought.

C. The Text of Romans

Fragments of the Epistle to the Romans are preserved in a number of ancient Greek papyri. The earliest and most complete is p^{46}, one of the Chester Beatty biblical papyri from about the year A.D. 200, which contains portions of Romans 5, 6, 8, 9, 10, 11, 12, 13, 14, 15, and 16. The complete text of Romans is preserved in the earliest uncial mss that belong to the best ancient text-type (Alexandrian), including the 4th-century codex Sinaiticus, the 4th-century codex Vaticanus (B), and the 5th-century codex Alexandrinus (A), to name only a few.

Although scholars are in agreement that the apostle authored this epistle, there has been much discussion in recent years over exactly what Paul wrote to the Romans and what, if anything, has been added to his work. In other words, while accepting the essential authenticity of Romans, many have questioned the integrity of the epistle.

Several scholars in recent years have argued unsuccessfully that the Epistle to the Romans is actually composed of two or more writings, and its composite nature is the result of post-Pauline redactional activity. Schmittals (1975) perceives in Romans two distinct letters written to Rome at different times, along with some Pauline material not originally addressed to Rome and some later non-Pauline material. Scroggs thinks that Romans is composed of "two self-contained and completely different homilies" (1976: 274). O'Neill (*Romans* PNTC, 11) asserts that the original Epistle to the Romans suffered corruption through the incorporation of brief marginal glosses into the text at an early date and longer editorial sections that were added to supplement the epistle. Nevertheless, none of these scholarly views has been widely accepted.

Another challenge to the integrity of Romans was mounted by Bultmann (1947: 197–202). Because Rom 2:1, 2:16, 6:17b, 7:25b and 8:1, 10:17, and 13:5 appear to disrupt the logic of Paul's argument, Bultmann identified these verses as glosses, or brief marginal notes, that have found their way into the text of Romans. But not everyone has been persuaded by Bultmann's judgment on all of these verses.

The most extensive discussions regarding the integrity of Romans, however, have centered on three somewhat related textual problems. The first problem was mentioned in section A above, namely, the absence in some ancient mss of "in Rome" in 1:7, and the omission in others of the phrase "who are in Rome" in 1:15. Codex Boernerianus (G), a Greek mss with a Latin interlinear version, deletes the name of Rome in both verses. But textual critics agree that neither of these omissions represents earlier readings of the text. Rather these variants are best understood as deliberate attempts by later scribes to eliminate the specificity of the epistle and thereby make its contents more generally applicable.

The chief textual difficulties, however, concern the termination of Romans. At this point the textual history of the epistle is quite complicated. One significant textual problem is the doxology, which many of the best Greek mss (Sinaiticus, B) print at Romans 16:25–27. Other mss include the doxology after 14:23 (L, ms 044), one important witness (p^{46}) places the doxology after 15:33, a few have it at the end of chap. 14 and then again at the end of chap. 16 (A, P), and some mss omit the doxology altogether (G).

The variability in the placement of the doxology, coupled with its distinctive stylistic and theological features, have led most scholars to conclude that these verses were not a part of the apostle Paul's original Epistle to the Romans. But whether the doxology is a fragment from another Pauline work that was added later or simply a non-Pauline insertion cannot be determined conclusively.

The problem of the doxology, however, is related to another textual difficulty in the termination of the epistle. Serious questions about the authenticity and integrity of the rest of chap. 16, as well as chap. 15, have been raised. Evidently, by the 2d century the epistle existed in a 14-chapter version, a 15-chapter version, and a 16-chapter version.

Although the 14-chapter version is not preserved in any extant ms, there is indirect evidence to support its existence. According to Origen (*comm. in Rom.* 7, 453), Marcion used a 14-chapter version of Romans in the 2d century. Moreover, this shortened form of Romans is attested to indirectly in the ms tradition by the varying placement of the concluding doxology. Because of its character and tone, this doxology must have stood at the end of the letter. For this reason, the presence of the doxology after 14:23 in a few mss (L, ms 044, Origen) is indirect testimony to the existence of a short version of Romans, even though those witnesses in their present form contain chaps. 15 and 16.

But although the textual evidence suggests that the 14-chapter version of Romans is early, this version was probably not original. The deletion of chaps. 15–16 may be related in some mss to the practice of omitting the specific addresses in Rom 1:7 and 1:15. The desire to eliminate the specificity of Romans and thereby gain for this work a more universal appeal may also have been the motive behind the elimination of chaps. 15–16, which contain Paul's future travel plans and greetings to individuals.

The original form of the letter, in any case, must have been either the 15-chapter or 16-chapter version. But here the ms evidence is not sufficient to determine conclusively which version is original.

Until relatively recently, the 15-chapter version was conjectured purely on the basis of internal arguments. By Paul's own admission he has never visited Rome (1:10; 15:22), but in Rom 16:3–15 twenty-six persons are greeted by name. Would Paul have known so many people in a place that he had not visited? Moreover, Paul is not in the habit of greeting addressees by name. Paul usually communicates only a general and collective greeting, so would he have greeted specific individuals and groups even if he knew so many?

Finally, some of those on the list are associated more closely with the eastern Church than with the western Church. Prisca and Aquila, who are greeted in Rom 16:3–4a, were in Ephesus (1 Cor 16:8, 19) at the time of the writing of 1 Corinthians. Andronicus and Junia(s) who are greeted in Rom 16:7 Paul describes as having been "in prison with me," most likely at Ephesus. Epaenetus, who is greeted in Rom 16:5b, is called "the first convert in Asia," the capital of which is Ephesus.

Such internal evidence for the 15-chapter version of Romans as the original form of the epistle has also found some external, textual evidence since the discovery in 1935 of the Chester Beatty papyrus of the Pauline letters (p^{46}). This oldest extant mss of the Pauline corpus (from the early 3d century) contains the doxology between 15:33 and 16:1, and from this mss, therefore, one can infer the existence of a tradition that concluded Romans with chap. 15. See CHESTER BEATTY PAPYRI.

Manson (1948), who accepts the 15-chapter version as original explains the existence of the present 16-chapter version by assuming that Paul made two copies of the epistle. While the 15-chapter version was sent to Rome, the 16-chapter version was addressed to a church other than Rome, most likely to the church at Ephesus. Nevertheless, although the 15-chapter version is no doubt ancient, the question remains about whether this version is the oldest tradition.

Prompted by the careful textual study of Gamble (1977; and the insight of Donfried 1970), however, the tide of scholarly opinion is shifting to a renewed appreciation of the integrity of the 16-chapter version of Romans (minus 16:25–27). Gamble's comparison of the style and structure of Pauline epistolary conclusions has shown that all of the elements of chap. 16 are typical of Paul's conclusions. Moreover, without chap. 16 the 15-chapter version lacks a proper epistolary conclusion. In other words, if chap. 16 is not original, then the original ending has either been lost or displaced.

Finally, Gamble has shown that some of the unusual features of chap. 16 can only be understood if chap. 16 was addressed to Rome. One of the most prominent unusual features is the list of explicit greetings to individuals and groups which comprise most of the chapter (16:3–15). But the presence of twenty-six names in chap. 16 does not prove that this chapter is not original. Because Paul had not visited Rome, it was to his advantage to mention the names of those Roman believers who he knew from churches elsewhere. Moreover, Paul describes these persons in laudatory terms, which enhances their position in the community and reflects positively on Paul's status in the church. In this way, Paul presents himself as one who was not unknown to the church at Rome.

This textual difficulty regarding the termination of the epistle, it should be noted, has significant interpretive significance. If the 15-chapter version is the original form of the epistle, then there is no reason to believe that Paul had any accurate information about the church at Rome. If, however, the 16-chapter version is original, then Paul must have known something about the church at Rome through his contact with members of the Roman church elsewhere in the Roman empire.

Although a detailed description of the textual history of the Epistle to the Romans is not within the scope of this article, one additional textual matter is worthy of note, namely, the unusual textual problem found in Romans 5:1. Here the ms evidence strongly favors the subjunctive "let us have" (*echōmen* in

Sinaiticus*, A, B*, C, D, Vg, cop^{bo}). The internal evidence, however, supports the less well-attested indicative "we have" (*echomen* in Sinaiticus^{a}, B^{3}, P, cop^{sa}), because other verses in this passage (see 5:2, 9–11) offer evidence of an indicative context, and the immediate concern of these verses is clearly with description rather than with exhortation. Because the *o* and *ō* were virtually indistinguishable in pronunciation during the Hellenistic age, the original indicative *echomen* may have been mistakenly understood as the subjunctive *echōmen* at an early stage of dictation, and the repeated use of this text in preaching may also have encouraged a hortatory understanding of the verb. For contextual reasons the indicative (*echomen*) is the preferred reading in 5:1, but the textual evidence for this variant is such that the subjunctive reading has had and continues to have its proponents.

D. Epistolary Form and Occasion of Romans

The uniqueness of the Epistle to the Romans cannot be overlooked. Romans is the only extant epistle written by Paul to a church that Paul did not found. In fact, Paul wrote this epistle to a community that he had never even visited (Rom 1:10f.). Unlike 1 Corinthians, therefore, Romans is not a response to specific questions addressed to Paul by the community. Unlike Galatians, Romans is not a reaction to heretical teaching. And unlike the other Pauline epistles, the body of Romans does not exhibit an obvious "occasional" character. Paul confines his personal remarks largely to the beginning (1:1–15) and the ending of the epistle (15:14–16:23), and the occasional character of "the frame" of the letter appears to have little effect on the central section of Romans (1:16–15:13). The very structure of this epistle, therefore, helps to explain the tendency down through the years to understand Romans as a theological treatise or as "a compendium of the Christian religion" (Philip Melanchthon, *Loci Communes Theologici*), which contains pure, "objective" doctrine (so Nygren 1949:4–9) untainted by historical circumstances.

Nevertheless, the current scholarly consensus is that Romans is like the Pauline epistles in that it is an actual letter. Although Romans is Paul's longest and most systematic work, it is still an epistle, not a manifesto, or a treatise, or a position paper. As such, Romans exhibits an obvious epistolary form. First comes the salutation (1:1–7) that identifies both the author (1:1–6) and the recipients of the letter (1:7a) and includes the apostle's characteristic greeting ("Grace … and peace …" [1:7b]). Then, after the thanksgiving (1:8–15) comes the body of the letter (1:16–11:36), which is followed by the paraenetic or hortatory section (12:1–15:13). Finally, Paul relates his travel plans (15:14–33), then he closes with greetings (16:1–16) and a benediction (16:20).

In addition to the epistolary form, however, Romans also has an epistolary occasion. But the question debated by modern scholars is whether the occasion for Paul's Epistle to the Romans is to be found in the situation in Rome or in the life of the apostle Paul. Many scholars, including C. H. Dodd (*Romans* MNTC), T. W. Manson (1948), Nygren (1949), G. Bornkamm (1963), J. Jervell (1971), and C. E. B. Cranfield (*Epistle to the Romans* ICC), argue that Romans was prompted primarily by Paul's own situation in life—his impending journey to Jerusalem, his future visit to Rome, and his eventual mission to Spain. It is not uncommon for these scholars to accept the 15-chapter version of Romans as original. After all, they argue, if chap. 16 was not a part of the original epistle, then we have no evidence that Paul knew much about this community that he had never visited (Rom 1:10). What he did know about was his own situation in life, and that is what prompted his writing to the Romans.

Other scholars, including K. P. Donfried (1970, 1974), P. Minear (1971), J. C. Beker (1980, 1989), and R. Jewett (1986), to name only a few, argue that although Paul had not yet visited Rome (Rom 1:10; 15:23), he did in fact know something about that community. Accepting the 16-chapter version of Romans as the original form of the epistle, these scholars note then Paul apparently had many friends and acquaintances in Rome (some twenty-six, to be exact) who could have informed him of the community situation.

But how would Paul have met these Romans Christians, if he had not visited their city? According to the 1st century historian Suetonius in his *Lives of the Caesars*, the Roman Emperor Claudius in A.D. 49 "expelled from Rome the Jews who were constantly stirring up a tumult under the leadership of *Chrestus*" (*Claud.* 25.4). As a result of Claudius' edict of A.D. 49 some of the Jewish-Christians were expelled from

Rome. According to Acts 18:2, Prisca (Priscilla in Acts) and Aquila were among those expelled who Paul met elsewhere.

The fact that good cases can be made for both of these two scholarly views may indicate that each side has an element of the truth. In other words, it could very well be that in addressing the needs of the Roman community Paul finds that his present and future situation in life has applicability to the situation at Rome.

But what was the situation at Rome? Here one must piece together bits of information from the epistle itself. Because Paul directly addresses both gentiles (1:13, 11:13) and those of Jewish background (2:17, 3:9), the Christian community must have been a mixed congregation. Most likely, Jewish Christians founded the church at Rome, and some of these same Jewish Christians, like Priscilla and Aquila (Acts 18:2), may have been expelled from Rome by the Emperor Claudius in A.D. 49. When the ban was lifted after Claudius' death in A.D. 54, many of the exiled Jewish Christians may have returned to Rome. But these returning exiles may have been surprised to find that the small group of gentile Christians that had remained in Rome had grown considerably during their absence. Without a doubt friction between the returning Jewish Christians and the resident gentile Christians must have resulted.

In 15:15 Paul admits that "on some points I have written to you rather boldly by way of reminder …" (NRSV). Problems of coexistence with Jewish Christians may have arisen in this largely gentile congregation: the gentile Christians were now in the majority and may have been all too willing to overlook the contribution of the Jewish Christian community. In chap. 14, Paul counsels the gentile Christians to be more tolerant of Jewish believers and their distinctive religious practices (14:3, 5–6, 14). One reason that Paul writes Romans, therefore, is to counsel the church on Jewish-gentile relations in the hopes of establishing the one church of Jews and gentiles. But this does not explain fully Paul's reason for writing this particular letter to this Christian community.

Paul goes on in chap. 15 to say that he has completed his work in the East (15:19), and now he wants to move on to Spain (15:23–24). Rome would be an ideal point of transit (if not headquarters) for his Spanish mission (15:24). Since Paul has not yet visited Rome (15:22), another reason that Paul writes this letter is to introduce himself to the Roman Christians. But the Romans may have already heard about Paul and his law-free gospel (see Rom 3:8), so Paul takes this opportunity to explain his gospel more fully and also to respond to possible objections to it. Although this is another important reason for writing, it is not a sufficient explanation for Paul's writing this letter to the Roman community.

On several occasions in Romans, Paul has stated that he is an apostle whose ministry is directed to the gentiles (1:5, 13, 14; 11:13; 15:16, 18). Because of the large gentile population in the community at Rome, Paul has often longed to visit the imperial city (1:10–15). To date, however, Paul has not paid such a visit (1:13; 15:22), evidently because his mission has involved proclaiming the good news "not where Christ has already been named, so that I do not build on someone else's foundation" (15:20). Since Rome already has an established Christian community, Paul has viewed other areas of the E Mediterranean world as higher priorities. But now that he has finished his work in the East (15:19b) and wants to move on to Spain (15:24a, 28), Paul intends to visit Rome (15:24b).

But Paul again will be delayed, for at the time of writing he is preparing to go to Jerusalem to deliver the gentile collection (15:25). Paul, "an apostle to the gentiles" (11:13), feels compelled to explain to the Romans his reason for doing this, lest they be offended by his decision to go "to the Jew first" in Jerusalem, and only after that "to the Greek" in Rome and beyond. A third reason, then, that Paul writes Romans is to apologize for his further delay in visiting Rome.

Finally, Paul asks the Romans to participate by means of their active intercession in the offering that he is about to deliver: "join me in earnest prayer to God on my behalf …" (15:30b NRSV). Paul is concerned about the possibility of persecution, so he asks the Romans to pray "that I may be rescued from the unbelievers in Judea …" (15:31a NRSV). Paul is also concerned about the acceptability of the offering, so Paul asks them to pray "that my ministry to Jerusalem may be acceptable to the saints …" (15:31b NRSV). Therefore, a fourth and final reason that Paul writes Romans is to appeal for prayer support.

In short, no single reason accounts for the writing of Romans. Several factors converge, including the situation in Paul's life at the present time and also the situation in Rome. Although Paul does not reveal the factors that prompted his writing until chap. 15, these several factors have in fact influenced the length, scope, and duration of Paul's argument in the first 14 chaps.

E. The Argument of Romans

Although scholars concur that Romans contains the apostle's longest and most systematic argument (1:16–11:36), there has been much discussion about the structure of the argument in this important Pauline epistle. Part of the problem stems from the fact that Romans 1–4 differ considerably from Romans 6–8. The discussion in chaps. 1–4 is carried out primarily in the third person, while the discussion in chaps. 6–8 is in the first and second person. Moreover, in chaps. 1–4 Paul repeatedly refers to the Jews (1:16, 2:9, 10, 17, 28, 29; 3:1, 9, 29) and the gentiles (1:5, 13; 2:14, 24; 3:29; 4:17, 18), but in chaps. 6–8 all such references are absent. And finally, there exist significant lexical differences. Terms prominent in chaps. 1–4 (such as "faith" [*pistis*] and "wrath" [*orgē*]) are lacking in chaps. 6–8 where new terms (such as "life" [*zōē*] and "spirit" [*pneuma*]) predominate.

As a result of these and other differences, most scholars perceive two phases of Paul's argument in Romans 1–8. Traditionally, 5:21 was understood as the conclusion of the initial phase of the argument and 6:1 as the beginning of a new phase (so Sanday and Headlam *Romans* ICC, and most Protestant commentaries from the 16th through the 19th centuries; recently, Wilckens *An die Römer* EKK).

But N. Dahl (1951: 37–48) argues persuasively that the theme of chap. 6 is to be found in the verses that immediately precede in 5:20–21. Therefore, contrary to the traditional understanding of the structure of the epistle, a new phase of Paul's argument does not begin at 6:1. Furthermore, by printing a synopsis of Rom 5:1–11 and 8:1–39 Dahl shows that "chapter 8 contains a fuller development of the themes which are briefly stated in 5:1–11" (ibid., 39), and this fact also argues in favor of connecting chap. 5 with chaps. 6–8. For these reasons, Dahl sees 5:1 as the beginning of a discussion that extends through chap. 8, a conclusion that supported the work of some previous commentators (notably Barth 1933; Dodd; and Nygren 1949) and has been supported by others since (so, e.g., Cranfield; Käsemann 1980; Meyer in *HBC* 1130–67; and Beker 1989).

Another problem in the structure of Romans, however, is a result of the obvious break between the climactic conclusion of chap. 8 and the somber note sounded at the beginning of chap. 9. This raises the question of how chaps. 9–11 are related to chaps. 1–8. Are chaps. 1–8 "the main argument" of the epistle (Sanday and Headlam, 225) to which are appended chaps. 9–11? Or do chaps. 1–8 serve merely as an introduction to the climactic discussion of chaps. 9–11 (Baur 1876: 315; Stendahl 1976: 28–29)? While many contemporary scholars are unwilling to call chaps. 9–11 the "climax" of Romans, most would be even less willing to call these chaps. an "appendix." In these chaps., Paul responds to the questions first posed in Rom 3:1–4 and then answered with a brief "By no means!" The subsequent discussion in chaps. 9–11 shows that Paul's notion of grace, which was the subject of chaps. 3–4, does not invalidate God's promises to Israel. As a result, the discussion in chaps. 9–11 is hardly an afterthought.

These are some of the questions that continue to plague scholars who acknowledge the systematic form of the argument in Romans but who account for this form in different ways. Nevertheless, all agree that the central argument in Romans is without parallel in biblical literature. For that reason, a brief overview of the argument of Romans 1:16–11:36 and its practical application that follows in 12:1–15:13 is in order.

1. Rom 1:16–17. The central argument of the epistle begins with a thematic statement (1:16–17) that picks up on the notion of proclamation from v 15, where Paul has expressed his "eagerness to proclaim the gospel to you also who are in Rome" (NRSV). The theme is introduced by the assertion, "For I am not ashamed of the gospel; it is the power of God for salvation to everyone who has faith, to the Jew first and also to the Greek" (1:16 NRSV). Here Paul acknowledges the salvation-historical priority of the Jews in his remark "to the Jew first," but he also refutes Jewish exclusivism when he adds, "and also to the Greek." The relationship between Jew and Greek in salvation history will be unfolded in greater detail in Romans 9–11.

Paul goes on to say, "For in it the righteousness of God is revealed through faith for faith; as it is written, 'The one who is righteous through faith shall live' " (1:17). That is to say, the gospel reveals exactly how God justifies or puts people right with himself: it is through faith from beginning to end. The OT quote from Hab 2:4 supports this notion that the one who is put right with God by faith shall live.

Romans 1–8 elaborate on the Hab 2:4 quote of Rom 1:17. Chaps. 1–4 treat being put right with God "through faith." This section climaxes in 3:21–30, and the climax is then supported by the example of Abraham in chap. 4. Chaps. 5–8, on the other hand, treat Christian existence in light of God's act of justification. Here Paul considers the life that should be led by one who is righteous through faith.

2. Rom 1:18–3:20. In the first part of the argument in chaps. 1–4, Paul portrays the human dilemma by demonstrating that both Greek and Jew deserve divine condemnation and punishment when judged on the basis of their "works." Paul begins the argument with an indictment of the gentiles (1:18–32). Although Paul does not explicitly identify this group in these verses, the references to idolatry in 1:23, 25, indicate that the gentiles are intended. Paul states that through the creation God has clearly revealed himself to the gentiles as omnipotent and divine Creator (1:18–20). But the gentiles, "though they knew God" (1:21a), did not give God the reverence and thanksgiving due him (1:21b). Instead, they became idolaters (1:21a–23), the result of which was all manner of sordid behavior that violates the divine will (1:24–31) and makes them worthy of divine condemnation (1:32).

In the next section Paul addresses an unspecified "you" (2:1a), although this is identical to the direct address of 2:17 where "a Jew" is named. In any event, the "you" who self-righteously passes judgment on behavior described in 1:24–31 is guilty of self-condemnation, "because you, the judge, are doing the very same things" (2:1c). In other words, the addressee in 2:1–5 stands in the same condemnable position before God as the one judged does in the eyes of the addressee.

But Paul goes on to argue that no one escapes God's impartial and just judgment (2:6–11). God will repay every person for what he or she has done (2:6). People will get exactly what they deserve, either reward (2:7) or punishment (2:8). God judges everyone ("the Jew first and also the Greek," 2:9, 10) alike, "For God shows no partiality" (2:11).

But because God judges "according to each one's deeds" (2:6), the Jew is as deserving of divine condemnation as is the gentile (2:12–29). God revealed his will for his people through the law. Yet mere possession of that law (2:12–24) is not enough to save Jews, because it is only "doers of the law who will be justified" (2:13b). Moreover, mere circumcision (2:25–29) is insufficient unless "you obey the law" (2:25). The failure of Jews to live up to the requirements of the law (2:17–24) annuls their circumcision (2:25) and is grounds for their condemnation. In fact, when redefined in terms of "deeds," traditional Jewish "advantages" are opened up to gentiles, who by keeping the law (2:14–16) can have the benefits of circumcision attributed to them (2:26).

But if the Jew is no better off than the gentile, what benefit is there to being one of God's chosen persons? Of course, the Jew has certain "advantages" over the Greek (3:1), such as possession of "the oracles of God" (3:2). But in light of God's impartial judgment, the Jew is no better off than the Greek (3:9a). The Jew and the Greek are "under the power of sin" (3:9b), and Scripture itself supports Paul's point (3:10–18). Being under the power of sin, therefore, people are unable to put themselves right with God "by works of the law" (3:20).

In 1:18–3:20 Paul has described the impartiality that characterizes all of God's judgments. God is absolutely just and will judge everyone by what they do. God will reward those who do good and punish all who sin, regardless of their ethnic background. But Paul had also demonstrated the universality of sin and the universal inability to be put right with God by means of what one does. The result is the human predicament: being under the power of sin, people are powerless to put themselves right with a just God, and therefore, they are worthy of condemnation and death.

3. Rom 3:21–4:25. In the second part of the argument in chaps. 1–4, Paul presents God's response to the human predicament and begins to discuss the implications of that response. First comes the divine solution to the human predicament (3:21–26); Paul states that God has now revealed the way of being put right with him. It has nothing to do with (works of) the law (= "apart from law," 3:21a), which becomes

the topic of 3:22–30. Nevertheless, this way "is attested by the law and the prophets" [= the Scriptures] (3:21b), the topic of 3:31–4:25.

Since no one is able ("all have sinned and fall short of the glory of God," 3:23), God puts people right with himself (3:22a). God puts right with himself all who believe [in Jesus Christ] (3:22b). But being put right with God is not earned; it is merely "by his grace as a gift" (3:24a). Being put right with God was achieved through Jesus Christ, whom God offered up as a sacrifice for human sin (3:25–26a). As a result, God is both just (= "righteous") and the justifier of "the one who has faith in Jesus" (3:25b–26). By judging sin (through the death of Christ) but forgiving the sinner (through faith in Christ), God is shown to be both just and merciful.

Paul then begins to detail the consequences of the divine solution (3:27–30). In the first place, human boasting is excluded (3:27a), for human achievement is denied. God alone puts people right with himself (see 3:22). Persons merely accept by faith what God has done in Christ (3:27b). That is to say, it is through faith in what God has done, not by doing works of the law, that one is put right with God (3:28).

But if a person is put right with God only through faith (3:28b), then, Paul concludes, there can be no distinction between Jew and Greek. God is the God of Jews and Greeks alike (3:29), and God accepts both Jew and Greek on the same basis: through faith (3:30).

Citing the example of Abraham in Rom 4:1–25, Paul demonstrates that being put right with God through faith "apart from (works of) the law" (3:21a) is the clear testimony of "the law and the prophets" (3:21b). Paul's view, then, "upholds the law" (3:30).

In Rom 4:1–15 Paul uses the example of Abraham in Gen 15:6 to prove that divine approval is a gift and is not dependent on circumcision or obedience to the law. Abraham did not earn God's favor. It was granted to him as a gift, and a gift that must be earned is no gift (4:2–8). Moreover, God's acceptance of Abraham came prior to any mention of circumcision, and therefore divine approval cannot be dependent on circumcision and cannot be limited to those who are circumcised (4:9–12). Neither was the promise made to Abraham dependent on obedience to the law, which came much later (4:13–15). Therefore, from the earliest of time people have been put right with God by means of God's grace through their faith!

Paul then goes on to show in Rom 4:16–25 that Abraham's faith is a type of Christian faith. Abraham is "the father of all of us" (4:16), not only of the Jews, because Christian believers share with Abraham a common faith. Abraham believed in a God "who gives life to the dead and calls into existence the things that do not exist" (4:17 NRSV), so he believed that God would keep his promise to make him the father of many nations (4:17, 18), even though Abraham's body "was [already] as good as dead" (4:19 NRSV). Abraham believed in this God (4:20–21), and for this reason was accepted by God as righteous (4:22). Likewise, Christians are accepted as righteous, because they believe in a God who raises the dead, Jesus Christ the Lord (4:23–24).

According to Romans 1–4, both Jew and Greek are confined under sin and both are liberated and united by faith in Jesus Christ. Because distinctions between Jew and gentile are overcome by God's act in Christ, the discussion of Christian life in chaps. 5–8 omits mention of Jews and gentiles. Not until chaps. 9–11 does Paul return to the topic of Jewish-gentile relations.

4. Rom 5:1–8:39. This new life presupposes God's act of justification by grace as a gift (5:1a, which recalls the conclusion reached in 3:28). This act, achieved by God giving up his own son on behalf of those who were "weak" (5:6), "sinners" (5:8), and "enemies [of God]" (5:10), "proves his love for us" (5:8). The result of God's act in Christ, which is received by faith, is "peace with God" (5:1), "freedom from the wrath [of God]" (5:9), and "hope of sharing the glory of God" (5:2).

In 5:12–21 Paul compares Christ with Adam. Adam is the head of the old creation, which has been in bondage to sin and death since Adam's act of disobedience. Christ by contrast inaugurates a new reign of God's grace which "leads to justification and life for all" (5:18) as a result of Christ's act of obedience [unto death] (5:19).

Paul concludes chap. 5 with two radical assertions, the first about the law ("But law came in, with the result that the trespass multiplied …" 5:20a) and the second about sin ("… but where sin increased, grace

abounded all the more …" 5:20b). These two statements prompt the discussion of chaps. 6 and 7. In Rom 6:1–7:6 Paul treats the problem of sin, while in Rom 7:7–25 Paul considers the law.

In response to the assertion of 5:20b that grace abounds where sin increases the question naturally arises, "Should we continue in sin in order that grace may abound?" (6:1). Paul responds with an emphatic, "By no means!" then goes on to explain that believers are no longer controlled by sin, because they have "died to sin" (6:2). Through baptism believers have been united with Christ in his death (6:3–5) so that they are no longer enslaved to sin (6:6). Therefore, having been united with Christ in his death, believers "will certainly be united with Christ in a resurrection like his" (6:5) at a future time.

Paul then uses two analogies in 6:15–7:6 to demonstrate that sin and the law have no power over ones who have been "baptized into [Christ's] death." In the slavery illustration of 6:15–23 Paul asserts that a slave is bound to a single master for life. Death, however, discharges one from servitude to one master and thereby allows one to be enslaved to another. The point is that believers, who were at one time "slaves of sin" (6:17), through baptism have "been set free from sin" (6:18) and have now become "enslaved to God" (6:22a), the result of which is sanctification and ultimately eternal life (6:22b).

In the marriage illustration of 7:1–6 Paul notes that the wife is legally bound to one husband for life. With death, however, she is "discharged from the law" (7:2) and may legally marry another. Similarly, believers have "died to the law" (7:4) through baptism into Christ with the result that "now we are discharged from the law" (7:6).

Paul then turns in 7:7–25 to explain the radical claim about the law that he made in 5:20a. Although "law came in, with the result that the trespass multiplied" (5:20a), Paul asserts that the law is not sin (7:7, 12). Rather the law makes obvious the power of sin which manifests itself in "trespass" and "transgression." Sin uses the good law to take advantage of the weak flesh. The function of the law, then, is to drive people to the point of seeing that there is no way out except through the gift of God's grace in Christ (7:24–25).

Having completed in chaps. 6 and 7 his further explanation of the radical comments in 5:20, Paul returns in chap. 8 to the discussion begun in chap. 5 concerning new life. Here Paul characterizes that new life as "life in the Spirit" (8:9). At present, believers live "in the Spirit," if they are controlled by the indwelling of the Spirit of God. According to Paul, "all who are led by the Spirit of God are children of God" (8:14), and as children are "heirs of God and joint heirs with Christ" (8:17), provided that we suffer with him so that we will be glorified with him.

But Paul goes on to show that possession of the Spirit has a twofold function. In the first place, the Spirit makes believers aware that at present they are not what they should be. Present life is characterized by suffering (8:18), weakness (8:26), and decay since Adam's fall (see Gen 3:17). Believers are not above the world order, but rather identify with the rest of creation as they "groan inwardly" (8:22–25). Furthermore, the Spirit intercedes on their behalf, because their prayers are not adequate (8:27).

But possession of the Spirit also assures believers that they have a future. The Spirit is the "first fruits" or down payment of future redemption (8:23) as adopted children of God. When believers themselves (lit., "our bodies" in 8:24) are conformed to the image of God's son (through the resurrection of the dead and the transformation of the living, which will occur at the parousia), then they shall be brethren of the firstborn son (8:29).

The concluding doxology in 8:31–39 serves as a summary of the entire argument in chaps. 1–8. Here Paul asserts that "God is for us." The "us" refers to "the justified," who are "called," who are God's elect (8:33). If God is for this group of "chosen" people, then nothing can be against them. Since God went to great lengths to justify believers, God will not now indict them. And because Christ suffered, died, and intercedes on behalf of believers, he will not condemn them.

Nothing, then, can separate God's chosen ones from his love, absolutely nothing! Or is there something? Can lack of faith on the part of God's chosen ones separate them from the love of God? This one possible exception is the topic of chaps. 9–11.

5. Rom 9:1–11:36. The solemn oath in 9:1–5 stands in stark contrast to the end of chap. 8 where Paul ponders whether anything is able to separate God's chosen people from God's love in Christ (8:35–39). In

chaps. 9–11 Paul ponders the one "exception" that threatens to undermine his confidence, namely, the faithlessness of God's chosen people. Paul expresses deep sorrow in these opening verses going so far as to say, "I could wish that I myself were accursed and cut off from Christ for the sake of my own people, my kindred according to the flesh" (9:3 NRSV), because of Israel's unbelief in Christ.

But Paul's sorrow in 9:1–5 is prompted not only by personal sorrow for the unbelieving members of his own race but also by a grave theological consideration, namely, God's faithfulness in the face of Israel's faithlessness. After all, God made promises to his chosen people Israel in the past. In light of Israel's unbelief in Christ, will God now turn his back on Israel and turn to the gentiles instead (as Paul's mission might suggest)? If this is the case, then hasn't God welshed on his (unconditional) promises to Israel? And if he has welshed on his promises to Israel, what is to prevent him from welshing on his promises to Christian believers at some time in the future? Thus, Jewish unbelief is of concern for gentile believers.

Paul begins by arguing that the present unbelieving state of most Jews does not mean that God's promise has lapsed. Paul reconsiders some important OT events, only to discover that human unbelief is unable to thwart the saving purposes of an all-powerful God. The present situation, where many gentiles are included in the people of God and many Jews are excluded, is in accordance with God's revelation in Scripture, Paul says. According to Hosea (2:25; 1:10), gentiles would be called "children of the living God" (Rom 9:25–26), whereas Isaiah (10:22; 1:9) states that only a remnant of Jews will be saved (Rom 9:27–29).

But even though most of Israel suffers from hardness of heart in the present, God continues to reach out to his chosen people. He has made being put right with God (10:6) a simple matter of faith in the resurrection of Jesus Christ and confession of his lordship (10:9). Moreover, he has brought the message of faith near to the Jews (10:8) through the apostles' preaching of Christ (10:15). But even though "not all have obeyed the good news" (10:16), God continues to reach out to Israel to bring about its obedience: "All day long I have held out my hands to a disobedient and contrary people" (10:21).

To the question, "Has God rejected his people?" Paul gives a negative answer (11:1). Paul then goes on to show that the rejection of Israel by God is partial (11:1–10), temporary (11:11–27), and has had a deeper purpose (11:28–36).

Paul points to his own Christian existence as proof that the Jewish people as a whole have not been rejected. Contrary to what many think, there is a remnant of Jews that will be saved. According to 11:7 Israel is composed of "the elect" and "the rest." Surely the elect will be saved (9:27). The real issue is the destiny of "the rest," who are hardened in unbelief (11:8–10).

Next Paul argues that the rejection of Israel is a temporary condition (11:11–24). He begins by asking, "… have they stumbled so as to fall" (11:11a). Here the "they" refers to "the [unbelieving] rest" of 11:7, "stumbled" alludes to Jews' rejection of Jesus (see 9:32f), and "fall" means to fall from grace eternally. In short, when the Jews rejected Jesus, was it God's intention to cut them off forever?

Paul's response to the question of 11:11a is an emphatic "By no means!" God turned Israel's stumbling into good. It brought salvation to the gentiles, which in turn will "make Israel jealous" (see Rom 10:19 = Deut 32:21). Therefore, God's promise of salvation has not been taken from the Jews and given to the gentiles. The order of events has merely been reversed: to the gentiles first and also to the Jews.

This fact informs Paul's missionary method. In spite of Israel's unbelief, God can reach the Jew via the gentiles and the jealousy that the gentiles' acceptance of the gospel will cause. Therefore, Paul's mission to the gentiles does not overlook Israel; it is at present the most direct way to get at the Jews.

Paul believes that his mission to the gentiles will have an impact on some of the unbelieving Jews (11:14). Note that the rejection of the Jews by God brought about the preaching of the gospel to the gentiles, which resulted in the reconciliation of the world (11:15). If this tragic event (Israel's rejection by God) brought such good results (gentiles' acceptance by God), what will happen when the Jews are accepted (11:15)? God has rejected unbelieving Israel in the present, but has not cast off Israel forever.

Paul then appeals to the metaphor of the olive tree (11:17–24). Here "some of the branches" (11:17a) refers to "the rest," that is, unbelieving Jews (11:7), while "you, a wild olive shoot" (11:17b) agrees with the direct address of 11:13 and must, therefore, refer to a believing gentile. This metaphor illustrates

several points. In the first place, the ingrafting of gentile Christians is something unexpected, unnatural. Gentile Christians are at best "honorary Jews" (so Stendahl 1976: 37) who have become such by adoption. The practical result of this perspective is that gentile Christians must not "boast over the [natural] branches" (11:18), for the gentiles are dependent on the Jews. The gentiles must "not become proud, but stand in awe" (11:20), for God who did not spare the natural branches will surely not spare the wild branches, if they do not continue in their faith. Moreover, God can easily restore the natural branches, if they do not persist in their unbelief (11:23).

In 11:25–32 Paul reveals an eschatological mystery (11:25). The hardening of Israel is limited in extent ("a hardening has come upon part of Israel") and in duration ("until the full number of the Gentiles has come in") (11:25b NRSV). The result is that in the future "all Israel will be saved" (11:26a NRSV). And when will Israel be saved? According to the OT, which Paul cites in 11:26b–27, it will not take place until "Out of Zion will come the Deliverer" (Isa 59:20–21), that is, at the parousia of Christ. At that point Christ "will banish ungodliness from Jacob" (Isa 27:9), which Paul interprets to mean all unbelief on the part of "the rest" of Israel.

In response to the question implied in 9:6a, then, God *is* faithful! God will not take back from his people the gifts of his grace (listed in 9:4f) and their call to salvation (11:29). God's obvious intention is to save all Israel (11:26). Just as the gentiles, who were once disobedient, now have obtained mercy through the disobedience of the Jews (11:30), so too "the rest" of the Jews are now disobedient in order that God may have mercy on all (11:32), both Jew and Greek.

Paul concludes Romans 9–11, and also the whole of Romans 1–11, with a final hymn of praise (11:33–36). Here he states that God's ways of dealing with humankind are miraculous, far surpassing human understanding (11:33–34). Furthermore, no one holds God in his debt. What is received from God is not merited; how God acts is purely according to his will (11:35). Finally, God is creator and sustainer of all, Jews as well as Greeks, and therefore to God alone belongs all glory (11:36).

6. Rom 12:1–15:13. Following the lengthy theological argument in chaps. 1–11 comes the paraenetic section of the epistle which begins in 12:1. Having the paraenesis follow the body of the epistle is not unusual in Paul's writings (see also 1 Thessalonians 3–4 and Galatians 5–6). But this arrangement seems especially appropriate in Romans, for it shows that the saving work of God, which is described in chaps. 1–11, is not dependent on obedience to the injunctions of chaps. 12–15. One does not obey in order to earn God's favor. Rather obedience is the result of gratitude for all that God has already done and will continue to do in Christ for those who believe (understanding the *oun,* "therefore," of 12:1 to refer to all that has gone before).

This paraenetic section falls naturally into two distinct sections. While the first section (12:1–13:14) contains many general injunctions that seem unrelated to particular problems in Rome (but see the discussion of 13:1–7 below), the injunctions of the second section (14:1–15:13) are occasioned by and directed at the specific situation in Rome.

The exhortations of Romans 12–13 begin in 12:3 and end in 13:7. Life within the body of Christ is the subject of the first half of this section (12:3–14 [16a]), whereas relationships with those outside the Church are considered in the second half (12:15 [16b]–13:7). These exhortations are framed by an introductory appeal in 12:1–2, which urges Christians to offer themselves wholly and unreservedly to God as a proper service of worship, and by concluding appeals in 13:8–14, which summarize what has preceded and underscore eschatological urgency.

The present structure of 12:1–13:14 shows that the Christian's present life is radically qualified by the imminence of the New Age (13:11–14). Nevertheless, Paul does not conclude that Christians no longer have any responsibilities in the present age. In fact, according to Paul, life in Christ places special moral requirements on the believer. Gifts with which individuals are endowed (12:3–8) are to be used in the service of God, being the means whereby the believer's faith is enacted in love. As in 1 Corinthians 12, Paul in Romans 12 follows his description of spiritual gifts with an appeal to "let love be genuine" (12:9a). Then in Rom 13:8–10 the love command reappears in the summary appeal of the whole section.

In Rom 14:1–15:13, Paul considers the tensions that are present within the believing community between the "weak" and the "strong." In this section Paul describes those whom he calls "weak in faith" (14:1) as ones who "eat only vegetables" (14:2b NRSV) and also "judge one day to be better than another" (14:5a). The "strong," although not mentioned as such until 15:1, are surely those who "believe in eating anything" (14:2a NRSV) and "judge all days to be alike" (14:5b). While they are never identified as such, the "weak" may refer to overly scrupulous Jewish-Christians, who because of their background, consider diet and festal observance matters of significant religious concern. The very fact that Paul has to council the so-called "strong" not to "despise those who abstain" and the so-called "weak" not to "pass judgment on those who eat" (14:3) reveals the tension between these two parties in the Roman community.

But Paul states that "God has welcomed" (14:1) members of both groups into the fellowship and all are advised to "Welcome one another, therefore, just as Christ has welcomed you" (15:7 NRSV). Unity in the community, however, does not require uniformity of behavior (see 14:3, 5–6). But believers must be "fully convinced in their own minds" (14:5b) that what they do is done "in honor of the Lord" (14:6–9), knowing that one day they will have to account for their actions before God (14:10b, 12).

Believers must recognize that their responsibility to fellow believers does not simply involve tolerating the different practices of others. One's own behavior must not injure or alienate others (14:13–23), even if that means giving up some personal rights, such as eating meat or drinking wine (14:21). If believers are more concerned with pleasing others than with pleasing themselves (15:1–2), then those from different backgrounds in Rome can "live in harmony with one another" (15:5) and thereby "with one voice glorify the God and Father of our Lord Jesus Christ" (15:6).

Ultimately, then, this is the purpose of God's act in Christ: to unite Jew and gentile in the praise of God (15:7–13). And that ultimate purpose explains why Paul writes to the Romans (15:14–17), why Paul wants to go on to Spain via Rome (15:18–24, 28–29), why Paul is about to go to Jerusalem with the gentile offering (15:25–27), and why Paul is concerned about the acceptability of his service for Jerusalem (15:30–31).

F. Literary Character and Style of Romans

The longest of the undisputed Pauline Epistles exhibits a remarkably varied literary character and style. In this 7,094–word epistle Paul uses a relatively large 1,068–word vocabulary, which betrays the author's familiarity with Greek thought as well as his extensive knowledge of the Hebrew Scriptures in their Greek translation (the LXX).

Besides using a varied vocabulary in Romans, Paul employs a wide variety of literary conventions, wider than in any of his other extant writings. Long ago Augustine noted (in *On Christian Doctrine* 4.7) the Apostle's use in Romans 5:3–5 (see also 8:29–30 and 10:14–15) of the rhetorical device known as *climax*. Elsewhere Paul also reveals a familiarity with other ancient rhetorical devices, such as *chiasmus*, a form of parallelism that inverts the order of the elements in the second half of the literary unit (hence, the ABB'A' pattern; see 1:17–18; 2:6–11; 6:3; 11:22; 11:33–36).

The *diatribe* is another important rhetorical device employed by Paul in Romans. In his doctoral dissertation, Bultmann (1910) pointed out the influence of the diatribe on Paul's Epistle to the Romans. But recent studies, particularly by Stowers (1981), have clarified and deepened our knowledge of the subject.

According to recent research the diatribe is actually a form of discourse that was used by teachers in certain philosophical schools to correct students and to refute their objections to the subject being taught. The diatribe, therefore, captures the earnest give-and-take between a pupil and a teacher. With this in mind, one can see that Paul employs the diatribe in Romans when he addresses an imaginary interlocutor (2:1–5; 2:17–24; 9:19–21; 11:17–24; 14:4, 10) and when he responds to objections and false conclusions (3:1–9; 3:31–4:2a; 6:1–3, 15–16; 7:7, 13–14; 9:14–15, 19–20; 11:1–3, 11, 19–20). Paul's conspicuous use of the diatribe in Romans may also indicate something about the original addressees of this epistle. Paul may have known (or at least thought it to be true) that the Romans were a sophisticated, well-educated congregation which would be familiar with this literary device.

In Romans, the longest sustained argument of any extant epistle, Paul skillfully unites the various topics taken up in this lengthy epistle into a single argument. On several occasions, Paul draws together the thought of a longer, more-involved discussion by means of a brief summarizing comment (see 6:11; 7:12; 15:5–6). At other times, the Apostle connects discrete portions of his argument by delaying such summarizing comments until after the next thought-unit has begun. An obvious example of this type of *delayed conclusion* is found in 3:22b–23, where the comment, "For there is no distinction, since all have sinned and fall short of the glory of God," summarizes the discussion of 3:9–20 after a new thought has begun in 3:21 (see also 10:17).

But Paul is also careful to distinguish major sections of the epistle. Thus in 4:25 Paul cites a liturgical fragment to punctuate the discussion begun in 3:21. In 8:31–39 Paul utilizes a hymnlike passage to bring to a close the whole discussion that began in chap. 1 (understanding *tauta,* "these things," in 8:31 as a reference to all that has preceded, at least since 3:21). In 11:33–36 Paul cites a doxological passage to end the discussion of chaps. 9–11, and in 15:13 a blessing serves to round off the previous discussion. In smaller thought-units in Romans, Paul often employs the literary device known as *inclusion.* Here a word or phrase at the beginning of a thought-unit is repeated at the end as a way of concluding the unit (for example, see the phrase "through our Lord Jesus Christ" in 5:11, which recalls 5:1 and rounds out the discussion in 5:1–11).

As a result of these punctuating devices, Romans contains some rather abrupt transitions and sudden changes of mood. But rather than interpreting these abrupt transitions as the result of some post-Pauline redactional activity (so Schmittals 1975; O'Neill *Romans* PNTC; and Scroggs 1976) they are better explained as deliberate attempts to demarcate the various sections of the letter and are not evidence of the composite nature of the epistle. To those who first heard this epistle read aloud these abrupt changes were needed to enable the auditors to distinguish one thought-unit from the next.

Some of the literary style and character of Romans, however, cannot be attributed to the apostle Paul, for there is much tradition cited by Paul in this epistle. In the first place, Paul repeatedly cites the LXX. Romans contains so many quotations from the Greek Bible (some 65 in all) that Martin Luther thought that Paul's intent in writing this epistle was to compose "an introduction to the entire Old Testament" (1522 Preface to Romans).

But in Romans Paul also includes much pre-Pauline and even pre-Christian tradition. For example, Paul cites early creedal fragments (1:3b–4; 4:25), an early Christian hymn (11:33–36), an early Jewish-Christian liturgical statement (3:25), a baptismal tradition (6:4–5), a faith formula and confession (10:9), along with echoes of Christ-sayings (12:14, 17; 13:7; 14:13, 14). Some of the pre-Pauline paraenetic materials, such as the vice list in 1:29–31 and the imperative cluster in 12:9–13, may be pre-Christian. But Paul did not merely cite these traditions. He interpreted what he inherited by adding words and phrases in order to fit the occasion and his audience. The Epistle to the Romans, therefore, is not solely the product of Pauline originality.

All in all, the epistle that has as its theme "the power" of the gospel (1:16) is written in a style that is appropriate for the message. This epistle is forceful, but not angry like Paul's Epistle to the Galatians. Moreover, Romans is argumentative, but not contentious like Paul's Corinthian correspondence. But as is the case in the other Pauline writings, the literary character of Romans is also influenced by the audience that Paul addresses. The more sophisticated and more erudite style of Romans, in comparison to the other Pauline epistles, suggests that the community which Paul addresses is unlike his own congregations. Therefore, Paul wrote this epistle in a manner that he thought would enlighten and also persuade believers in Rome.

G. The Relation of Romans to Other Ancient Literature

Before World War I, Adolf Deissmann published his ground-breaking work (1910). Whereas previous scholars had compared NT works to the literature of Plato, Demosthenes, and other authors of classical antiquity, Deissmann endeavored to compare the literature of the NT with the plethora of nonliterary papyri that had been uncovered of late in Egypt. On the basis of this comparison, Deissmann distinguished between "letters" (*Briefe*), which were private, unliterary, and clearly occasional

communications, and "epistles" (*Episteln*), which have the outer form of a letter but are actually artful literary products intended for public consumption and written for posterity. According to Deissmann, the writings of the apostle Paul were real letters and not literary epistles (1926: 9–12).

Not all scholars are satisfied with Deissmann's absolute distinction between the letter and the epistle, particularly as it applies to Romans. Although most admit that Romans is occasional in nature, this work is not a casual correspondence written hurriedly and haphazardly. Neither is this work a private, informal communication. On the contrary, Romans is a well-thought-out, authoritative communication that is intended to serve as a substitute for Paul's personal presence (Rom 15:25–27).

The enduring contribution of Deissmann, however, was his awareness of the need to compare the NT writings with the wide variety of Hellenistic literature. This careful comparison has continued to be a vital part of Romans research in recent years, the thought being that the discovery of the rhetorical genre to which Romans belongs may provide some clue about Paul's intention in writing Romans. And a clearer sense of the rhetoric in Romans sheds valuable light on the structure of the argument.

Basing his work on the research of M. L. Stirewalt (1977: 175–206), K. P. Donfried suggests that Romans evidences the characteristics of the "letter-essay" (1977: 143–48). Stirewalt examines fifteen ancient Greek documents that he classified as "letter-essays," because the more personal epistolary features of these writings seem to be giving way to the more impersonal features that characterize an essay. These writings often function as a summary of earlier work, and they seem to assume a third party (not only "I" and "thou," but also "they"). The summary character and the public nature of Romans suggest that this writing may also exhibit characteristics of the "letter-essay," Donfried asserts.

S. Stowers (1986: 114) classifies Romans as a "protreptic letter," a type of letter which is modeled on the protreptic speech that goes back to the Sophists. Protreptic works usually urge one to adopt a new way of life, and to do so they sometimes include a refutation of objections. In Romans, Paul introduces his gospel and himself as an authoritative teacher to the Roman Christians. Moreover, in Romans, Paul answers objections to his gospel and reproaches those who, through arrogance or pretentiousness, will not accept his gospel. All of these features, argues Stowers, are typical of the protreptic letter.

Other scholars have considered the whole of the Epistle to the Romans in relation to ancient Hellenistic literature by means of rhetorical criticism. After determining the conventional parts of a rhetorical composition through a careful examination of the contents of ancient rhetorical handbooks, these scholars (notably W. Wuellner 1976: 152–74; G. Kennedy 1984: 152–54; and R. Jewett 1986: 382–89) then analyze Romans in terms of its rhetoric of argumentation.

Although there is no scholarly consensus at the present time, further comparisons of Romans with other ancient Hellenistic literature is assured. And although this type of scholarly research is still in its infancy, such analysis promises to shed new light on the perennial problems of the author's intent, the structure of the argument, and the climax of the epistle.

H. Some "Problem" Texts of Romans Reconsidered

Several passages in Romans, which down through the years have had a deleterious effect on the social, political, and moral realms, have received special scholarly attention in recent years. Three texts in particular have been the subject of considerable study: Rom 1:26–27, which deals with the subject of homosexuality; Rom 13:1–7, which concerns the Christian's responsibility to the state; and Rom 16:1–7, which provides valuable testimony about the role women played in the first generation of the Christian Church.

1. Rom 1:26–27. In the course of indicting gentile unbelievers in 1:18–31, Paul refers to women who "exchanged natural intercourse for unnatural" (1:26 NRSV) and men who "giving up natural intercourse with women, were consumed with passion for one another." (1:27 NRSV). Rom 1:27 is the clearest statement in the NT regarding the issue of homosexual behavior between consenting adult males, and Rom 1:26 is the only biblical text that addresses the particular issue of homosexual behavior between consenting females. Because of their clarity, these verses have served as a biblical warrant for singling out homosexual behavior as the grossest of sins and for discriminating against those who engage in such behavior.

Greater awareness of the historical context and a greater appreciation of the literary context of Paul's remarks in Rom 1:26–27, however, have forced a reconsideration of these verses. True, homosexual behavior between consenting adult males was a capital offense in ancient Israel (Lev 18:22; 20:13), but so were such "heinous" crimes as consulting a medium or wizard (Lev 20:6), cursing your father or mother (Lev 20:9), and engaging in sexual intercourse with a menstruating woman (Lev 18:19; 20:18).

Apparently, homosexual behavior among consenting males was quite rare among Israelites. Nowhere in the historical literature is this practice mentioned. More importantly, prophetic denunciations of Israel's sins do not include homosexual behavior. The result is that among Jews, homosexual behavior was perceived as a "gentile" phenomenon and practice.

Although homosexual love (usually in the form of pederasty, the love of an older man for a younger) enjoyed a relatively prominent place in ancient Greek social life beginning in the 6th century B.C., homosexuality was viewed differently in the world of the 1st century A.D. To be sure, it was still practiced among some segments of society, but moral philosophers were beginning to question its merit. Homosexuality was viewed as grossly self-indulgent, essentially exploitative, and an expression of absolutely insatiable lust. The same desire that drove men to female prostitutes could, unless kept under control, drive men to seduce other men. Homosexuality was also seen as a violation of the natural order. Since heterosexual intercourse was necessary for procreation, this was "natural," whereas sex between same-sexed partners was "unnatural."

It is vital to note that Paul's presuppositions about homosexuality in Romans 1 are similar to those of his contemporaries. Paul's choice of the active verbs "exchanged" (1:26) and "giving up" (1:27) assumes that homosexuality is an activity freely chosen. Paul's use of the phrase "consumed with passion" (1:27) reveals the belief that homosexual behavior is associated with insatiable lust and unbridled passion. And Paul's remarks concerning the giving up of "natural [heterosexual] intercourse" (1:26, 27) in favor of "unnatural" (1:26) understand homosexuality as a violation of the natural order.

It is also important to note that Paul describes homosexuality as the consequence of idolatry. In 1:18–23 Paul indicates that the source of gentile "ungodliness and wickedness" is their failure to give honor and thanks to God, who has revealed himself to all through the creation. "So they are without excuse" (1:20b). Rather than worshipping the Creator, they worship the creation instead (1:23, 25). And their fundamental confusion regarding the true entity of God ("they exchanged the truth about God for a lie and worshiped and served the creature rather than the Creator …" 1:25) results in a basic confusion about their own sexual identity ("they exchanged natural intercourse for unnatural," 1:26). Homosexual conduct (and the other vices catalogued in 1:29–31) is due to the sin of idolatry.

But Paul's description of the gentile world in Romans 1 is not original. As the striking parallels with the Wisdom of Solomon (chaps. 11–15) indicate, Paul is heavily indebted to the traditional Hellenistic Jewish picture of gentile sinners. Homosexual behavior, which was believed to be a typically gentile practice, is understood as a consequence of their refusal to let God be God.

But Paul's argument does not conclude with the description of the gentile world. At 2:1, Paul's indictment of the gentiles' behavior turns to "the man" (the Jewish boaster of 2:17?) who self-righteously judges that behavior. The one passing judgment is not innocent, because no one is guiltless, when judged purely on the basis of what one does before an impartial and just God (2:1–11).

While Paul obviously accepts the description of the gentiles in Romans 1, this is not the point of the initial chapter of Romans. Paul's description of the gentiles is intended to provoke self-righteous Jewish pride, so that Paul can destroy it in chap. 2 by showing them that they sin against the law. Paul is simply leading up to the point that "all people, both Jews and Greeks, are under the power of sin" (3:9b), so that he can introduce the topic of the reality and power of God's redemptive grace for all (3:21–8:39).

Even within Romans 1, homosexuality is perceived not as one of the "sins" of the gentiles, but as one of the consequences of their root sin of refusing to let God be their God. Therefore, homosexuality cannot be singled out in this chapter, for Paul says that those who do such things (1:32a), or they that approve of others doing them (1:32b), or they that pass judgment on those who do them (2:1) are all worthy of condemnation. In other words, "all have sinned and fall short of the glory of God" (3:23).

2. Rom 13:1–7. The Apostle Paul's admonition to "be subject to the governing authorities" (13:1a) on the grounds that "those authorities that exist have been instituted by God" (13:1c) has caused much needless suffering and much misery even in the 20th century. This passage seems to lend support to any existing government, regardless of how tyrannical or how corrupt, and any governmental policy, however repressive or unjust. This passage has been invoked by Christians to put down revolt, support war, and justify genocide. In fact, many Christians in Hitler's Germany appealed to this text as the decisive biblical warrant for obedience to the Nazi regime. And it has been regret over the Church's alignment with the Nazi regime that has forced a reconsideration of these verses, particularly by German biblical scholars.

Again, a careful reading of the text along with an awareness of the historical context is essential for understanding this problem passage. It must be noted that Paul does not say "obey" or "disobey" governing authorities. He instead speaks of "being subject" (13:1, 5), which can include disobedience.

In Rom 13:1–2, Paul states that the authority of the governing authorities has been granted them by God. Here Paul is indebted to Hellenistic Judaism, which understood that earthly rulers had no authority except what God had given them (see Prov 8:15–16; 24:21; 1 Pet 2:17). But authority was not a license to do whatever one wanted. Tradition also held that earthly rulers were accountable to God for their own actions and were liable to God's judgment (see, for example, Wis 6:1–11).

In Rom 13:3–4, Paul argues that earthly rulers function as servants of God to employ the authority granted them for the common good. According to Paul governing authorities are "God's servants" and not divine representatives. Their authority is recognized, for it is given by God, and their rightful task is to serve. The proper function of governing authorities is to assure the welfare of society by punishing those who do wrong and by supporting those who work for what is good.

In Rom 13:5, Paul advances a third point by repeating the opening admonition to "be subject" not only for fear of punishment but also "for the sake of conscience." Up to this point Paul has argued for being subject to governing authorities, because they are God's servants for the maintenance of law and order. Now he says one must be subject "for the sake of conscience." This refers to the capacity to reflect critically upon what is appropriate given the realities of existence. Therefore, Paul argues that if one thinks carefully and reasonably about it, subjection to the authorities will commend itself as a wise and prudent course. This passage sums up the argument to this point, but the conclusion and real point of the paragraph comes in 13:6–7.

In Rom 13:6–7, Paul states exactly how one should comply with the demands of the governing authorities: by paying taxes. Everything in 13:1–5 has been leading up to the topic of "taxes" in 13:6–7. But the way that the admonition is worded suggests that Paul has a specific issue in mind.

Rom 13:7 is an admonition, which uses two different words (*phoros* = "taxes" in the NRSV, and *telos* = "revenue" in the NRSV) to refer to taxes due, in contrast to 13:6, which is a statement that mentions only "taxes" (*phoros*). Moreover, the admonition in 13:7 stresses the need to render "to all what is due them" (NRSV).

What Paul apparently refers to in v 6 is direct taxes, which were collected by government officials. The reference to "revenue" in 13:7 is probably a reference to indirect taxes (such as harbor fees, import and export duties), which were collected by Roman citizens known for their exploitation the public. The Roman historian Tacitus (*Ann.* 13.50) says that public displeasure with the corrupt practices of these citizen collectors of "revenues" reached a climax in A.D. 58. As a result of the widespread discontent, Nero almost abolished these taxes, but instead he simply reformed the system.

Paul's letter to Rome was written in ca. A.D. 55–57, while public pressure was building against abuses of revenue collectors. If the Roman church included some well-to-do people, then these would be ones most affected by revenue abuses. If this is true, then Paul is urging Roman believers to continue paying the direct tax (13:6) and also the controversial indirect tax (13:7). Paul urges the paying of whatever taxes are levied. This will prevent punishment for tax evasion, which is a reasonable thing to do as a sign of respect for law and order.

Rom 13:1–7, therefore, was originally directed to a specific situation in Rome during the mid-50s. When these words were composed, several years before Paul's own death at the hands of the Romans and

before the Neronian persecutions of the 60s, Paul must have been fairly confident that the Roman government would be just. Nevertheless, Paul's thought about the governing authorities in these verses is not original; he was indebted to the Hellenistic Jewish tradition that he inherited. But Paul uses that tradition to address a specific situation in Rome, because Paul did not believe that Roman Christians should become embroiled in the tax issue. For that reason, the point of the discussion is the concluding admonition: "Pay to all what is due them" (13:7).

3. Rom 16:1–7. The problem with this passage is that it has for so long been overlooked. After all, on the surface these verses appear to be little more than commendations and greetings, material that is hardly worthy of any scholarly scrutiny. Nevertheless, in recent years this passage has been found to contribute some important pieces to a larger puzzle about the role(s) of women in the first generation of the Christian movement.

In Rom 16:1–2 Paul recommends to the Romans (assuming that chap. 16 is a part of the original letter to Rome; see the discussion in section C, above) a woman named Phoebe from the port city of Corinth. Note that she is identified as a *diakonos,* and although at this time "deacon" is not the formal office that it becomes at a later stage in the early Church, the woman Phoebe must have been a prominent figure in the church at Corinth. Moreover, the fact that Paul recommends to the recipients of his letter a woman who comes from the place where Paul wrote Romans suggests that Phoebe probably delivered Paul's letter to the Romans, not an insignificant task.

In Rom 16:3–4, Paul greets Prisca and Aquila, a woman and her husband. According to Acts 18, after this man and his wife (called Priscilla in Acts) were expelled from Rome by the Emperor Claudius, they met Paul in Corinth (Acts 18:1–3). Acts also states that this husband-wife team later "expounded to [Apollos] the way of God more accurately" (Acts 18:26). In Rom 16:3, Paul, contrary to ancient practice, greets Prisca before Aquila, which may indicate that Prisca was the leader of the team. In any event, Paul calls both Prisca and Aquila *synergoi* ("fellow workers"), a title reserved for important leaders (for example, Apollos, 1 Cor 3:9; Titus, 2 Cor 8:23; Timothy, 1 Thess 3:2).

In Rom 16:7, Paul greets two apostles who Paul describes as "prominent among the apostles, and they were in Christ before I was" (NRSV). One of these apostles is a man, Andronicus. But the other apostle, who was an apostle before Paul himself, may be a woman and the spouse of Andronicus. Most English translations merely transliterate the Greek text and render *Ioudian* as "Junias," a male name that is otherwise unattested in antiquity. But the name in the Greek text is in the accusative case, because it is the direct object of the sentence. That same name in the nominative (subject) case could be "Junia," which was the Greek version of a common Roman name for a woman. If "Junia" is the correct name in this verse, and this reading is gaining wider acceptance (so the REB and NRSV), then here is evidence that women were apostles at a very early stage in the Christian movement.

These few verses testify, therefore, that Paul knew of women in positions of leadership in the early Church and that he acknowledged their authority. These verses also reveal that the practice in the first generation of the Church's existence differed from the practice of the later Church, which is reflected in 1 Tim 2:11–3:13. Apparently, in Paul's day women were not denied the right "to teach or have authority over men …" (1 Tim 2:12). In Paul's churches, those who led were the ones most-gifted spiritually (see 1 Cor 12:4–11, where Paul's remarks do not bar anyone from participation in the various offices listed). As a result, women had access to prominent roles of leadership in the earliest generation of the Church. Paul's own testimony suggests that in reality women were among his closest associates in ministry and that women were among the most prominent leaders in the early Church.

Rom 16:1–7, therefore, lend additional support for understanding 1 Cor 14:33b–36 as a non-Pauline insertion and for recognizing Paul's remark that "there is neither male nor female; for you are all one in Christ Jesus" (Gal 3:28b) as most expressive of Paul's attitude toward women.

ROME (PLACE) [Gk *Rhōmaios* (Ῥωμαιος)*, Rhōmē* (Ῥωμη)]. ROMANS. The Italian city-state (Lat *Roma*) which by the 2d century B.C. ruled an empire encompassing the Mediterranean basin and much of its hinterland. References to Rome occur throughout the book of 1 Maccabees and the NT, especially the book of Acts. See also ROMANS, EPISTLE TO THE.

C. Late Republican Rome
D. The Empire
E. The Late Empire

———

A. Archaic Rome

The foundation of Rome is obscured by legend and the lack of adequate archaeological material to form substantive hypotheses. Tradition accepts the 753 B.C. founding date proposed by the 1st-century B.C. antiquarian, M. Terentius Varro, and links Rome's origin with the legend of its eponymous founder, Romulus (Bloch 1960: 11–92; Alfoldi 1965: 101–76). That Rome began as a small pastoral, agricultural settlement of Latins at a ford across central Italy's most important river, the Tiber, seems clear enough. Legends of early conflict with a neighboring village of another early Italic people, the Sabines, are also

relatively well confirmed by archaeological evidence (Scott 1929: 21–69; Poucet 1967: 5–136). The synoecism of Latin and Sabine villages produced the town, *Roma quadrata,* ruled by kings. The social system there developed was strongly patriarchal and organized on the basis of families and clans, with their headmen forming an advisory council to the kings, known as the Senate. All Roman citizens, *Quirites,* comprised an assembly called the *Comitia Curiata,* as much a religious body as a civic council. The governmental and societal structure of the monarchical period is best elucidated in the works of Palmer (1970: 67–287) and de Francisci (1959: 25–624).

The transformation of Rome from rustic village to city proper must be credited to Etruscans who seized the Tiber crossing around 600 B.C. and proceeded to drain the marshy land between Rome's hills, pave extensive areas, build a city wall, and construct large brick, stone, and masonry public buildings and private edifices. Territorial expansion was effected by its Etruscan rulers and Rome developed into the leading city-state of central Italy. In addition to Rome's physical development as a city, the formulation of its legal and religious systems must in large part be attributed to Etruscans. Etruscan influence continued long past the termination of the Etruscan monarchy as many of the leading men of Rome's new republican government were nobles of Etruscan origin (Alfoldi 1965: 176–419; Scullard 1967: 243–84; Ogilvie 1976: 9–124).

B. Republican Rome

Traditionally established in the year 509 B.C., the Roman Republic, in Latin *res publica* signifying simply "government" or "public thing," was in essence an oligarchy of nobles whose rule continued with little interruption for almost five centuries. After resolving a long protracted struggle between patrician aristocrats and plebeian commoners by temporarily opening in 366 B.C. the ruling oligarchy to the wealthiest and most influential plebeians, an internally unified Rome was able to turn its attention to the rest of the peninsula (Heurgon 1973: 156–221; Raaflaub 1986: 1–377). In rapid succession, Latium, Campania, Umbria, Etruria, and finally an ever resistant Samnium fell to Rome through treaty of alliance or military conquest, and a unified Italian peninsula was prepared to face the growing power in the western Mediterranean of Phoenician Carthage (Salmon 1982: 1–90; Sherwin-White, 3–133).

Rome's conflict with Carthage spanned a century and was resolved in three bitterly contested Punic wars (I, 264–241 B.C.; II, 218–201 B.C.; III, 149–146 B.C.). The system of alliances and citizenship grades established by Rome for its Italian subjects and allies weathered the test of Carthaginian invasion and Hannibal's efforts to foment rebellion. Italian unity and extensive manpower resources overcame Carthage, and at the beginning of the 2d century B.C., Rome possessed an empire in the W Mediterranean including Spain, NW Africa, S Gaul (France), and the islands of Sicily, Sardinia, and Corsica (Scullard 1980: 146–239; Toynbee 1965: 247–82, 505–55).

For administrative purposes these territories were organized into provinces governed by senatorial proconsuls and propraetors, whose responsibilities entailed the maintenance of peace and order, the adjudication of disputes, and the supervision of tax revenue collection (Stevenson 1939: 1–93; Badian 1972: 11–118). This pattern of provincial administration prevailed as the primary mode of organizing Roman territory, including expansive regions acquired by Rome in the E Mediterranean. Some areas were organized into provinces, but others were governed in Rome's behalf by local dynasts who became client kings ultimately subject to Rome's Senate (Badian 1958: 55–115).

Questions related to Rome's involvement in E Mediterranean affairs and gradual domination of the region are complex. Imperial versus economic concerns as cause for Roman expansion continue to be debated (Hatzfeld 1919: 17–50, 192–382; Harris 1979: 54–131). Gruen's recent work (1984) offers a thorough treatment of the Roman conquest of Hellenistic monarchies, providing much useful information on political motivation and the effect exerted by philhellenism initially as a motivating factor and later as a determinant of Roman cultural and societal development. In addition to his discussion of Hellenistic influences on the Near East, Peters (1970) provides an excellent outline not only of Roman conquest and subsequent provincial organization, but also of the Roman cultural impact upon the region.

With the acquisition of the greater part of the Mediterranean and its hinterland, wealth flowed to Rome from its provinces and subject peoples. A cosmopolitan city developed that began to rival even

Alexandria as an economic and mercantile center. From throughout Italy individual Romans and Italians, many exposed to the luxuries of the East through soldiering in the campaigns that had brought the area under Rome's dominion, sold farms and property to move to the capital and partake in the "good life" which slowly deteriorated the old-fashioned upright mode of life earlier Romans had practiced and honored as *mos maiorum.* By the mid-2d century B.C., Rome was a city with serious problems that would ultimately prove detrimental to its entire empire (Alfoldy 1988: 29–65). In addition to crime and lawlessness, a new landless proletariat comprised of those who had used up personal fortunes in pursuit of pleasure, constituted for Rome's ruling senatorial order the necessity of a public welfare system to provide for the ever-increasing indigent and unemployed, who without their small farms to work and untrained for other tasks, were unemployable. Indeed, for survival the mob had recourse only to its citizen rights and sold to politicians in exchange for support of social programs or other favors, their one commodity of value: votes and political support. Such goods of trade were welcome to the ruling elite who had not only enriched themselves as a result of overseas conquests and private land acquisition at home, but who had developed among one another intense political rivalries for office, power, and influence (Brunt 1971: 1–73).

C. Late Republican Rome

The nobility's battles for prestige and political preeminence were initially waged in three arenas, the Senate, the electoral and legislative assemblies, and perhaps most importantly in a reorganized court system whose complex structure lent itself more to the manipulation of political factions than to the determination of justice. Here many political careers began and ended as the false accusation was developed as a potent political weapon, while the skilled orator plied the legal trade first as attacker or defender of senatorial nobles, and finally as participant in both the senatorial order and its political combinations (Gruen 1968: 8–278).

During the last century of the Roman Republic, political factions were many and varied. Whether a particular senatorial faction supported increased rights and largesse for the commons and sought to obtain these through legislative means within the popular assembly, or instead opposed the extension of such privileges through obstructing the people's institutions and protecting closed senatorial prerogative, determined inclusion among the broad categories of people's supporters, *populares,* or supporters of the aristocracy, *optimates* (Taylor 1949: 1–70). All segments of Rome's citizen body, whether residents of the city proper or citizens living throughout Italy, took greater interest in public affairs and played a more direct and active role in the politics of the time. Heightened political awareness produced strident demands among particular parts of the population. The urban poor clamored for more government supports; Italian allies claimed citizen rights; soldiers insisted upon mustering out benefits; equestrian businessmen sought a more extensive role in determining fiscal policy, etc. Roman society of the 1st century B.C. was segmented into special interest groups whose dictates threatened to destroy the entire community and nearly did (Alfoldy 1988: 65–93; Brunt 1971: 74–156; Beard and Crawford 1985: 1–87).

Military reform abolished induced military service on the part of land-owning citizens, instituting instead a professional army in which could serve anyone for whom the pay might be sufficient. Soldiers' allegiance underwent transferral from the state to individual commanders who were careful to maintain their troops' loyalty with rewards of money and booty (Gabba 1976: 1–69). Natural results of these changes were greater military involvement in the political arena and the ultimate resort to force as a mode of political determination. Consequently, three civil wars were fought in the last century B.C. to settle political problems or disputes. The first, the so-called Social War or "war of the allies," saw the defeat of a segment of Italian allies (Lat *socii*) who seceded when repeated petition for full Roman citizen rights went unheeded, but were in defeat ultimately granted citizenship as soon as the necessity of politically incorporating the whole of Italy was realized at Rome. The other two conflicts were fought over control of the Roman political system and rule of the Roman world by rival politicians and their followings: Marius versus Sulla in the 80s B.C. and Caesar against Pompey and a few senatorial oligarchs in the 40s (Gabba 1976: 70–130; Taylor 1949: 71–255). The complex historical problems of the era are best analyzed and elucidated in Gruen's thorough treatment of 1st century B.C. politics (1974: 1–596).

The city itself witnessed tremendous growth during the period, both in terms of population increase and in physical structure. Politically motivated government construction projects resulted in a record number of new public buildings and temples. Dudley (1967) and Coarelli (1974) provide the most complete physical description of the city for this period of the late Republic as well as for that of the early empire which accounted for even greater expansion and construction.

D. The Empire

Caesar's military triumphs not only added much of W Europe to Rome's empire and brought to an end the political conflicts and wars of rivalry between *optimates* and *populares,* but more importantly produced a political stability which coincided with Caesar's governance of Rome as *dictator perpetuus*—king in all but name. His reign was a benevolent sort of monarchy that oversaw much needed reform in many spheres, but assassins' knives cut it short and hurled the state once more into political chaos (Gelzer 1968: 102–335).

Leaders of the conspirators, Caesarian political lieutenants, and Caesar's posthumously adopted son and heir, Octavian Caesar, either struggled to succeed to Caesar's power or to protect themselves from those who attempted to do so. After several civil wars the protracted military and political struggle came to an end with the defeat of Antony and Cleopatra by Octavian who remained sole claimant to his father's authority. Hailed as deliverer and restorer of peace and order by a Senate now filled with his own supporters, Octavian established a new government with monarchical powers cloaked in traditional constitutional trappings. In return for sharing power with a grateful Senate happy to oversee peaceful non-military provinces while the *princeps* or emperor retained control of frontier provinces with their troop concentrations, Octavian was rewarded with the title Imperator Augustus Caesar, and received lifetime powers of governance as well as semidivine honors. The empire was thus established and by literary, religious, and artistic propaganda was quickly legitimized and made attractive to Rome's citizens. The much heralded *pax Augusta* did, in fact, provide for an empire at peace for the first time in over a century. Political stability gave rise to economic prosperity, while efficient government in Italy and the provinces won for Augustus the approval of his subjects. Population increased, new cities were established and old cities expanded. In no place was there such a change as in Rome itself where the emperor's building projects transformed the urban area into a beautiful city of marble buildings, monuments, and temples. On a less-extravagant scale the same process occurred not only throughout Italy but also in the provinces where leading citizens were granted Roman citizen rights and romanization was begun in earnest (Syme 1939: 1–568; Jones 1970: 1–189; Taylor 1939: 100–246; Firth 1902: 1–366; Millar and Segal 1984: 1–219).

Through a complicated process of intermarriage among his descendants and his step-descendants, Augustus provided for a succession designed to remain within the family of the Julians and the Claudians. His immediate four successors—the Julio-Claudian emperors Tiberius, Caligula, Claudius, and Nero—were, except perhaps for Claudius, poor administrators more concerned with personal indulgence than the improvement of Rome or its empire. However, save for political unrest in the capital, and that largely between several of these emperors and more independent segments of the senatorial class, the empire continued in an expansion cycle characterized by peace and prosperity, so well had Augustus set the proper course. As a result of Nero's excesses and tyrannies revolution came at last. From this civil war emerged a new dynasty, the Flavians, who would rule almost until the beginning of the 2d century A.D. They in turn were succeeded by five emperors elected by the Senate upon their predecessor's recommendation of high moral character and competence to govern. Because such criteria were applied to the designation of new emperors during most of the 2d century, the empire prospered (Garzetti 1974: 3–861; Salmon 1944: 1–366; M. Rostovtzeff 1926: 38–124).

In the opening lines of his *Decline and Fall of the Roman Empire,* the renowned Gibbon praises the Roman Empire during the era of the 2d century as at the height of its civilization.

> … the Empire of Rome comprehended the fairest part of the earth, and the most civilized portion of mankind. The frontiers of that extensive monarchy were guarded by ancient renown and disciplined valour. The gentle, but powerful, influence of laws and manners had gradually cemented the union of

> the provinces. Their peaceful inhabitants enjoyed and abused the advantages of wealth and luxury. The image of a free constitution was preserved with decent reverence. The Roman senate appeared to possess the sovereign authority, and devolved on the emperors all the executive powers of government. During a happy period of more than four score years, the public administration was conducted by the virtue and abilities of Nerva, Trajan, Hadrian, and the two Antonines.

Gibbon's eloquent prose is only slightly exaggerative. Rather, it is a fairly accurate description of a period of growth during which Britain, Dacia, and the Mesopotamian region were acquired and organized into provinces. The extent of Roman territory would never be greater. The frontier was protected by efficient legions, assisted by local auxiliary troops which functioned to garrison the now fortified borders (*limites*) of the Empire (Luttwak 1976: 7–126). Population growth, thriving industry, and widespread trade insured economic expansion which stimulated urbanization. Not only Italy, but most provinces of the empire were occupied by residents who lived in towns and cities and practiced an urban lifestyle (Rostovtzeff 1926: 125–343; Garnsey and Saller 1987: 43–162; Alfoldy 1988: 94–157). Governmental forms changed little, the emperor continued to rule with supreme authority, though, as previously noted, the 2d century witnessed the rule of emperors who observed constitutional forms and were assisted in their governance by the upper classes of society, the Senate and the equestrian order, members of which occupied high office and filled the roles of provincial governors. Administrative organization was still not too complex. Except for a few equestrian civil servants, most bureaucratic functions were performed by freedmen or slaves of the emperors for whom private and public affairs were frequently mixed (Millar 1977: 59–363; Talbert 1984: 163–493).

Yet despite the material prosperity of the period, individual dissatisfaction with stale Greco-Roman religious forms and increasingly pedantic philosophic discourse questioned traditional ethical and metaphysical systems, embracing instead new salvation-oriented religions arising in eastern sections of the empire or beyond. Mithraism and Christianity were the most popular of the cults that offered a personal religion, and their spread and acceptance, sometimes peacefully but frequently not, occasioned societal changes whose full effect upon the empire would not be realized for a century and a half. It was the chaos of the 3d century A.D. soon to follow, which witnessed the incredible increase of these religions and allowed for the sweeping changes of the 4th century (Ferguson 1970: 88–274; Mattingly 1954: 5–95).

E. The Late Empire

Military and governmental stability was provided Rome by early rulers of the Severan dynasty, but economic woes as well as political, religious, and social dissonance produced strains in the fabric of the empire. Weaknesses and oddities of the last Severan emperors contributed to societal deterioration which by the third decade of this turbulent 3d century A.D. had so declined that the empire was nearly destroyed in a few short years (MacMullen 1966: 163–268; Alfoldy 1988: 157–85). During the fifty years from the death of Severus Alexander in 235 until the accession of Diocletian in 284, twenty men ruled as emperor at Rome, while others ruled elsewhere either as pretenders to the imperial throne or as local dynasts over parts of the empire which had segmented into several separate realms. Civil wars more continuous and intense than those that had gone before devastated population, wealth, and resources. In the East a resurgent Parthia deprived Rome of territories and along the European *limites* the long restrained press of semicivilized humanity poured across borders denuded of legions utilized elsewhere in battle with forces of rival claimants to Rome's once considerable power. To Aurelian and a handful of his successors, all soldier emperors from Illyria, goes credit for reacquiring most of Roman territory (Rostovtzeff 1926: 344–449; Brauer 1975: 3–267; MacMullen 1976: 48–214).

Under the last of these, Diocletian, stability was reestablished and there emerged a new transformed society, more the precursor of the Middle Ages than emulator of classical antiquity. Military reform ended reliance on standing frontier garrisons as the primary defense structure of a realm whose population was too small to support any but the new mobile field armies that accompanied Diocletian and his colleague emperors, each administering a quarter of the empire. The term tetrarchy aptly describes the reformed government that managed a hierarchical system of smaller administrative units, the dioceses and provinces. The balanced and efficient organization of Diocletian gave new life to the empire but

functioned less effectively under successors whose rivalries were responsible for initiating Christian persecutions as an aspect of the politics of oppressing or currying favor of a group that had grown to comprise so large a portion of the population. After a decade of civil war a proponent of Christian rights and recipient of Christian support, Constantine, gained supreme power and provided Rome, once more, with but a single ruler (Williams 1985: 24–230; MacMullen 1987: 1–184; Lot 1961: 5–54; Luttwak 1976: 127–94; Jones 1964: 21–76). Many of Diocletian's military and administrative reforms were continued by Constantine in his centralization of authority under a court which accompanied the emperor, wherever he might journey. The reformed mobile army had reestablished the prowess of Roman arms and continued to assist the frontier militia in maintaining the integrity of Roman borders. Administration and society in the era of the late empire is most fully and effectively described in Jones' masterwork *The Later Roman Empire* (1964: 77–1024). Economic problems of inflation and unemployment resulted in price controls and job restrictions which produced hereditary occupation castes and discouraged change of residence. More persons became engaged in farming and individuals became tied to particular parcels of land. Urban society declined and country life flourished in the agricultural economy. Local aristocrats commanded country militias and provided immediate protection to residents against frontier incursions until such time that the emperor's armies could arrive. The seeds of medieval feudalism were thus sown (Lot 1961: 55–127; Claster 1982: 9–57). A repercussion of the struggles between pagan and Christian that characterized the era of Constantine's heirs was the decline of educational institutions and with them the extirpation of classical culture (Smith 1976: 21–144; Lot 1961: 128–87; Dodds 1965: 1–138; Laistner 1951: 1–74). It is perhaps fitting that Constantine had established a new capital for this increasingly Christian empire. The name of Rome's empire remained, but Rome no longer ruled. Rome came to be but another city in the empire of Constantine and his successors, the Senate but a town council. Any authority Rome would possess in the new era ironically derived from the very Christianity which was perhaps ultimately responsible for damaging the preeminent position Rome had occupied in the Mediterranean world for six centuries before Constantine. Moreover, for the first time in over a thousand years Rome had ceased to govern itself, and rather was governed first from Constantinople, later from Mediolanum (Milan) or other seats of the divided empire in the West (MacMullen 1987: 139–240; Lot 1961: 187–309; Smith 1976: 120–250). See also ROMAN EMPIRE.

JOHN F. HALL

ROME, CHRISTIAN MONUMENTS AT. In Romans 16:4, the apostle Paul refers to a housechurch in Rome, the first of many Christian remains in Rome. One may assume the presence of several other such housechurch congregations (v 15). According to Roman tradition there were twenty-five of these private dwellings (*tituli*) which eventually became the basilicas of Rome. Archaeological studies show there are no extant churches of Rome which unquestionably evolved from a private dwelling of the 1st century, though many of the title churches have incorporated in their structures pre-Constantinian edifices such as a bath (Sta. Pudentiana) or even a Mithraeum (S. Clemente). SS. Giovanni e Paolo may constitute an exception. The foundation of that building incorporates a 1st-century shop complex. One particular room was used by an early Christian community prior to the 4th century. The second and third stories of the shop complex became a meeting hall early in the 4th century. Though not developed from an apparent domicile, SS. Giovanni e Paolo did maintain a continuity of worship from a single room to the present-day basilica.

The earliest extant constructed church in Rome was S. Crisogono in the Trastevere. At approximately A.D. 300, the Christians of that area built a hall 33.8 m long and 19.8 m wide. That first hall lacked furniture, *confessio,* and divisions for laity and clergy. About the end of the 4th century, an apse was constructed, a *confessio* added in front of the apse, and an incipient choir screen inserted, which served as a divider. Within the city proper the first constructed church was S. Giovanni in Laterano. This five-aisled building was started about 313 by Constantine.

Parallel developments occurred with burial edifices. Outside the walls of the city, the Christians of Rome developed an extensive network of catacombs for burial purposes. Often a catacomb developed around a nucleus of special dead. The first monument to appear in such a nucleus was the *martyrium* (e.g., the martyrium for SS. Cassius and Florentius in Bonn). Such a development can be seen at the catacombs associated with Sta. Agnese and S. Lorenzo. Parallel developments occurred at S. Sebastiano and St.

Peter's, but the presence of a *martyrium* cannot be ascertained. At these extramural sites, Christians ate meals (*refrigeria*) celebrating the death of the martyr, the special dead and their own family dead. In about the year 240 in the catacomb at S. Sebastiano, they constructed over the original nucleus a larger structure (*triclia*) for eating with the dead. Eventually several such nuclei were honored by large covered cemeteries (*coemeteria subteglata*). Built by Constantine after 313, these edifices were quite long (as much as 100 m), circular at one end with a clerestory supported by an interior columnar structure. All had attached mausolea. Six such structures are discernible: Sta. Agnese, S. Lorenzo, S. Sebastiano, SS. Pietro e Marcellino, St. Peter's, and Tor de'Schiavi. A circular imperial mausoleum attached to Sta. Agnese has survived as Sta. Constanza. SS. Pietro e Marcellino and Tor de'Schiavi, both likely imperial burial sites, exist only as ruins. Sta. Agnese and S. Lorenzo have suffered the same fate, but surviving churches in honor of the saints were built adjacent to the *coemeteria subteglata.* S. Sebastiano still remains while St. Peter's has been greatly altered on its original site.

The site on Via Appia known to us as S. Sebastiano was frequented by early and medieval Christians because it related to the apostles Peter and Paul. Historically there is no known association with the two. The site, a sand pit called the *katakumbas,* first was used by non-Christians until about 200. Only then did Christian symbols appear in the earliest mausolea. By the mid-3d century the *triclia* appeared above the pit and its now Christian mausolea. According to the many graffiti inscribed on the walls of the *triclia,* frequent prayers of petition for family members were made to the apostles Paul and Peter. At some time before the building of St. Peter's, there existed on the Via Appia a site that functioned as the *martyrium* of Peter and Paul. Constantine perpetuated the function of the site by building on it a great *coemeterium subteglatum.* Later the cult of St. Sebastian was transferred to the complex. During the Middle Ages, pilgrims continued to visit it as the location associated with the two apostles. At the same time two separate locations developed in honor of the two apostles. For Paul, it was a great church on Via Ostiense, S. Paulo fuori la Mura, which originated with Constantine. For Peter, it was the Vatican site.

Constantine built St. Peter's over a non-Christian cemetery near the circus of Nero. There is practically no evidence of cultic practices at this site. One family (in mausoleum M) became Christian. The unique green and gold mosaic of Christ Helios decorates their mausoleum. Despite the apparent lack of veneration for Peter, the Vatican has a long association with that apostle. In the poor section of the Vatican necropolis (Campo P), some Christians built a retaining wall (the Red Wall) in about 160. At the time of construction, the wall included a niche which marks a remembrance of Peter. An aedicula was built into the niche by 200 (Eusebius, EH, II, 25: 6, 7). In about the year 250, supporting walls were built into the aedicula. In the N wall (wall g), the excavators found a marble box, and on the north side of the same wall they uncovered a number of Christian graffiti. Nothing about the burials in Campo P or the graffiti on wall g indicate the presence of a martyrium, and there is practically no reference to Peter. Later investigators found a set of bones elsewhere in St. Peter's. The Vatican displays these bones as those of Peter which, it is claimed, were originally found in the marble box of wall g. Constantine encased the aedicula, covered the necropolis and built the five-aisled St. Peter's over the entire complex. The transept allowed worshipers greater access to the aedicula. The present St. Peter's continues that focus on the original aedicula.

Near the end of the 4th century, remains of the special dead were moved into the city and placed in a *confessio* underneath the altar. In this way the practices of the cemetery cult were combined with the traditions of the housechurches and meeting halls. The churches that resulted from this merger were constructed like the *coemeteria subteglata* (e.g., Sta. Sabina) or like St. Peter's and S. Giovanni in Laterano.

The Christians at Rome developed from the original burial nuclei massive networks of catacombs. There are approximately sixty miles of catacombs with about 500,000 burials. They dug the catacombs in a volcanic rock called tufa. The burials consisted of narrow shelves dug out of catacomb tunnels or galleries. Each was covered with a series of plates, often marble. Usually the plates were inscribed with at least minimal epitaphic data and often early Christian symbols such as an anchor, a tree, a dove, a fish, a lamb, a Good Shepherd, an *orante* (praying figure), a branch, a ship, or a cup. Intermittently Christian

families cut out a larger burial space called a *cubiculum.* These were decorated with frescoes, especially the space directly over the grave, that is, the *arcosolium.* In Roman Christian art, OT scenes, such as the Jonah cycle, Noah in the Ark, Daniel among the Lions, Susanna and the Elders, and the Three Young Men in the Fiery Furnace, depict deliverance from extenuating circumstances. NT scenes, such as the resurrection of Lazarus and various healing stories, show Jesus as a young wonder worker. This portrayal of Jesus lasted through the Constantinian period until replaced in the 5th century by an older, bearded, majestic type. Several areas of the catacombs are of special value. The Capella Greca in Sta. Priscilla contains the oldest known Christian fresco art (ca. 200). The Crypt of the Popes in S. Callixtus houses the final resting place of six bishops of Rome from the 2d and 3d centuries. More important there are the six early *cubicula* called the Sacrament Chapels. In them are early fresco paintings, especially several related to the agape meal (*refrigerium*) celebrated with the dead. In the same catacomb of S. Callixtus, the double chamber of Lucina contains significant early Christian art. A section of Sta. Domitilla purports to originate as a burial plot of the Flavian family. The hypogeum and gallery contain early examples of fresco art.

The symbolic art of the catacombs shifted to illustrative art after Constantine. Maria Maggiore contains not only an apsidial mosaic honoring Mary, the mother of God, but also extensive mosaics illustrating the OT. Sarcophagi of Rome parallel the catacombs. The sarcophagus of Sta. Maria Antiqua, in the Capitoline, offers Christian pictorial representations as early as the Capella Greca. Not all the catacombs represent mainline Christianity. The newly discovered catacombs on via Latina and the Hypogeum of Aurelii, show, by their selection of artistic subjects, a faith at variance with the rest of Christian Rome. Jewish catacombs have been discovered particularly under the Villa Torlonia (via Nomentana).

The official center of Roman Christianity, S. Giovanni in Laterno, was built by Constantine in the 4th century, ironically and quite significantly, over the barracks of Equites Singulares. Adjacent to this great five-aisled edifice Constantine built an octagonal building used by the bishop of Rome as a baptistry. See also ART AND ARCHITECTURE (EARLY CHRISTIAN).

GRAYDON F. SNYDER

ROME, EARLY CHRISTIAN ATTITUDES TO. Direct references to Rome are rare in the NT. The authority structures directly encountered by most provincials would be local rather than Roman, although bolstered and supported by Rome in differing degrees. Many commentators assume without question that these would have been seen by provincials simply as extensions of Roman power, but perceptions could vary: while some in the provinces saw Rome as the oppressing power, others identified the empire, and more particularly the emperor, as a protector against more present local exploitation (Millar 1977: 466–67). These complexities must be borne in mind if a serious understanding of Christian attitudes is to be reached.

Methodologically, our problem is that we have no direct access to the "attitudes" of the early Christians, only to their texts. The prime unit of investigation must therefore be the text itself, even though its precise date and historical setting may not be known, and it may be a composite incorporating traditions from many periods. It is the surface narrative itself, not its prehistory, which both forms and reflects the attitudes of the church (Aland 1979: 164–65).

A. Jewish Attitudes
B. The Gospels
C. Acts
D. The Pauline Epistles
E. Other NT Epistles
F. Revelation
G. Conclusion

A. Jewish Attitudes

The Jewish people had a long experience of life under foreign empires, and the OT already contains a range of texts reflecting a variety of attitudes to the phenomenon. Daniel, Esther, and Nehemiah all provide examples of Diaspora characters who choose to collaborate with the regime in which they find themselves, rising in one way or another to positions of eminence (cf. Tert. *De Idol.* 17). Their stories also show the limits of collaboration: Nehemiah and Esther exploit their closeness to the throne to win concessions for their people, while Daniel and his companions face martyrdom rather than compromise their private religious principles. The book of Daniel also contains the classic expression of theoretical reservations about the world empires in the apocalyptic visions of chaps. 7–12. Only the kingdom of God is eternal (4:3). The empires of the world will meet their fate at the hands of "one like a son of man" (7:13), or of a "stone cut without hands" (2:44–45).

Martyrdom may be described as "passive resistance" (Schaefke 1979: 461–62), apocalyptic perhaps as "theoretical resistance"; but there is no trace in these Diaspora texts of any active resistance to the domination of the world empires. For that we have to turn to the land of Israel and to the literature of the Maccabean period, which produced not only martyrs (2, *4 Macc.*) but also freedom fighters willing and able to take up arms in the cause of independence (1, *2 Macc*). The distinction here between the Diaspora and the Land is fundamental: clearly the presence of foreign authority within the Land, coupled with the loss of political independence, raises different ideological problems from those of the individual or community living outside it. It is not surprising, then, that we continue to find a wide spectrum of attitudes in the Roman period: the fanatical opposition of the "Zealots" to the Roman occupation of Palestine, whose rise Josephus charts throughout the 1st century A.D., stands in contrast with the prevailing attitude of Diaspora Judaism, which saw Rome positively as a protective power (*m. Abot* 3:2, cf. Smallwood 1976: 134–43, 235–50, 356–57) or simply advocated a policy of quietism (*m. Abot* 1:10, 2:3; cf. Loewe 1940: 4–37). Even within Palestine there was room for a wide variety of ideological stances in the pre-70 period (Goodman 1987: ch. 4; Stemberger 1979).

B. The Gospels

The pivotal event of the Gospel story (and the one best attested by non-Christian sources) is Jesus' crucifixion by a Roman governor. This immediately raises two different kinds of questions about Christian attitudes: (a) what were its causes? Does Jesus' message inevitably involve conflict with Rome? and (b) what were its results? Did the church perceive Rome as a natural enemy after this cataclysmic event?

The second is easier to answer. All the Gospel narratives, while agreeing that Pontius Pilate was responsible for the order to crucify Jesus, concur in laying the real blame at the feet of the Jewish authorities (Matt 27:1–2, 20; Mark 15:1–11; Luke 23:1–5, 13–25; John 18:38–40; 19:12–16). Thus the Roman governor, in this prototypical martyr-story (cf. 1 Tim 6:13) figures not as the persecutor but as a weak, vacillating (Matt 27:15–24), and basically unwilling tyrant, and the victim's own compatriots are portrayed as the real culprits (Matt 27:25). We must conclude, then, that at the time the Gospels were put into writing, the churches did not wish to pin the blame for Jesus' death on Rome. Despite the manner of Jesus' death, the reader of the Gospels would not assume that Rome was the natural enemy of the Christian movement.

The first question is more challenging. Does the reader of the Gospels gain the impression that following Jesus would inevitably involve conflict with Rome? The problem is that the Gospel message itself allows divergent conclusions to be drawn. Jesus' preaching of the "kingdom of God" (Mark 1:15) echoes the language of Daniel and therefore carries an implicit challenge to all human authority systems, including that of Rome. Moreover the identification of the kingdom with the relief of poverty and hunger (Luke 6:20–21) suggests to modern ears a critique of the Roman tax system which was placing an intolerable burden, at least in Judea, on an already overstrained peasant economy (Rajak 1983: 119–26; Goodman 1987: 60)—although the connection between poverty and Rome is never made explicitly in the text. So the reader is not surprised when both Jesus' supporters (John 6:15; Acts 1:6) and his enemies (Luke 23:2; John 19:12) interpret his mission as a challenge to Rome. Even after the resurrection the disciples' hope of "restoring the kingdom to Israel" is not negated, only postponed (Acts 1:7). Jesus himself, however, is throughout reluctant to accept the title "king" (Mark 15:2), and stresses the radical difference between God's kingdom and the kingdoms of the world (Mark 10:35–45; John 18:36).

Attitudes to more explicitly Roman manifestations are equally ambivalent. Possibly the most striking Gospel comment on the Roman occupation comes in the "Legion" story of Mark 5:1–20. Theissen (1983: 255) argues that Jesus' victory over the demons may be seen as a symbolic victory over the forces of occupation whose name they carry, with the denouement of the story triumphantly symbolizing the expulsion of the "legion" from the country. But elsewhere in the Gospels the tokens of occupation are treated as a much less urgent problem than the spiritual revival of Israel. The centurion of Matt 8:5–13 is simply a foil to Jesus' unbelieving compatriots. Pilate's Galilean massacre (Luke 13:1–3) is treated as a natural disaster calling for theological, not political comment (cf. 13:4–5). In Matt 5:43–48, Jesus goes further: the command to "love one's enemies" must presumably include the Romans, and the instruction to "go the second mile" (5:41) clearly envisages that the demands of an occupying force must not only be met, but be voluntarily bettered. And there is a similar ambiguity about the question of Roman taxes (Mark 12:13–17). Jesus' reply is presented as purposely enigmatic, a wily answer to a question designed to trap. Justin (*I Apol.* 17) quotes it in order to defend the church against a charge of disloyalty, and many commentators see it as an acknowledgment of the authority of the state "and therefore of the obligation to pay taxes" (Taylor *ad loc.*). But there were clearly those who believed that Jesus forbade the payment of Roman taxes (Luke 23:2), and it is possible to read the passage both as a rejection of the Roman occupation (Belo 1981: 224) and as an ironic pointer to the fact that those who choose to stay "in the world" and participate in its economic system will find it impossible to fulfill their duties both to God and to the system (Wengst 1987: 58–61). What does seem clear is that the problem is not Jesus', but his questioners': by leaving their homes and employment, Jesus and his followers have effectively placed themselves outside the writ of any taxation system (Matt 17:25–26). In many ways it is this radical ideology of withdrawal from the world that is most characteristic of subsequent Christian attitudes.

C. Acts

The narrative of Acts, like that of the Gospels, has a paradoxical stance towards Rome. The book ends with its hero being transported to Rome under a centurion's guard to be tried before Caesar (Acts 27:1), but Paul is portrayed throughout as politically innocent. Attempts to denounce his preaching as contrary to Roman law fail at the tribunal (18:13–15); his final incarceration in Caesarea is for his own protection (23:10, 23–30), and even if its prolongation owes something to the venality of Festus (24:26), Paul's final appeal to Caesar is his own choice, based both on the wish to avoid a trial in Jerusalem and on a belief in a divine vocation (23:11). Caesar here functions not as persecutor but as protector against a more immediate threat; for the author of Acts the problems of the church are caused not by Rome but by "the Jews" (17:5, 13; 18:12; 21:27) or by local troublemakers (16:19; 19:23).

This positive picture of Paul's relationship with Rome should not be dismissed too lightly; it corresponds well with other evidence on the experience of empire in the provinces (Price; Millar; Sherwin-White) and, *mutatis mutandis*, with the Jewish experience of Rome as protector against local hostility (Smallwood). In literary terms the position of Luke's Paul may be compared with that of Daniel in Dan 6:10–15 (cf. 3:8): local denunciation of a religious minority before an impartial higher authority is

a common pattern whose persistence into the second century is attested both by Pliny (*Ep.* 10: 96–97) and Melito (*ap.* Eus. *Hist Eccl* 4/26: 5–11). But there is also a certain detachment in Paul's attitude to Rome which could be described as a cynical readiness to manipulate the resources of the empire for the furtherance of private religious aims. Paul travels the empire as an "outsider," content to be embroiled in the anonymous world of the streets until it suits him to call on the authorities for protection: his Roman citizenship carries no sense of responsibility, but functions as a "joker" which he exploits only when it suits him to do so (16: 37; 22: 25). Similarly the "appeal to Caesar" is employed as a stratagem for the spread of the Gospel, and the insistence on the political innocence of Christianity falls well short of active support for the institutions of the empire.

D. The Pauline Epistles

The predominant impression in the Pauline epistles is of a profound lack of interest in either local or imperial politics. The empire and its institutions are hardly mentioned except as metaphors for the religious life (2 Cor 2:14; 2 Tim 2:3–4), and the statement that "our citizenship is in heaven" (Phil 3:20) implies a total disengagement from the authority structures of the Christian's place of residence (Aland 1979: 186–95). This may in part have arisen naturally out of the actual political status of the early Christians; traveling artisans or merchants like Lydia (Acts 16:14) and Priscilla and Aquila (Acts 18:1–3) were often de facto disfranchised, with little political stake in their place of residence. But it must also be linked with a powerful *impulse towards withdrawal* from pagan society, including its law courts (1 Cor 6:1–6) and its social occasions (as evidenced by the problem of "food offered to idols" discussed in 1 Corinthians 8 and Romans 14). The Pauline letter corpus is full of "the language of separation" (Meeks 1983: 94), and Paul's warning against total withdrawal from "the world" (1 Cor 5:10) indicates that such a withdrawal was not inconceivable.

Positive opposition to Rome is harder to document from the Pauline letters. Paul acknowledges that he has been "beaten with rods" as well as receiving "forty stripes save one" (2 Cor 11:24–25): in other words, he has been punished by Roman authorities as well as by synagogue officials. Rome thus stands alongside "the Jews" and Aretas as hindrances to the Gospel, but is not singled out in the list as of any particular significance. In Philemon and Philippians Paul appears as "a prisoner for the Lord's sake" (Phlm 1, 9; Phil 1:7, 13–18), probably but not certainly in Rome; wherever its location, this imprisonment could hardly have taken place without Roman involvement in some way. But what exactly Paul had done to merit either beating or imprisonment is never explained: Paul regards himself as potentially under the death sentence (Phil 2:17), and his imprisonment is "for Christ" (1:13), but it is not clear in what sense, if at all, the two are connected. What is striking again is the lack of overt interest in the exercise of Roman authority as such: the threatened execution is regarded as a way of honoring Christ (1:20), and the imprisonment merely as an opportunity for "the defense of the Gospel" (1:16).

It is in the apocalyptic and eschatological sections of the letters that we come closest to a comprehensive estimate of the role of Rome in God's cosmic plan. The "fashion of this world" is passing away (1 Cor 7:31), and with it the "rulers of this age" who "crucified the Lord of glory" (1 Cor. 2:6–8). Christ's final return in early Christian apocalyptic literature heralds the "subjection" of "all things" to him (Phil 3:21), including the "principalities and powers"; whatever the intended reference of this phrase, it must include in some way the "powers" of the Roman empire. In Paul himself this view is most clearly expressed in 1 Thessalonians. Persecution is a normal experience for the Christian communities (3:3; cf. 2:2, 14–15), and their response is to wait in quietness for the imminent revelation of God's wrath (1:10; 2:16) at the "Day of the Lord" (5:2). The attitude of the persecuted church may thus be described as passive resistance, involving a readiness to accept martyrdom, combined with theoretical opposition to the persecuting powers which are under the wrath of God. There seems to be no distinction between Roman and local persecutors here, and no explicit attack on the institution of empire as such; however, some commentators have seen an ironic rejection of the "Pax" slogans of the empire in 5:3 (Wengst 1987: 77).

There may be a more specific allusion to Rome in 2 Thess 2:3–12. This vividly apocalyptic passage, like the Synoptic apocalypses, concentrates on warning rather than denunciation: the church is not to be "quickly shaken in mind" (2:2), and the "mystery of lawlessness" is at present being restrained (2:6–7). If

the "restrainer" is the empire itself (as argued by many interpreters since Tert. *De Resurr. Carn.* 24), it is clear that active resistance to the empire, even if it were a practical possibility, would not be in the interests of the Gospel (Bruce *Thessalonians* WBC, 159–78, 187–88; Trilling *2 Thessalonians* EKKNT, 94–105). On this reading, 2 Thessalonians is consistent with Paul's most explicit statement on the Christian's attitude to authority in Romans 13:1–7. Here the Christian is firmly enjoined to "be subject to the governing authorities" (13:1) which are "instituted by God" (13:4, 6). In a context where "the day is at hand" (13:12), these instructions must be taken as part of the Christian's duty to behave "becomingly" (13:13): good civic conduct, including the payment of taxes (13:3, 6), is simply a part of this wider duty (13:8–10). Conversely, Paul has no conception of a state which may actually *enjoin* "bad conduct" on its citizens (13:3). Paul does not envisage the later Roman practice of requiring Christians to perform a pagan sacrifice as a test of loyalty (Pliny *Ep.* 10:96), nor does he anticipate the dilemmas faced by later Christians over military service. Like many of his Jewish contemporaries, Paul may have experienced persecution (12:14) only as a local phenomenon, and so might well see the wider and more impartial authority of the empire as a protection rather than a threat. On the history of interpretation of this passage, see Wilckens *Romans 12–16* EKKNT, 43–66.

E. Other NT Epistles

We find a similar combination of themes in the non-Pauline epistles. The impulse to withdrawal from pagan society and its institutions is expressed strongly in the "sojourner" imagery of Hebrews. The heroes of the catalogue of faith in Hebrews 11, like Abraham, are "strangers and exiles on the earth" who "desire a better country, that is, a heavenly one" (Heb 11:13–16); of them, and by implication of the persecuted Christians who follow their example, "the world is not worthy" (11:38). Persecution and the "hostility of sinners" (12:3) are to be accepted as the norm, but the focus is on the disciplinary action of God (12:5–11) rather than on the motives of the persecuting agencies. There may be a hint of civil disobedience in the praise for Moses' parents (11:23; Wengst 141), and Moses' withdrawal from Egyptian society is treated as exemplary (11:24–25); but in general the Christian is to "strive for peace with all men" (12:14).

Similarly in 1 Peter: the Christians are "aliens and exiles" (2:11), set apart by God's election from the society in which they live (2:9); Rome is referred to under the apocalyptic code name "Babylon" (5:13), and persecution is an imminent possibility (4:12). The author is only concerned that none of his flock should justly incur criminal charges (4:15); if they "suffer as a Christian" (4:16) they are to rejoice at the privilege of sharing Christ's sufferings (4:13). Yet the Christian's attitude to authority is to be one of respectful submission (2:13–17). The emperor is not merely to be prayed for, as in rabbinic teaching and in 1 Tim 2:1–2 (cf. *1 Clem.* 61), but actually to be "honored" (2:17). It is interesting to compare this with Pliny *Ep.* 10:96; the evidence of 1 Peter suggests that it may well have been the sacrifice to the gods, not the reverence shown to the emperor, that was the sticking point for these Bithynian Christians (Price 1984: 221). As in Hebrews, the persecution faced by the church is regarded as God's judgment, a sign of the end and a token of the much more severe judgment which awaits unbelievers (4:17–19); it is not treated as evidence of the corruption of the political system which produced it. The church's only response is to "seek peace" and keep a low profile (3:8–17).

F. Revelation

Apocalyptic thought, whether Jewish or Christian, does not necessarily entail resistance to the world empires in the practicalities of daily life: it can coexist with collaboration (as in Daniel) or with a counsel of peaceful submission (as in Romans 13). In the book of Revelation, however, the NT's most full-blooded apocalyptic is combined with radical opposition to the empire and all it stands for. Rome for this author is a "great harlot" (17:1) whose name is "Babylon, the great city," i.e., the last of the four world empires of OT history (14:8; 16:19; 17:5; 18:2, 10, 21); in a clear echo of Daniel's visions, the city is also a "beast rising out of the sea, with horns and seven heads" (13:1; cf. 17:3, 7). The precise interpretation of the heads, the horns and other details is disputed, but the description of "the great city which has dominion over all the kings of the earth" (17:18) and the "seven hills on which the woman is seated" (17:9) make the reference to Rome clear.

The beast's authority derives from Satan (13:2, 4; cf. 12:9), but it is "allowed to exercise authority" for a limited period only (13:5). It is widely accepted that the "beast from the land" of chap. 13 refers to the provincial authorities in Asia and their encouragement of the imperial cult (Price 1984: 197); clearly for this author at least the cult was no empty political gesture. But it would be wrong to read John's polemic merely as an attack on one particular excess; it is the empire itself that he sees as demonic, not an individual emperor or policy. There is no indication that he wished to advocate any action against the empire other than the passive resistance of martyrdom. Yet the language he uses is unusually combative: the great city is to be repaid double for her misdeeds (18:6), and the martyrs in heaven are said to have "conquered" the beast and its image (15:2; cf. 2:7, 11, etc.). Although the battle is ultimately fought out in the cosmic realm, there may be a suggestion that human enemies of Rome could play a part in its downfall if 16:12 refers to the Parthian threat on the E frontiers.

John sets out his vision in terms of a series of fundamental oppositions. There is no opportunity for compromise: the saints are called to endure (14:12), to be "faithful unto death" (2:10), and also to separate themselves from the great city (18:4). Since it is impossible to buy or sell without the mark of the beast (13:16–17), this separation must include a withdrawal from the economic life of the empire (cf. the identification of the empire's interests with those of her "merchants and seafarers" 18:11–20). John's tough stance on the issue of "food offered to idols" (2:14, 20) is probably linked with this issue (Schüssler Fiorenza 1984: 195–96). Yet it is clear from the opening letters that not all Christians thought as John did. As Schüssler Fiorenza suggests, there may be a correlation here between theological attitudes and socioeconomic status; "the two communities that deserve Christ's praise and receive no censure are obviously poor and without power. Those communities that receive censure are rich, complacent, and do not experience any harassment" (Schüssler Fiorenza 1984: 196).

G. Conclusion

Early Christian attitudes to Rome thus show as wide a diversity as their Jewish counterparts. The apocalyptic strain of theoretical resistance runs right through the NT from Jesus' preaching of the kingdom of God, with its radical opposition to all human authority structures, to the visions of the book of Revelation. But this theological stance does not necessarily entail active resistance to the empire; allusions to overt political or military activism are virtually unknown in the NT (the puzzling Luke 23:38 is unique). The passive resistance of the martyr is prominent in Revelation, where the apocalyptic enemy of the faithful is clearly identified as Rome. But in 1 Peter even martyrdom is to be avoided as far as possible by law-abiding and submissive behavior (2:13–17; 3:13–17), and in Acts where martyrdom is welcomed (4:19–20; 5:29), it is the priestly authorities of Jerusalem, not the Romans, who figure as the persecutors. Paul's mission is presented throughout Acts as politically harmless to Rome, and the progress of the Gospel is assisted rather than hindered by the timely exploitation of Roman institutions (16:37–39; 18:12–17; 21:31–22:29; 23:11–24:12). If one attitude can be said to predominate in these documents it is not martyrdom so much as radical withdrawal from the political life of the Empire, which is fundamental both in the Gospels and in the Pauline epistles. It is this which must provide the context for understanding the NT recommendation of submission to authority.

ROSETTES. See JEWELRY.

ROSH (PERSON) [Heb *rō‹š* (רֹאשׁ)]. Seventh son or grandson of Benjamin (Gen 46:21). The Genesis genealogy is comprehensive including grandsons as if sons. The LXX lists Rosh as a son of Bela and thus Benjamin’s grandson. The Genesis list is also obscure, for the genealogies of Num 26:38–39 and 1 Chron 8:1–5 do not list Rosh. The Numbers text records just five sons of Benjamin; the remainder (five in the Genesis account) become grandsons. The LXX credits Benjamin with three sons and seven grandsons. Parallel passages also seem to suggest that the names, “Ehi” and “Rosh” (Gen 46:21), could be read and understood as one name “Ahiram” (Num 36:39; 1 Chron 8:4; Speiser *Genesis* AB, 343). Rosh means “head” or “chief.”

ROYAL JAR HANDLE STAMPS. See STAMPS, ROYAL JAR HANDLE.

ROYAL ROAD. See KING’S HIGHWAY.

RUFUS (PERSON) [Gk *Rhouphos* (Ῥουφος)]. **1.** A Roman Christian who together with his mother received greetings from Paul (Rom 16:13). Paul called him “elect in the Lord” (cf. Acts 9:15). He probably was freeborn: the epigraphical material indicates that the name “Rufus” was not ordinarily a slave name (see Lampe *StadtrChr*, 151–52). Rufus, with his mother, had immigrated to Rome from the East of the Roman empire. Paul called Rufus’ mother “also mine,” which may mean that she had housed the apostle one or several times in the East. Rufus was probably a gentile Christian. See NEREUS.

2. The brother of Alexander and son of Simon of Cyrene (Mark 15:21). The brothers were Christians and known by Mark’s community if not members of it. For the later evangelists, the brothers’ names were not worthy of note (Matt 27:32 and Luke 23:26 omit them).

It is possible that Paul and Mark refer to the same Rufus, especially if Mark was written in Rome. But one wonders why Paul did not also mention the “famous” father in Rom 16:13. Also, Rufus in Rom 16:13 was probably a gentile Christian while Mark’s Rufus was a son of Cyrenian Jews. For further discussion, see Cranfield, *Romans* ICC.
PETER LAMPE

RUJM EL-HIRI (M.R. 225257). During the archaeological survey of 1967–68 in the central parts of the S Golan Heights, an outstanding and unique ancient structure was discovered, the Rujm el-Hiri (Kochavi 1972: 277–78). See Fig. RUJ.01. This monument is one of the most enigmatic and disputed subjects of the archaeology of Israel. There is no agreement as to its function or its construction date because of the near total absence of artifacts in its immediate vicinity (Gutman and Drucks 1969). Nevertheless, closer scrutiny might indicate at least a partial answer to the questions that have arisen around this magnificent structure.

A. Description

The Rujm el-Hiri is situated ca. 16 km E of the N shore of the lake of Galilee, and is 515 m above sea level. It consists of a series of concentric circles surrounding a central tumulus (cairn). See Fig. RUJ.01. Its overall diameter varies between 150 m and 155 m. The central tumulus is composed of a core ca. 8 m across, and an enclosing mantle forming a truncated cone of ca. 25 m across at the bottom, and preserved to a height of ca. 10 m. It is built with relatively small stones collected from the surface and from a nearby basalt flow.

This tumulus is encompassed by a semicircular row of medium-sized orthostates, preserved only on the N and the W side. These orthostates form the retaining wall for a low platform around the tumulus, called here wall 5 (as counted from the outside) for convenience. Parallel to wall 5 runs another semicircular wall no. 4 which is 1.2–1.5 m thick. Its two faces can be followed with some difficulty only due to the

large amount of fallen stones that cover the site. Whether these two walls were originally full circles cannot be ascertained before excavation.

The next wall, no. 3, is 1.8–2 m thick and forms nearly a full circle. It bulges out in the S and runs under a large heap of fallen stones in the SE; its continuation to the E was probably disturbed by later building activities. However, wall no. 2 forms a closed circle without any perceivable openings or later disturbances. Its thickness is quite consistently 2.6 m all around except in the S where it thickens to 3 m. This wall is connected with wall 3 by two radial walls, one in the NW and the other in the SW. Other radial walls can be seen but their relation to the original pattern remains to be clarified; they could be later additions when the site was used as a cattle pen in recent periods.

All these walls are built with medium-sized basalt stones and seem to form a structural unit.

The outermost wall, no. 1, is the most distinctive feature of the Rujm el-Hiri. It is carefully constructed, its thickness being remarkably consistent on all sides, 3.2–3.3 m. Its state of preservation is excellent, in some places up to 2 m in height with 5 or 6 rows of medium-sized to large stones. Some of these stones are true megaliths with sizes 2.5–3 m length, weighing 20 or more tons. The megaliths are found mostly in the E section of wall 1. In the NE and the SE, the line of the wall turns and forms radial walls approaching wall 2. This results in some sort of openings, 29 m and 26 m wide respectively. Both openings are blocked by a mass of large boulders without any clear construction lines. The amount of these boulders seems to indicate that they represent the remains of some structures which were originally higher than the other walls.

Near both openings, and partially blocking them, are fragments of smaller walls. They are rather insubstantial and their relation to the main wall is not clear (called “additions” on Fig. RUJ.01).

B. Discussion

The architectural development of the complex suggests two possibilities. The first is that an older, but seemingly perfect circle underlies the construction as described above. The so-called “additions” could be the remains of this older structure, especially when studied from certain aerial photographs.

The other possibility is that the central tumulus and its circular walls 5 to 2 represent the primary stage. For the time being this seems to be the more convincing theory—a monumental funerary complex which was turned into a sanctuary or ceremonial center with the erection of wall 1. Whether this occurred simultaneously or it entailed a time lapse has yet to be determined. The opening in the NE seems to indicate an orientation towards the summer solstice (azimuth 61°42´9") of no great precision. When a higher precision was felt to be necessary, the wall “additions” were installed, correcting wall 1. The same wall leads to a point in the E where two large stones indicate the equinoxes. The SE opening, whether it was used for observing celestial phenomena (e.g., midsummer moon rise or the appearance of Sirius), or whether it pointed to some other objects (e.g., a sacred grove or another monument which has disappeared) seems to be a moot point. It is noteworthy, however, that the two radial walls connecting walls 2 and 3 form rather exact back sights to these openings. There is no noticeable indication of the winter solstice (azimuth 118°17´1").

It is possible that these two openings formed spaces where rituals might have taken place. The only artifacts found were broken flint tools from these open spaces. Perhaps the mass of fallen stones are the remains of elevated altars.

A fairly secure assumption is that the Rujm el-Hiri is oriented towards the summer solstice and the equinoxes. This is a consistent feature of many examples of ANE and Mediterranean sacral architecture. Like other Bronze Age temples, the site also seems to have served, among other things, as a rough timekeeping device.

If we accept the central tumulus as the primary element of the complex, we cannnot dissociate it from the other tumuli and dolmens which cover extensive parts, not only of the Golan, but other areas of the Levant, too. There exists a considerable difference in opinion about their date with an increasing evidence for a MB I date (Epstein 1972; 1973; 1975; Bahat 1972). However, an earlier date, even EB I, cannot categorically be excluded (Yassine 1985).

Undoubtedly, these monuments including Rujm el-Hiri represent the most tangible remains of pastoral cultures on the edge of the desert during most of the 3d and even the 2d millennium B.C.E. Another aspect not to be neglected is the close resemblance of the Rujm el-Hiri, in conception and construction, to certain N African funeral complexes, e.g., those near Djanet in Algeria or in the Nejd in Saudi Arabia. Their date of construction is equally disputed, but a growing number of students assume a date in the 2d millennium as most probable. It is to be hoped that the future excavation of the Rujm el-Hiri will throw more light on the builders of this monument and their relation to other Near Eastern cultures, and will contribute to another aspect of sacral architecture of Israel.

MATTANYAH ZOHAR

RULE OF THE COMMUNITY. See COMMUNITY, RULE OF THE (1QS).

RULERS OF THE SYNAGOGUE [Gk *archisynagōgos* (ἀρχισυναγωγος)]. A title of honor for one of several synagogue officials attested in ancient Jewish, Christian, and pagan literary sources and in inscriptions. "Ruler of the synagogue" is the most common Jewish title associated with the synagogue in antiquity. Other titles include "ruler" (*archōn*), "elder" (*presbyteros*), "mother of the synagogue (*mater synagogae*), and "father of the synagogue" (*pater synagogae*).

Although we have no catalogue of the functions of the "ruler of the synagogue," his or her duties seem to have spanned a range of practical and spiritual leadership roles. The "ruler of the synagogue" chose Torah readers and prayer leaders, invited others to preach, contributed to the building and restoration of the synagogue, and represented the congregation to the outside world. Several inscriptions cite women as "rulers of the synagogue." Children are occasionally called "rulers of the synagogue," which may mean the title was sometimes hereditary.

The sources show no consensus on the practice of selecting an *archisynagōgos.* Some "rulers of the synagogue" were appointed, some elected, and some inherited the office. Some served for one or more terms, while some held the office for life. Certain synagogues had more than one ruler.

The earliest literary evidence for the title comes from the NT. Mark 5:22 and Luke 8:49 tell of the *archisynagōgos* Jairus, whose daughter is healed by Jesus. Luke 8:41 calls him an *archōn tēs synagōgēs* while Matt 9:18, 23 read only *archōn.* However, Roman inscriptions show that *archisynagōgos* and *archōn* were distinct offices, though they could be held by the same person. Other NT references show the "ruler of the synagogue" as regulating worship or acting as representative of the congregation to outside authorities (Luke 13:14; Acts 13:15; 18:8, 17).

Assuming the Hebrew term *rʾš hknst* is equivalent to *archisynagōgos,* we find the earliest Jewish references in the Mishnah (*m. Yoma* 7:1; *m. Soṭa* 7:7, 8). The ruler (or head) of the synagogue is accorded honor in connection with the reading of the Torah. One head is mentioned by name in *t. Ter.* 2:13. The *rʾs hknst* should abstain from reading from the Torah unless no one else is able, according to *t. Meg.* 4:21. Later rabbinic references support the notion that the *rʾs hknst* held a position of esteem as leader of an assembly.

Patristic remarks also portray the *archisynagōgos* as a leader (Just. *Dial.* 137; Epiph. *Pan.* 30.18.2; Pall. *V.Chrys.* 15). Pagan examples show that outsiders were familiar with the term *archisynagōgos* as designating a leader of the Jews (Vopiscus *Life* of Saturnius 8; S.H.A. 3.399). Detractors of Alexander Severus ridiculed him by calling him "the Syrian *archisynagōgos*" (Lampridius, *Life* of Alexander Severus 28, S.H.A. 2.234–35). In the 4th century, laws transmitted in the Theodosian Code suggest that

the *archisynagōgos* was one of the leaders who represented the Jewish community (*Cod. Theod.* 16.8.4, 13, 14).

In addition to numerous literary references, over thirty inscriptions from disparate locales, dating from before 70 C.E. and on into the Byzantine era, employ the title *archisynagōgos.*

CLAUDIA J. SETZER

RUMAH (PLACE) [Heb *rûmâ* (רוּמָה)]. The town of Zebidah, the mother of Jehoiakim, one of the last kings of Judah (2 Kgs 23:36). Rumah is also mentioned by Josephus as the home of two brave Galileans who attacked the Tenth Roman Legion (*JW* 3.7.21). This mention allows us to place Rumah in Galilee, which is evidence of the ties established by Josiah, the father of Jehoiakim, with N Israel. The exact location of the town has not yet been identified. Some scholars would identify Rumah with Arumah, mentioned in Judg 9:41 as the place of residence of Abimelech after he fled Shechem. Aharoni (*LBHG,* 349–50) posits that this Arumah is Khirbet er-Rumeh. (M.R. 177243), by the S border of Battof, to the N of Sepphoris. This place is called Arumah in the annals of Tiglath-pileser III (*ANET,* 283). Cogan and Tadmor (*2 Kings* AB, 305) agree with this as a possible location for Rumah, but also suggest Rumah in the Netophah Valley. The MT of Josh 15:52 has the name Rumah as part of the inheritance of the tribe of Judah, but most of the other witnesses, including the OG, read Dumah. The reading of the MT appears to be an error caused by the confusion of *dalet* and *reš,* a confusion which occurs frequently both in paleo-Hebrew and in the square script.

SIDNIE ANN WHITE

RUTH, BOOK OF. The story of Ruth and Naomi is a tale of human kindness and devotion transcending the limits of national- or self-interest. It is the book of the OT which has long been cited as a perfect example of the art of telling a story.

———

A. Summary of Plot

In the days of the judges a family from Bethlehem journeys to Moab because of famine. There the father Elimelech dies, and the two sons, Mahlon and Chilion, take Moabite wives, Ruth and Orpah. After ten years the sons also die, leaving no offspring. Their mother Naomi is bereft. Hearing of food in her native land, she decides to return. When the daughters-in-law resolve to accompany her, Naomi bids them stay. Orpah consents but Ruth clings to Naomi. In Bethlehem the two women seek food. Ruth gleans in the fields of a wealthy man named Boaz who belongs to the extended family of Elimelech. His kindness

prompts Naomi to conceive a plan for securing Ruth a home. Obeying her mother-in-law, Ruth goes to the threshing floor at night and asks Boaz to marry her. Though willing, he must first determine if a nearer relative wishes to assume responsibility. The unnamed man refuses, and so Boaz marries Ruth. She bears a son, Obed. A blessing to his grandmother Naomi, Obed continues the family line to become the grandfather of David.

B. Composition

Despite the unity of plot, a few scholars have proposed compositional histories for the book. Utilizing criteria of meter, parallelism, and vocabulary, Myers identifies a poetic nucleus underlying the present text (cf. De Moor 1984). The nucleus bespeaks an oral poem handed down for centuries before the appearance of the prose narrative. Glanzman suggests three stages of development: an old poetic tale of Canaanite origin; a preexilic Hebraized version; and the postexilic final draft. Brenner maintains that the book is composed of two oral tales, one about Naomi and the other about Ruth. Originally independent, these stories shared a geographical and social milieu as well as the theme of the reversal of female fortune. Such compositional theories have not won general acceptance. Most exegetes affirm the unity of the book, though the genealogy at the end (4:18–22) remains a problem as to whether it is an appendix or part of the original story (see McCarthy 1985).

C. Date

Critics diverge widely on the date. Earlier scholars posited an exilic or postexilic time based on alleged Aramaisms, the remoteness of customs (cf. 4:7), discrepancies with the Deuteronomic law, and the theme of universalism over against nationalism. With modified criteria, some contemporary scholars retain this dating. Many others, however, argue for a preexilic composition between the 10th and 7th centuries B.C.E. They detect linguistic features, classical prose, legal and theological perspectives that fit these earlier periods (see Campbell *Ruth AB* and Hals 1969). Still other critics, such as Sasson (1979), find the date altogether elusive.

D. Author

Though Jewish tradition assigned Ruth to the prophet Samuel, scholarship has remained properly silent on the subject. The author is unknown. Nevertheless, commentators have assumed a male gender for the storyteller, an assumption not unchallenged. Subject matter, the dominance of women characters, and point of view suggest a female presence in shaping the narrative (cf. Campbell *Ruth* AB, Brenner 1983).

E. Text and Versions

The Hebrew text has been relatively well preserved. Though variants exist, including those attested in four Qumran manuscripts, they offer few difficulties for interpretation. In general, Gk manuscripts conform to the Hebrew. An incomplete OL text may suggest a different lineage from the known Gk tradition, but the evidence is scant. Differences between Hebrew texts and the Vulgate (e.g., 2:7, 14; 3:15; 4:5) may also indicate another lineage or only show the freedom Jerome exercised in translation. The Peshitta is yet freer. (For discussion of the text and versions, see the commentaries of Campbell *Ruth* AB, and Sasson 1979.)

F. Literary-Exegetical Interpretation

1. Genre. Most form critics call Ruth a *novella.* Closely related is the category of short story, connoting a brief fictional narrative of conscious craftship. With a beginning, middle, and end the plot moves through various scenes to climax and resolution. Words and actions reveal the characters. Sasson (1979) relates Ruth to the folktale as delineated in Russian formalism. Other designations include comedy, saga, romance, and idyll. They all impose modern genres on an ancient story.

2. External Design. A symmetrical design structures the book (Bertman). Three sections in the first half (chapters 1 and 2) match, in reverse order, three in the second (chapters 3 and 4). The first section is the family history (1:1–5). The second, surrounded by the travels of the women (1:6–7 and 1:22), concerns kinship ties (1:8–18) and reports a meeting between the women of Bethlehem and Naomi (1:19–21). The third, after the introduction of Boaz (2:1), contains five elements:

(1) Ruth receives Naomi's permission to glean in the fields (2:2).

(2) Ruth goes to the fields (2:3).

(3) Boaz seeks the identity of Ruth (2:4–7).
(4) Boaz requests that Ruth stay, deems her worthy of blessing, and gives her food. He also orders his men to cooperate (2:8–17).
(5) Returning to Naomi, Ruth reports the meeting and receives counsel (2:18–23).

The second half of the book opens with five analogous elements:
(1) Naomi sends Ruth to the threshing floor (3:1–5).
(2) Ruth goes to the threshing floor (3:6).
(3) Boaz seeks the identity of Ruth (3:7–9).
(4) Boaz deems Ruth worthy of blessing, requests that she stay, and gives her food. He also protects her from other men (3:10–15).
(5) Returning to Naomi, Ruth reports the meeting and receives counsel (3:16–18).

The next section corresponds to section two of the first half. It concerns kinship ties (4:1–13) and reports a meeting between the women of Bethlehem and Naomi (4:14–17). The genealogy of the closing section (4:18–22) returns in theme to the family history at the beginning. Symmetrical design secures the unity of the story, gives balance and rhythm, highlights important motifs, and suggests the richness and complexity of form, content, and meaning.

3. Internal Structure and Interpretation. Sections one and two in the first half constitute scene 1, with an introduction (1:1–7), body (1:8–21), and conclusion (1:22). Throughout, certain motifs prevail. The catchword "return" (*šûb*) occurs 12 times along with the synonyms "go," "come," and "go forth." The struggle between life and death appears on various levels: food and famine, Moab and Judah, Elimelech and Naomi, Mahlon and Ruth, Chilion and Orpah, barrenness and fullness, the names Naomi (Pleasant) and Mara (Bitter). Opening narration presents the characters. The males never speak; after they die, the females talk. Naomi orders Ruth and Orpah to return home. Her words mirror the overall symmetry while emphasizing the themes of kinship and loyalty (1:8–9a):

A Go, return ***each of you to her mother's house***
B *May the Lord be loyal to you*
C as you have dealt with the dead and me.
B' *The Lord grant that you may find a home,*
A' ***each of you in the house of her husband***.

Though the young women protest, Naomi insists until Orpah agrees (1:9b–14b). The exchanges among them are enclosed by the words "kissing," "lifting up the voice," and "weeping." Outside this unit lies the extraordinary decision of Ruth (1:14c). She pledges allegiance to Naomi even beyond death (1:16–17). Yet when the two women arrive in Bethlehem (1:19–22), Naomi fails to acknowledge Ruth's presence. Instead, through a chiastic arrangement of the words "Shaddai" and "Yahweh," she convicts the deity of afflicting her (1:20–21). At the close of the scene, the narration counters her sentiments in several ways (1:22). It never calls Naomi "Mara." It observes that Naomi has not returned empty because "Ruth the Moabite her daughter-in-law is with her." And it notes that the women have arrived at the beginning of the barley harvest, a sign of life.

Like the first scene, the second has a narrated introduction (2:1) and conclusion (2:23) surrounding the dialogue (2:2–22). This scene constitutes the third section of the symmetrical design and reflects in its parts patterns of the whole. Three catchwords occur: the verb "glean," (*lqṭ*), the adjective "Moabite," and the phrase, "find favor (*māṣā᾽ ḥēn*) in the eyes of." In presenting Boaz, the storyteller gives another sign of life, a male in the family of Elimelech who will endure. Action begins when Naomi grants Ruth permission to seek food. Though Boaz appears to dominate in the ensuing meeting with Ruth, subtleties of language and style indicate that his tremendous power is subservient to the women's story. First, Boaz has not invited Ruth to glean in his fields. She came by choice and chance—perhaps a sign of divine providence (2:3). Second, when Boaz asks the identity of Ruth's owner (2:5), a question that fits his culture, he learns that Ruth does not fit the culture. She has no male lord. Third, though Ruth's first words to Boaz are appropriately deferential (2:10), the reader knows that her deference results from her daring. Boaz is responding to her initiative. Fourth, in seeking a blessing for Ruth, Boaz unwittingly implicates

himself. He wishes that her payment be full from Yahweh "under whose wings you have come to seek refuge" (2:12). In time, Ruth will require him to make good on these words. Meanwhile, she reports to Naomi (2:18–22). Their conversation builds on incongruities, each woman having both more and less information than the other. When Ruth finally names Boaz (2:19a), Naomi discloses the kinship: "The man is a relative of *ours,* one of *our* redeemers" (2:20). Thus Naomi reaches out to include Ruth in the family. The old woman also embraces the gift of food. But again the narration counters her by referring to Ruth as "the Moabite" (2:21) and hinting at the return of famine with the "end of the barley and wheat harvest" (2:23).

Corresponding to scene 2, scene 3 begins the latter half of the book (3:1–18). Its catchwords are "threshing floor" (*gōren*), "lie down" (*škb*), and "redemption" (*gʿl*). From the beginning (3:1–5) the characters speak. Naomi initiates a bold, even scandalous, plan to secure Ruth a home. She is to visit the threshing floor when Boaz is sleeping, find his place, uncover his "feet," and lie down. Sexual overtones are clear, even though the extent of intimacy is uncertain. Then, says Naomi, "He will tell you what to do." Ruth agrees to the plan (3:4–5).

This second meeting between Ruth and Boaz constitutes the body of the scene (3:6–15). In contrast to the first encounter, it is private, held indoors at night. Nuances in language and style yield a wealth of meanings. Ruth finds Boaz "at the end of the heap of grain" (3:7). The phrase suggests an accessible area away from the other sleepers—perhaps another sign of the blessed chance (cf. 2:3b) that guides Ruth. When Boaz discovers Ruth lying beside him, he does not ask this time to whom she belongs (cf. 2:5) but rather her personal identity. In answering, Ruth changes the proposed script. Instead of Boaz telling her what to do (cf. 3:5), she tells him. "Spread your wing over your maidservant for you are a redeemer" (3:9c). Once again, she, not he, is in charge. By a play on the word "wing," Ruth asks Boaz to make good on his prayer for her blessing (cf. 2:12). His response is gracious, promising to do "all" that Ruth asks (3:11), even as Ruth has agreed to do "all" that Naomi asked (3:5). Boaz, a "man of worth" (2:1), calls Ruth a "woman of worth" (3:11). Thereupon he introduces information that disturbs the progress of the narrative and heightens suspense. A nearer redeemer must be consulted. In reassuring Ruth, Boaz's speech (3:13) mirrors the symmetry of the story:

A ***Remain this night and in the morning***

B if he will do *the redeemer's part,* well and good; let him redeem;

B' but if he is not willing to do *the redeemer's part* for you, then, as Yahweh lives, I will redeem you.

A' ***Lie down until morning***.

At the conclusion Ruth reports to Naomi (3:16–18). Her language is guarded, and subtleties persist. Though Naomi asks how Ruth has fared, the answer focuses on "all" that Boaz has done (cf. 3:5, 11) and on food. Ruth says nothing about her own bold speech and action. Naomi, who began the day by plotting a dangerous mission, now closes it by counseling a patient wait. Unlike the endings of scenes 1 and 2, the narration does not counter her words. This tension ceases; the story moves toward resolution.

Yet a different tension emerges in scene 4 (4:1–13). Corresponding to the theme of kinship ties in 1:8–18, it presents a point of view alien to the dynamics of the story. The catchwords "gate" (*šʿr*), "redeem" (*gʿl*), and "buy" (*qnh*) mark the tone. At the gate of the city, where business and legal transactions occur, men gather—the elders, Boaz, and the nearer redeemer whom Boaz addresses as "Mr. So-and-so." Boaz presents the case, again giving new information. In a symmetrical structure he claims Naomi wishes to sell land that belonged to Elimelech and Mr. So-and-so has the responsibility of redemption (4:3). Tension mounts when the unnamed man agrees to the purchase, for he becomes the rival of Boaz. Only then does Boaz present the expected issue, albeit with an unexpected motive. The buying of the land entails the "buying" of Ruth "to restore the name of the dead to his inheritance" (4:5; see Sasson 1979 for a review of the issues implied in this key verse). Upon hearing of this obligation, the nearer redeemer changes his mind. The arrangement would impair his own inheritance for the sake of Elimelech's line. Thus the way opens for Boaz to marry Ruth. But the direction of the narrative has shifted. In scene 1 kinship ties altered radically when Ruth broke with family, country, and faith to commit herself to Naomi rather than to the search for a husband. Now, in the corresponding part of scene 4, kinship ties bind

conventionally when restoration for dead males, rather than justice for living females, becomes the motive. Structural symmetry yields semantic dissonance.

Resolution of the women's plight through traditional channels of patriarchy exacerbates tension again. The birth of a son to Ruth (4:13) does not alleviate the problem, but the concluding episode does restore the female perspective. The women of Bethlehem reappear. They call the child a "restorer of life" to Naomi, not a restorer "of the name of the dead to his inheritance," and they exalt Ruth his mother above the ideal number of natural sons (4:15b). When their words converge upon Naomi, she embraces the grandchild. The widow of emptiness is fulfilled. Further, in naming the child Obed, the females of Bethlehem declare, "A son has been born to Naomi!" and not "An inheritor has been born for Elimelech!" Repeatedly, they reinterpret the perspective of the male gathering. As these women spoke for the whole town in scene 1, so now they render its final message in scene 4. Structural symmetry yields semantic harmony.

Poetic analysis finds three conclusions to Ruth, each with its own function (see Berlin 1983). First is the birth of the male child (4:14–16). It completes the events of the story, compensating for the death of the sons at the beginning. Second is the reference to Obed as "the father of David" (4:17). It serves as a coda, moving the time frame into history to forge a link between future and past generations. Third is the genealogy (4:18–22). It provides a larger context for the small family of Elimelech with whom the story began (1:1–5). Yet the androcentric orientation of these endings contrasts strikingly with the distaff life of the story. Such tension opens the narrative to further interpretation.

4. Theology. God never speaks in Ruth or performs miracles, but the story abounds in sacred language and activity. Some commentators uncover the hidden God directing human events (Hals 1969, Campbell *Ruth* AB). Others suggest that human speech and action itself manifests the deity (Trible 1978). Whatever the nuance, the book undercuts dichotomies between the divine and the human and between faith and works.

In the narrated introduction God appears to give food (1:6). This assertion begs the question of who sent the famine (1:2) and so presages the storyteller's perspective throughout. God is the author of life. Accordingly, the deaths of Elimelech, Mahlon, and Chilion are not attributed to the divine (1:1–5), but the birth of Obed is Yahweh's gift (4:13). Contrary to this view sounds Naomi's voice in scene 1. She claims that Yahweh might learn faithfulness from Orpah and Ruth (1:9). She also avers that the Lord's hand has gone forth against her (1:13) and the Almighty has afflicted her with great calamity (1:20–21). For Naomi, Yahweh brings death, not life. Posing the problem of theodicy, her complaints shatter any pat correlation of reward and punishment. The issue resolves as Naomi moves from being a victim to becoming an agent of change and a recipient of blessing. After granting Ruth permission to glean and seeing the successful outcome, Naomi invokes divine blessing upon Boaz, appealing this time to the faithfulness of Yahweh who "has not forsaken the living or the dead" (2:19–20). This altered perspective leads her to propose the plan at the threshing floor and then to advise patience. Eventually she is blessed with the birth of her grandchild. Out of Naomi's pilgrimage comes a theology of providence. God gives life.

The words *ḥesed* and *bārûk/bĕrûkāh* are central. *Ḥesed* connotes faithfulness in action and attitude. *Bārûk* bestows the God-given blessing of life upon another. *Ḥesed* appears alone near the beginning of the story and *bārûk* alone near the end. In the middle they occur together twice. Naomi sees Orpah and Ruth as models of *ḥesed* in their devotion to her and her family (1:8). When she blesses (*bārûk*) the man who took notice of Ruth (2:19), she blesses (*bārûk*) Boaz by Yahweh and cites divine *ḥesed* (2:20). Later when Boaz invokes blessing (*bĕrûkāh*) by Yahweh upon Ruth, he commends her for a second act of *ḥesed* in seeking an heir for Naomi (3:10; cf. 2:12). At last, the women of Bethlehem bless (*bārûk*) Yahweh for goodness to Naomi (4:14).

Even where these words do not occur, their meanings are implicit. Thus a theology of chance emerges. By chance Ruth comes to the field of Boaz (2:3). There she receives the blessing of grain through the faithfulness of Boaz. By chance Boaz lies down at the end of the heap of grain (3:7). The position is the blessing of accessibility for Ruth who dares to request the faithfulness due her. By chance Mr. So-and-so

appears at the city gate (4:1) so that Boaz can faithfully settle the issue of redemption to effect blessing upon the widows. Within human luck, then, lies divine intentionality. A faithful God blesses through a faithful people.

Among the book's characters, women predominate. They embody a remnant theology in contrast to patriarchal perspectives. Scene 1 presents Naomi and Ruth all alone; they make their own decisions. This portrayal continues in scene 2, even though the appearance of Boaz complicates the situation. The power of the scene is not, however, transferred to him. The women prevail in their struggle for physical survival. Similarly, in scene 3 they summon an Israelite man to responsibility and thereby secure their cultural survival. At its beginning, scene 4 reverts to a traditional mode when males decide the future of the widows. At the end, the females of Bethlehem reinterpret the occasion. The newborn child symbolizes a new beginning with men. Overall, the book of Ruth shows females working out their own salvation with fear and trembling, for it is God who works in them (cf. Philippians 2:12).

G. Legal Allusions

Three references in chapter 4 evoke comparisons with Pentateuchal laws: the role of the redeemer with laws of redemption (Lev 25:25 and 27:9–33); the right of a widow to inherit her husband's property with the silence of the recorded law (cf. Num 27:1–11); and the remarriage of a childless widow with the law of the levirate (Deut 25:5–10). To reconcile these texts is difficult, though many scholars have tried. One view holds that Ruth belongs to a period after the codification of the law and so reflects modifications of it. A converse proposal maintains that the book precedes the formulation of the law and so reflects its antecedents. Both positions stress the legal credibility of the narrative. (For discussion, see Rowley 1965 and Thompson 1968.) A related approach, not tied to dating, suggests that Ruth demonstrates policy rather than techniques; it appeals to underlying legal principles rather than specific formulations (Campbell *Ruth* AB). Still another perspective finds in the story a metalegal attitude whereby the spirit rather than the letter of the law prevails (Levine 1983).

H. Purpose

Attempts to specify a single purpose falter in light of the book's richness and complexity. Many levels of meaning intertwine—social, political, religious, and aesthetic. A representative list includes: to maintain Israelite customs, inculcate legal duties, integrate law and daily life, legitimate David and his monarchy, tell a good story, encourage proselytes, promote universalism over against nationalism, elevate the virtues of friendship and loyalty, glorify family ties, preserve women's traditions, and witness to God at work. Two approaches, however, are best avoided: to interpret the book as protest literature and to relate its purpose to one specific historical setting. Neither in tone nor content is it polemical, and the date is uncertain.

I. Canon

By the beginning of the 2d century C.E., the canonical status of Ruth was assured (see *Meg.* 7a). Less certain is its place within the canon.

1. Placement. In the Hebrew Bible Ruth appears among the Writings, though its precise location varies. According to the Babylonian Talmud (*B. Bat.* 14b), it comes first, to be followed by the Psalms. This order may be chronological. Set in the days of the judges, Ruth antedates the purported contexts of the other Writings. Ending with the genealogy of David, it prepares the way for the Psalms, most of which are attributed to him.

Another tradition places Ruth within the Megilloth. As one of five festival scrolls, it is read on the Feast of Weeks or Shabuoth (Pentecost) in celebration of the harvest. Two versions of this location exist: (1) a *liturgical* order that puts Ruth second, after the Song of Songs, which is read on Passover, and before Lamentations (ninth of Ab), Ecclesiastes (Succoth), and Esther (Purim); (2) a *chronological* order that has Ruth first, followed by Song of Songs, Ecclesiastes, Lamentations, and Esther. In the latter arrangement Ruth follows Proverbs.

The ordering of the Greek Bible differs. There Ruth comes after Judges and before Samuel. Factors influencing this location include the juridical setting of the story (1:1), the genealogy that prepares for the coming of David (4:18–22), and the ancient ascription of authorship to Samuel.

2. Meanings. Many scholars view canon as a theological issue whereby a single book is interpreted within the whole of scripture. In this light, Ruth elicits numerous observations. When placed after Judges, it contrasts strikingly with the terror story of the unnamed concubine, a tale from which God is absent (Judges 19–21). Ruth shows that in the days of the judges not every man did what was right in his own eyes (cf. Judg 21:25). Some males lived by *ḥesed* and treated females accordingly. Moreover, divine providence guided the affairs of daily life. While contrasted to the concubine narrative, Ruth complements Hannah's story at the beginning of Samuel (1 Sam 1:1–2:21). Also set in the days of the judges, this account continues the theme of providence. Yahweh remembers Hannah and gives her a son. If Ruth is more to Naomi than seven sons (4:15), Elkanah is more to Hannah than ten (1 Sam 1:8). Both stories honor women. This emphasis occurs again in the order that puts Ruth immediately after Proverbs. The latter concludes with an acrostic poem that exalts an *ʾēšêt ḥayil*, a woman of worth (31:10–31). The same phrase describes Ruth (3:11) and so places this Moabite in a larger Israelite tradition about women.

Other allusions firmly anchor the narrative to past and future memories. Ruth's decision to follow Naomi recalls Abraham's departure from his country, clan, and father's house to go to an unknown land (Gen 12:1–3). Boaz's words to Ruth confirm the analogy (2:11). Foreigners populate the story of Israel. Among them are the ancient mothers of Rachel, Leah, and Tamar with whom the elders of Bethlehem compare Ruth (4:11–12). Though these names yield fragments for a female genealogical tradition, the reference to Tamar exalts the house of her son Perez. The genealogy at the close (4:18–22) returns to the male line. It traces descendants of Perez through nine generations culminating with Obed, Jesse, and David. Related to the long genealogy of 1 Chronicles 2, this conclusion enlarges the context. Divine activity in the story of Naomi and Ruth belongs to a sacred history that establishes the nation Israel (cf. Merrill 1985).

Finally, in the canonical conversation between the Hebrew scriptures and the NT, genealogies again expand interpretations of Ruth. Though the male line in Luke alludes only to the ending of the book (Luke 3:31–33), the version in Matthew includes the women Tamar and Ruth (Matt 1:3–6).

A. Sabbath Terminology

The discussion of the terminology of the sabbath is in many ways interrelated with the quest for extrabiblical sabbath origins. It will be helpful, however, to describe the terminological evidence for the sabbath in both the OT and NT.

1. Hebrew Terminology. The Heb noun *šabbāt,* "sabbath," occurs 111 times in the OT. Concentrations of usage are in the Pentateuch with 47 times (Exodus 15 times; Leviticus 25 times; Numbers 4 times; Deuteronomy 3 times), the prophetic literature with 32 times (Ezekiel 15 times; Isaiah 8 times; Jeremiah 7 times; Amos and Hosea 1 time each), and the historical books with 30 times (Nehemiah 14 times; 1–2 Chronicles 10 times; 2 Kings 6 times). It appears one time each in Ps 92:1 and Lam 2:6. The noun *šabbātôn,* "sabbath feast," seems to be a derivative of the noun *šabbāt* (GKC §240) and appears eleven times. It is used by itself in Exod 16:23; 31:15; Lev 23:24, 39 in the sense of "sabbath feast" and in Lev 25:6 for "the sabbath of the land," i.e., the sabbatical year. The combination *šabbāt šabbātôn,* "sabbath of complete/solemn rest," appears for the seventh day (Exod 32:5; Lev 23:3), the annual Day of Atonement (Lev 16:31; 23:32), the annual Feast of Trumpets (Lev 23:24) and the sabbatical year (Lev 25:4).

The relationship between the noun *šabbāt* and the Heb verb *šābat,* "to stop, cease, keep (sabbath)" in the *Qal,* "to disappear, be brought to a stop" in the *Nip*ʿ*al,* "to put to an end, bring to a stop" in the *Hip*ʿ*il,* remains disputed. Scholars have argued that the noun derives from the verb (for example, *AncIsr,* 475–76; *RGG* [3] 5:1259) or that the verb derives from the noun (for example, North 1955:185–87; KB, 496). While there is no conclusive answer, it seems certain that the noun *šabbāt* cannot be derived from the Akk term *šab/pattu (m)* (see B.1 below). A possible connection of *šabbāt* with the number "seven" has been left open (Hehn 1907, 1909; North *NCE* 12:780). In this case the Akk feminine form *sibbitîm,* "seventh," may be considered as an ancestor of the Heb noun *šabbāt,* "sabbath," also a feminine form, which, if the relationship holds, may have originally meant "the seventh [day]." On this supposition "the seventh day" in Gen 2:2–3 would receive further light.

2. Greek Terminology. The Gk neuter noun *sábbaton,* "sabbath," (Mark 2:27–28; 6:2; Matt 12:8; Luke 6:5, etc.) translates the Heb noun *šabbāt.* It corresponds generally to Gk pre-NT usage. Whether the Gk noun *sábbaton* derives from the Aram *šabbāh* by means of the emphatic form *šabbetâ* or is a spontaneous creation seems to be immaterial (Pelletier 1972:441 n. 2).

The NT has 67 usages of the term *sábbaton* (Synoptics 43 times; John 13 times; the remaining usages appear in Acts and in a few letters). In some usages the plural form (Matt 28:1; Mark 16:2; Luke 24:1; John 20:1, 19; Acts 20:27) or the singular (Luke 18:12; Mark 16:9; 1 Cor 16:2) refers to "week"; otherwise the meaning is always the seventh day of the week, the sabbath.

B. Modern Research on Sabbath Origins

At the end of the 19th century appear the first modern attempts to find the origin of the sabbath outside of the OT. This modern quest for extrabiblical religio-historical sabbath origins was conditioned by the extensive redating of materials in Pentateuchal criticism and the discovery of texts from ancient Babylon.

1. Babylonian Origins. Various hypotheses and theories of Babylonian sabbath origins were put forth some years ago. It was suggested first that the Hebrew noun *šabbāt* and the Akk term *šab/pattu (m),* which were at first thought to be identical, meant approximately the same thing, i.e., "day of rest" (so Lotz 1938). The Akk term was brought into connection with *ûmê lemnûti,* "evil (taboo) days" of the Assyrian calendar, which appeared in approximately seven-day sequences. This hypothesis had to be abandoned when it became apparent that *šab/pattu (m)* was the 15th day of the month, the full moon day, and was never applied to taboo days. In the course of time it also became evident that the *ûmê lemnûti* are the 1st, 7th, 14th, 19th, 21st (added later) and 28th days of the month without fitting into a true weekly cycle. The 19th day was the most important day, but never fits into a seven-day schema.

The Akk term *šab/pattu (m)* cannot be etymologically related to the Heb term *šabbāt* and the latter cannot be directly derived from the Akk term. The Heb term has its middle consonant (radical) doubled, whereas the Akk term has its last consonant (radical) doubled. Comparative Semitic linguistics cannot adequately account for connections between the two terms because of the differing doubling of letters.

Beginning in 1905, J. Meinhold argued that the OT sabbath was originally a monthly full-moon day and as such was borrowed by Israel from ancient Babylon. His hypothesis has found sporadic support. It is

recently defended by G. Robinson (1988) who argues that the sequence of "new moon—sabbath" in preexilic sabbath texts (Amos 8:4–7; Hos 2:11–15—Eng 2:9–13; Isa 1:10–14; 2 Kgs 4:22–23) shows that the sabbath after the monthly "new moon" is a monthly "full moon" day just as the sequence in Babylonian texts has *arḫum-šapattu,* "new moon–full moon." In postexilic times the monthly (full moon) sabbath is said to have been transformed into the weekly sabbath. However, this alleged parallel has serious problems: (1) The sequence in all currently known Babylonian (and Sumerian) texts is *arḫum-sebutu-šapattu,* "1st (new moon), 7th, and 15th (full moon) days," which is totally unaccounted for in the OT. (2) The 8th-century text of Hos 2:13—Eng 2:11 (cf. Amos 8:5; Isa 1:13) manifests the sequence of "feasts–new moons–sabbaths," three festal celebrations in the order of increasing frequency of "yearly (feasts), monthly (new moons), and weekly (sabbaths)" celebrations. The sequence also appears in reversed form of decreasing frequency of "weekly (sabbaths), monthly (new moons), and yearly (feasts)" celebrations (Ezek 46:1, 3, 9; 1 Chr 23:31; 2 Chr 2:3—Eng 2:4; 31:3; cf. Ezra 3:5). Both sequences are unknown outside of Israel. (3) New moon and sabbath continue to stand next to each other in later and particularly postexilic texts (Ezek 45:17; 46:1; Neh 10:33; cf. 1 Chr 23:31; 2 Chr 2:3—Eng 2:4) where *šabbāt* refers clearly to the seventh day of the week. (4) The respective contextual settings are so distinct that they cannot be related to each other (Hasel 1988:37–64; Kutsch 1986:71–77). Furthermore, there is no compelling evidence in the OT for an alleged transfer from a preexilic monthly sabbath to an exilic/postexilic weekly sabbath.

Other Babylonian hypotheses hold that an early Semitic pentecontad calendar was used, based on the *ḫamuštu (m)* unit of Babylon, meaning "fifty days" ("pentecontad") as first suggested. The sabbath is said to have been the 50th day of such a period (Morgenstern 1947:1–136; *IDB* 4:135–41) or an alleged last day of a reconstructed Babylonian seven-day week (H. and J. Lewy 1942:1–152) or one-fifth of a month of a sexagesimal calendar system (Tur-Sinai 1951:1, 14–24). These menological hypotheses have not received much support in scholarly circles, because (1) there is no clear evidence for a pentacontad calendar, and (2) *ḫamuštu (m)* is typically a five-day period and does not stand for fifty or six days respectively.

2. Kenite Origin. The Kenite hypothesis holds that the Israelites adopted the seventh-day Sabbath through Moses in the Sinai region from metal-working nomads known as the Kenites. The sabbath was supposedly Saturn-day of the nomadic Kenites (Eerdmans 1925:79–83; Rowley 1951:81–118). There is no documentary evidence in support of this hypothesis, and the biblical texts cited in its favor (Exod 35:3; Num 15:32; Amos 5:26) are highly disputed in their precise meaning. Accordingly this hypothesis has had only few followers and is hardly supported today.

3. Arabic Origin. D. Nielsen (1904:52–88) suggested that the sabbath originates through the linguistic link with the Akk *šabattu* which is supposedly derived from the Ar verb *tabat,* "sit," a word used for the four monthly phases where the moon "sat." Ancient Arabs worshipped the moon on the four days of the "sitting" of the moon each month, and thus provided the background for the seven-day intervals which in Israel were turned into weekly cycles. This lunar hypothesis has the same difficulties as the ones mentioned previously. The Akk term *šap/battu (m)* is never used for a seven-day cycle or for the four monthly stages of the moon and thus cannot provide a link. The lunar month has 29 days, but weekly sabbath cycles never harmonize or coincide with the phases of the moon. It is not surprising that this hypothesis has not attracted any supporters.

4. Ugaritic Origin. Texts from ancient Ugarit (Ras Shamra) have divisions of "seven years" in the Danel cycle and "seven days" in the *Krt* legend. These days have to do with a festival week and it is maintained that "it is only a short step to the assumption that the origin of the seven-day week was the festival week, which was carried over … from the cultic festival and from the cultic week to the reckoning of time as a whole" (Kraus 1966:87). There is no direct or indirect evidence in support of this connection. Some scholars build on the supposition that there was a universal "seven" structure on the basis of which the origin of the sabbath is to be explained (Negretti 1972, and earlier, Hehn 1907:59–61, 115–20).

5. Sociological Origins. Several scholars have suggested a variety of sociological contexts out of which the seventh-day sabbath is said to have evolved. H. Webster (1916:188–92, 101–23) sees the sabbath rooted in "special days" or "rest days" of primitive agriculturalists. Some suggest that the sabbath had its beginning in the "market days" (Jenni 1956:7–16). However, there is no evidence for a seven-day cycle of market days from the ancient Near East or anywhere else. The development from a market day to a regularly recurring cycle of weekly sabbath celebration remains likewise unaccounted for.

In spite of the extensive efforts of more than a century of study into extra-Israelite sabbath origins, it is still shrouded in mystery. No hypothesis whether astrological, menological, sociological, etymological, or cultic commands the respect of a scholarly consensus. Each hypothesis or combination of hypotheses has insurmountable problems. The quest for the origin of the sabbath outside of the OT cannot be pronounced to have been successful. It is, therefore, not surprising that this quest has been pushed into the background of studies on the sabbath in recent years.

C. Sabbath in the OT

The sabbath appears in a variety of texts in OT literature and in varied contexts of historical and theological import.

1. Pentateuch. The Pentateuch has been considered traditionally to contain the earliest references to the sabbath in the OT. Historical-critical redating of many Pentateuchal strata and traditions has called this into question for many modern scholars. However, there is no unanimity of scholarly opinion on matters of dating and caution remains in order. Also new methods of research throw new light on old questions.

a. Narrative Texts. There are two narratives in which the sabbath plays a prominent role. The creation account of Gen 1:1–2:4a climaxes in the creation sabbath (2:1–3). This pregnant passage reveals that God had finished his creative activity in six days after which he "rested" *(šābat)* on the "seventh day," i.e., ceased from his creative activity (v 2). The "seventh day" means the sabbath even though the noun *šabbāt* is not used. The phonetic linkage between *šābat* and *šabbāt* is generally perceived to indicate sabbath-rest. This seems supported by other typical sabbath terminology which Gen 2:1–3 has in common with the fourth commandment of the Decalogue: "seventh day" (vv 2–3; Exod 20:10), "bless" (Heb *bārak,* v 3; Exod 20:11), "sanctify/make holy" (Heb *qiddaš [Pi῾el],* v 3; Exod 20:11; cf. 31:14), "make" (Heb *῾āśāh,* vv 2–3; Exod 20:9–10; cf. 31:14–15), and "work" (Heb *melā᾽kāh,* v 3; Exod 20:9–10; cf. 31:14–15). The "seventh day" sabbath is "blessed" as no other day and thereby imbued with a power unique to this day. God made this day "holy" by separating it from all other days. Rest-day holiness is something God bestowed onto the seventh day. God manifested himself in refraining from work and in rest as the divine Exemplar for humankind. The sequence of "six working-days" and a "seventh [sabbath] rest-day" indicates universally that every human being is to engage in an *imitatio Dei,* "imitation of God," by resting on the "seventh day." "Man" *(᾽ādām),* made in the *imago Dei,* "image of God," (Gen 1:26–28) is invited to follow the Exemplar in an *imitatio Dei,* participating in God's rest by enjoying the divine gift of freedom from the labors of human existence and thus acknowledging God as his Creator.

Exodus 16 reveals "that through a miraculous rhythm in the provision of the manna Israel was both shown the keeping of the sabbath rest on each seventh day and was obliged to keep this divine ordinance" (Noth *Exodus* OTL, 132). The noun "sabbath" (*šabbāt*), the expression "sabbath feast" (*šabbātôn*), the explicit identification of sabbath as "seventh day," the "sixth day" as preparation for the sabbath, the idea of "rest" on the sabbath for human beings, the notion of the sabbath as a feast and not a day burdened with fasting, and the sabbath being based on YHWH's "commandments and laws" appear in Exod 16:22–30 for the first time. In Noth's view this is "presumably the oldest Old Testament passage about the sabbath" (*Exodus* OTL, 136). For Childs "the existence of the sabbath is assumed for the writer" (*Exodus* OTL, 290). The idea that sabbath keeping is part of "laws and commandments" (v 28) has led Buber to say that the sabbath "is not introduced for the first time even in the wilderness of Sin, where the manna is found. Here, too, it is proclaimed as something which is already in existence" (1958:80). The nature ("holy"), function ("sabbath feast"), and purpose ("rest") of the sabbath reveals religious, social, and humanitarian significance already in this wilderness setting.

b. Legal Texts. The fourth commandment of the Decalogue (Exod 20:8–11; Deut 5:12–15) is dated late in form-critical and traditio-historical study and is reconstructed into a supposedly short early (Mosaic?) commandment which was formulated either positively according to some scholars or negatively according to others. However, no scholarly consensus has emerged from these endeavors (Meesters 1966:84–111; Negretti 1972:173–224; Robinson 1988:143–54). The Mesopotamian tradition of old ANE law codes reveals that long and short laws can stand next to each other (*ANET*, 160–61, 162–63, 166–77) without necessarily involving a long development of either. Later Hittite laws (14th century B.C.) manifest that a later version of a law can be shorter or longer than the original version (Hasel 1982a: 28–29).

The sabbath commandment has a literary structure shared in common in the versions of Exod (siglum E) and Deut (siglum D): A–Introduction (E, v 8; D, v 12), B–Command (E, v 9; D, v 13), C–Motivation (E, v 10a; D, v 14a), B1–Command (E, v 10b; D, v 14b), C1–Motivation (E, v 11a; D, vv 14 c–15), D–Conclusion (E, v 11b; D, v 15b). It reveals that aside from the minor changes between the two versions the most noticeable change in wording appears only in the C1–Motivation. In Exod 20:11a the C1–Motivation grounds the sabbath in YHWH's creation (Gen 2:2–3), whereas in Deut 5:14c–15a it is grounded in the redemptive Exodus experience. The soteriological and freedom-from-slavery emphasis in Deut 5:14c–15a and the creation freedom-from-labor emphasis in Exod 20:11a indicate that one is dependent on the other and that both are humanitarian in essence. Man is to rest on the seventh day because YHWH, as rest-providing Creator, sets an example of rest for human beings and because YHWH, as liberating Redeemer, sets an example of rest from slavery so that all are able to rest (Exod 5:5). Thus the covenant community is called upon to "remember/observe" (both infinitive absolutes functioning as strong imperatives). The command to "remember" points to the origin of the sabbath prior to Mt. Sinai, an obligation (cf. Exod 16:28) going back to the beginning (Childs *Exodus* OTL, 416), and Deuteronomy uses an equivalent expression in the term "observe."

The Book of the Covenant (Exod 20:22–23:33) contains various covenant statutes and ordinances and among them an ordinance of sabbath rest on the "seventh day" (23:12) similar to Deut 5:14. The sabbath commandment of Exod 34:21 indicates that sabbath celebration shall not be interrupted even in times of plowing and harvest. The instruction for sabbath keeping in Exod 31:12–17 reiterates most of the known aspects of the sabbath. However, several major thoughts appear here for the first time: (a) "Whoever does any work on the sabbath shall be put to death" (v 14), (b) sabbath observance is a "perpetual covenant" (v 16), and (c) the sabbath is a "sign between me and you" (v 13). The death penalty is enjoined upon a member of the covenant community for sabbath disobedience (cf. Exod 35:2b; Num 15:32–36). There is no indication that such punishment should be inflicted outside of the realm of ancient Israel. As the Noahic covenant has a "sign" (Gen 9:13, 17) in the rainbow and the Abrahamic covenant has a "sign" (Gen 17:11) in circumcision, so the Sinai covenant has a "sign" in the sabbath. Its "sign" signification is *commemorative* of God as Creator and Redeemer where the sabbath-keeping community confesses its continuing relationship to its covenant Lord; it is also *prospective* in signification in that it is a "sign" of the covenant history moving forward to its appointed goal; it is at the same time a "sign" signifying the believer's *present* posture vis-á-vis God with physical, mental, and spiritual renewal taking place in each sabbath celebration.

2. Prophetical Writings. The weekly sabbath appears in Amos, the oldest of the classical prophets. Amos 8:5 affirms the knowledge of the seventh-day sabbath in the N Kingdom (Israel). Greedy merchants could hardly wait for the sabbath to end, presumably at sundown, on which the sabbath began and ended as any other day (Gen 1:5, 8, 13, etc.; Lev 23:32; Ps 55:18—Eng 17; Neh 13:19). The sabbath is a day on which no business activities took place. The social-humanitarian aspect is present in the idea of rest, and the moral aspect manifests itself in the control of avarice and greed by refraining from commercial interests.

The widely discussed sequence of "new moon and sabbath" in Amos 8:5; Hos 2:13—Eng 2:11; and Isa 1:13, which are universally accepted 8th century sabbath passages, have been understood to occur "at equal intervals" and "that we have here an institution parallel to the Babylonian *šab/pattú* with monthly occurrence" (Robinson 1988:55, cf. pp. 59–60; see above on the alleged Babylonian parallel). The full

sequence in Hos 2:13—Eng 2:11 is "feasts *(ḥag)*, new moons *(ḥōdeš)* and sabbaths *(šabbāt)*" followed by an appositional phrase "and all her appointed festivals *(môʿēd)*." The term "feasts *(ḥag)*" stands in the OT only for the annual feasts, the designation "new moons *(ḥōdeš)*" is a monthly celebration, and "sabbaths *(šabbāt)*" are accordingly weekly celebrations. The sequence is clearly one of an increasing number of celebrations in the order from least frequent to most frequent, i.e., yearly–monthly–weekly, celebrations (Hasel 1988:38–45). Evidently the sabbath was celebrated weekly as a day of rest in both the Northern (Amos 8:5; Hos 2:13—Eng 2:11) and the Southern kingdoms (Isa 1:13; cf. 66:23) in the 8th century B.C. Isa 1:13 even indicates that the seventh-day sabbath institution was one of both rest and worship and could be abused, if it regressed into formal ritualism when emptied of a true relationship with God.

Later sections of the book of Isaiah contain pregnant sabbath passages (Isa 56:1–8; 58:13–14; 66:23). The sabbath belongs to YHWH (56:4), sabbath-keeping means holding fast "my covenant" (v 6; cf. Lev 26:42, 45), Israelite and non-Israelite sabbath-keepers receive divine blessings (Isa 56:2, 6).

Isa 58:13–14 is a most profound OT sabbath passage not to be separated from its context in this chapter. Three prohibitive injunctions protect the believer from having human and secular affairs diminish the sabbath, because the sabbath is a day of "delight" *(ʿonēg)* and enjoyment on which humans are set free to experience liberation from everyday pursuits. The sabbath is not a legalistic, ritualistic, and burdensome institution, but one that creates "delight" in all spheres of human existence. The sabbath-keeper will be the recipient of such superb divine promises as being fed with the heritage of Jacob and riding on the heights of the earth. Isa 66:23 has the context of the new creation, in which universally "all flesh" will worship YHWH "from sabbath to sabbath."

Jeremiah's prose sermon about the sabbath (17:19–27) keeps sabbath-breaking and sabbath-keeping within the confines of the covenant and the instruction given to the "forefathers" (v 22). The sabbath is a day of rest on which no commercial enterprises are to be enacted. The idea that sabbath-keeping is the condition for the survival of Jerusalem (and Judah) is rooted in the notion of obedience to the covenant stipulations contained in the Decalogue, the breach of which had profoundest concern for Jeremiah (7:8–10; cf. Lam 2:6).

The book of Ezekiel has a high concentration of references to the sabbath (20:12–24; 22:8–26; 23:38; 44:24; 45:17; 46:1–4, 12). The sabbath belongs to YHWH (20:12–13, 20–21, 24; 22:26; 23:38; 44:24) and is a covenant "sign" (20:12, 20) between YHWH and his people. Its profanation is cited among infractions of God's law (20:13, 16, 21, 24, 26; cf. 22:8–26; 23:38). The exile did not come because of sabbath profanation. The latter is but an external sign for covenant breaking, a key theme in Ezekiel, of which the sabbath is the "sign." The sabbath is to be "sanctified/hallowed" (20:20; 44:24; cf. Gen 2:3; Exod 20:8, 11). The sabbath "may well have become a touchstone of loyalty to YHWH from the time of the assimilatory reforms of Manasseh onward" (Greenberg *Ezekiel 1–20* AB, 367) and therefore is singled out by Ezekiel (and Jeremiah, as also in the later parts of the book of Isaiah) as a special sign of faithfulness to the covenant God.

3. Historical Writings. 2 Kgs 4:22–23 indicates that there was no travel restriction for visiting a man of God on "the new moon or sabbath." The sequence of the two festivals is here also one of increasing frequency of celebration. The new moon arrived monthly and the sabbath weekly. This text may be safely dated to the 9th century B.C. and gives evidence of knowledge of the seventh-day sabbath in the Northern kingdom at that time.

In 2 Kgs 11:4–12 (= 2 Chr 23:4–11) the sabbath is the day of the week on which the ruling monarch was overthrown, presumably since he visited the temple for religious purposes. 2 Kgs 16:17–18 mentions the removal of a structure "for the sabbath" in the time of Ahaz (735–715 B.C.).

The sabbath has a variety of connections in the work of the Chronicler (1 Chr 9:32; 23:31; 2 Chr 2:4; 8:13; 31:3; 36:21) with reference to temple, land, covenant, rest, redemption, and restitution.

Sabbath observance was lax in the time of Nehemiah. The sabbath was "profaned" (Neh 13:17–18) and there was need to bring the sabbath back to its rightful place (9:6–37; 10:31–34; 13:15–22) as a day of rest, worship, and enjoyment from sunset Friday to sunset Saturday (13:19).

D. Sabbath in Extrabiblical Texts

There are various archaeological discoveries that have been linked directly or indirectly to the sabbath in biblical times.

1. Sabbath Attacks on Ancient Israel. Sennacherib's letter written on his Judean campaign in 701 B.C. refers to his capture of Lachish on Hezekiah's "seventh time" (*ina 7-šu,* lit. "in his 7th (time)," Na›aman 1974:26). Shea (1988:178) has suggested that Hezekiah's "seventh time" refers to the sabbath, the day when its defenders rested and the Assyrians captured Lachish. If this suggestion is correct, this cuneiform text from Sennacherib "becomes the earliest extrabiblical reference to the Sabbath" (Shea 1988:179; cf. Shea 1989:22–23). It corresponds to such passages as Amos 8:4; Hos 2:11—Eng 13; and Isa 1:13 where the weekly sabbath is also depicted as a day of rest.

The publication of the Chronicles of the Babylonian Kings by Wiseman in 1956 provided the date for the capture of Jerusalem "on the second day of the month of Adar" (Wiseman 1956:72–73), i.e., March 16, 597. The day was a sabbath (Johns 1963:483–84). Also the day for the first assault against Jerusalem on January 15, 588, is again a sabbath, based on the synchronism of the biblical date (2 Kgs 25:1; Jer 52:4; Ezek 24:1–2) with the Babylonian records. Again the fall of Jerusalem on the 9th day of the 4th month of Zedekiah's 11th year (Jer 52:5–8) is calculated to fall on a sabbath (Johns 1963:485). Based on these calculations, it appears that the military strategy of the Assyrians and Neo-Babylonians utilized the seventh-day sabbath rest of the Israelites to accomplish their military-political goals.

This strategy was again used later by the Seleucids at the beginning of the Maccabean period when Jews were attacked on the sabbath but refused to resist on this day (Josephus *Ant* 12.6.2; 1 Macc 2:33–38).

2. Yabneh-Yam Ostracon. The so-called Yabneh-Yam (Meṣad Ḥashavyahu) ostracon, discovered in 1960 by J. Naveh and dated to about 625 B.C., contains in lines 5–6 the Heb phrase *lpny šbt,* "before sabbath" (Cross 1962:45 n. 45; Albright *ANET,* 568; Delekat 1970:455; Lemaire 1977:261). Some scholars have emended *šbt* into *šbty* and vocalized it as *šibtî,* "I stopped" (Robinson 1988:91), but there is no reason to emend the text of the ostracon. The term *šbt* seems contextually best rendered "sabbath" (Shea 1989:22). In this case, the Yabneh-Yam ostracon provides extrabiblical evidence for a seventh-day sabbath in preexilic times, the time of the reign of Josiah of Judah.

3. Aramaic Ostraca and Papyri. The Aram Elephantine ostraca, dated to the 5th century B.C., contain four ostraca which refer to the sabbath. A certain Jedaniah who was imprisoned makes reference to "the [d]ay of the sabbath" ([*y*]*wm šbh CAP* 44); a Uriah refers to a shipment which needs to take place before "the day of the sabbath" (*ywm šbh CAP* 186); another ostracon refers to someone who will arrive at "the eve (of the sabbath) [‹*rwbh*])" (*CAP* 204); and the fourth ostracon is addressed to a woman urging, "Meet the boat tomorrow on sabbath *(šbh)* lest they [vegetables] get lost/spoiled" (Porten 1969:116; cf. Dupont-Sommer 1949:31). These brief remarks in private letters seem to indicate that the sabbath as special day was important to the Jewish community at Elephantine in Upper Egypt.

The personal name Shabbethai, meaning "born on the sabbath," appears a number of times in the Elephantine ostraca as it does in the OT (Ezek 10:15; Neh 8:7; 11:16). Porten (1969:117) believes that in some instances in Elephantine this name is used also by non-Jews, indicating that they had apparently adopted sabbath observance.

An Aram papyrus from Saqqâra (not later than 5th-4th century B.C.) mentions the words *šbt›* and *šbt,* which may refer to the "sabbath" or perhaps be interpreted as the personal name Shabbatai (Segal 1983:95). In either case it seems to give evidence for the sabbath at Saqqâra in Egypt.

The Aram name *šbty,* "Shabbatai," appears on a sarcophagus in Assuan, Upper Egypt, presumably belonging to a non-Jew (Kornfeld 1967:9–16).

E. Sabbath in Intertestamental Literature

The development of the sabbath in intertestamental times shows variance in observance and reveals significant intensifications.

1. Qumran Literature. The recent publication of the Shabbath Songs (4QShirShabb), a fragmentary liturgical composition from Qumran in thirteen sections, one for each of the first thirteen sabbaths of the year, describes the heavenly priesthood of angels serving in the heavenly sanctuary each sabbath, supposedly corresponding to sabbath worship on earth (cf. *Jub.* 2:30). 4Q403 1 i 30 is translated by

Newsom, "Song of the sacrifice of the seventh Sabbath on the sixteenth of the month" (1985:211), followed by a call to praise addressed to angels.

The Damascus Document (CD), dated to ca. 100 B.C., enjoins strict sabbath observance (VI, 18), but does not call for the death penalty for sabbath profanation (XII, 3–4). A long section outlines appropriate sabbath observance (X, 14–XII, 5). Sabbath prohibitions include such things as walking further than 1,000 cubits (X, 21), eating that which is prepared on the sabbath (X 22), drinking outside of the camp (X 23), drawing water up into any vessel (XI 2), voluntary fasting (XI 4–5), opening of a sealed vessel (XI 9), wearing of perfume (XI 9–10), lifting of stone or dust at home (XI 10b–11a), aiding a beast in birthing (XI 13a), lifting an animal that has fallen into a pit (XI 13–14), lifting a person that has fallen into a place full of water (XI 16–17), and having sexual relations in the city of the sanctuary (XII 1). These rigid demands are more or less like the sabbath *halakhah* of normative Judaism outside of the Qumran community (cf. Kimbrough 1966:498–99).

The Temple Scroll (11QTemple), dated not later than the third quarter of the 2d century B.C., makes it clear how the Qumran community took the famous expression "on the morrow after the sabbath" (Lev 23:10–11; cf. 23:15–16), which has caused the so-called Pentecost controversy that divided Jewish sects in pre-NT times and ever since. The rabbis and normative Judaism took "sabbath" in this context to mean Passover. The Sadducees, the Samaritans, and other sects took it to mean a regular seventh-day sabbath. The Temple Scroll changes Lev 23:15–16 to read, "And you shall count seven full sabbaths from the day you brought the sheaf of the wave offering; you shall count to the morrow after the seventh sabbath, counting fifty days" (11QTemple 18, 11–12). Based on the 364-day and 52-week solar Qumran (-Jubilees) calendar and beginning the year on Wednesday Nisan 1 (March/April), the Temple Scroll takes the "sabbath" under dispute as the first sabbath after the entire Feast of Unleavened Bread, which is dated to the 25th of the 1st month so that the "morrow of the seventh sabbath" was the 15th of the 3rd month, a Sunday, the 50th day after Pentecost (Yadin 1983:2.76). In this way these festivals always fall on a Sunday, the day after the seventh seventh-day sabbath of the year (Maier 1985:71–73).

2. Apocryphal and Pseudepigraphical Literature. The author of *Jubilees* (ca. 150 B.C.) has the sabbath fall regularly on the seventh day of each week according to its calendar of 364 days. In *Jub.* 2:17–33 the sabbath is depicted as a specially holy day to be observed only by Israelites and not made for any other people (*Jub.* 2:30). The author strongly maintains the death penalty for any transgression of the sabbath (*Jub.* 2:25–27). The list of sabbath *halakhah* in *Jub.* 50:6–13 corresponds in many aspects with the ones in the Damascus Document (see E.1 above). The following section is typical, "And (as for) any man who does work on it [sabbath], or who goes on a journey, or who plows a field either at home or any (other) place, or who kindles a fire, or who rides an animal, or who travels the sea in a boat, and any man who slaughters or kills anything, … or who fasts or who makes war on the day of the sabbath, let the man … die so that the children of Israel keep the sabbath …" (*Jub.* 50:12–13, trans. Wintermute, *OTP* 2:142).

Fragment 5 of the work of Aristobulus (ca. middle of 2d century B.C.) explains the sabbath in relationship to cosmic orders, also linking the sabbath to wisdom (Frag. 5.9–10) and the sevenfold structures of all things (Frag. 5.12). This work is an attempt to bring the sabbath into relationship with Hellenistic thought similar to that of Philo.

3. Historical Literature. In earlier times Israelite enemies captured Jerusalem on the sabbath (see D.1 above). In *Jub.* 50:13 fighting is still prohibited on the sabbath. Ptolomy I Soter (323–283/82 B.C.) took Jerusalem on a sabbath unopposed and ruled it harshly (Joseph. *Ant* 12.1.1). Apollonius, a commander of an army corps of Antiochus IV Epiphanes, in 168 B.C. "waited until the holy sabbath day" to "rush into the city with his armed men and killed great numbers of people" (2 Macc 5:25–26), because Jews did not fight on the sabbath. Sabbath attacks continued (1 Macc 2:38), and Mattathias and his followers decided that they needed to defend themselves on the sabbath (vv 39–41) in order to avoid annihilation. According to Josephus this practice continued (*Ant* 12.6.2). By the time the Romans engaged in war against the Jews, the latter would even attack viciously on sabbath (Joseph. *JW* 2.17.10; 18.1).

4. Rabbinic Literature. Rabbinic literature is filled with sabbath regulations and detailed instructions that go far beyond anything found elsewhere in Jewish literature. The most extensive regulations are

gathered together in the Mishnah (*Šabb.* 7.2; *Beṣa* 5.2; and in *ʿErubin,* cf. *TDNT* 7:12–14). Many of these instructions are aimed at protecting the sabbath from profanation. In cases of emergency, however, particularly as regards threats to life, one could flee on sabbath (*Tanḥ.* 245a), act as a midwife on sabbath (*Šabb.* 18.3) to preserve life, and put out a fire on sabbath (*Šabb.* 16.1–7). These are exceptions and sabbath sacredness is to be maintained in cases of doubt (*Tanḥ.* 38b). The rabbis followed the thought that the sabbath was made for the Jews and not for anyone else (*Midr.* Exod. 31.12 [109b]; *Exod. Rab.* 25.11; *Deut. Rab.* 1.21). A Gentile who keeps the sabbath, according to Rabbi Simeon b. Laqish (mid 3d century A.D.), "deserves death" (*Sanh.* 58b). Sabbath-keeping and Jewish identity were one concept in normative Judaism.

F. Sabbath in the New Testament

The sabbath appears in the teachings of Jesus, in his conflicts with religious leaders, and in the later NT church.

1. Gospels. Jesus, at the beginning of his ministry in Galilee, "went to the synagogue, as his custom was, on the sabbath day" (Luke 4:16). The phrase "as his custom was" indicates that Jesus continued to worship on the sabbath. He remained a faithful disciple of OT scripture following his established custom of attending the synagogue each sabbath (cf. Mark 1:21, 29; 3:1; Luke 4:44; 13:10; etc.).

The four Gospels record among eight sabbath incidents six controversies in which Jesus "rejected the rabbinic sabbath *halakah*" (Jeremias 1973:201), i.e., two are recorded in the three synoptics (Matt 12:1–8 = Mark 2:23–28 = Luke 6:1–5; Matt 12:9–14 = Mark 3:1–6 = Luke 6:6–11), one is recorded in two synoptics (Mark 1:21–28 = Luke 4:31–37) and the remainder are found in Mark (1:29–31), Luke (13:10–17; 14:1–6) and John (5:1–18; 9:1–41) only. The authenticity of these pericopes seems well established (Rordorf 1968:54–74; Lohse *TDNT* 7:21–30; Goppelt 1981:94). Only Jesus' inaugural sabbath sermon in Nazareth (Luke 4:16–30) and the healing of Peter's mother-in-law on the sabbath (Mark 1:29–31) are outside of explicit controversy contexts. All except two (Luke 4:16–30; Mark 2:23–28) of the nine sabbath pericopes involve sabbath miracles.

After Jesus had started to preach in the synagogue in Capernaum a man with an unclean spirit interrupted him. Jesus drove the unclean spirit out of this demon-possessed man (Mark 1:21–28 = Luke 4:31–37). Subsequently, Jesus healed Peter's mother-in-law from a fever on the sabbath (Mark 1:29–31). Jesus continued to preach in the Galilean synagogues presumably on the sabbath and cast out demons (v 39).

At times Jesus is interpreted to have abrogated or suspended the sabbath commandment on the basis of the controversies brought about by sabbath healings and other acts. Careful analysis of the respective passages does not seem to give credence to this interpretation. The action of plucking ears of grain on the sabbath by the disciples is particularly important in this matter. Jesus makes a foundational pronouncement at that time in a chiastically structured statement of antithetic parallelism: "The sabbath was made for man and not man for the sabbath" (Mark 2:27). The disciples' act of plucking grain infringed against the rabbinic *halakhah* of minute casuistry in which it was forbidden to reap, thresh, winnow, and grind on the sabbath (*Šabb.* 7.2). Here again rabbinic sabbath *halakhah* is rejected, as in other sabbath conflicts. Jesus reforms the sabbath and restores it to its rightful place as designed in creation, where the sabbath is made for all mankind and not specifically for Israel, as claimed by normative Judaism (cf. *Jub.* 2:19–20, see D.3). The subsequent logion, "The Son of Man is Lord even of the sabbath" (Mark 2:28; Matt 12:8; Luke 6:5), indicates that man-made sabbath *halakhah* does not rule the sabbath, but that the Son of Man, not man, is Lord of the sabbath. It was God's will at creation that the sabbath have the purpose of serving mankind for rest and bring blessing. The Son of Man as Lord determines the true meaning of the sabbath. The sabbath activities of Jesus are neither hurtful provocations nor mere protests against rabbinic legal restrictions, but are part of Jesus' essential proclamation of the inbreaking of the kingdom of God in which man is taught the original meaning of the sabbath as the recurring weekly proleptic "day of the Lord" in which God manifests his healing and saving rulership over man.

The seven miraculous sabbath healings of Jesus indicate once again that Jesus restores the sabbath to be a benefit for humankind against any distortions of human religious and/or cultic traditions. The healing of the man with the withered hand (Mark 3:1–6 = Matt 12:9–14 = Luke 6:6–11) brought about another confrontation with Pharisees and scribes, because healing on the sabbath was only permitted in case of danger to life (*m. Yoma* 8.6) which obviously was not the case here (cf. Luke 14:1–6) or elsewhere in sabbath healings (John 5:1–18; 9:1–41). Jesus maintained here as always, against the rabbinic position, that "it is lawful to do good on the sabbath" (Matt 12:12).

In his eschatological discourse (Matthew 24), Jesus urged his followers to pray that their flight "may not be in winter or on the sabbath" (Matt 24:20; Mark 13:18 omits "on the sabbath"). Jesus anticipated that his followers would continue to regard the sabbath as holy in the future. His request for them was that they be spared from having to flee on the sabbath, but he presupposes that they would flee if they had to. Lohse maintains, "Mt. 24:20 offers an example of the keeping of the Sabbath by Jewish Christians" (*TDNT* 7:29). A society governed by many rabbinic sabbath laws would make it rather difficult for Christians to flee on the sabbath.

In short, Jesus declared himself Lord of the sabbath. He consistently rejected man-made sabbath *halakhah.* He freed the sabbath from human restrictions and encumbrances and restored it by showing its universal import for all men so that every person can be the beneficiary of the divine intentions and true purposes of sabbath rest and joy. Carson has concluded, "There is no hint anywhere in the ministry of Jesus that the first day of the week is to take the character of the Sabbath and replace it" (1982:85).

2. Acts. Aside from two casual references to the sabbath (Acts 1:12; 15:21), the sabbath is mentioned in connection with the establishment of churches in Pisidian Antioch (13:13–52), Philippi (16:11–15), Thessalonica (17:1–9), and Corinth (18:1–4). The Western text includes Ephesus (18:19). Paul, as Jesus before him, went to the synagogue on sabbath "as his custom was" (Acts 17:2; cf. 24:14; 28:17). There is silence on the subject of sabbath abolition at the Jerusalem Conference (15:1–29). There is also no evidence for the abrogation of the sabbath after the Jerusalem Council in the apostolic age or by apostolic authority in the early church (Turner 1982:135–37). Early Jewish and non-Jewish Christians continued to worship on the seventh day as far as the evidence in the book of Acts is concerned.

The single reference to "the first day of the week" in Acts 20:7–12, when Christian believers broke bread in a farewell meeting at the imminent departure of Paul is debated in its meaning. Some scholars suggest that Roman reckoning is used so that "the first day of the week" means Sunday night (Rordorf 1968:200–2; Turner 1982:128–33) and other scholars suggest that Jewish reckoning is used and in that case it means Saturday night (Bacchiocchi 1977:101–11; Mosna 1969:14–17). This passage hardly supports Sunday-keeping on the part of the apostolic church, since this was an occasional farewell meeting lasting till after midnight (v 7) and the breaking of the bread is hardly the Lord's Supper.

3. Letters. The meaning of the term "sabbath" in Col 2:16 is controversial. Among the major suggestions are those that take it to refer to the seventh-day sabbath which is thought to be done away with; ceremonial sabbaths of the Jewish cultic year; some Jewish aspect of the sabbath without denying true sabbath-keeping; perverted sabbath-keeping in honor of the elemental spirits of the universe; weekdays that were designated to be sabbaths; or sabbath sacrifices prescribed in Num 28:9–10. Within the context of the Galatian Judaizing heresy, "sabbath" seems to refer to something other than wholesome weekly sabbath-keeping as the majority opinion holds.

Hebrews 4:9 states, "There remains therefore a Sabbath rest for the people of God." The words "sabbath rest" translate the Gk noun *sabbatismos,* a unique word in the NT. This term appears also in Plutarch (*Superst.* 3 [*Moralia* 166a]) for sabbath observance, and in four post-canonical Christian writings which are not dependent on Heb 4:9 (Justin *Dial.* 23:3; Epiph. *Panar. haer.* 30, 2.2; Martyrdom of Peter and Paul, chap. 1; *Const. Apost.* 2.36.2) for seventh-day "sabbath celebration" (Hofius 1970:103–5). The author of Hebrews affirms in Heb 4:3–11, through the joining of quotations from Gen 2:2 and Ps 95:7, that the promised "sabbath rest" still anticipates a complete realization "for the people of God" in the eschatological end-time which had been inaugurated with the appearance of Jesus (1:1–3). "Sabbath rest" within this context is not equated with a future, post-eschaton sabbath celebration in the heavenly

sanctuary; it is likewise not experienced in the rest that comes in death. The experience of "sabbath rest" points to a *present* "rest" *(katapausis)* reality in which those "who have believed are entering" (4:3) and it points to a *future* "rest" reality (4:11). Physical sabbath-keeping on the part of the new covenant believer as affirmed by "sabbath rest" epitomizes cessation from "works" (4:10) in commemoration of God's rest at creation (4:4 = Gen 2:2) and manifests faith in the salvation provided by Christ. Heb 4:3–11 affirms that physical "sabbath rest" *(sabbatismos)* is the weekly outward manifestation of the inner experience of spiritual rest *(katapausis)* in which the final eschatological rest is proleptically experienced already "today" (4:7). Thus "sabbath rest" combines in itself creation-commemoration, salvation-experience, and eschaton-anticipation as the community of faith moves toward the final consummation of total restoration and rest.

B. Fallow Year for the Land
C. Release of Debts or Pledges
D. Release of Slaves
E. Historical Evidence
F. Theological and Ethical Significance

———

A. Definitions

Strictly speaking, the term "sabbatical year" is only found in Lev 25:2–7, where the expressions "sabbath of rest" and "sabbath to Yahweh" are applied to the seventh year, as the year in which the land is to be left fallow. However this law in Leviticus is clearly an expansion of the simpler and earlier fallow law of Exod 23:10f., and there are other laws concerning what was to take place in that year. Deut 15:1–3 is concerned with the release of debts (or of pledges for debt) in the seventh year. Exod 21:1–6 and the parallel Deut 15:12–18 prescribe the release of Hebrew slaves after seven years. Furthermore, Deut 31:10–13 specifies this year as the time when the whole law was to be read to the whole community. According to Lev 25:8ff., the seventh sabbatical year either was, or was followed by, the year of jubilee in which any land which had been sold was returned to the original owner and any Israelites who had entered slavery as a result of poverty or debt were released to return to their patrimony.

The question of extrabiblical parallels to Israelite sabbatical cycles (both the weekly sabbath and the sabbatical year) is problematic. Attempts to find direct parallels for either in the Babylonian calendars have not been successful. On the other hand, the existence of a seven-year cycle of nature is found in the Ugaritic texts (Gordon 1953). Its purpose was connected with the victory of Baal over Mot, and was to ensure agricultural prosperity. So while it is probably mistaken to think that Israel simply took over their sabbatical institutions from outside (particularly for the weekly sabbath), there are some parallels (particularly for the seventh year) which indicate the close association of religious belief and agricultural practices—an association that is common in all human societies. Certainly we can say that in Israel, as was the case in so many areas of life where it exhibited similarities with the customs of its contemporaries, the theological rationale and the historicizing of the motivation for sabbatical institutions were unique.

Leaving aside the matter of the reading of the law to the whole community in the seventh year, three major aspects of the sabbatical year can be distinguished: legislation concerning land, debt, and slaves. It is thus clearly a primarily socioeconomic institution. The fact that it receives such heavy religious significance as well simply underlines how central was the economic dimension to the faith of Israel. We

shall return to this in the paragraphs below on theological and ethical significance. For the sake of clarity, it will be best to deal with each of these three aspects of the year separately.

B. Fallow Year for the Land

1. Exodus 23:10f. This law allows six years of normal agriculture, but in the seventh there was to be no plowing. Whatever grew by itself was treated as common, available to the poor and wild animals. The law applied to vines and olives as well as crops. Coming in the Book of the Covenant (Exodus 21–23), this is the earliest of the OT laws concerning the seventh year and may well reflect very ancient and pre-Israelite custom. Though the text of the law itself does not contain any religious rationale or theological motivation, its inclusion within the Book of the Covenant certainly gives it the same overall orientation as the rest of the law within that corpus. It is seen as part of Israel's wider obligations to Yahweh himself within the framework of their covenant relationship to him. Whatever the precise redactional history of the Book of the Covenant, the laws which were included in it, or its constituent sections, by their incorporation as laws of *Israel,* took on the distinctive religious perspective of all Israel's law and life.

While the religious aspect of the law may be implicit, then (especially in view of the deep religious significance of anything to do with the land and agriculture), the humanitarian or social aspect is quite explicit: The fallow year was to be for the benefit of the poor, meaning specifically those without land of their own. In the seventh year the natural produce of the land was common and free. The humanitarian motive for the law fits it in with its surrounding context: the preceding laws concern judicial integrity and fair treatment of foreigners; the following law prescribes weekly rest for the benefit of the slave and domestic animals.

It may be questioned whether a fallow year once in seven years would be of much real benefit to the poor. What did they eat in the other six years? For this reason, some scholars reckon that this earliest form of the law was not prescribing a universal fallow over the whole land of Israel in a single sabbatical year for all. Rather the law meant that individual farmers must operate their own fallow year on their land, as and when they cultivated it, or in some kind of rotation. While it is certainly possible that this was the meaning of the law in its earliest formulation, the question of how the poor survived for six years need not arise when this sabbatical law is set in the context of other laws concerning assistance for the landless poor (see Mason 1987). There was the annual right of gleaning, in the fields, vineyards, and olive groves (Lev 19:9f; 23:22; Deut 24:19–22). And there was the triennial tithe which was to be stored and used for distribution to the poor, and was expected to suffice for their "satisfaction," presumably for the intervening two years (Deut 14:28f.). These laws, of course, are in later legal collections than the Book of the Covenant, but it is very probable that they witness to early practices in Israel concerning benefit rights for the landless poor, of which the fallow year was one.

2. Leviticus 25:2–7. When this text is carefully compared with Exod 23:10f., the number of verbal parallels shows that it is obviously dependent on it, and an expansion of it. Several points emerge from the comparison.

Whether or not the law in Exodus was intended as a universal fallow or a seven-year rotation for individual farms, the Leviticus formulation clearly intends a single universal year. "Your land" (Exod 23:10) has become, repeatedly, "the land." The sabbatical year is here more clearly linked to the theology of the land itself.

Two additional phrases, not used in Exodus, intensify the religious aspect of the year: *šabbat šabbātôn* and *šabbat layhwh* (twice). However, it is improbable that this is introducing for the first time a religious rationale. Rather it is making explicit what was always understood. "This sacramental reason … might well be the more original one … in point of content" (Noth, *Leviticus* OTL). For this reason it is unnecessary to see the religious addition in the text itself as evidence for a late date.

The humanitarian dimension is somewhat modified. Whereas the Exodus law specified the poor in a general sense as the beneficiaries of the fallow year, Leviticus homes in on the domestic world of the slaves, hired workers and resident alien workers (25:6). These would have had primary access to the produce of the fallow ground in the households to which they belonged, without ruling out other groups

of landless people. The humanitarian concern for the poor is in any case expressed by other laws within the same legal corpus—i.e., the gleaning rights in Lev 19:9f., and 23:22.

The combination of the religious and the humanitarian can also be seen by comparing the Leviticus law with the immediate context of its Exodus predecessor. In describing the seventh year as a "sabbath to Yahweh," Leviticus is linking it to the sabbath-day law which, in Exod 23:12, immediately follows the fallow-year law. In the decalogue the sabbath day is explicitly referred to as a "sabbath to Yahweh" (Exod 20:10). Thus the seventh year is interpreted in the same way as the seventh day. The land is to enjoy rest after six years of being worked. Interestingly, however, in the Book-of-the-Covenant formulation of the weekly sabbath (just as in its formulation of the seventh year fallow), the religious or theological rationale is taken for granted and it is the humanitarian motivation that is explicit: "so that your ox and donkey may rest and the slave born in your household, and the alien as well, may be refreshed." The same classes of beneficiary are listed in the sabbatical year law in Leviticus (25:6f.), including even the last—the *gēr,* i.e., the non-Israelite, residential laborer. While the sabbatical institutions of Israel were at one level symbolic of their special relationship with Yahweh (the sabbath was a covenant sign), they were not exclusive or narrow in the benefit they gave. The landless alien is included along with the landless Israelite in weekly sabbath rest, septennial access to the fallow produce, as well as his express entitlement to the annual gleaning and the triennial tithe.

C. Release of Debts or Pledges

The opening sentence of the law of release in Deut 15:1–3 undoubtedly picks up the phrasing of the fallow year law in Exodus: "you shall make a release" *(šĕmiṭṭâ);* "you shall release it (i.e., the land)," using the same root verb, in Exod 23:11. In fact, some scholars suggest that the opening sentence of the law in Deuteronomy was an ancient formula in Israel prescribing precisely the fallow year—which Deuteronomy has then expanded in vv 2f. into a law concerning debt. It seems best, therefore, to treat this as a law primarily concerned with debt, i.e., agrarian debt related to the use of the land, rather than linking it with the laws concerning the release of slaves.

If the Deuteronomic *šĕmiṭṭâ* presupposes, then, the fallow year law of the Book of the Covenant, the question arises as to its relation to the sabbatical year law of Leviticus. The common critical source division, of course, assigns Leviticus 25 to the "Holiness Code," or the Priestly compilation (H or P), much later than Deuteronomy. However, it is generally agreed that the sociological date of origin of a law or institution may be quite unrelated to the date of its inclusion in a literary compilation, so that the traditional documentary classification of texts cannot really provide an answer to the question of historical precedence among the laws. (Weinfeld 1972 cites the sabbatical and *šĕmiṭṭâ* laws as examples of his contention that some of the laws in P are earlier than those in Deuteronomy.)

On two grounds it seems arguable that the Deuteronomic *šĕmiṭṭâ* law is the latest of the three. First, the verbal parallels are much closer between Leviticus and Exodus. Secondly, and more important, it is easy to suppose that the Deuteronomic law has simply presupposed the existence of the seventh year fallow, as prescribed in Exodus and Leviticus, but it is very difficult to explain why Leviticus should have omitted reference to the release of debts in the seventh year if the Deuteronomic law had already been in existence. Leviticus 25 is throughout concerned with economic arrangements, including problems of debt and poverty, so that the omission of a sabbatical debt release, if it had existed, would be baffling. It seems to make much better sense to see Deuteronomy as expanding the scope of the original fallow-year law so that it is not only a year when the land is released, but also when humans are released from the burden of debt. And certainly for Deuteronomy, the seventh year is universal (as in Leviticus), and has the same sacred significance (it is "to Yahweh," as in Lev 25:2, 4). But it has recaptured and intensified the humanitarian aspect of the original law.

Several exegetical difficulties face us when we try to ascertain precisely what the *šĕmiṭṭâ* law actually prescribed. These cannot be treated in detail here, but it is a well-argued view (see Horst 1930; North 1954; Weil 1938; Wright 1984) that the law commands the release of *pledges* given for debt, not simply the debt itself. Verse 2 reads *šāmôṭ kol-baʿal maššēh yāḏô ʾăšer yaššeh bĕrēʿēhû.* Taking *maššeh* as the pledge given in security for a loan, this can be translated, "Every owner of a pledge within his power

(yādô) shall release what has been pledged to him by his neighbor." A person in debt would offer a pledge to his creditor. This might be some valuable possession, but more likely was a part of his land, or even a dependent person (child, slave), who would be put at the disposal of the creditor. Probably this pledge would function not merely as a security until the debt was paid, but would actually serve to repay it in what is known as an "antichretic" arrangement. That is, the produce of the pledged land, or the labor of the human pledge, would belong to the creditor and serve to pay off the debt. What this law prescribes, then, is that in the seventh year, all such pledged land or persons should be released by the creditor from his control, and returned to the debtor.

Lev 25:25ff. and Neh 5:3–5 show the kind of circumstances in view, and also make it clear that the pledging of dependent *persons* was the last extremity for a debtor, preceded by several stages in which *land* (or vineyards, etc.) would have been mortgaged first. In any period of seven years there would be many more people who had surrendered parts of their landed property to secure loans than had yet begun to hand over children or slaves as pledges. So the *šĕmiṭṭâ* law can be seen as aimed primarily at the release of *land* pledges for agrarian loans. It should not therefore be confused with the laws concerning the release of "Hebrew" slaves, who were sociologically in a quite different category.

The wording of the law leaves open the question of whether it prescribes a complete cancellation of the debt, or a one-year suspension of repayment. Either could be textually justified. Jewish exegesis and practice has always assumed that the law required complete cancellation of debts in the seventh year. As Wacholder (*IDBSup,* 762–63) points out, this would have meant that in Israel loans were never to be treated as business or profit-making transactions, but exclusively a temporary form of assistance to the needy. Hence, in later, developed forms of financial arrangements, ways were found to avoid the sabbatical cancellation in the fixing of loans. Such radical legislation would not be impossible, in the context of the radical nature of other Israelite practices and ideals—such as its astonishing laws concerning slaves (astonishing in the context of established ANE customs). But several considerations point to the possibility that the original law intended a suspension rather than a cancellation.

The wording of the second half of v 2 is literally "He (i.e., the creditor) shall not *press* his neighbor, his brother, for Yahweh's *šĕmiṭṭâ* has been proclaimed." It could be said that this implies that there was to be no pressing for repayments for the duration of the *šĕmiṭṭâ* itself. That is, the creditor was required to do two things: not to press for any repayments on the loan in that year; to release any pledges back to the debtor, which would mean that the debtor would have the use of his land and the labor of his family or workers—even in a reduced form, since it was a fallow year. Since repayments were probably linked to harvests, this would mean the creditor would receive nothing after whatever was repaid in the sixth year, until the autumn of the eighth year. Thus the impact of a one-year suspension of repayment should not be minimized, either as a relief to the debtor, or as a surrender by the creditor.

A suspension rather than a cancellation would also enable the law to fit more easily with the jubilee arrangements. Of course, as has been pointed out, the relationship between the laws in different sections of the Pentateuch is problematical, and complete harmonization may always elude us. However, it is obvious at least that if all debts were totally cancelled every seven years, and all mortgaged lands returned to debtors, there seems to be little point in a special year of jubilee apparently with the same intention. If, however, the seventh year was a suspension of repayment combined with release of pledged land for that year, the fiftieth year was a year of complete freedom (*dĕrôr*—a word not used in the *šĕmiṭṭâ* context), for families who in the course of two or three generations—even with the assistance of sabbatical and redemption procedures—had been unable to avoid the final consequences of poverty and debt. It was a fresh start, not a temporary respite.

In the end, however, one has to accept the uncertainty and acknowledge that either cancellation or suspension could have been the intention of the law. Either way, it is clear from the law itself and reinforced in the "preaching" which characteristically follows it (4–11), that its dominant motif is humanitarian concern for the impoverished. And this concern has been extended now not only to the landless poor (as in the original fallow), but also to land*owners* threatened by burdens of poverty and debt.

D. Release of Slaves

The laws pertaining to the release of slaves (Exod 21:2–6; Deut 15:12–18) are not, strictly speaking, concerned with the sabbatical year, because they prescribe that slaves were to be freed after six years of service from the time of their purchase or acquisition, not necessarily in a universal seventh year. Some scholars have argued that the freeing took place in the sabbatical year. It has been suggested that they had to be freed in order to attend the great reading of the law in the year of *šĕmiṭṭâ,* as prescribed in Deut 31:10ff. But in view of the explicit inclusion of slaves in the other great cultic occasions of Israel's life, this seems unnecessary. And the natural reading of the law in both Exodus and Deuteronomy is that the slave was to be offered his freedom after six years of service, regardless of what year it was. Nevertheless, the principle of the law—six years of work, then freedom—is clearly "sabbatical," and it may therefore be appropriately included along with the other septennial requirements.

The beneficiary of the law was the "Hebrew" slave. It is widely (though not universally) agreed among scholars that the term "Hebrew" is in some way related to the various forms of *ʿapiru* found in many ANE documents, where it apparently has a social rather than an ethnic meaning. That is, the term is not simply equivalent to Israelite, but denotes a class of people in ancient society. They appear to have been landless, and in some cases "stateless," surviving by selling their services, sometimes as mercenary soldiers or as laborers. They were therefore a dependent class, potentially troublesome, as some extrabiblical texts show, but also vulnerable to exploitation. See also HEBREW; HABIRU, HAPIRU.

The Book of the Covenant sets a limit to that potential exploitation by giving the Hebrew slave the option of freedom after six years of service to one employer. If he took it, he joined the ranks of the *ḥopšîm* (Exod 21:2b; Deut. 15:12b), a term also found throughout the ANE to describe a class of people, technically and legally free, but still without land, and therefore needing to hire themselves out as laborers, or settle as tenant farmers. For the Hebrew slave, therefore, release after six years was probably more a change of employment than any significant rise in social status. Not surprisingly, therefore, this may not have been an attractive option. So the law allows for the fact that some Hebrew slaves may prefer to remain in the permanent service of benevolent landowners.

The Deuteronomic development of the law (Deut 15:12–18) is characteristic of its humanitarian ethos. It extends the benefit of the law explicitly to female slaves (who were excluded in the Exodus legislation), and it tries to encourage slaves to take the option of freedom by requiring the owner to provide a substantial endowment of livestock, grain, and wine to the departing slave. Presumably this was not merely a parting gift, but an attempt to help him become economically viable.

Recognizing that the law of seventh-year release applied to Hebrew slaves helps us to understand the significant difference between this pair of laws and the jubilee law concerning release in the fiftieth year. The apparent discrepancy is not to be solved by literary critical manipulation of the texts, nor by arguing that Leviticus is a repeal or a modification of the earlier law. Rather it can be seen that the two laws are directed at two quite distinct groups in society: on the one hand the *landless* "Hebrews," for whom slavery was the only way of life; and on the other hand, Israelite *landowners,* who for various reasons had had to mortgage part or all of their land, but who still retained legal title to it, and could return to it in jubilee (see Ellison 1973; Wright 1984).

E. Historical Evidence

There is no direct reference to a sabbatical year being observed in the OT period itself, but there is plenty of evidence to affirm that it was an ancient institution, and not, as has been thought, a postexilic invention. Deut 31:10 prescribes the reading of the law at the end of the *šĕmiṭṭâ* year. Jer 34:8–16 reports a freeing of Hebrew slaves, which was subsequently revoked. Since this happened in a time of national emergency (the siege of Jerusalem, when all available manpower was needed) it was probably not an actual sabbatical year; but the account shows clearly that the institution, though neglected, was known. Lev 26:34f., 43 includes among its reasons for the exile of Israel their neglect of the land-sabbaths—i.e., the sabbatical years. The predictions that the exile would last seventy years (Jer 25:12; 29:10; cf. Dan 9:2), also seem to presuppose the use of sabbatical cycles. Finally, the terms of the solemn agreement initiated by Nehemiah, with the priests, Levites, and people, included the keeping of the sabbatical year.

In Neh 10:32b (—Eng 31b) they undertake to "leave" (the produce, cf. BHS) of the seventh year, and "pledges of the hand" (same phrase as in Deut 15:2). Their promise thus encompasses both the fallow law of Exodus and the *šĕmiṭṭâ* law of Deuteronomy, showing that this is a restoration, not the invention, of sabbatical requirements.

In the post–Old Testament and early Christian eras, there are some explicit references to sabbatical years. These occur in the Maccabean period (163/2 B.C.), at the time of the murder of John Hyrcanus' father (135/4 B.C.), in the reign of Agrippa I (A.D. 41/2), and in the second year of Nero (A.D. 55/6). For these and further details, see Wacholder (1973), who argues that "the sabbatical year remained a living institution in Palestine until the period of the Crusades."

F. Theological and Ethical Significance

In conclusion we may pick out several themes which have been touched on in the above analysis.

1. God's Lordship over Time and History. Israel's sabbatical concept in its different manifestations is related to their view of time as having been created by God and therefore, in a sense, "owned" by him. The seventh day, and the seventh year, being alike "holy to Yahweh," symbolized God's claim on all time, from a creation perspective. But Israel's concept of time was dominated by its awareness of history, and that in turn was shaped by its experience of redemption in history. Thus it is the historical redemption from Egypt which forms the motivation for the weekly sabbath in the Deuteronomic decalogue (Deut 5:15). By its sheer proximity the Exodus dominates the Book of the Covenant, and it is also explicitly used as motivation in the immediate context of the fallow year law (Exod 23:9). The *šĕmiṭṭâ* law and the Hebrew-slave release in Deuteronomy 15 are both commanded on the basis of God's historical generosity in Exodus and the gift of the land. The same motif is present in the sabbatical arrangements of Lev 25:38, 42, 55. As was the case with several other festivals and practices in Israel, whatever extra- or pre-Israelite roots there may have been, the sabbatical institutions of Israel were unique to them in terms of their historicized theological rationale.

2. God's Ownership of the Land. "The land is mine and you are my guests and tenants" (Lev 25:23) is the principle at the heart of the economic arrangements of Leviticus 25. The land was a fundamental part of Israel's faith: included within the promise to Abraham; the explicit objective of the Exodus from Egypt; the focus of the major historical traditions of Israel from Joshua to David. It was the land of divine promise and gift, but also a land still divinely owned. Thus everything to do with the division, tenure, and use of the land was ethically significant because it fell within the mainstream of Israel's covenant relationship with Yahweh. The sabbatical year, therefore, was one among many dimensions of a total economic system that was intended to reflect not only the sovereignty of Yahweh, but also his moral demands (see Wright 1983:chaps. 3 and 4).

3. Humanitarian Ethics. The moral aspect of the institution has already been seen clearly. We noted that whatever religious or sacral meaning attached to fallow years or septennial cycles outside Israel, and even allowing for the implicit religious significance within Israel, the dominant motivation or explanation of the sabbatical arrangements was humanitarian. As in other areas of Israel's life and customs, one fulfilled one's duty to God by practical care for fellow humans—particularly in care for the poor, the vulnerable, and the alien, for they were God's special concern. Much sociological analysis of ancient Israel has demonstrated that not only in principle but also in reality their economic system was geared to the needs of the lowest in society, with the immediate goal of giving maximum assistance to the poor, and the ultimate ideal that there should be no poor (Deuteronomy 15). The sabbatical year fits within this overall framework of ethical objectives.

4. Eschatological Hope. The combination of a sense of time and history with an awareness of ultimate ideals generated a future orientated perspective. At the very least the sabbatical year and the jubilee gave the poorer section of Israelite society something to look forward to—a hope, in a purely economic sense. But beyond that, concepts like rest, release, and (from the jubilee) return and restoration could easily fit metaphorically into the vocabulary of the hoped-for new age of God's unhindered blessing on a perfectly obedient people. Thus we find that future hope in the prophets sometimes draws allusively from the sabbatical milieu (e.g., Isaiah 35, 58, 61).

It is possible that the ministry of John the Baptist coincided deliberately with a sabbatical year (see Wacholder 1975), which would fit both with the radical ethical challenge of his call to repentance and also with the messianic implications of his mission which were traditionally high in sabbatical years. Sabbatical and jubilary influence on the teaching of Jesus is seen in the "Nazareth manifesto" of Luke 4:16–20 and also in his explicit teaching on actual remission of debts (see Sloan 1977). Luke's interest in the eschatology of sabbatical texts is probably reflected in his descriptions of the way the early church in Acts, under the control of the eschatological spirit, voluntarily solved the problem of poverty in itself. His observation in Acts 5:34 that "there was not a needy person among them" is almost certainly an echo of the virtually identical LXX wording of Deut 15:4, which expressed the hope and ideal that underlay the sabbatical law. Finally, Hebrews 4 uses the concept of sabbatical rest (which derives from the sabbatical year, not just the weekly sabbath, since the context has to do with rest in the land particularly), as an eschatological picture of the heritage of God's people that yet awaits those who will enter it by faith and obedience.

SABEANS. There are three references to "Sabeans" in the OT; in each passage the name may refer to a different group of people. In the book of Isaiah, the Sabeans (Heb *sĕbā·îm*) are identified as a tall race of people (45:14), which probably refers to an African people which Josephus (*Ant* 2.10.2) locates in Nubia (modern Ethiopia; cf. Isa 43:3). See SEBA.

In Joel 3:8, the Sabeans (Heb *šĕbā·î*) are identified as a far-off nation to whom the Judeans will sell peoples captured from Tyre, Sidon, and Philistia. The reference here is probably to the inhabitants of the S Arabian kingdom of Sheba (modern Yemen). See SHEBA (PERSON); SHEBA, QUEEN OF. It is possible that there is some historical connection between the S Arabian Sabeans and the African Sabeans, the latter originating as a trade colony of the former sometime before the 6th century B.C. See SEBA.

In the book of Job, Sabeans (Heb *šĕbā·*) steal Job's oxen and asses and kill some of his servants (1:14–15). The peoples here are a N Arabian group in the vicinity of Tema (Job 6:19), an oasis city which is often associated with Dedan (Isa 21:13–14; Jer 25:23; cf. Gen 10:7 and 25:3). Pope (*Job* AB 13) suggests

that these N Arabian Sabeans are probably the *Saba* mentioned in the inscriptions of Tiglath-pileser III and Sargon II, that memory of them may be preserved in the toponym Wadi esh-Shaba in the vicinity of Medina (200 miles S of Tema), and that these Sabeans should be viewed as distinct from the S Arabian and African Sabeans. However, it is possible that a Sabean presence in the vicinity of Tema and Dedan in N Arabia attests to the expansion of the S Arabian Sabeans N along the major trade route shortly after the middle of the 8th century B.C. See also TEMA; DEDAN.

GARY A. HERION

SABTAH (PERSON) [Heb *sabtâ* (סַבְתָּה); *sabtā*› (סַבְתָּא); śabtā› (שַׂבְתָּא)]. A son of Cush (Gen 10:7; 1 Chr 1:9) and hence the name of a tribe or place located somewhere in South (in Gen 10:7 several mss) Arabia or Ethiopia. The attempts to identify the biblical name either with the Ethiopian harbor *Sabat* (Ptolemaios, *Geog.* 4,7.8) or with *Saba* (Strabo, *Geog.* 16,4.8) respectively or even with *Sabai* (Strabo, *Geog.* 16,4.10) at the coast of the Red Sea (see, e.g., Gesenius 1883:566) or with the place *Ḏū s-Sabta*› at the shore of the Persian Gulf (Glaser 1890:252–53) are not convincing.

Tuch (1871:176) was the first to propose identifying it with the capital of Ḥaḍramaut (see HAZARMAVETH), whose name appears in classical sources as *Sabata* (Strabo, *Geog.* 16,4.2 according to Eratosthenes), *Sabbatha* (variant *Sabatha;* Ptolemaios, *Geog.* 6,7.38), *Sabbatha* (variant *Saubatha; Periplus maris Erythraei* 27), and *Sabota* (Pliny, *HN* 6,155; 12,52). In the Old S Arabian inscriptions the name of that town is attested in the form *šbwt,* Shabwat. It has been argued that for phonetic reasons Shabwat cannot be combined with the biblical *sabtāh,* since one would expect in the corresponding Heb form the consonantal sequence *śbwt.* However, it should be mentioned that there are in fact mss variants (of Gen 10:7) with an initial *ś* in Hebrew; furthermore, the forms of the LXX (Gk *Sabatha; Sabata*) are identical with the names by which the capital of Ḥiḍramaut is designated in the above-mentioned classical sources.

Shabwat is located at the E border of the desert Ramlat as-Sab'atayn on a hill at the mouth of the Wadi ‹Aṭf, the lower course of the Wadi ‹Irma. Already in the middle of the 2d millennium B.C. a settlement existed there, and its inhabitants practiced agriculture dependent upon seasonal irrigation by flash floods. In spite of its geographical position in the utmost W part of Ḥaḍramaut, Shabwat became the capital of that ancient kingdom and was, according to the testimony of the classical authors, a center of the incense trade. The frequent mention of Shabwat in Ḥaḍramitic inscriptions found outside of the capital (*hgrhn šbwt;* e.g., RES 4912,1; Khor Rori 1,2; etc.) as well as in Sabean texts reporting on military campaigns (*hgrn šbwt;* e.g., Iryānī 13 §10; Fakhry 75,3; etc.) give evidence to the importance of the town. Beginning in the 5th century A.D. the town began to decay, and the Arabic geographers of the Middle Ages knew on the ruins of the former metropolis only an insignificant place still called Shabwa, a name which has survived to this day. At any rate, the reference to Shabwat (i.e. Sabtah) in the table of nations (Genesis 10) seems to point to an active traffic on the incense road already in the 7th century B.C.

Another less-plausible explanation for Sabtah is the assumption of an old writing error for *sbkh,* i.e., for *Shabako* or *Shabaka* (Gk *Sabakōs*), the name of the first ruler of the 25th ("Ethiopian") Dynasty of Egypt, who reigned about 715–702 and who, like his successor Shebitku (see SABTECA), is supposed to be mentioned among the sons of Cush (see Astour 1965:422–25; Yurko 1980:221–40).

W. W. MÜLLER

SABTECA (PERSON) [Heb *sabtĕkā*› (סַבְתְּכָא)*; sabtĕkâ* (סַבְתְּכָה)]. The youngest son of Cush (Gen 10:7; 1 Chr 1:9) and hence the name of a tribe or place located somewhere in S Arabia or Ethiopia. The peculiar enumeration of the five sons of Cush as "Seba and X and Sabtah and Y and *Sabteca,*" however, gives rise to doubts about the correct transmission of the form of the last name in the MT. Bochart (1674:246) had identified Sabteca with *Samydakē* (Ptolemaios, *Geog.* 6.8.7), a town in Carmania, the present province of Kerman in SE Iran, not far from the mouth of the coastal river Samydakos. For that reason he was even inclined to change the vocalization of the Heb form of the name *Sabtheca* to *Sabithace.* This equation was accepted by other scholars in spite of the fact that it is highly improbable to search for sons of Cush from the table of nations on the NE side of the Persian Gulf.

In connection with the biblical name Sabteca, von Wissmann and Höfner (1953:109) mention two places named Shabaka and Shubaika in the region of al-Ḥāḍina in Ḥaḍramaut, a journey of two days to the S of the ancient capital Shabwat (see SABTAH), at the W slope of the plateau of the Djōl. These localities are situated on the ancient trade route coming SE from the harbor QanaÕ via Maifa‹at and Ḥabbān and then continuing from here N to Shabwat. The names Shabaka and Shubaika are still unattested in the Old S Arabian inscriptions, and the area of these two places has not yet been investigated by archaeologists. It cannot, however, be entirely excluded that Shabaka might be related to Sabteca, all the more since the form of the name in the LXX, *Sabakatha,* corresponds exactly to an ancient *šbkt,* Shabakat. Philby (1939:338–39) has described the settlements Shubaika and Shabaka as consisting of fort-dwellings scattered among trees; Shabaka belongs to the Ahl Ḥumaiyir which is a diminutive form of Ḥimyar.

Already Glaser (1890:331) had written that the name of the Ethiopian Pharaoh Shabataka reminds one immediately of the Sabteca in the book of the Genesis. In fact, that biblical name has been compared to Shebitku or Shabataka (Gk *Sebichōs*), the name of the second ruler of the 25th ("Ethiopian") Dynasty of Egypt, who reigned about 702–690 B.C. and who, like his predecessor Shabaka (see SABTAH), perhaps because of his Cushitic name, is supposed to be mentioned among the sons of Cush (see Astour 1965:422–25; Yurko 1980:221–40). During the siege of Jerusalem by Sennacherib in 701 B.C., Shebitku was Pharaoh of Egypt to whom the Bible (2 Kgs 18:21; Isa 36:6) refers (his name, however, is not given). As a contemporary of Hezekiah, on the contrary, Shebitku's brother and successor Taharqo or Taharka (Heb *tirhāqâ*) is mentioned by name as "king of Cush" (2 Kgs 19:9; Isa 37:9), who at that time was commander of the Egyptian army in Palestine fighting against the Assyrians.

W. W. MÜLLER

SACHAR (PERSON) [Heb *śākār* (שָׂכָר)]. **1.** According to 1 Chr 11:35 Sachar the Hararite was the father of Ahiam, one of David's mighty men. In the parallel at 2 Sam 23:33 he is called Sharar the Hararite. It is difficult to decide which of the two forms is the more original; the likelihood of confusion of the letters *kap* and *reš* is very great, but it is not possible to tell in which direction the confusion might have gone. It is worth noting that the textual tradition in 1 Chronicles is much more unified than that of 2 Samuel 23 here. In 1 Chr 11:35 Gk B, along with a few mss, reads *achar* while the vast majority of Gk mss have *sachar.* In 2 Sam 23:33 several Heb mss have *šrd* instead of *šrr* while in Gk we find *arad* (A), *sacharō* (Lucianic mss), *arai* (B), *saraia* (MN). For Heb *hărārî* at 1 Chr 11:35, Gk ms S has *sararei,* but the others follow the Hebrew. At 2 Sam 23:33, for Heb *›arārî* the majority of Gk mss have *arathuritēs,* with the variants *arareitēs* (A) and *saraoureitēs* (B).

2. At 1 Chr 26:4 Sachar is mentioned as one of the gatekeepers of the temple. He is listed as the fourth son of Obed-edom. 1 Chr 26:15 tells us that in the casting of lots for the assignment of watches in the service of the house of the Lord, the S side fell to Obed-edom, and to his sons the storehouse.
STEPHEN PISANO

SACHIA (PERSON) [Heb *śākĕyâ* (שָׂכְיָה)]. A Benjaminite, whose father was Shaharaim and mother was Hodesh (1 Chr 8:10). The only occurrence of this name is in a Chronicler's list of Benjaminites. Many mss, supported by the LXX and Targums, read the more common *šibĕyâ* ("captivity" or "captive"). The same root is found in the dubious *śĕkîyâ* (ships?) in Isa 2:16.
TOM WAYNE WILLETT

SACKCLOTH. See DRESS AND ORNAMENTATION.

SACRAL KINGSHIP. An expression used by contemporary scholars to bring into focus the different aspects of the relationship "God–King–People" as it underlies the different monarchic systems of the ANE. "Sacral kingship" is not a biblical term, and its two elements would, at best, have ambiguous equivalents in the ANE. The word "sacred" (from a W Semitic base *qudš-*) had different values at the beginning and the end of the period during which the Hebrew Bible was composed. "Kingship" (Heb *malkût*) had roughly the same meaning in Israel as among the "other nations" when the Israelite monarchy was established (1 Sam 8:5, 20), but under the impact of the prophets its religious connotations changed (Hos 8:4; 13:10–11).

C. The Desacralization of Sacral Kingship in the Bible
1. In the Narratives
2. By the Prophets

———

A. Ancient Near East

With the development of sedentary civilization in the ANE, trade networks complexified and urbanization fostered social stratification. Kin-based social organizations were no longer fully effective for meeting the increasingly complex demands of urban and political development. Leadership passed on to certain officials responsible for military, economic, and civil administration. The invention of writing at the end of the 4th millennium B.C. gave rise to texts in which can be found the various titles of political leaders. The precise meanings of terms designating civil and political authorities are not always known.

1. Mesopotamia. The head of a Sumerian city in the first half of the 2d millennium B.C. bore the title *ensi.* The Sumerian word can be roughly translated "lord" (CAD 7:262–65); often, in relation to a god, it can refer to some sort of a *sangû,* "priest" (CAD 7:263b). Apparently the *ensi* was in charge of the land of the god of the city (Seux 1965). In addition to the *ensi* there was a set of notables, counselors, and sometimes a general assembly (Akk *puḫru*), although there is no indication that lesser dignitaries had the power to vote; they seemed to have gathered to approve the decisions of the "director" (Garelli 1974:182). In the absence of a system of suffrage, it seems inappropriate to speak of "primitive democracy"; Sumerian society was "democratic" only in the most general sense.

The strength and shrewdness of the *ensi* led him to be called a *lugal,* or "great man" (cf. 1 Sam 10:23). According to the Sumerian King List (*ANET,* 265), Etana, a member of the postdiluvian Kish dynasty, reigned as *lugal;* also, a *lugal* named Lugalzaggizi, king of Uruk, established an empire extending from the Persian Gulf to the Mediterranean Sea.

The Semitic equivalent of Sum *ensi* was *šarru.* At Mari, for example (which was under West Semitic influence), the term was applied not only to the rulers of Mari itself but also to various tribal heads (Anbar

1986). In time, the East Semitic *šarru* would be identified with the West Semitic *malku* (Heb *melek*), but earlier (e.g., at Ebla) there is a lexicographic problem. Even if *malku* (Sum *en*) was not a dynastic "king" but rather appointed for a limited time, he nevertheless ruled as a king (Gregoire 1981:385), and it was the *lugal* (Akk *šarru*) who acted as an official (cf. Heb *śar;* Charpin and Durand 1986). The word *mlk* prevailed at Ugarit and Phoenicia, and is attested as well in Aramaic and Hebrew documents. Even in Mesopotamia, the word *malku* was used not only for foreign kings but also for the kings of Assyria and Babylonia (CAD 10:168a), even though it seems to have been associated more with giving counsel and advice than with military activity; indeed, a *māliku* was a counselor (CAD 10:162b).

In mesopotamian cities a ruler might also be a priest. Rulers bearing the Akk titles *išakku* (Sum *ensi*), *šarru* (Sum *lugal*), and *malku* could receive the Sumerian title of priestly office *sangû.* A priest-king was "pure" or "sacred" (Akk *ellu*) and "august" (Akk *ṣiru;* Seux 1967:287; van Driel 1969:80; *AHW* 1163b; *RLA* 6:169). As such, he was not a cult specialist but rather a possessor of special gifts from the national and dynastic god. From the god he received scepter, crown, throne, and royal staff (*RLA* 6:167). He also received his name *(nibitu)* from the gods. He might be said to have been created by them, or even fashioned by them in the womb of his mother (Labat 1939:58). He is not only the "servant" of a divinity (Seux 1967:360–62), but also "vicar" (*išakku,* very often), messenger, and even "son" of a divinity (*RLA* 6:170). (These expressions have no precise dogmatic significance; anyone might be said to be a "son" of a god, and the title seems to have become obsolete in the 1st millennium B.C.)

The names of kings of the Akkad dynasty (ca. 2300 B.C.), of the Ur III dynasty, and of some members of the 1st dynasty of Babylon prior to Hammurabi are written in cuneiform with the divine determinative. In plastic representations, kings are sometimes depicted wearing the horned helmet, a symbol of deity. But there were many types of gods in the polytheistic world of Mesopotamia, and the practice of divine determination of royal names disappeared during the 2d millennium B.C. In Ebla, in the Hittite empire, and in the Ugaritic kingdom kings were not deified until after their deaths (Archi 1986:215; Gurney in Hooke 1958:115; del Olmo 1987:48–50; Xella 1981:288–91; *KTU* 1:113).

According to what we know about Babylonian cultural influence in the West Semitic area during the 2d millennium B.C., it is not surprising that Ugaritic and Canaanite kingship also exhibited a sacral character. The king, who was "just and fair," participated not only in administrative affairs but also in cultic rites (*DBSup* 9:1335). Tabnit, king of Sidon, and his father are said to have been "priests of Ashtart" (*KAI* 13:1–2).

2. Egypt. Canaan and Israel were confronted with another type of sacral kingship, that of pharaonic Egypt. Etymologically, "Pharaoh" (Eg *Pr-ᶜ3*) was an administrative title meaning "great house," the palace where the king (Eg *neswt*) of Upper and Lower Egypt lived. In Egyptian texts, "pharaoh" is not used metonymically of the king before the 1st millennium B.C. The king of Egypt possessed additional names which revealed his relationship with the gods. He is one of the two deities (of Upper and Lower Egypt), the living Horus, the son of Re, and priest in all temples of the country. With respect to Egypt, we can speak not only of sacral kingship but of divine kingship (Frankfort 1948). The teaching of Sehetep-ib-Re (*ANET,* 431) is one of the most eloquent and concise statements on the topic. In Egypt, concepts of the divine were rich and complex (Posener 1960), and any simplistic schematization of divine kingship is vitiated by the evidence. In addition, the relative cultural influence of Mesopotamia and Egypt on Israel is impossible to measure in any comparative sense.

B. Monarchic Israel

Kingship was established in Israel ostensibly according to the pattern found in other nations (1 Sam 8:5–20). The king was the military chief and primary decision maker *(špṭ),* enjoying the benefits of the "way of the king" enumerated in 1 Sam 8:10–17 (Mendelsohn 1965). But what can we say about the "sacral" character of the Saul-David-Solomon monarchy?

The institution of human (i.e., political) kingship was understood to have been granted by Yahweh, the god of Israel, who himself had previously been considered Israel's "king" (see Judg 8:22–23), but the prophetic and Deuteronomic redactors of these traditions were not fully favorable toward the institution of kingship. Paying great attention to the fidelity of the biblical authors in the premonarchic Israelite

tradition, a number of scholars have denied the "sacral," much less the "divine," character of the Israelite monarchy (Irwin in Frankfort 1948:337–44; de Fraine 1954; Bernhardt 1961). Others hold that Israelite kingship was sacral in character from the beginning of the monarchy (Mowinckel 1922; 1956; Hooke 1933; Bentzen 1955; Johnson 1955; for complete bibliography, see Cazelles 1984:1065–66). See also KING AND KINGSHIP. Hooke became gradually more cautious (compare 1958 with 1933), and de Vaux insisted that the data requires a more-balanced resolution of the problem (*AncIsr* 1:175), concluding that "the king, consecrated by anointment and adopted by YHWH, is a sacred personality and consequently entitled to religious office" (p. 174). The two issues that are important for us to consider are (1) the role the king played in the religious cult according to the historical narratives, and (2) the prophetic and Deuteronomistic response to this role.

The king is the "anointed of the God of Jacob" (2 Sam 23:1) or the one "anointed" by Yahweh. On this concept, see CHRIST; KING AND KINGSHIP. In the ancient Orient, unction is a sign of dependency: an emancipated slave toward his master, a bride toward her father-in-law, a Syrian prince toward the Pharaoh (EA 51:5–6; cf. Cazelles 1978:68–71 and notes). The king is "elected" *(bḥr)* by the national God (1 Sam 16:9; cf. 9:15ff.; Ps 78:70). Solomon is called *Jedidiah*, "beloved of YHWH" (2 Sam 12:25), just as Naram-sin was the beloved of Sin, and Rameses II the beloved of Amon. The king is the servant of the national God (2 Sam 7:19; cf. v 5; Pss 18:1—Eng title; 36:1—Eng title; 89:4—Eng v 3; Zech 3:8) as had been the kings of Mesopotamia (Seux 1967:360–63), the Pharaoh (Eg *hm.f:* his servant), King Keret in Ugarit (*KTU* 1.14 III 49 = *ANET,* 144, line 153), and Azitawadda in Karatepe (*ANET,* 653).

Infrequently in the historical books (2 Sam 7:14), but more clearly in the Psalms (2:7; 89:27–28—Eng vv 26–27; cf. Ps 110:3), the king is considered to be "the son" of God. The Bible, however, has no developed concept of theogamy (as in Egypt; Brunner 1964), nor allusion to suckling by goddesses (as in Ugarit), or fashioning in the womb of the mother (as in Mesopotamia). In the texts of Psalms 2 and 110 the divine sonship of the king is expressed in a context of rites of royal investiture (110:1) and accession (Heb *hayyôm* "today" [Ps 2:7]). This type of sonship has been called an "adoptive" sonship (de Boer 1955); in other words, it is not by birth but by accession to kingship that the king shares the duties of the national God as savior and ruler. He sits at the divine "right hand" (Ps 110:1). He is endowed with supernatural power: not the symbolic crowns as in Egypt (even if he was crowned: 2 Sam 1:10; 2 Kgs 11:21; Jer 13:18) but the Spirit *(ruaḥ)* of YHWH, either directly bestowed (1 Sam 11:6, 14; 2 Sam 23:2) or obtained by the mediation of prophets (1 Sam 10:10; 16:13). Unction in the ancient Orient was a gift of health and strength; *ruaḥ* is life (in a Ugaritic text) and wonderful strength (Samson in Judg 14:6, 19; 15:4).

Although the biblical authors appear to have understood intimations of divine sonship as evidence of a king's legitimacy, it is possible that earlier in the monarchy the official ideology of the royal court construed the metaphor more literally. Pss 2:7 (in its syntax) and 110:3 (in the text itself) disclose a recasting of older sentences. The Anointed of YHWH is a consecrated man. People are forbidden to touch him (1 Sam 24:7, 11; 26:9, 11, 23; 2 Sam 1:14, 16). A woman of Tekoa regards him as a *mal›ak* ("messenger," but also "angel") of God (2 Sam 14:17–20). He was recognized as possessing "divine wisdom" (1 Kgs 3:28), and very probably was himself called *›elohîm* ("God") in Ps 45:7–8—Eng vv 6–7 (on this passage, see KING AND KINGSHIP). In Prov 16:10 the sentence given by the king is called an "oracle" (Heb *qesem*). In Lam 4:20 the anointed of YHWH (as in Egypt) is said to be "the breath of life" of the people protected under his shadow. When he is crowned and receives the scepter he receives a new name, and in Isa 9:5 one of those names is *›el gibbôr,* "God hero."

Elected by the national God, the king is mediator between God and his people. He must pray for the people and their welfare (1 Kings 8) and offer holocausts and sacrifices *(šelâmîm)* so as to protect the country from plagues whenever the people (1 Sam 14:33), he himself (2 Sam 24:25), or any of his predecessors (2 Sam 21:14) have sinned. Even if he does not perform the slaughtering himself, he is nevertheless the one who commissions it. This was the role of, for example, Saul at Gilgal (1 Sam 13:9–10), David at Jerusalem after the transfer of the Ark to the new capital (2 Sam 6:13, 18), and Solomon after his accession (1 Kgs 8:5, 62–64) and at the three great feasts of the year (1 Kgs 9:25). He "mounts

the steps" of the altar (1 Kgs 12:33; 2 Kgs 16:12), and he blesses the people in the name of the Lord after the installation of the ark (2 Sam 6:18) and the dedication of the Temple (1 Kgs 8:56). David danced before YHWH during the transfer of the ark (2 Sam 6:14).

Like the Pharaoh, an Israelite king builds temples (2 Sam 7:2–3; 1 Kings 6), changes the cultic rules (2 Kgs 16:12–18; cf. 1 Kgs 12:31–33), selects priests (Heb *kōhănîm*) for the cultic service (2 Sam 8:18; 1 Kgs 12:31) and is able to remove them (1 Kgs 2:27). According to Ps 110:4, a king's enthronement invested him not only as king but also as priest (Heb *kōhēn;* priestly titles were likewise given to the kings of Egypt, Mesopotamia, and Phoenicia). Although Psalm 110:4 mentions only a royal priesthood ("after the order of Melchizedek") and not the specific levitical priesthood (as defined in the Pentateuch), the Israelite kings' activities with respect to religious and cultic affairs justify the assumption that they legitimately bore the title "priest." Some scholars (even those who would date Psalm 110 late) still regard the psalm to be more "royal" than "messianic."

C. The Desacralization of Sacred Kingship in Israel

1. In the Narratives. 1 Samuel 8–10 recounts opposition to an Israelite kingship patterned after that of other nations. It is possible that Saul's opponents (1 Sam 10:27) are more politically than religiously motivated. The privileges of the king are described in 8:10–18 as an arbitrary oppression of the people. The bestowal of the divine spirit on Saul produces manifestations similar to those found among the ecstatic prophets (1 Sam 10:10–13).

The long narrative of David's succession is intended to demythologize the king's succession, especially with regard to the sexual potency of the king (1 Kgs 1:1–4; 2 Sam 16:21–22), the value of the king's political wisdom (2 Sam 13:3; 14:2; 15:35; 20:16), and his ability to practice justice (2 Sam 15:3–4). Even the praise of Solomonic wisdom in matters pertaining to judgment, politics, and sacred architecture conclude (1 Kings 11) with sharp criticism.

2. By the Prophets. In biblical narrative are found prophetic interventions against the king: Nathan against David's adultery (2 Samuel 12), Gad against his census (2 Samuel 24), Ahijah of Shiloh against Solomon (1 Kings 11) and afterwards against Jeroboam (1 Kings 14), Shemaiah against Rehoboam's war with Israel (1 Kgs 12:24). The Elijah-Elisha cycles (1 Kings 17–2 Kings 2), even when they retain old features reflecting the sacrosanct quality of kings (1 Kgs 18:46), criticize the decisions made by the kings. The kings are condemned for being unfaithful to YHWH, the national God, and for travesties of justice (e.g., Naboth in 1 Kings 21). In short, kings do not save Israel; the word of YHWH is given to (and by) the *prophets*, who are the only reliable counselors of the kings.

As far as Hosea is concerned, there is no sacral kingship in N Israel. The kings are victims of the court (7:3–7). The Israelites "set up kings without my consent" (8:4). They say: "We have no king because we didn't revere YHWH; but even if we had a king, what could he do for us?" (10:3). And comes the word of God: "Where is your king that he may save you? Where are your rulers in all your towns of whom you said: 'Give me a king and princes'? So in my anger I gave you a king, and in my wrath I took him away" (13:10–11). At the same time, in Bethel, Amos had condemned the "house of Jeroboam" (7:9, 11).

In Judah, the S kingdom, the prophets Micah and Isaiah are less critical of kingship as an institution, largely because of their faith in the election of the house of David, a Bethlehemite and thus a southerner (Mic 5:1; Isa 9:6). But these prophets show no special recognition of the sacral character of kingship. Micah does not apply the title "king" to the ruler coming from Bethlehem. In the text as it stands, Isaiah criticizes the unfaithfulness of Ahaz (Isa 7:13) and the reluctance of Hezekiah to correct the injustices committed by the judges (10:1–4); he also criticizes the stubbornness of the king's "sages" (29:14). A century later Jeremiah not only condemned the sages (Jer 8:8–9) and the government in Jerusalem, as had Micah (Jer 26:17–19; cf. Mic 3:9–12), but also the kings who didn't change (as Hezekiah had done; Jer 22:10–30). The name "YHWH our justice" (23:6) will be no more given to the king but to the city (Jer 33:16).

The Deuteronomic movement further diminished regard for the sacral character of kingship. The law of the king in Deut 17:17–20 subordinates the king, "a brother" (vv 15, 20), to the Law; as such, he is himself subject to the Levites and the prophets. In the Deuteronomistic history (esp. 1–2 Kings) the king

is never called "Messiah." In fact, the Davidic promises are made to a "prince" (Heb *nāsî;* Ezek 34:34; 37:25; cf. Ezra 1:8). From the time of Ezekiel on, the "prince" is distinguished from the "priest," and only the latter retains a sacral character.

HENRI CAZELLES

SACRED MARRIAGE. The term "sacred marriage" is a translation of the Gk term *hieros gamos,* which originally referred to the marriage between Zeus and Hera. It is nowadays applied to marriage or sexual union between a god and a goddess, in ancient or primitive religions, an act which is usually connected with some form of fertility cult. The present discussion will include the phenomenon of sacred marriage in ancient Mesopotamian religions, and the question of whether or not it was consummated between a god and a goddess, or between a human pair representing a god and a goddess, having some form of relation to the cult.

A. The Sacred Marriage Rite in Sumerian Religion (ca. 2700–1800 B.C.E.)

1. Sources. The sacred marriage rite in Sumerian religion and mythology almost exclusively revolves around the goddess Inanna (Akk *Ištar;* Semitic *ʿAṯtar;* Heb *ʿAštōret*) and her divine spouse Dumuzi (Akk *Duʾūzu;* Heb *Tammūz*). Information as to the relationship between these two deities is furnished mainly by three groups of literary sources: (1) cultic love-songs and royal hymns, describing the love, courtship, and marriage between Dumuzi and Inanna; (2) Sumerian (and some Akkadian) mythological compositions, describing Dumuzi's rejection by Inanna, his death and descent to the netherworld; and (3) dirges and laments bewailing Dumuzi's tragic death. For the reconstruction of the sacred marriage rite, it is the love-songs and the royal hymns which provide the most pertinent information (Sefati 1985).

2. Origins. Direct evidence for the sacred marriage in Sumer can be found only in the Ur III and Old Babylonian (OB) literary texts. Sumerian epic literature, however, attributes statements concerning the performance of the sacred marriage rite with Inanna, already to Enmerkar, the second king of the First Dynasty of Erech (Berlin 1979:40, 58). Furthermore, the god Dumuzi, who is the central male figure in the sacred marriage rite, seems to be either the deified shepherd-king Dumuzi who, according to the Sumerian King List, ruled over Bad-Tibira, in the Early Dynastic (ED) period, or the deified fisherman, his namesake, who ruled over Erech three generations after Enmerkar (or perhaps a mixture of these two ancient royal figures; cf. Heimpel 1972:290–91). Hence, it is quite possible that the sacred marriage rite originated in ED (or even prehistoric) Uruk, where it was customary for the priestly-king (EN) to marry the city-goddess, Inanna, the Sumerian goddess of love and fertility. However, it is not clear whether the sacred marriage, in this early period, was consummated only symbolically or, as in later periods, was performed carnally with a priestess representing the goddess (Falkenstein 1954:41–45; Kramer 1969a: 57–62; *RLA* 4:257–58). Later, in Sumerian mythology, Dumuzi was identified with the god Amaushumgalanna, becoming a fertility god, conceived as the power of growth in vegetation and animal life (cf. Jacobsen 1970:74–82), and his human origin was forgotten (or ignored). However, several facts still attest to his origin: throughout the history of Sumerian religion, Dumuzi appears as a passive, minor deity, a shepherd-king always inferior to his mate, Inanna, who chose him to be her husband. Furthermore, all the kings of the Third Dynasty of Ur and the Isin Dynasty impersonate him in the sacred marriage rite. Finally, in contrast to his central role in the literary sources related to the sacred marriage, his actual worship in Sumerian cult was rather limited; and by the late 2d millennium, his role in the sacred marriage rite was altogether forgotten (see below). His female counterpart, Inanna/Ishtar, on the other hand, not only kept her prominent position in the Mesopotamian pantheon but, toward the 1st millennium, was even promoted to the status of the divine consort of An, the heaven god, in Uruk; whereas in Babylon she became the mistress of the chief god, Marduk, with her cult having spread to many important Mesopotamian religious centers.

3. The Nature and History of the Ritual. In the Ur III and Early OB periods (ca. 2100–1800 B.C.E.), the performance of the sacred marriage was a royal prerogative: throughout these periods, the king used to represent Dumuzi/Amaushumgalanna in the sacred marriage rite. To the king's central role in this rite attest not only the numerous references in the royal inscriptions and royal hymns to him as the "beloved spouse of Inanna" (Hallo 1957:140–41; Römer 1965:147–48; Klein 1981:49 n. 112); but also a number of royal hymns, devoted wholly or partly to the description of the sacred marriage ceremony (see below). Furthermore, some Dumuzi laments list the Ur III and Isin kings as Dumuzi figures, beside other deities of Inanna's circle (Jacobsen 1975:67, 90–93).

The identity of the female partner in the sacred marriage rite is still a mystery, although it is generally assumed that she was a priestess (cf. Bottéro 1983:215). The possible candidates could be the NU-GIG (hierodule), the LUKUR (concubine, *RLA* 4:256), the NIN-DINGIR ("the divine lady," Hallo 1987:49), or the EN (high priestess, Frayne 1985:12–22). Since the female partner in the sacred marriage rite is consistently referred to as the goddess Inanna, it is not impossible that the goddess in the sacred marriage rite was represented merely by her statue, and the whole ceremony was performed only symbolically. According to the Old and Neo-Sumerian Lagash inscriptions, this particular form of sacred marriage was not celebrated in Lagash. Hence, it may be assumed that the kings of the Third Dynasty of Ur, and most probably Shulgi himself (ca. 2094–2047 B.C.E.), borrowed this cultic practice directly from the Uruk tradition, among other religious and political ideas and institutions. The Ur III kings apparently celebrated their sacred marriage with Inanna in Uruk, the original cult center of the goddess. This follows from a Shulgi hymn, describing the pilgrimage of the king to Inanna of Uruk, perhaps on the occasion of his coronation. Inanna, upon seeing Shulgi dressed in his ceremonial priestly garment and carrying with him sacrificial animals, utters a sumptuous love song, in which she recalls or anticipates the physical pleasures of her sacred union with the king, and subsequently blesses him (lit. "decrees his fate"). In her blessing, she promises him support in battle and administration, and declares him suitable for all prerogatives of kingship (cf. van Dijk 1954:83–88; Klein 1981:124–66). In another Shulgi hymn, Inanna complains about the total absence of vegetation, whereupon Shulgi invites her to his fields, gardens, and orchards, to fructify them in some way (cf. Kramer 1969b: 18–23). Another Ur III king who is the subject of three love-dialogues (Sum BAL-BAL-E) is Shusin, the grandson of Shulgi (*ANET,* 496; Kramer 1969a: 92–95). Although the female protagonists in these love songs are LUKUR-priestesses, according to their subscripts these hymns are dedicated to the goddesses Inanna and Baba of Lagash. Hence, no doubt, these hymns were sung in the sacred marriage rite. As to the kings of the Isin Dynasty, these seem to have celebrated the sacred marriage in their capital with a priestess representing the city-goddess Ninisinna, whom they identified with Inanna. This follows from a royal hymn, which gives a detailed description of the sacred union between king Iddindagan (ca. 1974–1954 B.C.E.) and Inanna-Ninisinna on New Year's day. The New Year celebrations in Isin, according to this hymn, involved the following major events: various priests and cultic personnel pass before Inanna and pay homage to her; the cult-places and the roofs are purified; incense is burned, and animal and food offerings are presented there (probably at night, when the goddess is visible as the Venus star); a bed is set up for the goddess and she bathes for the ritual; the king goes to the goddess and they unite on the bed. After the sacred union the people enter the Egalmaḫ temple with their incense and food offerings, and the ceremony ends with a joyful banquet, sponsored by the king in honor of the goddess (Römer 1965:128–49; Reisman 1973:185–97). The only other Isin king who is referred to in a fertility prayer, dedicated to Inanna, is Ishmedagan (ca. 1953–1935 B.C.E.). In this prayer, Inanna is asked to bless the stalls and sheepfolds with fertility and abundance for the sake of the king, as well as to grant the king, her spouse, a long life. A duplicate of this prayer substitutes the name of Dumuzi-Amaushumgalanna for Ishmedagan, which shows that the same hymn could be used in connection with a number of kings who represented Dumuzi in the sacred marriage (Römer 1965:21–22; Hallo 1966:244–45). In another royal hymn, dedicated to an anonymous king, Ninshubur, Inanna's maiden, leads the royal bridegroom to Inanna's bosom and he requests the goddess to bless him with long life, a stable kingship, and fertility for his land (Kramer 1963:501–3; 1969a: 81–84; *ANET,* 640–41). From these and other Dumuzi-Inanna love songs, we can reconstruct an approximate procedure for the Neo-Sumerian sacred marriage rite: priests and other cultic personnel (such as, e.g., transvestites and musicians) pass and do homage before Inanna, and offerings and gifts for the (later) banquet are brought. A (canopied) dais is erected for the goddess in the temple (more specifically in the *giparu,* an ancient storehouse, which later became the residence of the high priestess), and a bed, covered with halfa grass and other greenery is set up for her therein. Inanna then bathes and anoints herself. The king, impersonating Dumuzi/Amaushumgalanna, is led to her dais or chamber, carrying with him customary marriage gifts (NÍG-MU^{10}-ÚS-SÁ). Inanna opens the door for him, he enters, and the holy nuptials take place. Thereafter, the goddess decrees a good fate for the king and the land. The ceremony ends with a

banquet, wherein the king and the goddess sit together, and the goddess is celebrated in hymns accompanied with sacred music.

4. Frequency and Purpose of the Ritual. Earlier it was generally held that the sacred marriage was celebrated in Sumer annually, during the New Year festival, and its primary purpose was to guarantee abundance and fertility in nature and human society for the coming year. According to this hypothesis, the divine pair itself became the power of fertility in nature, and the sexual union between them was believed to have produced new life and prosperity everywhere (cf. Labat 1939:163–65, 247–49; Frankfort 1948:286–99; Kramer 1969a: 49–84). This hypothesis has been recently questioned on the grounds that, apart from the Inanna-Iddindagan hymn from Isin, no source mentions New Year's eve as the date of the ritual, and the blessings put in the mouth of the goddess in the various sources include not only the fertility theme, but also the themes of long life and a firm reign for the royal bridegroom. Accordingly, some scholars assume that the main purpose of the sacred marriage rite was the legitimation and deification of the Sumerian king, and hence the ritual took place usually on the day of his coronation (*RLA* 4:256–57). Still another opinion holds that at least on the real (if not the symbolic) level, the sacred marriage in its classical phase served to engender the crown prince, who thereby was assured of divine parentage (J. Klein in Durand, ed. 1987:97–106). According to a recent hypothesis, the sacred marriage was consummated between the king, in his role as an EN-priest, and an EN-priestess of Inanna, both of whom impersonated the divine couple of the Sumerian city. The occasion for the celebration of the ritual, according to this opinion, was the installation of the priestess in her office, and its main purpose was the promotion of fertility (Frayne 1985:12–22). In conclusion, it should be pointed out that the overwhelming stress and main concern, both of the Dumuzi-Inanna love songs and the Dumuzi laments, is the theme of fertility. Accordingly, the main purpose of the sacred marriage rite in Sumerian religion must have been to assure fertility for the land. Since the only date ever alluded to in the literary texts dealing with this ritual is New Year's day, it is this date on which this ritual most probably took place.

5. Vestiges of the Cult of Dumuzi in the Post-Sumerian Period. Up to the OB period, Dumuzi had two temples where he was worshipped as a minor deity: one in Girsu and another in Bad-tibira. Surprisingly, there is no indication that the sacred marriage rite was practiced in any of these two cultic centers. The sources point only to Uruk and Isin, as the loci, where this rite was performed. After the OB period (i.e., from ca. 1800 B.C.E. to 100 C.E.) the Dumuzi-Inanna sacred marriage rite was apparently abandoned, and Dumuzi lost the character of the young bridegroom and god of fertility, in parallel to the decline of the institution of divine kingship. From now on, Dumuzi is only Inanna's tragic husband, killed and carried down to the netherworld by its "bailiffs," as a substitute for the goddess (for this motif, see the epilogue of "Ishtar's Descent to the Netherworld"; *ANET:* 52–57). Whereas Dumuzi's official cult fell into oblivion, his death continued to be mourned annually in the fourth month (i.e., the month of Du›ūzu/Tammuz), or in the fifth month, throughout the 2d and 1st millennia. The absence of any temples of Dumuzi in this period, as well as Ezekiel's reference to the "women bewailing Tammuz" in the Temple (Ezek 8:14), suggest that in the late periods the mourning of Dumuzi/Tammuz was an unofficial, popular cult practiced mainly by women and perhaps also by GALA-cantors (Kutscher 1990:41–44).

B. The Sacred Marriage Rite in Babylonian and Assyrian Religion (ca. 1800 B.C.E.–100 C.E.)

1. Nature and Origins. Parallel to the Dumuzi-Inanna type of sacred marriage, there seems to have existed another type of sacred marriage in Sumer, namely one which was conceived as having taken place between deities only, and did not involve human protagonists. This type of ritual seems to have been practiced already in the cult of Lagash, since its ruler, Gudea (ca. 2143–2124 B.C.E.), refers in his inscriptions to customary "marriage gifts" (NÍG-MU^{10}-ÚS-SÁ), presented on "New Year's day during the Festival of Baba," (Stat E 5:1–6:4; G 5:5–6:19; cf. Lambert and Tournay 1952:82–83). Similarly, the Ḫendursanga Hymn praises Nindara of Lagash for presenting the "marriage gifts" to his wife Nanshe "every New Moon and New Year's day" in her temple (cf. Edzard and Wilcke 1976:144–47). This type of sacred marriage was presumably performed in a symbolical way, such as, e.g., by bringing the god's statue into the "bedchamber" of the goddess. It was probably practiced in other cultic centers also, from times immemorial, ever since the gods were thought of as anthropomorphic figures, and its purpose was

likewise to secure prosperity and fertility for the land during the ensuing year. It is this type of sacred marriage that survived and continued to be practiced after the Isin-Larsa period, when the Dumuzi-Inanna type of sacred marriage was totally abandoned.

2. Allusions to the Sacred Marriage in the 2d Millennium B.C.E. The only source explicitly dealing with the sacred marriage (Akk *ḫašādu*) in the OB period, is a divine love-song from the time of Abiešuḫ, king of Babylon (ca. 1711–1684 B.C.E.). It contains a love dialogue between Nanaya of Babylon/Uruk and her lover, Mu'ati (a divine figure of the Tammuz type), in which Nanaya is requested to bless king Abiešuḫ with a long life. The poem also quotes the actual blessing, which the goddess granted the king and his city, Babylon (Lambert 1966:12–41). An entirely different source which also seems to be related to the sacred marriage, is a Middle Babylonian ritual text from Emar (modern Meskene, a recently excavated Syrian city), which describes the consecration of an *entu* priestess to the storm god, Ishkur. During the ceremony, the priestess is given a bridal hairdo and lies down on a bed, which indicates that we are dealing here with her marriage to the deity (Arnaud 1986:1.100–101; 1986:3.326–27). This unique ritual, attested in a West Semitic milieu, recalls the relationship of the *entu*-priestess of Ur to the moon god Nanna, during the Old and Neo-Sumerian periods.

3. Allusions to the Sacred Marriage in the 1st Millennium B.C.E. There is a Neo-Assyrian catalogue, from the beginning of the 1st millennium, furnishing the incipits of about 275 Sumerian and Akkadian love songs, divided into a number of groups, with each group provided with a generic subscript. Two groups of these incipits, subsumed under the generic terms *rē'î rē'î* ("My Shepherd, My Shepherd") and *māruma rā'imni* ("The Little One, Our Lover"), are explicitly concerned with love between Ishtar and "the shepherd" Dumuzi. However, it is not clear what purpose these Akkadian songs served, and hitherto only one of them, entitled "Come in, Shepherd, Ishtar's Lover!" was found inscribed on a tablet, dated approximately to the Middle Babylonian period. In this poem, which resembles the earlier Sumerian Dumuzi-Inanna songs, Ishtar invites Dumuzi to spend the night with her in her parents' house, and later she visits Dumuzi in his sheepfold (Black 1983; cf. Loretz 1964:191–203). Sporadic references to actual practices of sacred marriage within the temple cult in this period can be found mainly in ritual texts and texts of historical nature. These references, however, are usually laconic and quite obscure. There are direct and indirect references in Neo-Assyrian texts to a periodical sacred marriage between Nabu (the tutelary deity of Borsippa) and his spouse Tashmetu, on the third day of Addaru. There is also a liturgical calendar, which describes how Nabu, "in status of a bridegroom (Akk *ša ḫadaššūtu*)," was led to Nanaya of Babylon, his divine mistress, in order to perform with her a six-day sacred-marriage ritual. As to the sacred marriage between Marduk and Ṣarpanitu, Ashurbanipal, king of Ashur, tells in one of his inscriptions that during his restoration of Babylon he fashioned a luxurious bed for Bel and Beltiya, "to perform (their) marriage and make love," and that this bed was set up in the Kaḫilisu, the residence of Ṣarpanitu (Matsushima 1988:99–100). From another text describing the material and the size of this bed we learn that, during the sacred marriage, the goddess was expected to intercede for the king, her protégé, before her husband, and the divine couple was expected to bless the king with long life and firm kingship (Matsushima 1988:107–108). A most peculiar source, connected only indirectly with the sacred marriage rite, is a late ritual-tablet of Ishtar of Babylon, containing a liturgical "Love Song," which was used in the context of "rites against a rival mistress" (Akk *qinayyātu;* cf. Lambert 1975a). It contains a discourse between Marduk, his wife Ṣarpanitu, and his mistress-lover Ishtar of Babylon, with whom Marduk makes love and betrays his "lawful" wife (cf. Edzard 1987). Finally, there are ritual texts from Uruk, from the Seleucid period (Thureau-Dangin 1921:61–125) which describe, among others, the New Year festival *(akitu)* during the first eleven days of Tishre. These texts indicate that the "sacred marriage rites" (Akk *parṣē ḫašādu*), whose main protagonists were Anu and his wife Antum, were an integral part of the *Akitu*/New Year festival of Tishre (for further details as to the sacred marriage rite according to Akkadian sources, see Matsushima 1985; 1987; 1988).

C. Other Fertility Cults in the Ancient Near East

Some students of religion and anthropology believe that there was a common fertility cult in the ANE which included (1) the worship of a Great Mother goddess, who was the personification of fertility, and

(2) the worship of a young god, her spouse, who was believed to have died and resurrected, embodying the yearly growth of vegetation, which whithers away in the summer and reappears again in the winter or in springtime. These mythological beliefs and cultic practices were assumed to have been shared by all peoples of the ANE, with local variations of minor importance, and traces of them were deemed to be found in the Bible. According to this theory, the dying god Dumuzi/Tammuz, who is lamented by his spouse Inanna/Ishtar, and semiannually resurrects, is to be identified with the Syrian Adonis, the Egyptian Osiris, and the Ugaritic Baal (cf. Pope in *IDB* 2:265). Recent scholarship, however, based on a more sound philological approach and a more careful methodology, rejects these identifications as superficial and misleading. It is becoming evident that the ancient cultures and religions do not follow a common pattern, as it was formerly assumed, but greatly differ from each other. In any case, it is not clear whether the Mesopotamian Ishtar can be characterized as a "mother goddess"; and since the Dumuzi/Inanna type of fertility cult was abandoned after 1800 B.C.E., this cult could not have exerted any significant influence on Western or biblical religion. Accordingly, careful distinction should be drawn between Mesopotamian fertility cult on the one hand, and seemingly similar cultic phenomena in other ANE cultures (cf. *RLA* 4:253–55).

SACRED MEALS (GRECO-ROMAN). See MEAL CUSTOMS (GRECO-ROMAN SACRED MEALS).

SACRED STONE. The "sacred stone which fell from the sky" (Acts 19:35) was an object of worship in the temple of Artemis at Ephesus. The Greek is one word, *diopetēs,* lit. "fallen from the sky," and the meaning of the passage is therefore somewhat obscure. It probably refers to a meteorite to which the Ephesian worshippers of Artemis attached significance and which they worshipped in their temple.

Although no ancient source mentions such a meteor in the Artemis temple at Ephesus (Munck *Acts* AB, 196), meteorites were often venerated by the Greeks and Romans. A meteorite which had been brought to Rome from Pessinus was worshipped as a symbol of the Great Mother, Cybele (Lake and Cadbury 1979:250), and a meteorite called the Palladium was venerated at Troy (ibid.). Meteorites are attested as part of the Artemis cult itself, as one was present in the temple of Artemis at Tauris (Eur. *IT* 87, 1384).

The reference in Acts 19 is in the speech of the "town clerk" of Ephesus in his calming of a crowd which threatens to riot against Paul. The clerk argues that Paul is not offending Artemis when he denounces images "made with hands" (Acts 19:26). As a meteorite, the Artemis sacred stone was not man-made, but could claim superhuman workmanship (Williams *Acts* BHNTC, 224). In addition, the meteor need not have been viewed as an *image* of Artemis; the meteorite in the temple of Cybele at Rome was actually a quite small stone (Gk *baitylos;* Lake and Cadbury 1979:250).

SACRIFICE AND SACRIFICIAL OFFERINGS. This entry consists of two articles: the first surveys the Israelite practices of sacrificial offerings as outlined in the OT, and the second focuses upon how those sacrificial practices were understood and adapted in the NT writings.

OLD TESTAMENT

The main biblical references to cultic sacrifice are found in the Priestly (P) section of the Pentateuch, especially in Leviticus and Numbers. This cultic practice was also the subject of harsh prophetic critique.

A. The Problem of Sacrifice

1. General Concerns. The concept of sacrifice is at the root of both Christian and Jewish tradition. Though neither religion practices animal sacrifice any longer, the legacy of those practices perdures. Yet this legacy is not always so easy to understand, for the two traditions have been both attracted to and repelled by the image of slain animals being offered up within the sacred precincts of the holy temple. There is perhaps no better reflection of this ambiguity than the work of M. Maimonides (1135–1204). On the one hand, Maimonides was an assiduous systematizer of every detail of the sacrificial system as it was reflected in Jewish tradition. In his *Mishneh Torah,* Maimonides organized all the legal decisions that had accumulated rather haphazardly about sacrifice in biblical and rabbinic literature. No other compiler of Jewish law gave sacrifice this type of attention. Yet in his *Guide for the Perplexed,* Maimonides speaks discursively about the sacrificial system, nearly condemning it. In his evaluation he cites the standard prophetic critique of sacrificial worship (1 Sam 15:22; Isa 1:11; Jer 7:22–23) and says that sacrificial worship was never God's primary desire for humankind (Twersky 1972:332–34). The laws were given to Moses because the people needed them to counteract the attractions of contemporary paganism.

Scholars have long been perplexed over this double-mindedness on the part of Maimonides. Yet his perplexity strikes at the very root of what most modern readers of the Bible at least implicitly believe about the sacrificial system. On the one hand there is the feeling of responsibility toward the sacrificial material in the Bible—it must be organized, systematized, and understood—yet on the other hand there is the constant uncertainty as to its true religious significance. This uncertainty was very nicely summarized by Origen in a remark he made in a homily on the book of Numbers (*Homilia* 27). He noted that if you took a person whom you wished to instruct in the fundamentals of piety and faith and proceeded to instruct him in the laws of sacrifice, he would turn away from such teaching and react as one "who refuses food that is not fitting *(et tanquam non sibi aptum cibum recusat).*" Sacrificial practice remains a foreign and obtrusive element to the present-day interpreter. This problem is compounded by the fact that sacrificial practice constitutes a good portion of the Torah, the first five books of the Bible. Even more telling is its redactional placement; it is at the very heart of the Sinaitic legislation (Leviticus 1–9 *et passim*). Unlike other oddities of the biblical narrative that can be avoided because of their infrequency, the large corpus of sacrificial lore demands the interpreter's attention.

For many students of the Bible, the motif of sacrifice finds religious value in its symbolic role: the act of animal sacrifice is understood to reflect *the bond* between God and humanity. But such a general observation of symbolic value fails to satisfy. One wishes to know more concretely why *animal* sacrifice? Could not the bond between humankind and God be represented in another ritual form?

2. Social Science Explanations. The mystery of sacrificial practice also troubled early anthropologists and prompted the opening of a whole new era of comparative research. The problem with the earliest theorists is that they often desired to account for this particular cultic practice, and religion in general, in severely reductionistic, evolutionary models. Indeed, a strong undercurrent in the thinking of one such theorist, Sir Edward Tylor (1871), was to expose the false premises of all theological thought in his exploration of social evolution. Tylor claimed that sacrifice was "a gift made to a deity as if he were a man" (1871, 2:375). Thus, Tylor reduced all sacrifice to a primitive formula of self-aggrandizement, *do ut des* ("I give so that you will give in turn"). This ritual process was devoid of moral value in its original

setting because for Tylor all religions developed from a very primitive animism that viewed the spiritual world as indifferent to morality. Only at a far later stage did a more moral and spiritual meaning surface. On a similar level is the theory of Frazier (1890) that all sacrifice arose out of a ritual of slaying a "divine king." His ritual murder was thought to aid the crops. Frazier believed that this magical impulse was only at a later date spiritualized, and substitutes for the divine king were developed.

One other thinker we might include in this group is Robertson Smith (1889). His work can be distinguished from that of Tylor and Frazier on the grounds that Smith saw the religious impulse behind sacrifice in positive terms. For Smith, sacrifice began as an act of slaying the totemic animal that represented both the tribe and its god. The tribe's consumption of the flesh of this animal provided a means of experiencing a communion between the god and the tribe; thus the life of the community was sustained. The primary goal of the sacrifice was communal and mystical: it enhanced the feeling of unity among the tribe and provided a moment of communion between the tribal folk and their god. Only far later in the development of human culture, under the influence of the state, did sacrifice come to be thought of as a gift to a god. Smith's theory, like those of Tylor and Frazier, is an evolutionary one. Like other anthropologists from the late 19th century, Smith believed that religious sacrifice could be broken down to one original impulse from which all later permutations could be traced.

The gift theory of Tylor was subject to radical revision at the hands of Hubert and Mauss in their famous essay (1899). This work continues to command considerable respect among anthropological theorists and constitutes the starting point for all modern discussion of the problem. Hubert and Mauss argued against the crudely mechanistic theory of Tylor *(do ut des).* On the one hand they agreed with Tylor in seeing sacrifice as a form of a gift to the deity. Yet, on the other hand, they argued that sacrificial victims fashioned a link between the profane and sacral worlds. The animal becomes a mediating vehicle because it partakes of both realms: its body belongs to the physical world whereas its life belongs to the spiritual realm. This mediator, the sacrificial victim, became identified with the sacrificer (Hubert and Mauss' term for the individual who makes the sacrifice) during the moment of consecration. As Valeri notes (1985:65), "the gift ceases to be a commodity, a mere utilitarian object; *it is the subject in an objective form.*" Certainly one of the strengths of the work of Hubert and Mauss is their emphasis on the *entirety* of the sacrificial rite. The process begins with rituals which sacralize the time, place, and officiants. Then the victim is killed and consumed. Finally rituals of desacralization must be carried out to ensure an undisturbed entry to the profane world.

One problem with the gift theory is that it fails to account for the asymmetry of the sacrificial process. How is it that the human being can give so little (a single animal) and receive so much (the promise of divine blessing in its many varied forms)? Here one is greatly aided by recent anthropological theories of gift giving: the gods establish their superiority by giving more than they receive. But there is another level of meaning here as well. There is a degree of equality in the exchange because "the value of the thing given is inversely proportional to that of the giver. In other words, for a god, giving much is giving little; for man, giving little is giving much. Hence man's small gift to the god is as valuable as god's big gift to man, but at the same time this equivalence of the gifts signifies and establishes the nonequivalence of the givers, of god and man. It is in this way that reciprocity can coexist with hierarchy and that the sacrificial exchange can represent the gods' superiority over men" (Valeri 1985:66).

3. Social Science and Biblical Scholarship. Our survey of anthropological scholarship has to be severely curtailed for the purposes of this essay, but the reader should know that much work still remains to be done here by the biblical scholar. We have only surveyed those theories which have directly affected past biblical research. More recent conceptualizations have not been discussed (e.g., Girard 1977; Burkert 1983; Valeri 1985). By and large, biblical scholarship has not kept up with the theoretical work of recent anthropology. The handbooks on biblical sacrifice generally do one of two things: they either dismiss all or most of previous research as not applicable to the special case of the Bible or take up an evolutionary model such as that of Tylor or Frazier and apply the lower forms to Israel's ANE neighbors and the higher forms to Israel. The second strategy is especially dangerous. Such apologetic tendencies, besides being historically suspicious, are of marginal value theologically. The presumption of such thought seems to be

that the biblical cult is odd on its own terms, and only in comparison to a clearly inferior *Vorlage* can any theological value be extracted.

One prominent evolutionary model that has been popular in biblical handbooks is the motif of sacrifice as food for the gods. God is portrayed in this model as an anthropomorphic being who requires daily sustenance like any human being. Against this primitive mode of religious thought, some scholars have chosen to juxtapose the more evolved form of religion found in the Bible:

> If I am hungry, will I not tell you?
> For the earth and what fills it are mine.
> Do I eat the flesh of bulls,
> the blood of goats do I drink?
> Sacrifice to God praise!
> Fulfill, to the Most High, your vows! (Ps 50:12–14)

To be sure, this psalm explicitly says that YHWH needs no food. But before quickly concluding that the Bible's account of sacrifice is on a higher evolutionary level, one must account for the enormous amount of evidence that portrays Israelite sacrifice as food for YHWH. Countless texts from every period describe YHWH's sacrifices as food. The altar itself is called "the table of YHWH." The sacrifices can be called "YHWH's food." The aroma of the burnt offerings is said to be "a sweet savor to YHWH." All of this is dismissed by some biblical scholars as ancient relics of Israel's pagan past. No account of the fact is made that these terms and phrases are *freely* introduced into *all genres* (cultic and epic narratives, psalms, and more) of Israel's literature in all periods.

The boldness of such an argument is clear. While one can point to a few isolated poetic texts that speak of YHWH's freedom from human needs such as food, one must dismiss dozens of other texts from a variety of genres as unrepresentative, or as relics from an archaic past. Moreover, even the presumption that all non-Israelite conceptualizations of sacrifice uniformly presumed that the gods required food needs to be rethought. Tigay's work on the development of the Gilgamesh Epic has provided damaging evidence for the simplistic comparisons made by some biblical scholars (1982:224–28, 293–96). The late Assyrian reworking of this epic shows a decided tendency to downplay, if not altogether delete, all references to the gods' need for food. What are we to make of this shift? Is this late text representative of a new Mesopotamian perspective on sacrificial rites? If so, what do we make of all the subsequent Mesopotamian material (like the Neo-Assyrian and Babylonian ritual texts) wherein sacrifices are still described as food for the gods? Are these subsequent descriptions simply ancient relics? The most we can say with any certainty is that in Mesopotamia certain literate groups inveighed against an overly anthropomorphic characterization of the deity. *Mutatis mutandis* for the biblical material. The likelihood that this immediately became a generalizable philosophical principle in either civilization is very remote.

It would be preferable to see sacrifice as a *multivalent entity.* Various explanations of its function could coexist, and what a given writer enunciates is also affected by the literary needs and genre of the writer in question. Even in the rabbinic period the notion that the deity consumed sacrifices could find a literary setting in spite of the rabbinic tendency to avoid anthropomorphism. There exist halakic discussions which explicitly compare human consumption of the sacrificial fare to that of the deity (*Mekhilta of R. Ishmael ad* Exod 23:15). What this type of material demonstrates is that even the Rabbis of the Tannaitic era could say both that sacrifice was food for God and that God needed no food. *Mutatis mutandis* for the biblical Israelites and the Babylonians. The crucial variable is not an evolutionary development from magical, prelogical thinking to a more spiritual and ethical form of religion, but rather the literary genre in which a particular concept was found (myth, hymn, liturgical formula, etc.). Each of these linguistic forms or language games, to use the terminology of Wittgenstein, had its own particular ideology of sacrifice. This *multivalency* need much more attention than has been hitherto provided. Too much theoretical discussion of sacrifice is dependent on the assumption that sacrifice can be reduced to one essential concept. In the course of the present essay, we will attempt to develop further this notion of multiple levels of explanation.

4. Biblical Sacrifice as Cultic Realia or Textual Phenomenon. All treatments of sacrifice by biblical scholars have focused on the historical *realia* of the cultus. The dominant question concerns just what happened in the temple when animals were slain and what did it mean to the particular practitioners. This research paradigm involves two distinct but interrelated programs of investigation. First would be the construction of a history of Israel's cultic worship from its origins in the patriarchal period to its conclusion in the beginning of the Second Temple period under Ezra and Nehemiah. Having established this historical grid, the various data from the P source and from other ritual materials scattered throughout the former and latter prophets (especially Ezekiel 40–48) are then placed in their proper temporal setting. This method has produced significant results in terms of assessing the function of biblical sacrifice in ancient Israelite culture. But the cost of this methodology has been that the role of sacrifice in the final form of the biblical text, or the canonical function of the material, has received scant (one could say almost no) attention. The effects of this are manifold. As one enters the Second Temple era, sacrifice becomes as much a textual enterprise as one of actual practice; the study of the sacrificial system begins to develop a level of significance independent, though not inseparable, from cultic practice. Evidence of this approach to sacrifice as a textual phenomenon is already present, *in nuce,* in some pieces of what has come to be called "inner biblical exegesis" (Toeg 1974; Fishbane 1985). It becomes a full-blown reality in such documents as *Jubilees* and the Temple Scroll, not to mention the fifth division of the Mishnah, "sacred (offerings)." All of these sources seek to reconstruct a model of sacrifice that is not simply reflective of actual practice, but results from learned exegesis of the Bible in its final canonical form. This creation of an ideal, exegetical model of sacrifice we prefer to label "the scripturalization of the cult" and it will be discussed below (section F).

B. Sacrifice and Offering: Some Basic Distinctions

Thomas Aquinas defined the distinction between offering and sacrifice as one of "genus" and "species." Offering constitutes the more general category of gift or oblation, while sacrifice is a specialization of this category which entails a more specific means of delivery to the deity. For Aquinas, the act which separated sacrifice from offering was "immolation." In Latin, *immolare* does not mean "to destroy" as its English cognate would suggest, but "to sprinkle with sacrificial meal." For Aquinas, though, what constitutes "immolation" varies with the substance being offered: whereas an animal may be killed, liquids are poured out and foodstuffs such as grains and fruits are burnt (Turner 1977:190). As Turner observes: "In Scholastic terminology, oblation can be taken as the matter, immolation as the form of sacrifice."

This is a useful typology for biblical sacrifice as well, though one should note that such a distinction is not explicitly made in the biblical vocabulary. The Bible does have two basic terms for offering: *minḥâ* (in the non-P materials) which means simply "gift," and *qôrbān* (in P) which implies something "brought near" (namely, to the altar). These words are generic terms which include every type of sacrifice or oblation. There is no single term which defines how, or in what manner, an offering becomes a "sacrifice." The basic term for sacrifice in the Bible is *zābaḥ,* which means "to slaughter." In Phoenician this root develops the broader sense "to prepare food" in general, but nowhere does it become a generic term for sacrifice. Because blood sacrifice was such an important category in Israelite religion, this term for animal slaughter assumed the technical meaning of sacrifice.

The root *zbḥ* also appears in the Hebrew word for altar, *mizbēaḥ.* Although the term literally means "the place of slaughter," it functions in the OT to designate the spot where each sacrifice is formally offered. It is at this spot that animals are slaughtered, liquids are poured out, and grains are burned. Indeed, we might define sacrifice in the Bible as those oblations which are burned (wholly or partially) at the altar *(mizbēaḥ).* These would include the burnt offering *(ʿôlâ),* the "peace offering" *(šĕlāmîm),* and the grain offering *(minḥâ),* as well as the purification *(ḥaṭṭāʾt)* and reparation offerings *(ʾāšām).* Other types of sacred donations, though brought to the sanctuary and even sometimes presented at the altar, are not burned in any way at the altar and so are not sacrifices. These would include the tithe *(maʿăśēr),* firstfruits *(bikkûrîm),* the wave-offering *(tĕnûpâ),* and the heave-offering *(tĕrûmâ).* In general, those offerings we

have designated sacrifices are of higher sanctity ("most holy") than the more general category of offerings ("holy").

C. Development of Terminology

Every modern study of biblical sacrifice begins with an attempt to define the development and usage of various biblical terms for sacrifice. Indeed, the problems of definition can be so acute in respect to certain terms that many studies begin and end with nothing more than a purely philological discussion. Though the particular problem of definition of individual sacrifices is a difficult one, the more general problem of understanding their distribution in the Bible is also not easy to understand.

1. The Problem of P. Ever since the beginning of critical biblical studies scholars have noted the uniqueness of the sacrificial terminology of the P source as compared with the rest of the OT. We could summarize the distinctiveness of P's sacrificial vocabulary along 3 axes: (1) P has an immense technical vocabulary that vastly exceeds the other narrative sources; (2) much of P's vocabulary—indeed vocabulary that is central to the P system—is either absent from the rest of the Bible or used in a very different fashion; and (3) P's sacrificial vocabulary is heavily weighted toward rituals of atonement. Wellhausen *(WPHI)* used these data to derive very distinctive, if not pejorative results about the value of the P code in general. First, for Wellhausen, the vast technical vocabulary of P reflects the "externalization" of the cult. For P, a product of the Exile, sacrifice is no longer a *spontaneous* act of individual piety as it was in JE, but rather a *prescribed* ritual of the community (*WPHI,* 103). Second, the fact that these prescribed rituals and their distinctive vocabulary appear nowhere in the preexilic narrative and historical sources was one of Wellhausen's strongest arguments that P was a late product of the postexilic period. Finally, P's emphasis on rituals of atonement, in a manner that is unprecedented in earlier biblical narrative, indicated to Wellhausen the heavy sense of guilt Jews of the early Second Temple period felt and the tremendous efforts that were made to purge the community of its sin.

Each element of Wellhausen's system has come under attack. Dussaud (1941), on the basis of comparing Phoenician cultic tariffs from the early 1st millennium, demonstrated that an elaborate list of technical sacrificial vocabulary was not sufficient grounds for labeling the Priestly system as late or unique in the ancient world. Such lists were present among Israel's nearest neighbors. Weinfeld has carried this argument even further, noting that Wellhausen was "unaware of the existence of ordered, institutionalized cultic centers in the great cultural centers of the ancient Near East. All cult was based on ceremonial precision" (1983:96). As to the problem of P's "unique" interest in rituals of atonement, Thompson's (1963) study showed that atonement is also an operative sacrificial category outside of P. Even more important is Weinfeld's demonstration that the great cultural centers of the ancient world (1983:105–6) had appropriate terminology for sacrifices of purification and atonement. These types of sacrifice were an accepted norm for ancient ritual, and thus P's interest in them is hardly extraordinary. The fact that only P records these sacrifices tells us more about P's interest than P's date. We might add that Weinfeld's point can be strengthened by noting how the technical cultic vocabulary of Ugaritic is distributed among its various literary genres. Here, too, as Tarragon (1980) and Anderson (1987) have noted, the technical sacrificial terminology of the sacrificial texts is quite variant from the terminology of the epic and mythic materials. Not only do the meanings of various sacrificial terms vary from one genre to another, but each genre has its own unique terminology. Just as P's vocabulary stands out in relation to J, E, and D, so also the Ugaritic sacrificial tariffs stand out from the Baal myth or the epic of King Kirta. The differences cannot be explained on purely historical grounds; the nature and genre of the text in question is an equally if not more important conditioning factor.

2. The Development of Cultic Vocabulary. The development of cultic terminology in the Bible must be seen in a broader perspective than simply the distinctions between P and non-P usage. To be properly appreciated it must be seen in its overall NW Semitic (or Canaanite) context, that is, in relation to Israel's closest cultural relations (Ugarit, Phoenicia, Aramea, Ammon, and Moab). To illustrate how Israel's cultic terminology is related to these contiguous cultures, we will trace the development of the cultic term *minḥâ*.

The Heb word *minḥâ* has two very different meanings in the OT. On the one hand it can refer to the specific "cereal offering" (so the P source, so Leviticus 2) or it can simply mean "gift," including even noncultic donations. In Phoenician, the term only appears in cultic tariffs, and like the usage in P refers to the cereal offering. At Ugarit the specialization proceeded in another direction. The term occurs at least three times in economic texts referring to some type of secular payment (*CTA* 14.1; KTU 4.91; and in the Ras Hani materials).

In the past, it has been typical to explain the different levels of meaning for *minḥâ* in the Bible in historical terms. The specialization of the term in the P source (cereal offering) is seen as a postexilic development. Inherent in this view is an implicit Wellhausenian bias: because P is a postexilic document, its technical terminology reflects postexilic origin. This view has a number of problems, the most severe being the widespread usage of the term *minḥâ* meaning "cereal offering" in the preexilic period in both Phoenicia and Israel (*AncIsr* 2:430). In other words, it seems safe to say that the meaning "gift" and "cereal offering" could coexist.

How can we account for these variant meanings existing side by side? It is well known in anthropology that societies which possess religious specialists also have very technical explanations of ritual and mythic motifs. These learned explanations are often very different from those of the nonspecialist. In cultures where these specialists are able to write, the extensive recording of temple revenues further contributes to the development of elaborate classification schemes (Goody 1977:74–111). These classification schemes were necessary for temple revenues and expenditures being accounted for. This ability to classify allowed for more precise conceptual and lexical boundaries and gave much greater visibility to categories of items. Though these classification schemes were very important for the development of a sophisticated social structure, they were not generally relevant to the daily affairs of the common citizen.

How is this relevant for *minḥâ?* For the common Israelite, the term *minḥâ* meant a "gift," most often a gift given to the temple. Because the economic base of Israelite society was dependent on grain, the *minḥâ* payment given to the temple was usually grain. This basic datum was further refined by priestly specialists. A typical Judean farmer need not be specific regarding these matters; he simply contributed a tenth of whatever it was he produced. But the priests—who had to deal with a variety of agricultural and pastoral gifts and revenues—needed a more elaborate taxonomy so to order their experience. No doubt a large impetus for this ordering came from temple lists and tariffs (Levine 1963; 1965). In order to deal meaningfully with the income of the temple, a precise lexicon of cultic contributions had to be in place. This would explain the need to specialize further a term like *minḥâ* from "a gift" (which was most often grain) to "a cereal offering."

The development of a specialized meaning for *minḥâ* should be seen as both an inner-Israelite and broad NW Semitic phenomenon. In its early proto-NW Semitic form, the root had the broad generic connotation of "gift." During the Iron Age, or perhaps a bit earlier, the cultic specialists in Phoenicia and Israel used this word to express the most basic cultic offering, the cereal offering. But this specialization was uneven: its earlier generic usage survived even into postexilic literature in Israel. While in Ugarit, already in the Bronze Age, the prose material showed a limitation of meaning to a secular economic sense.

The specialization of meaning for cultic terms has important ramifications. In any one particular dialect the terms for sacrifice can become quite specific and technical. As a result of this learned procedure of classification which occurs within the cult the priestly vocabulary becomes quite idiosyncratic. This idiosyncratic and complex classification system is paradigmatic of all mature cultic centers in the ancient world. It does not reflect a crudely materialistic view of the cult; rather it reflects the attempt of each and every cultic center to provide order and meaning to the wide variety of gifts and offerings which it receives. The special usages of any one cult center cannot be predicted on the basis of the archaic meanings of the pertinent cultic terms. The specialization of *minḥâ* from "gift" to "cereal offering" is paradigmatic of this.

In summary, we can say that the P code's interest in classifying the broad array of sacrificial donations made to the temple does not reflect a crudely materialistic view of the cult as Wellhausen and von Rad

(*ROTT* 1:259–60) believed. Instead it represents the maturation and individuation of the biblical cult. Each cultic center in the ANE developed its own very intricate system of sacrificial categories and terminology. In the realm of Canaanite culture, what separates each center from the other is the *unique configuration* of the various sacrificial offerings. Thus the development of the Priestly vocabulary is part of a larger movement to develop a specialized and unique cultic identity that one sees in other cultic centers in the Iron Age.

D. Sacrifice in P

1. The Animals. As a general rule, the sacrifices can be broken down into two categories in regard to which animals were used: those sacrifices which specifically required a particular animal for each and every sacrificial occasion, and those which required a range of different animals depending on the social standing or economic status of the individual offerer. In the former class we can place the burnt offering, the peace offering, and the reparation offering, while in the latter class we would place the two forms of purification offering.

It would not be accurate to say that the requirements for the burnt offering, peace offering, and reparation offering were rigidly fixed; there was room for variability, but the variability was not similar to that reserved for the purification offering. For the burnt offering one had to offer a male animal from the herd or flock, or a bird (turtledove or pigeon). The peace offering could be either a male or female from the herd or flock. The reparation offering was always a ram, except for the Nazirite who became impure, who had to bring a lamb. The reparation offering was also unique in that most of the time this sacrificial requirement could be converted into an equivalent in silver. In contrast to these requirements, the laws for the purification offering in Lev 4:1–23 conform strictly to the *social standing* of the offerer. The priest, community, ruler, and individual had their own requirements that could not be varied. The additional situations for the purification offering listed in Lev 5:1–13 articulate a separate system altogether. In this material, the requirements for the purification offering are graded in accord with the *economic standing* of the offerer.

The animals used for sacrifices were domestic animals. Even though there were wild animals that were fit for consumption according to the laws of *kašrut* (e.g., the hart, gazelle, roebuck, wild goat, ibex, antelope, and mountain sheep; Deut 14:5) these animals were never used for sacrifices. What was fit for game was evidently not suitable for the altar.

2. The Technique of Sacrifice. Before beginning our formal discussion it is worth noting that since the P code made the setting of the Sinaitic revelation the primal location of Israel's cultic commandments, all of the sacrificial law was given in reference to the tent of meeting or tabernacle that was erected there (Exodus 35–49). In the eyes of the P source, all this material was thought to be equally applicable to the domain of the temple.

The sacrificial act consisted of six basic steps which can be divided into two groups: those which were performed by the layperson who offered the animal and those which were restricted to the priests. Laypersons were responsible for (1) bringing the animal to the sanctuary, (2) laying hands on the animal, and (3) slaughtering the animal (included cutting up the animal and washing or cleaning the insides, see Lev 1:6, 9). The priests were responsible for (4) tossing the blood, (5) burning the animal (or part of the animal), and (6) disposing of the remains. The first three actions of the layperson took place at the opening of the tent of meeting, a spot where the laypeople could also witness the Lord's "consumption" of the sacrifice (Lev 9:23–24). The fact that the laypeople were responsible for actions 1–3 can be seen from the diction of Leviticus 1. Those actions which the layperson was to perform, the P writer identifies with the third person singular: "he shall lay his hand …" (Lev 1:4). Those actions which the priest was to perform are rendered: "and Aaron's sons, the priests, shall present the blood …" (Lev 1:5). The meaning of the hand-laying rite, which is so basic to understanding the process of atonement in the expiatory sacrifices, has long been obscure to scholars. It has recently been suggested that the rite of hand-laying merely signified that the animal belonged to the owner (Wright 1986). This theory pertains to the generally prescribed law of laying *one hand* on the animal. The exceptional act of laying on *two hands* on

the day of atonement must be explained differently. In this case, the act of laying on hands identified a particular animal as the recipient of the ritual action.

The actions which only the priest could perform (tossing blood and burning the animal) were actions which had to occur at the altar. Because only the priests were given access to this location, the responsibility naturally was theirs. Blood manipulation varied from sacrifice to sacrifice. With the burnt, reparation, and peace offerings, the blood was tossed around the altar. In contrast to these, the purification offering required that the blood be first daubed on the horns of the altar and then the rest poured out at the base of the altar in the case of a ruler or commoner. For the priest or the entire congregation the blood was first sprinkled seven times before the veil of the sanctuary and then put on the horns of the inner incense altar. The remainder was poured out at the base of the outer altar. In certain cases the priests were also required to eat the sacrifice (cereal offering and reparation offering).

Disposal rites were different for each sacrifice. The burnt offering, of course, had no disposal rite: the entire sacrifice was burned on the altar. For the other sacrifices, disposal rites varied, seemingly in accord with sanctity. Thus the peace offering, which was of lesser sanctity ("holy"), could be eaten for two days and burned only on the third, whereas the purification sacrifice ("most holy") had to be eaten on the same day (Wright 1987). Special laws (Lev 7:16–18) of disposal also pertained to utensils used in preparing expiatory sacrifices (Lev 7:28). On the disposal rites in general, see Wright (1987).

3. Literary Genres in P. a. General Matters. The P source has brought together a variety of materials into its sacrificial program from different time periods and perhaps even variant sacred sites. Scholars often argue that because certain of these sources can be shown to be preexilic, the P source as a whole can be safely anchored in the preexilic period. See PRIESTLY ("P") SOURCE. One should not be so quick to reach such a solution. The date of the final redaction of the P source is an issue independent of the date of its constituent materials.

Scholars have noted the variety of materials that are found within the P source. The most basic source division, which all are agreed upon, is that between the Holiness Code (Leviticus 17–26) and the rest of P. It has been generally assumed that H is earlier than P, but recently Knohl (1988) has offered weighty arguments for presuming the reverse. Within the P source itself there is further evidence of different layers of source material. One may wish to compare the classic doublet regarding the purification offerings in Leviticus 4 and Num 15:22–31 (see below); other doublets can also be found. One stream of scholarship has taken the evidence of the doublets as a starting point for reconstructing the complex tradition history of the OT sacrificial materials (Rendtorff 1967; Elliger, *Leviticus* HAT). Although this method worked very well in narrative sources of the Pentateuch and has achieved a rather high degree of consensus, the same cannot be said for the sacrificial material. There simply is not enough data within these sources or in extrabiblical sources to reconstruct with any certainty the question of literary history. In proof of this, one need simply to compare the vastly different reconstructions found in the work of Elliger, Rendtorff, and Noth (*Leviticus* OTL). Perhaps the most convincing treatment of the tradition history of the P source and its variant sources is that of Knohl.

Another method of analyzing the sacrificial material in P has been employed by J. Milgrom. Working from the assumption that the source material of P cannot be reconstructed, and that the material presents itself, on the whole, as a complete system, Milgrom has opted to interpret OT sacrifice on the basis of the final redactional form of the P source. Thus, when Milgrom investigates the meaning of the purification or reparation sacrifices, he does not ask which treatment of it in the Bible is earliest, nor does he look for inconsistencies or contradictions as signs of literary seams in a particular pericope. Rather, Milgrom assumes that the P material as a unit has sufficient integrity to be treated as a whole. Thus, the meaning of the purification or reparation offering, for example, can only be grasped when each pericope is read and explained as though it was part of a complete system.

Milgrom's method has achieved some remarkable results, especially in regard to the purification and reparation offerings. His work is especially helpful to those working in Second Temple sources because his emphasis on how the P material presents itself in its final redactional shape provides a smooth

transition to the type of interpretation one finds in Second Temple sources. Others, though, have been critical of Milgrom's perspective on the grounds that it is not sufficiently historical in its outlook.

The 1988 study of I. Knohl has called into question some of Milgrom's assumptions about the homogeneity of the P material. As mentioned above, Knohl dates H earlier than P. But just as important, Knohl finds new evidence for the H source outside of Leviticus 19–26. He argues that H material can be readily identified and contains an understanding of sacrifice that is quite different from P. If Knohl is correct (and he marshals a good deal of evidence in support of his thesis), many of the integrative readings of Milgrom will have to be rethought.

In summary, one can say that the sacrificial matter in P is approached in very different ways and that no consensus has emerged as to what the most appropriate method might be. Readers of this literature must be careful to note what the operative assumptions are of a particular interpreter before assessing his particular understanding.

b. Descriptive and Prescriptive Ritual Texts. Although the exact stratification of P's source material remains a matter of debate, significant work has been done on the variant *Sitze im Leben* of some of this material. One scholar, B. Levine, has distinguished himself as an especially sensitive interpreter of OT sacrificial ritual against the ANE environment. He advanced the thesis, which has since been widely accepted, that sacrificial instruction could be broken down into one of two types: the descriptive and the prescriptive (1965). Working from sacrificial material found in Mesopotamia, Ugarit, and the Bible, Levine argued that descriptive texts describe what transpired at a specific cultic occasion. As a result these texts exist in a narrative format. Prescriptive texts, on the other hand, do not describe an actual ritual; rather they legislate what must be brought for a certain ritual. In the biblical material good examples of prescriptive texts can be found in Numbers 7; 28–29, while Leviticus 8–9 is descriptive in nature. Levine argued that behind the narrative of Numbers 7 was an actual archival record of cultic offerings which, "in its simplest terms, is an account of sanctuary income resembling numerous similar accounts from Mesopotamia" (1965:317); whereas the origins of Leviticus 8–9 were actual reports of ritual occasions that were "subsequently adapted into narrative accounts" (1965:324).

A. F. Rainey (1970) took Levine's results one step further and noted that such a form-critical distinction could account for the different order of sacrifices found in OT ritual texts. Rainey notes that the order of sacrifices in Leviticus 8–9 is different from Numbers 7; 28–29. The former includes a progression from the purification offering to burnt offering while in the latter the reverse order is found. Rainey argues that the proper administrative procedure is that found in the descriptive texts. Rainey's thesis finds resounding support in the narrative regarding the leper: "And on the eighth day he shall take two male lambs without blemish, and one ewe lamb a year old without blemish, and a cereal offering …" (Lev 14:10). Because the burnt offering must be a male animal (Lev 1:10), whereas the purification offering for the individual is a female (Lev 4:32), the order of this *prescriptive* text is: burnt offering and then purification offering. But when the actual performance of the ritual is *described*, a different order is found: the purification offering is offered before the burnt offering (Lev 14:19–20). A similar contrast can be found between the *descriptive* list of sacrifices that the Nazir was to furnish (Num 6:14–15) and the *prescriptive* text which describes their execution (Num 6:16–17).

The results of this form critical distinction between descriptive and prescriptive lists is also important for understanding the meaning of OT sacrifice. The purification sacrifice is first because it prepares the way for full sacrificial communion: it deals fully with any tinge of sin that may separate the divine presence from the worshipper. Once the rite of purification had been completed, the burnt offering, which was an offering given over totally to God, could be offered. Only then could peace offerings be given wherein the people at large would rejoice before their Lord (Deuteronomy 12).

c. Redaction of Sacrificial Material in P. When one first looks at the P source in its entirety, the laws of sacrifice seem to be ordered in a rather haphazard way. Beginning in Exodus 25 and continuing to the end of Numbers the sacrificial laws of P are interwoven among the various narrative materials of J and E. It is difficult, especially in Numbers, to understand what was the editorial function of this structure. Yet there are clear signs of editorial design within this larger framework. One might note the structure of

Exodus 25–Leviticus 9. Exodus 25–40 is the narrative which describes the delivery of the architectural plans for the tabernacle to Moses (Exodus 25–31) and the subsequent execution of those plans (Exodus 35–40). This particular section comes to a climax with the appearance of the divine presence ("glory of the Lord") in the Tabernacle (Exod 40:34–38). After the tabernacle has been revealed, the laws of sacrifice are laid out in a very general way (Leviticus 1–7). Concluding this section is the narrative of the ordination of Aaron and the ceremony of the eighth day (Leviticus 8–9). This final section concludes with the first appearance of the Lord to the entire gathered throng of Israelites:

> Moses and Aaron then went inside the Tent of Meeting. When they came out, they blessed the people; and the Presence of the Lord appeared to all the people. Fire came forth from before the Lord and consumed the burnt offering and the fat parts of the altar. And all the people saw, and shouted, and fell on their faces" (Lev 9:23–24).

The importance of this narrative has been underestimated by biblical scholars. In many respects it reflects the very center of the P document. Whereas prior to the revelation at Mt. Sinai, God had appeared to his chosen only sporadically, now this divine presence could be routinized and made available on a regular basis: "An altar of earth you shall make for me and sacrifice on it your burnt offerings and your peace offerings, your sheep and your oxen; *in every place where I cause my name to be remembered I will come to you and bless you*" (Exod 20:24).

The climax of the P narrative in the completion of the worship rites commanded at Mt. Sinai contrasts rather sharply with the climax of the epic narratives of the Pentateuch. In the Israelite epic, the climax of the narrative is found outside the Pentateuch in the settlement traditions. Whereas JE was interested in highlighting the role of the settlement, P chose to subordinate this theme to the inauguration of a regular, routinized temple-service in the desert. The inauguration of the priesthood and the sacrificial altar, and as a consequence, the appearance of the "glory of the Lord" (Lev 9:23) to all Israel constituted the very heart of Israel's relation to its God. It was here that the drama of Israel's relationship to God was consummated. So important was this moment of "consummation" that rabbinic midrash retold this moment using sexual imagery (*Sifra ad* Lev 9:23).

In summary one can say that the Torah has both *general rules* for the performance of individual sacrifices and *particular applications* for the individual sacrifices or sets of sacrifices. General rules for all of the sacrificial types are primarily found in one location, Leviticus 1–7. These general rules tell everything one needs to know about *how* to administer the burnt offering. It tells one where to bring the animal, how to lay on hands, where to kill it, how to handle its blood, how to prepare the altar, and what to burn on the altar. The section closes with the statement: "This is the law of the burnt offering, of the cereal offering, of the purification offering, of the reparation offering, of the consecration offering, and of the peace offering which the Lord commanded Moses on Mt. Sinai" (Lev 7:37–38).

In its present canonical shape, the laws of Leviticus 1–7 are viewed as the basic rules for how each sacrifice is to be performed. One must be careful to note though that these rules, on their own, are very artificial and do not constitute a complete system of sacrificial ritual. Leviticus 1–7 takes up each sacrificial type individually and treats it as an isolated entity. It is only rarely that an Israelite offered only a burnt offering or cereal offering. It was not the individual offering on its own terms that had meaning, but its particular combination within a given ritual. Thus the rest of the laws of sacrifice in the Pentateuch can be viewed as the specific ritual application of the rather abstract and general rules of Leviticus 1–7 (excluding the doublets to Leviticus 1–7, such as Num 15:22–31 and Num 5:5–8). The specific applications of the general rules of Leviticus 1–7 can be grouped into three categories: (a) foundational sequences (ordination of priests and Levites [Leviticus 8–9, Numbers 8], dedication of the tabernacle [Numbers 7]); (b) festival laws and the *tāmīd*, "daily burnt offering" (Leviticus 16; 23; Numbers 28–29); and (c) specific rituals pertaining to the life cycle of the individual: childbirth (Leviticus 12), "leprosy" (Leviticus 13–14), vows of the Nazir (Numbers 6), impurity from discharge (Lev 15:13–15), corpse defilement (Numbers 19), and so forth.

4. The Basic Types of Animal Sacrifice. a. Burnt Offering *(ʿôlâ).* The Heb term for "burnt offering" is *ʿôlâ*, literally, "an offering of ascent" or "an ascending offering" (Levine 1974:6). The noun is used

with its cognate verbal root *haʿăleh ʿôlâ,* "to make ascend an *ʿôlâ.*" It is not difficult to guess why this name is appropriate for this particular offering. The *ʿôlâ* sacrifice was one which was entirely burnt on the altar and so its smoke—or better, its scent—was directed toward the heavenly realm, wherein the deity was thought to have "inhaled" it. The *ʿôlâ* was generally offered along with accompanying cereal and drink offerings (Num 15:1–10). In Ugarit this sacrificial type was called *šrp,* that is " (totally) burnt."

The sacrifice was a widely used one in ancient Israel. Indeed the phrase "burnt offerings and peace offerings" (e.g. Exodus 20:24) could be used as a merism for the entire sacrificial system (Levine 1974:21). Once in the book of Ezra, the term *ʿôlâ* describes both the purification and the burnt offerings that were offered by the returning exiles (8:35). Levine has argued that the *ʿôlâ* sacrifice should be understood as one which attracted the deity's attention and invoked the deity's presence for a particular ritual occasion. Such a theory would nicely explain the usage of the *ʿôlâ* for the purposes of divination when the deity's response to an urgent plea was desired, as in the case of Balaam's oracles (Numbers 21–24), or the usage of the *ʿôlâ* by Elijah as a means of testing which prophetic group truly "had YHWH's attention" so to speak (1 Kings 18). It would also explain the usage of the *ʿôlâ* as a term for child sacrifice, which was thought in some circles to show one's consummate devotion to the deity (2 Kgs 3:26–27) and hence worthiness of divine assistance. Milgrom has argued that the *ʿôlâ* was the earliest form of atonement sacrifice in the biblical materials (*EncBib* 7:243). Job 1:5 is good evidence of this: "Job would rise early in the morning and offer burnt offerings according to the number of (his sons) for he said: 'It may be that my sons have sinned and cursed God in their hearts.' " The atoning function of the *ʿôlâ* survives vestigially in the P source itself. Although P generally holds that only the purification and reparation offerings deal with sin, in Lev 1:4 it is said that the burnt offering "shall make atonement" for the offerer. We say this is a vestigial usage because nowhere else does P spell out how this atonement would work. All subsequent discussion of atonement revolves around the purification and reparation offerings. In Milgrom's view, the development of these specialized offerings brought about a restructuring of the role of the more general *ʿôlâ.* One must be careful, though, not to presume that this restructuring of the system and refinement of the typology of atoning sacrifices was late simply because they do not appear in preexilic sources. They probably did exist, but nonpriestly sources took no interest in the more exacting taxonomy of the priestly system.

Another level of meaning present in the *ʿôlâ* is that of a gift to the deity. Of course the gift is not just any type of gift but a gift that the deity consumes, a "soothing odor." The consumable gift was thought to be in many respects the food of the deity. Just as the temple was conceived to be the deity's home, complete with furniture and other appurtenances, so this divine home had its hearth, the altar. The daily sacrifices for the deity are described in Exod 29:38–42 (cf. Num 28:3–8 and Ezek 46:13–15). These sacrifices took place both in the morning and the evening and consisted of the *ʿôlâ* (lamb) along with a cereal and drink offering. It was called the *tamid* offering in rabbinic sources because scripture says it was to be offered "continually *(tāmīd)* … throughout your generations" (Exod 29:42). It is no accident that Exod 29:42 continues to require the sacrifice "at the door of the tent of meeting before the Lord, where I will meet you, to speak there to you." This *tāmīd* sacrifice was symbolic not only of the deity's meal, but by extension, of the deity's presence among the people. No greater cultic calamity could be imagined than the loss of this sacrifice, since it symbolized the severing of the divine-human relationship (Dan 8:11).

b. Peace Offering *(šĕlāmîm).* The translation and interpretation of this sacrifice has bothered scholars for many years. It seems clear that at least three terms can refer to this sacrifice: *zebaḥ, zibḥê-šĕlāmîm,* and *šĕlāmîm.* This history of the development of these terms has been treated by Rendtorff (1967). The *šĕlāmîm* seems to be a special type of an earlier *zebaḥ* sacrifice. One should not infer that *zebaḥ,* "slain sacrifice," refers to any slain sacrificial animal. In spite of its name, which is quite general, this sacrifice designation often occurs in the pair *zebaḥ* and *ʿôlâ.* In this type of usage there can be no doubt that *zebaḥ* refers specifically to the *šĕlāmîm* offering.

The sacrifice has commonly been translated as "peace offering" but this is certainly an unhappy rendering. It tells us precious little about the nature of the sacrifice. Just what is peaceful about this sacrificial rite? Some say the peace refers to a harmonious relationship between humanity and God. R.

Smith went even further and said it symbolized a communion between them (1889). Others have argued that the peacefulness refers to a covenantal pact, either between God and humanity or simply between different peoples. Of course the lexical root of the term *šĕlāmîm (šlm)* does mean "peace," and in certain cases nouns formed from this root in Hebrew and Akkadian refer to covenantal relations. Yet each one of these attempts to locate the function of the *šĕlāmîm* in terms of etymology has not been persuasive. In the case of the *šĕlāmîm,* Gray's dictum that usage is a more important determinant of meaning than etymology is certainly true (1925:1–20).

(1) Types. In the P source the *šĕlāmîm* sacrifice is broken down into three subtypes (Lev 7:11–18): the *tôdâ* or "thanksgiving" sacrifice, the *neder,* "vowed sacrifice," and the *nĕdābâ,* "freewill offering." All of these sacrifices played a very important role in the life of the individual. Besides constituting the basic form of sacrifice brought on feast days (1 Sam 1:3–4; Deut 12:11–12), the *šĕlāmîm* also played an important role in the ritual of lamentation and thanksgiving that is so prominent in the Psalms. Very similar to the *šĕlāmîm* are the *pesaḥ,* "passover," and *millû᾽îm,* "ordination" sacrifices. Although the *pesaḥ* sacrifice is prepared in a different manner (it is roasted and not boiled according to Exod 12:9), it is a sacrifice that all Israel must consume. The *millû᾽îm* sacrifice is prepared almost exactly like the *šĕlāmîm,* the significant difference being that the blood is applied to the ear, thumb, and toe of the Aaronid priest (Exod 29:19–34).

The *pesaḥ, millû᾽îm,* and *tôdâ* sacrifices were all to be eaten on the very day they were offered, unlike the other *šĕlāmîm* types. This is certainly due to the fact that the former rites are all obligatory ones. The fact that their flesh must be consumed within one day points to a higher level of sanctity. The other *šĕlāmîm* rites were not obligatory and so the prescriptions for consumption and disposal of the remains were more lax.

(2) Usage. One negative conclusion that emerges from even a cursory look at the *šĕlāmîm* material in the Bible is that the sacrifice had nothing to do with atonement. Though the fat and certain other organs of the sacrifice were burnt on the altar as a "pleasing odor" and the blood was sprinkled on the altar, nowhere do we hear of these acts as atoning for any sin. It seems that the peace offering, in this exceptional circumstance, was nothing more than an accepted manner for slaughtering any animal that was to be used for human consumption (Lev 17:1–7) in the P system.

The role of human consumption constitutes the primary level of meaning for this sacrifice and helps to explain why the *᾽ôlâ* and the *šĕlāmîm* are routinely paired in biblical (and Ugaritic) ritual. The *᾽ôlâ* was the sacrifice that constituted the basic nourishment for the deity, while the *šĕlāmîm* in turn nourished the people. This was recognized by the rabbis (see the discussion of the *Mekhilta* cited in A.3 above), who explicitly compared these two offerings on exactly this point. Indeed so formative was the notion of celebratory eating to the *šĕlāmîm* that the rabbis even labeled one application of the *šĕlāmîm* sacrifice the "celebration sacrifice" *(šalmê-śimḥâ).*

The celebrative role of the *šĕlāmîm* is certainly its most prominent feature. If we define the *šĕlāmîm* as a celebrative sacrifice we not only can explain its presence in the rituals of thanksgiving and fulfillment of vows but we can also understand its role on feast days. In many texts in the Bible the command "to celebrate" *(liśmōaḥ)* can only refer to the obligation to consume the *šĕlāmîm*. So prominent is this association that the rabbis themselves say: " 'celebration' means nothing other than consuming the flesh (of the *šĕlāmîm*)." Rabbinic materials also further subdivided the *šĕlāmîm* to include both the *ḥăgîgâ* sacrifice, the sacrifice that all Israelite males were obligated to consume during the three pilgrimage festivals, and the *śimḥâ* sacrifice *(šalmê-śimḥâ)* which all Israelites, male and female, were to consume therein (*Sifre* 138).

Because the *šĕlāmîm* were emblematic of moments of joy or celebration, the *šĕlāmîm* could be, in certain circumstances, banned for days of public mourning. This appears to be the logic of Isa 22:12–14. Isaiah reports that the Lord had called for public mourning, yet Israel was slaying her fatlings and rejoicing. Such a practice does not seem to have been uniform in Israel, for on other occasions *šĕlāmîm* were offered at times of public mourning. In regard to these latter examples, though, one should note that

the *šĕlāmîm* were offered in conjunction with the burnt offering and, as Milgrom (*EncBib* 7:244) has demonstrated, it was the *ʿôlâ* that held the primary role in these rites.

c. Purification Offering *(ḥaṭṭāʾt).* Lev 4:1–5:13, Num 15:22–31, *et passim* refer to this offering. The traditional translation of this term has been "sin offering." This translation, followed by the LXX, is based on etymological considerations. The Hebrew root *ḥṭʾ* means "to miss the mark, to sin." Yet as Milgrom (1983a: 67) and others have noted, the term would better be understood as referring to the process of purification. This seems clear from the verb used in conjunction with *ḥaṭṭāʾt, lĕ-ḥaṭṭēʾ*. This verbal form is best understood as a *Piʿel* privative which conveys the sense of "cleansing, purging," or purifying an object. Even more important is the fact that the *ḥaṭṭāʾt* offering oftentimes is used in situations that have no relation to sin. For example, consider the cases of the parturient (Leviticus 12), the person suffering from a discharge (Leviticus 15), the Nazirite who completes a vow of abstinence (Numbers 6), or the installation of a new altar (Leviticus 8). In each of these cases, the act of sacrifice serves to purge or purify something rather than to remove sin. This is not only logically reasonable, but the biblical text explicitly says this is the function of the sacrifice. For example, in the case of the parturient instead of the ritual closing with a formula of forgiveness we read: "and the priest shall perform purgation for her *(kippēr)* and she shall be clean" (Lev 12:8). The rabbis also noted this: "The sacrifices [the parturient] brought, are nevertheless, for the purpose of permitting her to partake of consecrated food and are not expiatory" (*Ker.* 26a).

(1) Purification and atonement. The purificatory function of the *ḥaṭṭāʾt* challenges us to reconsider the role of the *ḥaṭṭāʾt* in rituals that seem to have an atoning function. Can these rituals also be understood in a purificatory sense? Milgrom has argued the affirmative on the basis of the atonement rituals found in Leviticus 4:1–5:13 and Leviticus 16. Milgrom pays particular attention to the role of blood manipulation in each of the rituals described here, for it is the blood itself which acts as the purging agent. In light of this fact, it is significant to note that the blood is never placed upon the individual. If the individual himself was being cleansed, one would expect the blood to be placed on him or her. Instead, the blood is placed on various cultic appurtenances. Even more telling is the variability of this blood ritual with respect to the status of the sinner. Leviticus 4 makes very careful distinctions between the status of various classes of people. The inadvertent sins of the priest and community as a whole are more serious than the sins of the individual, be he a commoner or a ruler. Most serious of all are the advertent offenses of any kind. In each of these cases, as the seriousness of the sin becomes more pronounced, the blood is brought closer to the very inner sanctum of the holy of holies. Thus the blood used for the commoner is placed on the altar of the burnt offering *outside the sanctuary* per se (Lev 4:30). The blood used for the sin of the priest or of the community as a whole is placed *within the sanctuary* itself, sprinkled on the veil separating the holy of holies from the outer chamber and placed on the incense altar. Finally, the blood of the purification offering on Yom Kippur, which atones for advertent sins (so would seem the sense of *pešaʿ* in Lev 16:16), is sprinkled "in front of the mercy seat" within the holy of holies itself (Lev 16:14).

Milgrom has argued that this sequence of the graded usage of blood in respect to the grid of the sacred shrine shows that what is being purged is not the sin from the sinner, but the effects of sin, i.e. cultic impurity, from the sanctums within the sanctuary. Since the blood is understood to be a purging agent, one would expect the sinner to receive this material if the primary intention of the ritual were to eliminate his/her sinful condition. Such an understanding would accord well with what is said about the purificatory role of the *ḥaṭṭāʾt* blood in the case of those suffering from discharge: "Thus you shall keep the people of Israel separate from their uncleanness lest they die in their uncleanness by defiling my tabernacle that is in their midst" (Lev 15:31, cf. Num 19:13). Impurity, conceived in this fashion, becomes "a physical substance, an aerial miasma which possessed magnetic attraction for the realm of the sacred" (Milgrom 1983a: 77). The purification offering is designed to remove this maleficent material from the sanctuary itself. If the impurity is allowed to accumulate, the deity will be forced to leave the sanctuary. This understanding of the process of atonement is quite distinct from previous theories (Gese 1981; Janowski 1982) which hold that the process is primarily concerned with removing sin from the sinner. Whereas the

latter stress the role of substitutionary death in the atoning process, Milgrom stresses the role of purification.

Stated in this general way, Milgrom's argument is very persuasive. Things become more difficult when Milgrom attempts to argue that the purification offering has no role whatsoever in removing human sin. Indeed scripture itself says that the purification rite is performed so that the sinner may be forgiven (Lev 4:20, 26, 31). Yet Milgrom contends that the forgiveness is not for the sinful act per se but rather for the *consequence* of the act, the contamination of the sanctuary. How then is the actual act of the individual sinner forgiven? Milgrom argues that the forgiveness of the original sin itself is accomplished by a feeling of remorse. This feeling is indicated in the biblical text by the use of the verb *ʾāšēm* (Lev 4:13, 22, 27), which Milgrom translates "to *feel* guilty." But there are problems. If such an important atoning function is present in the act of feeling remorse, why is this term absent in Num 15:22–31? Or why is it absent in the case of the priest (Lev 4:1–12)? This situation is complex and does not offer any easy solution. Certainly Milgrom's work is an important contribution, but loose ends still abound.

(2) The Performance of the Purification Offering. The purification offering varies across four classes of individuals: priest, congregation, ruler, and individual. (Lev 5:1–13 constitutes a special case which we will not have room to discuss.) Not only does the act of blood manipulation vary over these four classes, but so do other elements of the ritual. The four classes can actually be reduced to two groups: (1) priest and congregation, and (2) ruler and individual.

The performance of the purification offering has six discrete steps: (1) the animal is brought to the tent of meeting; (2) the offerer lays on hands; (3) the animal is slain; (4) the blood rites are performed; (5) the animal's remains are disposed by burning or are eaten; and (6) a forgiveness formula is cited which formally closes the atonement process. Within this schema there are two elements which serve to highlight and distinguish the offerings of the priest/congregation from those of the prince/individual. First, the blood and disposal rites are performed differently depending on whether one is handling the animals of the priest/congregation or the prince/individual. For the priest/congregation the blood is brought into the sanctuary and sprinkled seven times on the veil that stands in front of the holy of holies and then is daubed on the horns of the incense altar (Lev 4:5–7a; 16–18a). The remainder of the blood is poured out at the base of the altar reserved for the burnt offering which is outside the tent proper (Lev 4:7b; 18b). The fat of the bull as well as certain organs are burned at the altar of the burnt offering (Lev 4:8–10; 19–20); the remainder of the animal, including its edible flesh, is burned outside the camp (Lev 4:11–12; 21). For the prince/individual, the rite is quite different. The blood is applied to the horns of the outer altar and then poured at its base (Lev 4:25; 30). The fat is burned on the altar, but the remainder, that is, the edible flesh, is eaten by the priests (cf. Lev 6:17–23—Eng 6:24–30). It is difficult to know how to interpret the act of eating the meat. Is this an act of disposal parallel to the burning of the bull, or is the consumption simply a perquisite of the priesthood?

This asymmetry has been noted by Levine, who uses these data to reconstruct two originally separate offerings that lie behind our present text. The rite of the priest/congregation, he believes, is a "purification rite intended to safeguard the sanctuary and its ministering priesthood from contamination" (1974:103). The other rite is similar to the peace offering and originally had nothing to do with the process of purification; rather, its function was "to expiate certain of the offenses of the 'people,' of Israelites, individually, and even of their *nĕsîʾîm*, the tribal chiefs." A later redactor artificially fused two independent pieces of tradition. Levine's hypothesis is quite different from the theory of Milgrom. Though several aspects of Levine's hypothetical reconstruction are weak and have been correctly criticized by Milgrom, his basic description of the problematic posed by the present form of the text holds and has not been adequately addressed by Milgrom's own integrative reading.

(3) Order. The purification offering is generally brought in conjunction with other sacrifices. It is always the first sacrifice to be offered when it is offered in conjunction with other sacrifices such as the *ʿôlâ* and the *ʾāšēm*. The reasons are quite obvious: the purification offering cleanses the sacred appurtenances so that they are able to receive the subsequent sacrifices. In some lists the purification offering is listed after the *ʿôlâ* (Numbers 28–29). This is not an exception to the general rule. Rather this

phenomenon results from the particular literary genre of the sacrificial list. Descriptive lists often put the purification offering in the second position, whereas prescriptive lists which describe the actual order always put the purification offering first (see D.3.b above).

d. Reparation Offering *(ʾāšam).* This offering has generally been translated "guilt offering." This translation was predicated on etymological considerations; the root *ʾāšēm* can often mean "to be, feel guilty." Yet as Milgrom has shown (1976), though feelings of guilt are integral to the atonement process, the basic feature of the sacrifice is its function as a means of reparation. Unlike other sacrifices which one "offers" *(hiqrîb),* the *ʾāšām* can "be payed" *(šillēm, hēšîb).* Also, unlike other sacrifices, the *ʾāšām* can be converted into a monetary equivalent and simply paid.

Of all the offerings in the P system, the *ʾāšām* is the most difficult to understand. Indeed some scholars have claimed that even the P school no longer appreciated the distinctiveness between the *ʾāšām* and the *ḥaṭṭāʾt.* Almost every imaginable historical reconstruction for the relationship of the reparation offering and the purification offering has been posed. Needless to say, no overwhelming consensus has emerged.

The most detailed recent study of the reparation offering is that of Milgrom (1976). In many respects his work represents a major advance over previous studies. He offers a persuasive hypothesis as to how the reparation and purification offerings should be differentiated, but one should be aware that his proposal cannot account for every single example in the P source. Before presenting his theory, those conditions which call for the reparation sacrifice should be listed: (1) the act of misappropriating or misusing an item of sacred value (Lev 5:14–16); (2) sinning inadvertently and not knowing it (Lev 5:17–19); (3) swearing falsely in regard to damages done to another person (Lev 5:20–26—Eng 6:1–7); (4) the rite of purification of the leper; (5) the rite of renewing the vow of the Nazirite who has become unclean (Num 6:10–12); (6) having sexual relations with a slave who has been betrothed to another man (Lev 19:20–21).

Milgrom sees a thread of continuity between cases 1, 3, and 5. In each case something sacred to the deity has been violated. The first case is most obvious; it explicitly says the person has misused a sacred item. As Milgrom observes, this text is very similar in function to the problem of desanctifying an animal that is unfit for sacrifice which is discussed in Lev 27:9–13. Lev 27:9–13 charges a penalty for this desanctification, a penalty equaling the value of the animal plus one-fifth. Milgrom believes that it is not coincidental that Lev 5:14–16 charges the same penalty for misusing a sacred item. In both cases we are dealing with a situation where an item's sacred status has been profaned. Lev 25:9–13 stipulates the *charge* imposed for the *right* to do this, whereas Lev 5:14–16 stipulates the *penalty* imposed for the *crime*. The case of swearing falsely can also be grouped here because a false vow necessarily entails a misuse of the divine name which was originally invoked by the person in question. Indeed as Milgrom demonstrates, violation of vows and desecration of sacred items are treated as parallel phenomena in ANE legal materials. Finally, the case of the Nazirite who has become unclean also represents a case in which a sacred item has been sullied. In this case it is the Nazir himself who had become like a priest himself and hence "holy to the Lord" (Num 6:8). As Milgrom shows, the example of the Nazir has a formal parallel with the case of land dedicated to the sanctuary (Leviticus 27). Both are a result of a vow; both are for a limited period of time; but most importantly both vows can be prematurely terminated and have similar penalties for doing so. Whereas the Nazir brings an *ʾāšām,* the donor of the land must provide the equivalent of the entire value of the land plus an additional 20 percent (in other words, the equivalent of the *ʾāšām*).

The example of the leper and the betrothed slave girl are the most difficult for Milgrom's theory. Neither are said to have violated a sacred item in any way. Milgrom tries to explain the case of the leper on the grounds that elsewhere in the ANE and in the Bible leprosy is often the result of a serious sin against the sancta of a particular deity. On these grounds Milgrom suggests that the leper must bring an *ʾāšām* because he *suspects* he may have so offended the deity. The slave girl cannot be accounted for in this theory (Schwartz 1986).

The case of a person sinning and not knowing it also provides some problems. The text in question (Lev 5:17–19) is so similar in wording to the material in Leviticus 4 that some scholars have suggested that this material is a doublet of the purification rite that has been misplaced by the P editor. Milgrom presumes

that the P source knew what it was doing when it put this narrative here. The crucial feature that separates Lev 5:17–19 from the purification offering in Leviticus 4 is that the individual in question sins and *does not know it.* Leviticus 4, on the other hand, deals with cases where inadvertent sin is later realized or made known to the offender. Lev 5:17–19, then, appears to presume a case wherein an individual suffers from either a guilty conscience or, perhaps like Job, suffers the effects of divine retribution but cannot pinpoint the cause. In the ANE there are many cultic and ritual materials that deal with this exact problem. In each case, when an individual felt the effects of some divine chastisement, the presumption was that the individual had offended the deity in some way. On the basis of this comparative model Milgrom suggests that Lev 5:17–19 functions in the very same way. In this regard its redactional placement after Lev 5:14–16 is quite understandable: whereas vv 14–16 dealt with a known infraction against sancta, vv 17–19 deal with a supposed or alleged infraction.

In summary, one could say that the basic distinction between the purification and reparation offerings is that the purification offering deals with the issue of impurity while the reparation offering deals with profanation of sacred items. Though not every example in the P source can be explained this way, the overwhelming majority can.

E. Prophetic Critique

It has been common for Christian scholars of the past to denigrate the entire enterprise of biblical sacrifice. One scholar went so far as to describe the system as a means of "self-help." This obvious importation of an Augustinian-Lutheran reading of a Pauline soteriology into the OT is unacceptable to biblical critics of the most recent past (Stendahl 1963). In any event, there can be no doubt as to why Christian treatments of biblical sacrifice spend as much time as they do on the issue of the OT prophetic critique of the sacrificial system: it calls into question one of the fundamental tenets of Mosaic law. For Christian interpreters, these prophetic criticisms suggest that routine observance of the law in all its particularity is not as important as a more general stance of obedience toward one's God. If one can thus find a foothold in the OT itself for questioning the validity and perhaps timelessness of OT law, then the Pauline imperative that law was only given as a temporary measure (Galatians 3) will not seem so out of line with the OT itself.

Perhaps it was just this type of thinking that prompted Milgrom to read at least one prophetic critique in a very different manner (cf. other examples such as 1 Sam 15:22–23; Isa 1:11–14; Amos 5:21–23; Micah 6:6–9). Milgrom contends that the prophetic critique, at least in Jeremiah, is not a radical questioning of the cult's very foundation (1983a: 119–21). Milgrom's hypothesis is all the more intriguing when one realizes that the particular text in Jeremiah which he addresses is perhaps the most thoroughgoing cultic critique in the Bible:

> Thus says the Lord of hosts, the God of Israel: "Add your burnt offerings to your sacrifices, and eat the flesh. For in the day that I brought them out of the land of Egypt, I did not speak to your fathers or command them concerning burnt offerings and sacrifices. But this command I gave them, 'Obey my voice, and I will be your God …' " (Jer 7:21–23).

The text appears to call into question the very foundation on which the sacrificial system rests: the Mosaic legislation. Weinfeld argued (1976) that this prophetic text was a "slap in the face of the Priestly Code." It seemed to overturn the priestly notion that all cultic laws had been part of Mosaic law. Weinfeld also notes that this text was adopted by Maimonides as a proof of the secondary importance of sacrificial practice in the first place. Milgrom, though, reads the text quite differently. He notes that Jeremiah's rebuke only specifies the burnt offering and the peace offering (here called *zebaḥ*). In the P code, these two sacrifices only occur together in the context of voluntary offerings of the individual. The *zebaḥ* never occurs in any cultic calendar of public sacrifice; it is not a statutory offering. The primary staple of the fixed temple cultus was the *tāmīd.* In regard to this offering, Milgrom argues, Jeremiah has nothing to say. "Rather he turns to the people and urges them to renounce their individual offerings because their ritual piety is vitiated by their immoral behavior" (1983a: 274).

One problem with Milgrom's argument, besides its being an argument from silence, is the context of Jeremiah 7 itself. Jeremiah's indictment of the cultus in vv 21–23 occurs within Jeremiah's temple

sermon which itself seeks to undermine the grounding of the mythic nature of the temple. Hyperbole against the sacrificial cultus is just what one would expect here. Another problem is Milgrom's attempt to overspecialize the meanings of *ʿôlâ* and *zebaḥ* in this prophetic context. There is no evidence that Jeremiah is dependent on an overly specialized priestly sense here. Rather, the pair *ʿôlâ* and *zebaḥ* are better understood as a merism, a cliche indicating the sacrificial cultus in general. Levine has shown how this pair functions in exactly this way (1974:21).

In summary, one should not mistake the prophetic critique of the cult for systematic theology. Prophetic discourse occurs in a highly charged atmosphere. It is a mixture of hyperbole, exalted rhetoric, and even polemic. A more balanced view of the prophet's criticism of the cult can be found in the work of A. Davidson (1904). He argues that the Bible contains two models for dealing with human sin. The most prominent would be that of the P code. In P, sins are forgiven through a system of sacrificial atonement. The sins envisioned to fall within this framework are those acts of disobedience which are committed within the context of a larger covenantal bond. The prophets, on the other hand, are concerned with sins of a vastly different nature: sins that represent advertent, gross rebellion against the very fabric of the covenant charter. So heinous are these deeds, that the whole covenant framework is called into question. It is not a question of rejecting P, but rather finding oneself in such a radically new context that P's norms are no longer believed to apply.

A. Toeg (1974) and B. Childs (1986) have recently argued that this "prophetic" understanding of human sin is also to be found in the P code itself. Both scholars point to Leviticus 26, a chapter that lists the curses and blessing that will accrue to Israel depending on her response to the covenant. This chapter moves beyond the concerns of purification and atonement found in Leviticus 1–25. Israel's wanton disobedience, which is foreshadowed here, calls for measures of divine punishment that cannot be altered by the sphere of the cult. The language of judgment found in Leviticus 26, especially the threat to terminate the cultic order itself, is very close to prophetic thought. Toeg goes further and even claims that in one sacrificial law found in P, Num 15:22–31, one also can find evidence of a quasiprophetic critique. In this text, the P writer indicates that not only will all advertent sins be unforgivable in terms of any cultic procedures, but the penalty will also be severe, banishment from the community. The threat of banishment is very close conceptually to the prophetic warning of exile. But perhaps more striking is the P writer's extension of this penalty to *all who sin* in this fashion. Elsewhere in the P code this penalty is used very sparingly and only for the most heinous of sins. Here, however, any advertent sinner is to be banished. Toeg argues that this text, which presents itself as simply another religious law, ought to be understood as a form of prophetic rhetoric, this time employed by the P writer to exhort his community to obedience. Fishbane (1985) has picked up Toeg's argument and has provided additional support for the homiletic nature of this text and its role in a context of preaching rather than strict legal enforcement.

Whether the specific points of Toeg's and Fishbane's theories are accurate need not detain us here. What is important to note is that within the P code itself there are allusions to the type of criticism of the cult that one finds within the prophetic materials. This evidence, in and of itself, should call into question any overly rigid typological distinctions which would isolate priestly concepts of the cult from those of the prophets. The difference has to do with emphasis and rhetorical purpose rather than with outright contradictory evaluations of Israel's spiritual heritage.

F. The Scripturalization of the Cult

1. Biblical Sacrifice in the Second Temple Period. The Israelite sacrificial system has a long and far more expansive existence outside of its brief textual witness in the books of Leviticus and Numbers. It receives extensive attention in pseudepigraphical books that originate in Palestine (*Jubilees*, Temple Scroll) and in Hellenistic sources both within and without Palestine (Josephus, Philo). Of course its most extensive development is to be found in the rabbinic literature beginning with the foundational statement, the Mishnah, the contemporaneous supplementary material of the Tosefta, and culminating in the Palestinian and Babylonian Talmuds, the massive rabbinic commentaries on the Mishnah. Biblical scholars have tended to react to this material in one of two ways. In certain instances the material is conjectured to reflect actual practice in the Second Temple that is then claimed to have certain lines of

continuity with First Temple practice (so Milgrom). On the other hand, many scholars have cast aspersions on the utility of this material for the biblical scholar. In this perspective, these Second Temple sources are understood as operating in a world that is sharply distinguished from the biblical one with very few clearly reconstructible lines of continuity. Furthermore, this attitude toward Second Temple writings precludes their having any bearing on biblical exegesis per se; they are understood to have meaning only in relation to the history of Second Temple thought. In other words—to exaggerate a bit for the purpose of clarity—Philo's writings on the biblical sacrificial system can teach us a lot about Philo and Alexandrian Judaism, but precious little about biblical sacrifice. Similarly, the Temple Scroll can teach us a lot about the sect at Qumran and its sectarian outlook, but very little about the nature of biblical sacrifice.

On the one hand, there is no doubt that such a statement contains a good bit of truth. There is a wide gap between Hellenistic philosophical circles in Alexandria and the ritual of blood sacrifice practiced in Solomon's Temple in Jerusalem. Yet the emphasis on the realia of blood sacrifice within the temple of Solomon as the sole determinant of what constitutes biblical sacrifice is a bit odd and tendentious. Behind this emphasis is the mistaken notion that biblical sacrifice is, in its truest form, the historically reconstructed entity of critical scholarship and archaeology. One may construe the matter in a very different manner altogether. Perhaps what is *biblical* about biblical sacrifice is not only the historical *realia* presumed by the texts, but also the interpretation of sacrifice in the *present canonical form of the texts themselves.* After all, it is this canonical form which presented itself to the earliest interpreters of the Bible.

But there is more at stake here than simply taking care to note the final canonical form and its impact on early biblical interpreters. As is becoming increasingly self-evident, the boundary that separates the postbiblical from the biblical period is becoming increasingly hard to draw (Fishbane). The transition from what constitutes the "biblical" to the "postbiblical" period is an extended and, to a degree, overlapping one (VanderKam 1984). In other words, the sharp distinction made by Stendahl (*IDB* 1:418–32) between what a text *meant* (in the biblical period, by its original author) and what it *means* (to subsequent interpreters) must be blunted on purely historical grounds.

OT scholars are increasingly familiar with the fact that as scripture is being redacted and set in its final form, there is already significant interpretative work being done by the compilers of that literature. Both at the level of gross organization of the antecedent tradition into biblical books and at the more refined level of textual transmission, important hermeneutical shaping of the biblical tradition is taking place. Materials have ceased to be malleable oral traditions, or even written traditions that can be discarded or reworked at will; instead what is evolving are fixed written corpora that are interpreted by a variety of techniques ranging from such simple means as framing them between introductory or concluding formulae (Fishbane 1985) to full scale proto-midrashim (Toeg 1974). In between these poles we might place the phenomena of ascribing various literary works such as the Psalms or the Wisdom material to various biblical figures. What this tells us is that attention to the methods of early exegesis may give us insights into the very methods used by the compilers of the canon.

The interchange between the final composition of the Bible and its early interpretation is becoming increasingly well known for narrative and poetic material. It has not been so readily recognized in the sacrificial material. One obvious reflex of this movement has been the expansion of the Deuteronomistic History by the hand of the Chronicler so as to reflect priestly sacrificial concepts that were absent in the Deuteronomistic History. Sometimes these expansions are unmarked and only noticeable by comparing the Chronicler's expansions with similar material in P. Other times, the expansions are formally marked by the formula "as it is written in the Torah of Moses." More subtle forms of exegetical harmonization can be found in such texts as the Chronicler's treatment of the manner by which the passover sacrifices should be prepared. In this text, the Chronicler says Israel should eat this sacrifice "cooked in water" (2 Chr 35:13). This odd text is translated "roasted in fire" in the JPSV. But what it reflects is the uneasy disjunction between the commandments found in Exod 12:8 and Deut 16:7. The former requires roasting, the latter boiling. What is important to note for our purposes is not simply that the Chronicler has

harmonized two conflicting traditions, but the manner in which he appropriates this sacrificial law. No longer are we dealing simply with the realm of temple realia (the Chronicler is not reading back Second Temple practice into his First Temple text) but the *inner-biblical, exegetical formulation of a cultic ideal.* The exegesis is being performed on materials that no longer function as simple prescriptions for the cult. These materials are viewed at a second level of remove from the cultic realia. They have now become contradictory sacrificial prescriptions which must be rectified by exegetical artifice.

2. Example: The Interpretation of the Purification Offering in Second Temple Jewish Sources. A good example of the "scripturalization of the cult" can be seen through the exegetical development of the purification offering in the P code. This general description of this offering exists in two different places in P (Leviticus 4 and Num 15:22–31), and thus constitutes a classic example of what literary critics have labeled a doublet. Leviticus 4 describes the purification offering in terms of four different social groups (priest, congregation, prince, and individual); Numbers 15 in terms of two (congregation, individual). The most important difference is that Leviticus 4 requires that the congregation bring a bull for its purification offering while Numbers 15 requires a calf for the purification offering and a bull for a burnt offering. Conventional scholarship has attempted to see one of these texts as historically primary and the other as a secondary development. Toeg (1974) has correctly criticized this methodology. Though such methods have been used with considerable success in the narrative portions of the Bible where the data for comparative historical analysis can be quite abundant, they often fail in the cultic material precisely because of a paucity of comparative data. In the particular example of the purification offering, Toeg offers an ingenious solution to the problem of the relationship of the two texts which has in turn been picked up and somewhat expanded by Fishbane. Instead of seeing one as reflecting a later *historical* practice than the other, he suggests that the text of Num 15:22–31 is a systematic *exegetical reworking* of Leviticus 4. No longer are we speaking of *development of cultic practice* but rather of *learned reflection on a developing canon of textual material.*

Toeg's argument is predicated on the assumption that the author of Numbers 15 recognized a problem with the formulation of Leviticus 4. In this text—which is a general rule for the purification offering—the congregation is required to bring a bull (4:13–21). Yet, if one looks at all the other examples of how this general rule is applied, one notes that in every case, the congregation brings a goat. Toeg argues that this would have struck the author of Num 15:22–31 as odd. As a result, this writer assumed that the biblical text of Leviticus 4 was an abbreviated one which had to be filled out by a skilled interpreter. Toeg believes that the law of Leviticus 4, which commands the congregation to bring "a bull as a purification offering," was understood to really mean "a bull [for a burnt offering and a goat] for a purification offering." As Toeg shows, such exegetical "expansions" are very common in both midrash halakah and in some of the versions, such as the Samaritan Pentateuch. If Toeg is correct, Num 15:22–31 constitutes an inner-biblical example of this well-attested postbiblical phenomenon. Perhaps more important for the purposes of our argument is how the author of this piece of inner-biblical exegesis has understood the laws of sacrifice. No longer is sacrifice simply a matter of what takes place in the temple; it is also a matter of recovering what a *textual* law requires. And this manner of recovery is not that of observing what happens in an actual ritual of the temple but rather of interpreting what appears to be a problematic biblical text.

Though the treatments of Toeg and Fishbane are significant in their own right, and do provide witness to an early example of the "scripturalization of the cult," they do not address the question of how the data of the canon present themselves to the earliest readers of the Bible. The question we should address is: just how does canonical shaping effect the interpretation of the purification offering? Though Toeg may be correct that Num 15:22–31 constituted an inner biblical interpretation of Leviticus 4, for the readers of the Torah in its final form the two texts would have provided an exegetical problem. They would have assumed that the Torah was a seamless whole and taken the canonical shape of the Torah seriously. Rather than speak abstractly, let us look at how the rabbis and the Temple Scroll (TS) resolved this problem. By reconstructing how the TS read this text and comparing it to rabbinic exegesis we will see how the laws of biblical sacrifice were viewed in their final canonical form.

The basic problem regarding the purification offering, as stated above, is that the Bible contains two sets of general rules regarding its performance: Leviticus 4 and Num 15:22–31. Moreover, these general rules are contradictory about what the congregation must bring: bull or goat. In addition to these two general rules, there are over a dozen examples of particular applications of the rite. When one presents the data this way, the issues facing the early interpreter of scripture are quite clear: one of the general rules had to be shifted into the category of specific application. No halakic system could allow two contradictory sets of general rules to stand. What is the congregation to bring as its purification offering, a bull (Leviticus 4) or a he-goat (Numbers 15)? This is no small matter for a covenantal religion centered on the keeping of commandments.

For the rabbis the choice is very easy to discern. They chose to understand Num 15:22–31 as a specific application. Num 15:22–31 was understood to refer to the sin of idolatry (*m. Hor.* 2:6). Thus the danger of having two sets of general prescriptions was defused. One should note that this exegetical decision is a very prominent feature in the Mishnaic system of sacrificial atonement. It is not a matter of its being found in just a few *halakhoth.* Indeed, the entire tractate of *Horayot* depends on this exegetical decision, as do whole sections of other tractates.

The TS, on the other hand, has understood Leviticus 4 as a special application of the purification offering and Numbers 15 as the general rule (Anderson fc.). Two features of the TS make this clear. First, on the basis of a midrashic reading of Num 15:24b the author of the TS concluded that each purification offering must include a cereal and a drink offering. This exegesis of Num 15:24b was then applied to every application of the purification offering in the TS. Second, the TS understood the peculiar detail of Lev 4:14 which required that the congregation bring a bull as a special application that pertained to the rite of ordination. This fact can be proven by the manner in which the TS expresses the laws with respect to the ordination sacrifices of the priest and congregation. In both cases the TS expresses its laws of ordination on the basis of the distinctive diction of Lev 4:2–12 (the case of the priest) and 4:13–21 (the congregation). One may ask why the day of ordination was chosen as a particular application of the ritual found in Lev 4:1–21. Perhaps because of the unusual summary statement of Lev 7:37:

> This is the law of the burnt offering, of the cereal offering, of the purification offering, of the reparation offering, of the consecration, and of the peace offerings.

This verse summarizes what has just been itemized in detail over Lev 1:1–7:36. However, the careful reader will note that no mention of *the consecration offering* is found in the previous seven chapters. To be sure, there is a brief mention of how Aaron and his sons are to perform the cereal offering at the ordination rite, but no mention of how the animals in particular are to be treated. This textual anomaly has been explained as being due to a faulty transmission of the text. Again, one must note that though this explanation may be fine historically, it does not do justice to the meaning of the text in its final canonical form. For one canonical reader, the author of the TS, this tiny clue in Lev 7:37 pointed to the existence of an ordination rite hidden somewhere in Lev 1:1–7:36. Only with considerable exegetical skill could this rite be discovered.

3. The Sacrificial System in Canonical Perspective. It should be emphasized that what the TS has done is very closely paralleled in the rabbinic materials. The only difference is that the rabbinic sources understood the relationship of Leviticus 4 to Numbers 15 in a contrary fashion; for the rabbis Numbers 15 was the special application (for the sin of idolatry) while Leviticus 4 was the general rule (so the mishnaic tractate *Horayot*). What is common to both of these sources is the attempt to solve a puzzle left in the canonical shaping of the sacrificial material. The type of exegesis that is practiced by the author of the TS and the rabbis might be labeled *holistic* in the sense that these authors use the entire textual tradition of the Sinaitic revelation as the basis for constructing an exegetical system. Though modern critical scholarship has noted many of the irregularities that caught the eye of the author of the TS, its method of understanding those irregularities is quite different. The differences in detail which arise in the Torah's presentation of the purification offering are attributed to variant historical levels of the tradition, artificial fusings of disparate sacrificial lore, and even occasionally faulty transmission of the biblical text. This method of analysis presumes that the present state of the text is not the starting point for analysis, rather

that the earlier hypothetically reconstructed levels of the tradition constitutes the most valid entry point for the biblical scholar to begin his or her work.

A more appropriate model of exegesis that would allow the biblical scholar to move from the biblical text to a document like the TS or the mishnaic tractate *Horayot* must presume a mode of analysis that understands the Torah as a systemic whole. Perhaps the closest analogy to the type of exegesis would be the model of canonical exegesis advocated by Childs *(IOTS)* and others. Childs' own formulation of the task of biblical exegesis demands that the reader take seriously the final canonical form of the text as a way of recovering what the earliest shapers of the Bible intended. We would argue that the mode of analysis that Childs' presupposes, which seeks to understand the text in categories that are not purely historical, is the best starting point for understanding the conceptual horizon of early exegetes like the author of the TS. It is not a fact that the author of the TS was paying particular attention to the process of canonical shaping as much as he was working within the constraints of the canonical product. What modern scholars dismiss as textual accidents of omission are details of highest significance to early readers of the Bible.

It is most important to note the legacy of biblical sacrifice in its final canonical form. There is a certain tension in this form which must be appreciated. On the one hand, we can see as a result of historical criticism that the canonical shapers were selective in regard to what they put in the text. At no time in Israel's cultic history did this book as a collective whole function as a priest's manual. Or, to put it another way, the canonical shapers did not choose one particular historical expression of Israel's cultic experience as normative. In a very real sense this selectivity demonstrates that the cultic material of the Torah is "one step removed from the actual historical activity of the cult" (Childs 1986:160). But, on the other hand, these statutes are presented, in their final literary or canonical form, as *perpetual laws that cannot be periodized.* We could summarize this dilemma in the following manner: biblical sacrifice in its final canonical form consisted of disparate and fragmentary cultic materials which were presented en masse as a perpetual coherent system. Nowhere can this be better illustrated than in the example of Leviticus 4 and Num 15:22–31. Here we have materials that are one step removed from the cult and thus make any systematic historical reconstruction very difficult. Witness the many varied and often self-contradictory solutions of modern scholarship regarding their historical priority, none of which can claim an overwhelming consensus. Yet for the earliest readers of the Bible, this text presents itself as a perpetual statute, not a law that can be historically cordoned off into a particular epoch of history, nor a law that simply represents a mode of demonstrating covenantal obedience. Rather, this is a commandment that calls for actualization in the present. For the reader of the Bible in the Second Temple period the question had a particular edge: just which animal does the congregation bring for a purification offering? The author of the TS provided one answer, the rabbis another. As is true for the material on the purification offerings, so also for the other sacrifices. Removed historically on the one hand, yet commanding on the other—this is the legacy of biblical sacrifice in its final canonical form.

4. Biblical Sacrifice in Jewish and Christian Tradition. It has recently been argued that most of the Mishnah's treatment of the sacrificial system is a response to the destruction of the temple in 70 C.E. The ideological and exegetical superstructure of the tractate on sacred offerings has been explained as an attempt to recreate the world of the *destroyed* temple. No doubt there is much truth to such a suggestion. Indeed the exegetical reconstruction of the temple in the Mishnah was so successful that one can find the rabbis, in the context of interpreting the text, speaking of the sacrificial cultus as if it were still in operation (Bregman 1978). This "as if" quality of rabbinic speech continues to influence readers of rabbinic literature until the present day. As the anthropologist S. Heilman notes, the textual details of the temple cultus are still discussed in the present tense in contemporary Talmudic study groups *(haburoth).* Moreover, the discussion is not limited to rote citation of divergent textual traditions or rabbinic opinions, but rather the whole sacrificial complex is, in part, composed afresh (Heilman 1984:65) by each *haburah.* He writes: "As we reviewed each move the ancient priests would make in their ritual preparation of the sacrifices, I could begin to see all that rush of activity a bit more clearly. It was evident my partners [in the *haburah*] around the table were walking into the page and onto the Temple Mount with all the

assurance of old hands. When they came to a discussion of the sprinkling of blood on the altar and wondered aloud whether or not the priest bent his wrist in that act, it took only a quick look back into their own memory to see precisely how the ritual was carried out. But this memory was of course not theirs in origin; it was a memory acquired from the text. Their many years of review had allowed them to construct that ancient Temple and altar in their minds and people it with priests and worshippers" (p. 62). In the circle of these *haburoth* the transformation of biblical sacrifice from temple-practice to exegetical artifice is complete. The cultus has been "scripturalized."

The movement by the rabbis to transform the sacrificial system from that of a physical reality into an exegetical reality was enormously successful. But one must question whether this project is to be understood *solely* as a reaction to the events of 70 C.E. If the data we have compiled from the TS reflect a more general phenomenon of the pre-70 period era, then we can safely assume that the exegetical refashioning of the sacrificial system was already well underway in the pre-70 period. For Christians, this refashioning of the cultic system led to the denigration of much of the particularities of the books of Leviticus and Numbers. Not only were the details of Leviticus understood to be tedious, but the very fact that Jesus had predicted the actual destruction of the temple (Matt 24:1–3) seemed to call for a depreciation of the intrinsic value of the sacrificial cult. Indeed in the Byzantine city of Jerusalem the entire area of Temple Mount was left in a very conspicuous state of destruction as a physical sign and symbol of the fall of the first covenant. The sacrificial material of the OT had value only insofar as it pointed allegorically or typologically to the atoning death of Jesus of Nazareth and the new covenant his resurrection occasioned. Even OT materials that had little or no relation to the process of atonement, like the Passover rite, were made to conform to this Christological pattern (cf. 1 Cor 5:7).

For Jews, though, the cultic details of Leviticus and Numbers and the sometimes conflicting and incomplete laws found therein became the subject of intensive exegetical study. The final shaping of the Torah had put the diverse and, at times, fragmentary cultic materials of the First Temple period into a unitary framework: they now comprised the complete Torah which the Lord delivered to Moses at Mt. Sinai. The tension that resulted from the presentation of this fragmentary and diverse material as a complete revelation provided the impetus for subsequent interpreters creatively to refashion this Torah through carefully derived exegetical principles. Such is the legacy of biblical sacrifice in its canonical form; all the rest is commentary.

GARY A. ANDERSON

NEW TESTAMENT

When the NT was in the process of formation, any religion without the practice of sacrifice would have been almost inconceivable. As far as Judaism is concerned, the sacrifices described by the law continued to be offered daily in Jerusalem right up to the destruction of the temple in A.D. 70. Following that event the rabbis continued to discuss the sacrificial system as prescribed by the Torah and in fact laid even greater emphasis upon it (cf., e.g., *Zebaḥ*). In the gentile world the practice of sacrifice continued into late antiquity (cf. Rudhardt and Reverdin 1981). On the other hand, signs of a reaction against the practice began to appear. There was precedent for this in the OT with the prophetic critique of the cultus (e.g., Amos 5:21–27) and in the metaphorical use of sacrificial terms for interior religious dispositions (Ps 50:23; 51:19). There are further examples of this in postbiblical Judaism, e.g., Philo of Alexandria and the Qumran sect. Philo was a Diaspora Jew with no direct contact with the temple cult. He interpreted the OT references to sacrifice in allegorical terms and took them to refer to inward processes of the soul (cf. *Vita Mos* 2.106–8). As a result of its historical circumstances the Qumran sect found it impossible to take part in temple worship even though in principle they would have liked to have done so. They found a way out of their dilemma by interpreting their whole communal life, their very existence, their organization, and their prayer life in cultic terms (cf. 1QS 8:5–10; Klinzing 1971:50–166). In any case the centralizing of worship in Jerusalem made it increasingly necessary, even before the debacle of A.D. 70, for those living outside the holy city to worship in the synagogue. Here holiness in everyday life provided a substitute for the sacrificial system. In Greek philosophy since pre-Socratic times there had been a strong tradition advocating a more appropriate view of God and humanity. This led to a polemic against blood sacrifice which reached its climax in the hermetic literature, with its fundamental antagonism toward the cultus (cf. *Ascl.* 41). We find the same thing in Porphyry (Ferguson 1980:1152–65).

Such was the world into which Christianity was born. In general it may be said that Christianity succeeded in bringing the problem of sacrifice into association with the Christ event and working it out from that perspective. To be specific, the following questions arise in connection with the various levels of historical tradition and the respective documents: What was the Christians' attitude to the sacrificial practices of Judaism and pagan religion? Are the death of Jesus on the cross and, in close connection with it, the Lord's Supper, interpreted in sacrificial terms? In what way was sacrificial imagery employed as a metaphor for the Christian life?

A. Jesus and the Synoptic Tradition

1. Attitude to Sacrifice. There is surprisingly little about the actual performance of sacrifices in the Jesus tradition. We are never told that Jesus took an active part in them. In the infancy narratives (Luke 1:8–11; 2:22–24) temple sacrifice is mentioned merely as part of the necessary background. There is one authentic Jesus saying which is relevant, viz. Matt 5:23. Here the practice of sacrifice is taken for granted. The same is true in Mark 1:44 and Luke 17:15; cf. 13:1. On textual grounds Mark 9:49 is to be regarded as secondary and so may be left out of the account. There is no trace of any direct polemic against sacrifice. At the same time, however, Jesus does expect the worshipper, if necessary, to stop what he is doing in the middle of a sacrifice in order to seek reconciliation with a neighbor. Here we have a paradoxical and provocative perspective. Jesus takes up the requirements of OT liturgy and Jewish admonitions about approaching sacrifice in the proper frame of mind and enhances them in a significant way (Kertelge 1983:349–51). The redactional insertion of the prophet's critique of the cultus (Hos 6:6) in Matt 9:13 and 12:7 is along the same lines. Mark 12:33 (cf. 1 Sam 15:22) gives a similar precedence to the love commandment over burnt offerings *(holokautōmata)* and other sacrifices *(thysiai).* The same point is made indirectly in Luke 10:25–37 with the two figures of the priest and Levite in vv 31 and 32 (cf. also Mark 7:9–13; 12:41–44). Jesus introduces an unmistakably new emphasis in the cleansing of the temple (Mark 11:15–19), as he does with the difficult saying about the temple's destruction (Mark 14:58 par). In an act of prophetic symbolism Jesus shows explicitly that the temple is first and foremost a place not for the sacrificial cultus—which is so easily open to corruption—but for prayer to God (cf. Isa 56:7). In line with the apocalyptic hope for a new temple in the end time Jesus sets before his people the prospect of a complete renewal of worship in the kingdom of God. Such things as the forgiveness of sins

(Mark 2:5) and festive table fellowship (Mark 2:15), which in Judaism had sacrificial associations, Jesus transforms, with supreme messianic authority, into profane occasions of everyday life.

2. Suffering and Death. It can hardly be denied that Jesus had a premonition of his impending suffering and death. The question is, What categories did he use to interpret these events? And which of them belong to the pre- or post-Easter strata of the tradition? (Gubler 1977:206–334; Hengel 1981:65–75). Sacrificial images should not be given too much prominence in a one-sided way. Nor should they be entirely eliminated. After all, it was customary in Judaism to use such terms for the deaths of human beings. The innocent death of the Servant of God on behalf of the many, i.e., the nations of the world (Isa 53:12), was regarded as a sin offering (Isa 53:10; cf. 53:6f; *T. Ben.* 3:8 may have undergone Christian reworking). The martyrdom of the Maccabees was believed to be a means of atonement for the sins of the people (*4 Macc.* 6:29; cf. 2 Macc 7:37). This means that the Jews considered the vicarious surrender of life to have sacrificial significance. This was partly, though by no means entirely, a result of Hellenistic influence. True, the personal dimension remains primary; the ritual allusion is added more by way of illustration. In any case, this opens up the way as far as it goes for the interpretation of Jesus' death as a fulfillment of the OT sacrifices and their atoning effect. Of course it is difficult to prove how much of this goes back to the historical Jesus himself. We cannot be sure whether he used Isaiah 53 as Mark 10:45 suggests. This logion probably has its *Sitz im Leben* in the eucharistic tradition and must be judged accordingly.

3. The Last Supper. In the eucharistic tradition we find a great variety of motifs concentrated in a remarkably small space. The following elements may be mentioned as suggesting a sacrificial interpretation (cf. Cooke 1960:15–38; Aalen 1963:147–52). (a) In our texts the Lord's Supper is set in the framework of the Passover. Now, in Judaism the Passover was interpreted as a sacrifice because of the killing of the lambs in the temple and the shedding of blood which accompanied it. (b) The cup-word in Mark 14:24 includes the phrase "the blood of the covenant which was shed …" This is an allusion to the covenant sacrifice and to the sacrificial meal in which it culminated (Exod 24:1–10). (c) In the same cup-word the phrase "for the many *(hyper)*" is a reminiscence of Isa 53:12. Here we have a connecting link with the martyrological interpretation of the Servant Song. Matt 26:28 makes the specific point that its purpose was "the forgiveness of sins," an idea associated in Judaism with the sin offering. (d) Various attempts have been made to classify the Lord's Supper as a *tōdā meal,* another type of OT sacrifice. But this suggestion cannot be taken as proven (cf. Klauck 1986:17f.). We must reject the thesis that "body" and "blood" in the words of interpretation were technical terms associated with sacrifice, referring to the division of the sacrificial animal into its component parts (Klauck 1986:305–61). Rather, the word "body" stands for the entire person of the speaker, while "blood" points to his violent end.

The expansion of the eucharistic words with sacrificial notions is the result of a theological development which was as rapid as it was intensive. The source of it seems to lie in the gestures and words which Jesus used at his farewell meal to interpret his death as a voluntary act of self-giving. After Easter all this could be brought out and made explicit with the help of sacrificial terms derived from Jewish martyrology and covenant theology. It was an attempt to express the uniqueness of Jesus' death and its universal validity, and to show how it was the ultimate fulfillment of the ancient sacrificial cultus. The rending of the temple veil in Mark 15:38 points in the same direction. The death of Jesus opens up access for all to the holy of holies which only the high priest hitherto could enter once a year on the Day of Atonement.

B. The Primitive Christian Community

In Acts 2:46, 3:1, and 5:42 we see the early Jerusalem community regularly attending the temple. But they only went there for the times of prayer, thus agreeing with the cleansing of the temple in Mark 11:17 ("house of prayer"). Whether they occasionally took part in the daily sacrifices is not entirely clear. From Acts 2:46 we gather that the breaking of bread in private homes replaced the temple sacrifices. This rite formed a nucleus from which distinctive Christian forms of worship were developed (Hahn 1983:69–71). The canonical texts do not make it clear whether the strict Jewish Christians associated with James took a more favorable view of sacrificial practice or whether such an attitude developed over the course of time. The apocryphal evidence is equally vague. It is typical that the Hellenists, Diaspora Jews who had already

drifted away from temple worship, were critical of the temple itself and the sacrificial cult, as can be seen from Stephen's speech (Acts 7:41–43, 48–49). It is obvious that in circles such as these the view prevailed that Christ's death had an exclusive saving significance. This was realized through the resurrection and the descent of the Holy Spirit. Hence the earlier cult became superfluous. The development of the eucharistic tradition and the concomitant formation of creedal statements belong to this phase. We can trace these developments in the older formulae of the epistolary literature.

C. Paul

1. Attitude to Sacrifice. As a result of his origins and the sphere of his missionary activity Paul was on the one hand familiar with the temple sacrifices of Judaism. On the other hand he found himself face-to-face with the sacrificial cults of paganism (cf. the telling description in Acts 14:11–15).

a. Jewish. In arguing for his right as an apostle to receive financial support Paul refers in 1 Cor 9:13 to the privilege of the priests to have a share in the sacrifices (cf. Lev 6:9 etc.). In 10:18 he speaks of the table fellowship in which "Israel according to the flesh" became partners in the sacrifice. It is an open question whether Paul is simply giving an objective description or whether he is continuing the polemical invective of 10:7—the golden calf, Exod 32:6—as an instance of idolatry. In Acts 22:17 Paul visits the temple only for prayer, whereas in 21:26 he offers a sacrifice to discharge the dues for four Nazarites (cf. Num 6:13–21). The reliability of this piece of information has often been questioned. It becomes more plausible when we take Paul's missionary policy enunciated in 1 Cor 19:20 seriously.

b. Pagan. Paul discusses the sacrificial practices of paganism in a debate about meat sacrificed to idols in Corinth (cf. Acts 15:29). For Christians, participating in a sacrifice or worshipping in a pagan temple (1 Cor 8:10) is strictly prohibited. Paul believes that pagan sacrifices are offered not to God but to demons (10:20) as was already the case in the OT (cf. Deut 32:17). He is familiar with the technical details of sacrifice as we can see when he refers in 10:21 to the cup of libation and to the table which was a special feature of the *theoxenia* (a banquet given to the gods) and of the cult of the dead (Klauck 1986:264–71).

2. Christological Use. It would be wrong to suppose that everything Paul has to say about atonement (e.g., Gal 2:20; 1 Cor 15:3; 2 Cor 5:14–15; Rom 5:8–9; 8:3, 32) has sacrificial implications. But the idea of atonement, with its related images (e.g., ransom and reconciliation), includes the metaphor of sacrifice (Hengel 1981:34–54). When Paul says Christ was offered as our paschal lamb (1 Cor 5:7) he is borrowing from early tradition. In this instance the death of Jesus has already affected Christian perspective on Jewish ritual and has accentuated already latent ideas of sacrifice and atonement. In Jewish thought the killing of the lamb, though a necessary preliminary to the Passover meal, had no intrinsic significance of its own (Schmitz 1910:51, 161). When Paul says in 2 Cor 5:21 that "he made him to be sin who knew no sin," this is best taken as an allusion to the OT sin offering (*hamartia*, e.g., LXX Lev 4:8, 20–21). Such sacrifices are now overshadowed by the death of Christ (Lyonnet and Sabourin 1970:187–289). In Rom 3:25 Paul cites a fragment of tradition which probably comes from the Hellenistic circle in Jerusalem. It shows their critical attitude to the temple and was probably connected with the Lord's Supper (Gubler 1977:224–30). The focal points in it are "place of atonement" *(hilastērion)* and "in his blood." The LXX uses *hilastērion* to translate *kappōreth.* This is the golden plate on the ark of the covenant in the holy of holies, which the high priest sprinkles with the blood of the animal sacrificed as a sin offering on the Day of Atonement (Lev 16:14–16; cf. *4 Macc.* 17:22). The final stage of the atonement ritual takes place concealed within the innermost shrine of the temple, one of a series of sacrifices performed on that occasion. Now, however, the atonement has taken place on Golgotha for all to see. The Deutero-Pauline saying in Eph 5:2 makes the same point. Here we have a formula which speaks of Christ's self-surrender ("he gave himself for us"), expanded with sacrificial language from the OT: "as a fragrant offering and a sacrifice to God" (cf. Ps 40:7; Num 15:24, etc.). The context here is parenetic. It is an appeal to Christians, bidding them to show the same kind of love to one another (Hahn 1983:75–76).

3. The Lord's Supper. The Lord's Supper appears to be connected with sacrifice in 1 Cor 10:14–22, where Paul places the two entities side by side and draws a comparison between them (Fiebig 1911:272–73). But Paul is not thinking of *thysia,* the actual performance of a sacrifice, but of *koinonia,* the fellowship which is formed by participation in the common meal and which forms the climax of the

sacrifice. The Christ community created by the Lord's Supper is exclusive in character and rules out any further participation in pagan sacrifices (Klauck 1986:284–85). In 1 Cor 11:27 sacral terminology is used in connection with the eucharistic tradition (Aalen 1963:143–46). Again, in the explanation given at 11:30 Paul uses the idea of taboo, which comes from the sacrificial cultus. Such ideas are certainly not dominant in the text taken as a whole. It is arguable that, for Paul, Jesus' self-offering on the cross becomes a present reality in the Lord's Supper (cf. 1 Cor 11:26), but in no way can it be said that the Church itself offers any sacrifice in the supper except perhaps in a metaphorical or ethical sense.

4. Metaphorical (Ethical) Use. There is ample evidence for a metaphorical or ethical use of sacrificial language. Such terms describe concrete Christian behavior exhibited in everyday life in the world or in the missionary activity of the apostle himself (Klauck 1989:349–56).

Temple imagery is used to describe the community in 1 Cor 3:16–17 and the individual in 6:19 (cf. 2 Cor 6:16; Eph 2:19–22; 1 Pet 2:5–6; Klinzing 1971:167–96). In Phil 4:18 Paul gives a symbolic meaning to the material gifts provided by the Philippians: they are a "fragrant offering" (cf. Gen 8:21, etc.) and an "acceptable sacrifice" (Rom 15:31). The cultic language in 12:1 is colored much more by the Hellenistic milieu. The closest parallels to *logikē latreia* ("reasonable service") are to be found in *Corp. Herm.* 1.31; 13.18. Yet in one respect Paul does transcend the Hellenistic critique of the cultus with its spiritualizing tendency (Seidensticker 1954:17–43, 256–63). He can charge the Romans to offer their own bodies *(sōmata)* as a living sacrifice. Here Paul rises to new heights of existential relevance and ethical responsibility. In this connection we may also add 1 Pet 2:5. Here the community is pictured as a priestly body which offers spiritual sacrifices *(pneumatikas thysias)* in a life consistent with its faith (cf. 1:15).

In 2 Cor 2:14–16 Paul borrows two sacrificial terms, "savior" and "aroma," and applies them to the preaching of the gospel. The content of the gospel is Christ, with the apostle as his personal representative. In Rom 15:16 Paul calls himself a "liturgist" or "priest" of Christ Jesus. He is performing a "priestly sacrifice" *(hierogounta)* and making the gentiles into an "acceptable sacrifice" by converting them. In Phil 2:17 the two trains of thought converge. Alongside "sacrifice" *(thysia)* and cultic service *(liturgia),* Paul introduces the image of "drink offering" (*spendomai;* cf. 2 Tim 4:6). He pictures his own life, which he is likely to lose (cf. Rom 8:36), as a libation accompanying the main sacrifice, which is the Philippians' faith. See APOSTLE.

In conclusion let us mention the term *aparchē,* which is derived from the offering of the firstfruits and is applied by Paul in several different ways. He uses it for Christ (1 Cor 15:20, 23), for the Holy Spirit (Rom 8:23), for Israel (Rom 11:16), and for the first converts to be baptized in a particular city (1 Cor 16:15; Rom 16:5).

D. The Johannine Writings

1. The Gospel of John. According to the gospel of John Jesus travels several times to Jerusalem in order to celebrate the principal Jewish feasts (2:13; 5:1; 7:14; 10:22–23; cf. 12:1, 12, 20). He suffers death on the cross on the day before the Passover (18:28; 19:14, 31) at the same hour the lambs were being slaughtered for the Passover meal in the forecourt of the temple. How far this rests on historical reminiscence we need not now inquire. The gospel's intention is to say that Jesus invests the Jewish lamb cult with entirely new content. He gives himself (3:16; cf. Horvarth 1979:74–77) as the Passover lamb of the new covenant (cf. 19:36) for *(hyper)* his own (10:15; cf. 13:1) and for the life of the world (6:51; cf. 11:50, 52; 18:14). John 6:51 serves as a bridge to the tradition of the Lord's Supper. The Johannine redaction carries this further in the eucharistic discourse of 6:52–58, which is remarkable for its brutal language about "flesh" and "blood" and "chewing" *(trōgein)* the flesh. Whether this language is sacrificial in origin (Betz 1964:180–81) is open to question. According to 1:29 (cf. 1:36) the Baptist calls Jesus the "Lamb who takes away the sin of the world" (cf. also 1 Pet 1:19). But the matrix of this concept was more likely the Servant of Yahweh of Isa 53:7, even though further connotations (paschal lamb; the lamb of the daily Tamid-sacrifices) cannot be excluded. The saying about Jesus consecrating himself in 17:19 should most likely be connected with the activity of the high priest on the Day of Atonement (Schmitz 1910:256–57). The theological basis for the new evaluation of the Jewish sacrificial cult is laid down by the Evangelist in 4:20–24. Earthly places of cultic worship lose their significance when the eschatological

hour dawns. The need is for a new form of worship "in spirit and in truth." The *pneuma*, i.e., the reality of God, makes the renewal of worship possible. Jesus Christ is an essential factor in such worship for he is the One in whom God's *truth* is personally revealed. Such worship of God in the spirit is not therefore to be construed as a purely spiritual affair which only takes place in the human psyche. Rather, it is located in the worship of the Johannine community.

2. 1 John. In 1 John 1:7 we read that the "blood of Jesus" cleanses us from all sin. This assumes that blood has an atoning effect (Lev 17:11) brought about by the sprinkling of the blood of the sacrificial animal on the horns of the altar or suchlike manipulations. Later on in 2:2 (cf. 4:10) we read that Jesus, our advocate in heaven (2:1) is in person the atonement *(hilasmos)* for our sins. Atonement according to the OT is accomplished through bloody sacrifice. In Lev 25:9 the great day of reconciliation is called the "Day of Atonement" (LXX: *hilasmou*). 1 John applies the terms of sacrifice strictly to Jesus. They serve to explain 3:16: He gave his "life for us *(hyper)*." The conclusion drawn from this is that we must therefore do the same for our brothers and sisters. The Christians' existence is incorporated into the self-giving of the Lord. The concept of sacrifice can also be applied to the Christian life, although 1 John does not make this point directly.

3. Revelation. The heavenly sanctuary the seer speaks of is modeled after the temple at Jerusalem. The heavenly ritual is patterned on the liturgy of the temple. This provides a starting point for the development of many points of contact with the sacrificial cults. We will select only the most important ones.

The preeminent christological title is the "Lamb" (28 times). There are several references to "the blood of the Lamb" and also to the fact that this lamb was slaughtered (e.g., 5:6, 9, 12; 13:8). The lamb figures in early Judaism as a sacrificial animal par excellence. It serves as a sacrificial element in the daily Tamid. Alongside of this the Passover rites and Isa 53:7 may also be influential. In any case the author uses the Lamb as a code word for the crucified and exalted Lord, who is now enthroned in heaven but bears the signs of his sacrificial death upon his person (Wenschkewitz 1932:149–52).

Revelation reflects the persecution which provides the immediate context of the work. In 7:14 the author speaks of those who have washed their robes and made them white in "the blood of the Lamb," and in 12:11 of those who have conquered "through the blood of the Lamb." The reference here is to the Christian martyrs who have given up their lives for the sake of their beliefs. In 6:9 their fate is interpreted theologically in sacramental terms. The souls of those who were "slain" for the word of God are under the altar in the heavenly sanctuary. They are the firstfruits *(aparchē)* who were redeemed for God and for the Lamb (14:4).

In the OT the incense offering is by no means unimportant (e.g., Lev 16:13). In Rev 8:3–4 it is transferred from the temple cult on earth to the heavenly liturgy. In Rev 5:8 the incense offering acquires a metaphorical meaning symbolizing the prayers of the saints (Daly 1978:64–69, 301–3).

E. The Letter to the Hebrews

Of all the writings in the NT the Letter to the Hebrews provides the most systematic treatment of the sacrificial cultus of the OT. But it does so not for its own sake but because it wants to make a theological statement for mainly parenetic purposes. Christians who are unsure of themselves and are unduly impressed by certain Jewish rites (cf. 9:9–10; 12:16; 13:9) are told that they enjoy in full (4:14; 8:1; 13:10) what was only partially available in the worship of the old covenant. The paradox of this work is that it uses a thoroughly cultic language to make a deeply uncultic statement. In sacramental terms it announces the end of all sacrifice (10:18). The author succeeds in using the thought forms of apocalyptic and Platonism (8:5; 9:23; 10:1) to describe the permanent effect of the Christ event—how it fulfills and transcends all previous sacrifices.

1. High Priest and Sacrifice. Christ stands at the center of the argument as the One who is both priest (2:17) and victim (9:14). The author is relatively free in his handling of his OT sources. He uses as his archetype not the temple but the tabernacle in the wilderness (9:1–5). The ritual he has in mind is the liturgy of the great Day of Atonement (9:7). But the covenant sacrifice of Exod 24:3–8 also figures in the discussion (9:18–20; cf. 12:18-21; 13:20), and elsewhere he even mentions the daily sacrifice (7:27; 10:11). The main purpose of all sacrifice was to make atonement for one's own and other people's sins

(5:1–3), which is accomplished by the shedding of blood (9:22). But the effects were only temporary (10:1–4, 11). Jesus, the sinless One (7:26), however, offered himself as a victim on the cross and was raised to the right hand of God (12:2). Thus he removed the burden of sin from humanity once and for all (7:27; 9:12, 26, 28; 10:10) by a single sacrifice (10:12, 14) and opened up access to God for them for all time (1:3; 4:16; 10:19). One aspect of this self-sacrifice is the obedience to God which he showed during his earthly life and suffering (5:7–8; cf. 10:9–10). Now he is continuing his priestly work by making intercession in heaven (7:25; 9:24). As we can see from 13:11–12, his death on the cross was basically a noncultic affair despite all the cultic terms employed in 13:11–12. The unclean cadavers of the animals sacrificed on the Day of Atonement were burnt outside the city gates, their blood having already been used in the atonement rites of the temple (Lev 16:27). In this noncultic place Jesus shed his redeeming and atoning blood for all (2:9).

2. The Christian Life. In the parenetic part of the letter (from 10:19 onward) the meaning of this theology of sacrifice for the Christian life of the recipients is set forth. Now that the sacrifice of Christ has freed them from their sins (10:22) they are henceforth enabled and obligated to hold fast to the confession (10:23), to show brotherly love to one another, and to join in the assembly (10:24–25). They must guard against lapsing into sin a second time—if they do so there can be no atoning sacrifice (10:26)—and they must stand firm in suffering (10:32–39; cf. 12:1–11). As the cultic community of the new covenant which takes part in the heavenly liturgy (12:18–24), God finally honors them for their faith and for the gratitude they show in their lives (12:28). The shameful death of Jesus in that unholy place (13:13) should inspire them to face hostility outside of existing religious conventions. Their ongoing sacrifice according to 13:15 consists of prayer and the confession of faith, which the author calls "the fruit of the lips" (cf. Ps 50:14, 23; 1QS 9:26; 10:6, 8, 14, 22). As stated in 13:16, to do good and to maintain fellowship *(koinōnia)* is the only sacrifice pleasing to God. It is a matter of scholarly discussion as to whether these injunctions might be susceptible in part at least to a sacramental interpretation, in other words whether they allude to the celebration of the eucharist (Betz 1964:144–66). But this is highly questionable since there are no clear indications of that in the text. The expression "blood of the covenant" in 9:20 (cf. 10:29; 13:20) could just as well come directly from the OT, thus bypassing the eucharistic tradition entirely. The term "altar" *(thysiastērion)* in 13:10 serves as a summary description of Christ's saving work as a whole and should not be interpreted in isolation as a reference to the Lord's Supper. It would seem that the primary focus of the community's worship was the Word. The expositor should not be led astray by the sacrificial language.

3. The Binding of Isaac. One of the heroes of the faith cited in Heb 11:17–19 was Abraham, who was ready to sacrifice his only son at God's behest (Gen 22:1–18; cf. esp. v 9 quoted again at Jas 2:21, with a possible allusion in Rom 8:32). Isaac plays a central role in the Jewish Haggadah. He willingly accepts a sacrificial death, and in fact the sacrifice is regarded as actually accomplished. It has the effect of atonement for Israel (Gubler 1977:336–75; Daly 1978:175–86). The main evidence for this belief is to be found in the Palestinian Targums. But in view of the late date of their written form we have here a major chronological problem. It may be that it was only after the destruction of the temple that the sacrifice of Isaac came to be interpreted as an archetype of the Tamid-offering and its atoning function (Davies and Chilton 1978). We should therefore be cautious. Heb 11:17–19 shows no sign that this interpretation of the sacrifice of Isaac had already been developed.

F. Conclusion

It is impossible to do justice to the NT evidence if it is judged in the light of a general concept of sacrifice as a phenomenon in the history of religion. Otherwise the novelty and originality of the Christian appropriation of the concept would be decidedly shortchanged. Equally, the favorite notion that sacrifice was "spiritualized" (Wenschkewitz 1932:6–10) does not really fit the bill. It would be better to speak of its being "christologized" and "pneumatized." Jesus' saving death gives an entirely new meaning to sacrifice as a consequence of his resurrection and the sending of the Holy Spirit. He opened up a new dimension of reality. As a result sacrifice is reduced to its personal core from which ethical consequences can be drawn for Christian faith and life.

Here is the unbroken thread in the early Church's understanding of sacrifice (Daly 1978:311–508). We can see this, for instance, in the use of sacrificial language in connection with martyrdom (*Ign. Rom.* 2.2; 4.2; Young 1979:223–33). There is a parallel development in the application of sacrificial language to the new worship of the Christian community. The liturgy comes to be increasingly interpreted in the categories of the OT cultus (*1 Clem.* 40–45). This has an important effect on the understanding of the eucharist (cf. *Did.* 14.1–2), although to begin with it was only the prayer of thanksgiving plus the material gifts of charity that were regarded as the Church's offering. This tendency is enhanced from another angle. The absence of real sacrifices in the ancient sense led to accusations that the early Christians had no cultus of their own and were therefore atheists. The apologists replied by seeing the "pure offering" of Mal 1:11 as a reference to the eucharist. It was the sacrifice of the new covenant (Just. *Dial* 41.1–3; 117.1–3; cf. also Iren. *Haer.* 4.17.5; 4.18.4–5). Much of this development is perfectly understandable from a historical point of view (Young 1979:239–84), but it has only a limited justification in the NT.

A. Sources

Contemporary references to the Sadducees are found in Josephus, the NT, and in the rabbinic corpus. Josephus first mentions the Sadducees as the second of the schools of thought (Gk *haireseis*) among the

Jews of his day (*JW* 2 §119; 164–65; *Ant* 13 §171). The chronologically earliest appearance of them is in connection with events at the time of John Hyrcanus (135–104 B.C.E.; *Ant* 13 §293, 297). Their doctrine differed from Pharisaic teaching (*Ant* 13 §297–98) and was of great antiquity (*Ant* 18 §11); it primarily concerned personal immortality (which they denied: *Ant* 18 §16), determinism (which they rejected: 13 §173), and the validity of tradition (which they ignored, though inconsistently: 18 §17). Sadducees appear infrequently as a contemporary group with much the same doctrines in the NT (Matt 3:7; 16:1, 6, 11, 12; 22:23, 34; Mark 12:18; Luke 20:27; Acts 4:1; 15:17; 23:6–8).

Mention of the Sadducees in rabbinic literature is rather more abundant in the Mishnah (e.g., *m. ʿErub.* 6.1; *Mak.* 1.6; *Yad.* 3.7; 4.6, 7; *Nid.* 4.2; 5.2, 3; *Para* 3.7, 8), the Babylonian Talmud (e.g., *ʿErub.* 68a; *Yoma* 2b, 4a, 19b; *Ḥag.* 16b, 23a; *B. Bat.* 115b; *Sanh.* 33b, 52b; *Mak.* 8b; *Hor.* 4a–b; *Zebaḥ.* 65a; *Nid.* 33b), the Palestinian Talmud (*B. Bat.* 8.1), and in the Tannaitic Midrashim (*Sipra* 81b; *Sipre* Num. 112; *Sipre* Deut. 190). In many instances the word "Sadducees" in later rabbinic texts proves to be ambiguous, the intended reference in some contexts being to "heretics" and "gentiles" (i.e., Christians) in avoidance of medieval censors.

It is clear that anyone wishing to study the Sadducees faces a major obstacle, for all of the extant information about this sect must be culled from documents written by people who were not members of the sect and who often opposed them.

B. Name

Some of the Church Fathers (e.g., Epiphanius [*Haer.* 1.14] and Jerome [*Comm. in Matt.* 22:23]) thought that the term was derived from the adjective "righteous," *ṣaddîq*. However, modern scholarship connects it with the name Zadok, *ṣādôq.* Although a story in *ʾAbot R. Nat.* A.5 states that the term "Sadducees" derives from Zadok, a disciple of Antigonus of Soco (who is said to have flourished early 2d century B.C.E.), current scholarly opinion connects the term to the name of Zadok, the high priest at the time of David (1 Sam 8:17 and 15:24) and of Solomon (1 Kgs 1:34 and 1 Chr 12:29). Stern (1976:561, 567) states that from the beginning of the Persian period until the wake of the Maccabean revolt, the priestly house of Zadok, descended from Joshua son of Yehozadak, controlled the high priesthood in Jerusalem. Thus, Mansoor (*EncJud* 14:62) claims that the term "Sadducees" refers to "anyone who is a sympathizer with the Zadokites." Kohler stated that "in the course of time" the term became "a party name applied to all the aristocratic circles connected with the high priests by marriage and other social relations" (*JEnc* 10:630–33). However, as we shall see, the actual connection between the Sadducees and the priests is unclear.

C. Beliefs and Doctrines

Josephus identifies the Sadducees as one of the major varieties of Judaism which came into existence during the Maccabean period. In *JW* 2 §162 he refers to the Sadducees' rejection of the concept of fate and their acceptance of the idea of man's free will. He implies that they held these ideas so that God could not be held responsible for evil. Furthermore, the Sadducees did not believe that the soul continued to exist after death or that people suffered punishments or received rewards after they died. In *Ant* 13 §293 Josephus refers to only the Sadducees' belief in free will, and in *Ant* 18 §16–17 he refers to their claim that the soul perished along with the body at death. The most striking feature about these lists is that no single belief appears in all of them. When Josephus enumerated the Sadducees' doctrines not one element of their system of beliefs so impressed Josephus or his source(s) that it immediately came to mind when he set down his descriptions of their concepts.

The NT considers the Sadducees' rejection of resurrection as their primary characteristic, for the issue of resurrection was of central importance to the early Church. *Abot R. Nat.* A.5 claims that Zadok's followers broke away from Antigonus of Soco over the issue of resurrection; therefore, the evidence suggests that the Sadducees were known for their rejection of the idea of resurrection.

Josephus consistently emphasizes the opposition between the Sadducees and the Pharisees. In *Ant* 13 §297 we first encounter the Sadducees' rejection of the Pharisaic law "not recorded in the Laws of Moses," and in *Ant* 18 §17 Josephus says that the Sadducees observed nothing apart from the Law. Thus, the claim that the Sadducees considered valid only those regulations and traditions written down in the Law appears just twice, and only in the latter books of the *Antiquities.* The NT does not draw a consistent

picture of the opposition between the Sadducees and the Pharisees. In Acts 23:6–8 the Sadducees sit in the council along with the Pharisees. The gospel of Mark does not place the Sadducees in opposition to the Pharisees, and Matthew often places them together, as if they were two similar groups. Only in Acts do we find the two groups disagreeing; however, here the disagreement centers only on the issue of resurrection. One gains the impression from reading the Gospels that their authors did not have a clear idea of the differences between the Pharisees and the Sadducees. To the Christian writers, they merely represented two leadership groups within the Jewish community, and their disagreements over issues, with the exception of resurrection, were either unknown or of little importance.

In the rabbinic material we find the most extensive discussions about the differences between the Sadducees and the Pharisees. The earliest rabbinic texts in which these discussions appear are the Mishnah and the Tosefta (Lightstone 1971:206–17; Rivkin 1969/70:205–49). The Mishnah, edited ca. 220 C.E. (Neusner 1981), contains several passages in which the Sadducees disagree with the Pharisees; in most of these texts, the two groups dispute over matters of purity: *Yad.* 4.6, whether or not Scripture renders the hands unclean; whether or not the bones of an ass or the high priest are clean; *Yad.* 4.7, whether or not certain types of water are unclean; *Para* 3.7, the importance of the setting of the sun in rendering one clean; *Nid.* 4.2, the state of cleanness of Sadducean women. The Sadducees and Pharisees also disagree about matters of civil law: *Yad.* 3.7, whether or not a slave's master is responsible for the damage caused by the slave; *Mak.* 1.6, whether or not a false witness is executed only when the one against whom he testified is executed. Lastly, *ʿErub.* 6.1 discusses a matter of Sabbath law and suggests that the Sadducees held their own views concerning the establishment of the Sabbath limit. Similarly, in the Tosefta, a document edited ca. 250 C.E., the major issue between the Sadducees and the other Jews is purity; the other topics found in the Mishnah do not even appear in the Tosefta in the context of a reference to the Sadducees. *T. Para* 3.8 reflects *m. Para* 3.7; *t. Nid.* 5.2 is the same as *m. Nid.* 4.2; *t. Nid.* 5.3 states, as does *m. Nid.* 4.2, that the Sadducean women do not follow their own laws concerning menstrual purity. The Tosefta informs us that all Sadducean women followed the rulings of sages on this matter. One woman did not consult a sage, and she died soon after her failure to check with a sage. *T. Ḥag.* 3.35 presents the Sadducees and the Pharisees disagreeing about the purity of the menorah in the temple.

We find three references to the differences between the Sadducees and the Pharisees in three early midrashic collections. *Sipre* Num. 112, a midrash on the book of Numbers which was edited some time in the latter half of the 3d century C.E., interprets Num 15:31, "for he despised the word of YHWH," as a reference to the Sadducees. This is our earliest reference in the rabbinic texts to the view that the Sadducees did not follow the Word of God as interpreted by the rabbis/Pharisees. *Sipre* Deut. 190, part of a midrash on the book of Deuteronomy which appears to have been edited sometime in the 3d or 4th century C.E., contains a story about a Sadducean high priest who did not burn the incense on the Day of Atonement in accordance with the rules of the sages; compare this passage with *Sipra* 81a.

The Babylonian Talmud contains a number of references to the Sadducees; however, the censorship which this document has undergone makes some of these references suspect, for the word "Sadducees" often replaced reference to "gentiles" or "heretics" (Le Moyne 1972:97–99).

B. ʿErub. 68b is the Amoraic discussion of *m. ʿErub.* 6.1. In *b. Yoma* 19b we find a version of the *Sipre* and *Sipra* story about the Sadducean high priest who offered incense on the Day of Atonement. In this version we learn that the Sadducees were afraid of the Pharisees and that the former generally followed the rulings of the latter. We are further told that the high priest who offered the incense in a manner different from the way in which the Pharisees ruled soon died. *B. Nid.* 33b, which is the Amoraic discussion of *m. Nid.* 4.2, informs us that if the attitude of a Sadducean woman is unknown, she is considered to have followed the rules concerning her menstrual period to which all other Israelite women adhere, that is, the Pharisaic/rabbinic injunctions. These are clearly examples of rabbinic propaganda, attempts to make everyone into a Pharisee. The Gemara contains a version of *t. Nid.* 5.3; however, the version in the former pits the Sadducees against the Pharisees rather than against the "sages" as we find in the Tosefta. The Sadducean view concerning the importance of the sun's setting in matters of cleanness is

discussed in *b. Yoma* 2b, *b. Ḥag.* 23a, and *b. Zebaḥ* 21a. In *b. Yoma* 4a the Sadducees are excluded from the "students of the sages" and the "students of Moses." This is probably a reference to the fact that the Sadducees, who did not follow the Pharisaic/rabbinic traditions, were seen as rejecting the complete revelation given to and transmitted by Moses. *B. Ḥag.* 16b and *b. Mak.* 8b refer to the matter of the execution of false witnesses. In *b. B. Bat.* 115b we learn that the Sadducees and the Pharisees differed concerning a daughter's right of inheritance in certain circumstances. In *b. Sand.* 52b, R. Joseph, a third generation Babylonian Amora, refers to a Sadducean court; however, Joseph lived after the Tannaitic period and in a land which probably had not seen a Sadducee. From *b. Menaḥ.* 65a we learn that the Sadducees believed that individuals, and not the community, should pay for the daily offering. *B. Hor.* 4a and *b. Sanh.* 33b discuss a court which incorrectly ruled according to Sadducean law, a suspect reference, given the date of the collection in which they appear.

When we review the rabbinic evidence, we discover that the basic issue separating the Sadducees and Pharisees/rabbis was purity. This is not surprising, given the importance of the idea of purity in the Judaism of this period (Smith 1960/61:7; Neusner 1973). Curiously, virtually no one, with the exception of Lightstone, points to the purity laws as a major area of disagreement between the Pharisees and the Sadducees. Rather, scholars such as Bowker (1973:18), Sandmel (1969:39), Guttmann (1970:127), Mansoor (*EncJud* 14:621), Meyer (*TDNT* 7:63), and Le Moyne (1972:378–79) argue that the essential element of Sadducean belief was their rejection of the oral law and their literalist interpretations of the Bible. While there are a few references in Josephus and the later rabbinic texts to support this claim, this disagreement must be put into its proper perspective. Both Josephus and the rabbis/Pharisees had something to gain by claiming that they had the correct interpretation of revelation, that those who disagreed with them or rejected their ideas were incorrect, and that everyone followed the Pharisaic/rabbinic teachings anyway. Furthermore, if Judaism around the turn of the era was based on interpreting God's revelation to Moses, it stands to reason that each group would have its own set of interpretations which it favored, while rejecting those of the other groups. Lastly, it is unlikely that any group in the 1st century would have claimed that they were not in fact offering the "literal," or correct, interpretation of the Mosaic revelation. Each group would claim that it alone was faithful to the Law and that it taught only things contained in the Law. To claim that the Sadducees rejected the Pharisees' "oral law" is merely to state that Pharisees were not Sadducees (Blenkinsopp 1981:1).

D. Social Status

Josephus offers us limited information concerning the Sadducees' social status. In the context of his description of the split between John Hyrcanus and the Pharisees (*Ant* 13 §297), Josephus states that the Sadducees did not have the support of the masses; they enjoyed only the "confidence of the wealthy." In *Ant* 18 §17 only a few men of the "highest standing" know the Sadducean doctrines; however, we also discover that the Sadducees follow Pharisaic teachings. This "sociological information" appears only in these two contexts, and it is clearly connected with Josephus' attempt to prove that one cannot rule Palestine without the Pharisees (Smith 1956:75–76). In *ʾAbot R. Nat.* A.5 we read that the Boethusians and/or the Sadducees used silver and gold vessels, "not because they were ostentatious, but because it was the Pharisaic tradition to afflict themselves in this world, hoping to receive a reward in the world-to-come." The *b.* version of *ʾAbot* contains a shorter version of this story and omits the reference to the gold and silver vessels. Thus, the evidence for the patrician nature of the Sadducees is based on Josephus' polemical passages and a text in one version of *ʾAbot* which points to the Sadducees' acting as rich people for theological reasons. Ignoring the polemical side of Josephus' description and the curious nature of *ʾAbot's* description, Mansoor (*EncJud* 14:621), Jeremias (1977:230), Le Moyne (1972:349), and Baron (1952:35) argue that the Sadducees were the Palestinian aristocracy.

In *Ant* 18 §16–17 Josephus states that the Sadducees considered it a virtue to dispute with their teachers. In *Ant* 20 §163 he tells us the Sadducees were "boorish," and in *Ant* 20 §199 he describes them as "more heartless" than other Jews.

In *Ant* 20 §199 Josephus tells us that *one* high priest, Ananus, was a Sadducee. While the NT sometimes pictures the Sadducees' working in concert with the high priest (Acts 4:1–4; 15:17–18), it does not equate

the priests and the Sadducees. Similarly, the rabbinic texts speak of Sadducean priests, especially in the discussions of how one is to burn the incense on the Day of Atonement, but the rabbis also believed that there were Pharisees who were priests and identified many of the early rabbis, such as Ishmael and Tarfon, as priests. Therefore, none of our texts allow us to claim that all priests were Sadducees or that all Sadducees were connected to the priesthood. For this reason, we must look with suspicion when Goldstein (*1 Maccabees* AB, 57), Sundberg (*IDB* 4:160–61), Baumbach (1973:208), and Jeremias (1977:230) see a close relationship between the Sadducees and the priesthood.

The problem of the hellenization of Jewish groups during this period is difficult. The complexity of this situation is reflected in the scholarly discussion of the hellenization of the Sadducees. Mansoor (*EncJud* 14:622), Baron (1952:236), and Farmer (1956:189) suggest that the Sadducees were highly hellenized, while Sundberg (*IDB* 4:162) claims that the Pharisees were as hellenized as the Sadducees. Meyer (*TDNT* 7:44), Zeitlin (1961:125–26), and Sundberg (*IDB* 4:162) have argued that the Sadducees were the most nationalistic of the Jewish population. Baron (1952:36) seems to believe that the Sadducees were at the same time the most hellenized and the most nationalistic of the Palestinian Jews, without seeing any contradiction between the two positions. The problem is that our sources simply do not give us any information with which we could decide on the hellenization of the Sadducees or their political and nationalistic views.

E. History

Just as we cannot draw a clear picture of the political, theological, or nationalistic views of the Sadducees, we are also unable to clearly delineate the history of the group. Mansoor (*EncJud* 14:620) argues that the sect originated ca. 200 B.C.E., while Sundberg (*IDB* 4:160–61; cf. Baumbach 1973:240) places its origin "not long before the reorganization of Judaism under Maccabean leadership." Le Moyne (1972:331) merely states that in the 1st century B.C.E. "the Sadducees constituted a complete group inserted into Jewish life." Jeremias (1977:243), Bowker (1973:10), Davies (1967:19), Meyer (*TDNT* 7:31), and Sandmel (1969:58) tie the end of the Sadducees in with the destruction of the Second Temple in 70 C.E. This view rests on the assumed close relationship between the Sadducees and the priesthood; however, we have seen that that relationship is far from firmly grounded in our sources. Sundberg (*IDB* 4:161–62) argues that the end of the Sadducees did not come about simply with the destruction of the temple, for the Jews anticipated the rebuilding of the temple; "probably," he writes, "the Sadducees, concentrated about Jerusalem and being implicated in the war, suffered heavily with the fall of the city." Eppstein's suggestion (1966:213–23) that the end of the Sadducees is related to the Pharisaic doctrines concerning the waters of the Red Heifer is based on a naive reading of the rabbinic texts. Virtually all we know about the history of the Sadducees is that Josephus first mentions them in the Maccabean period at the same time that he first discusses the Pharisees and the Essenes. Furthermore, with the Pharisaic/rabbinic rise to power after 70 C.E., the Sadducees play a small role in the Jewish documents which have come down to us from that period.

SAFI (M.R. 195147). A large EB and Byzantine period cemetery site in the Ghor es-Safi, S of the Dead Sea. The location of a town connected with the cemetery remains uncertain. The name "Safi" was assigned to the site in lieu of a traditional local name. The cemetery is located on the slopes of a descending series of limestone foothills, between 300 and 330 m below sea level, at the SE edge of the Wadi el-Hesa delta on its SE edge. The visible ruins of a medieval sugar mill, Tawahin es-Sukkar, mark the N and lowest limits of the cemetery area just above the valley floor.

Safi must be viewed in the context of the Ghor es-Safi region which today is the largest, best-watered, and most extensively farmed area in the SE Ghor area (Harlan 1981:157–59). There is evidence for a wetter climate during the Late Chalcolithic–Early Bronze ages and the Byzantine period (Neev and Emery 1967) which must have made the region even more attractive during these periods. Despite these features the area is comparatively poor in archaeological remains.

During the 19th century, a series of explorers (Irby and Mangles in 1823; De Saulcy in 1853; Tristam in 1865; Hayne in 1873; Tristam in 1873; Klein in 1880; Kitchener in 1884; Hart in 1885; Hill in 1896) visited the Safi area. Most noted the low tell area of Sheikh Isa (500 m NW of the Safi cemetery), the ruins of the sugar mills of Tawahin es-Sukkar, and recorded vivid descriptions of the flora and fauna of the region. Kitchener also describes a large walled site with a tower and scattered *nawamis* called Kh. Labrush, located 500–600 m SE of Tawahin es-Sukkar high above the Wadi Hesa (1884:216). In 1924 a survey team led by Albright (1924) explored the Safi region and carried out soundings at Kh. Sheikh Isa. Subsequent published surveys in the area include Frank's (1934), Glueck's (1935), and Rast and Schaub's (1974). More recent unpublished surveys have been carried out by McCreery in 1979, King in 1982, and Macdonald in 1987.

The Ghor es-Safi appears to have been most extensively utilized in the EB I, Roman, Byzantine, Early and Late Arabic periods. The first evidence for an early history of the area came from a tomb group from Safi published by Frank (1934:204). This group was recognized by Glueck as belonging to the early phases of the EB (1935:8). Amiran has also published EB IB pots from the Safi region (1969:49; photos 44, 45). The source of these artifacts was further determined by the survey of Rast and Schaub, which recorded an extensive area of EB and Byzantine tombs on the slopes of Safi (1974:9–11, 15–17). Iron Age, Late Roman, and Byzantine sherds were also found. Some wall foundations were noted during the survey on one of the upper plateaus of the site, but subsequent visits have been unable to confirm the presence of a town site in this area, which has been considerably disturbed by recent trenching and the construction of a town site on the upper plateau regions. Sauer has mentioned the recovery of intact MB vessels at Safi (1982:207). The site of Sheikh Isa was described by Albright as belonging to the Byzantine and early Arabic periods, mostly to the latter. Most recently MacDonald has identified the site of Labrush, called Umm Tawabin, as a large Nabatean fort dating from the last decades of the 1st century B.C. to the mid 2d century A.D. Tawahin es-Sukkar is probably the last surviving remnant of the medieval "Zugar" which is mentioned frequently by Arabic geographers as a commercial center for sugar, dates, and indigo.

It seems unlikely that the scarcity of earlier archaeological remains in the Wadi el-Hesa delta region is due to major changes in the water levels. Donahue (Donahue and Beynon 1988) has suggested the possibility of severe down-cutting near the mouth of the Wadi Hesa since the EB, but this is difficult to maintain since the EB I tombs are at approximately the same level as the present wadi mouth. Klein (1982:90–93) has also argued that there was a dramatic rise in the Dead Sea level during the 1st century B.C. to 330 m below sea level or to the very edge of the N limits of the cemetery, but archaeological remains have survived below that level in other areas of the Dead Sea.

The discovery of the cemetery at Safi, contemporary with other EB cities (Bab edh-Dhraʿ, Numeira, Feifeh, and Khanazir) in the SE Ghor has renewed discussion about the location and identity of the Cities of the Plains (Gen 13:12; 19:29). The region of the Ghor es-Safi has been favored by many scholars (Albright, Aharoni, Abel, Lagrange, Harland, Glueck, Howard) as the location of the biblical site of Zoar (Gen 13:10; 14:2, 8; 19:22, 23, 30; Deut 34:3; Isa 15:5; Jer 48:4 (LXX), 34). Arguments in favor of this location have been drawn from the global geographical indications of the biblical texts and the strong Byzantine tradition culminating in the placement of Zoar at the S end of the Dead Sea on the Madeba Map. Other scholars (Mallon, Powers) have argued for a N location using the same texts and a late Byzantine tradition that places Byzantine Segor (Zoar) within site of Mt. Nebo. Noth, tracing the Lot traditions, also favors a N location (*HPT,* 151–54). Recently Shea has attempted to trace the geographical routes of the Ebla texts and has argued for Adamah as a site in the Safi region (1983:608–10). Although the cemetery site at Safi remains the only candidate for early presence in the area and the original existence of a town site nearby seems likely (on the analogy of the other EB sites in this region) the identification of this site with the Zoar of the Genesis texts remains uncertain.

SAFUT, TELL (M.R. 229160). A site named after the modern village W of the tell, it has been identified by Mallon as ancient NOBAH of Judg 8:11 (:Nabai), which is not to be confused with Nobah (:Naboth) of Num 32:42 (cf. de Vaux *EHI* 590).

A. Location and Topography

Tell (es-) Safut is located on the edge of the modern Amman-Jerash highway, 1.5 km N of Suweileh, at the point where the road enters the 5-km-wide × 10-km-long BAQʿAH VALLEY, which the tell overlooks from the S. Covering 17.73 dunams, the tell rises 300 m above the valley floor to a fairly flat oval top which is oriented E-NE by W-SW and measures approximately 18 × 70 m. At 927 m above sea level, it is 200 m lower than the Suweileh hills behind it.

Tell Safut guarded one of the principal roads leading from the interior of Gilead through the valley toward Rabbath-ammon (modern Amman), which it undoubtedly served at key moments in Amman's history. Ottosson (1969:188) connects Tell es-Safut with the Kings' Highway in a way that also suggests that Nobah of Judg 8:11 corresponds with Safut.

B. History of Exploration

First reported in 1877 as one of four important regional sites near Amman, in 1881 it was placed by R. Meyer on the Map of the American Palestine Exploration Society. Tell Safut was surveyed by N. Glueck and R. de Vaux in the 1930s.

A 1950s cut into the tell by road-building bulldozers led Ma‹ayeh (1960a: 114; 1960b: 228) to report finding an MB glacis, a report which Sauer (1986:6) simply accepts; Dornemann (1983:19) calls the finding "highly likely," but Landes (1961:67) is clearly uncertain. Ottosson (1969:188), on the other hand, goes so far as to call it a Hyksos fortification, "probably not unique for southern Gilead." However, a further sectioning of the area shows the alleged glacis to be sterile and nothing more than a natural geological formation.

C. Current Excavations

In 1982, a cooperative effort between the Department of Antiquities and Seton Hall University, with assistance from ACOR, undertook the first of (currently) four seasons.

Three definite stages were adopted in the strategy. The first (in 1982) required exposing sufficient architecture to help persuade authorities to preserve as much of the tell as possible. A close examination of the general configuration of the acropolis and its corresponding perimeter defense wall indicated that the tell was not as severely damaged as had at first appeared. In the second stage (in 1982 and 1983), three probes were cut to bedrock or virgin soil to determine the range of occupation. The lowest strata in each case yielded only LB sherds. In stage three (1985, 1987), horizontal exposure, which sought clarification of successive historical phases, disclosed that the latest significant occupation was during the Iron IIC/Persian period, with traces of a Late Byzantine presence on the very top of the tell.

D. History of the Settlement

1. The Middle Bronze Age. An MB presence cannot be denied on the basis of the pottery, but neither can it be posited conclusively.

2. The Late Bronze Age. A major perimeter defense wall attests that Transjordan, at least in this region, was heavily enough occupied by a sedentary society in the LB Age to require protection with a substantial perimeter defense wall. Inside the city was probably a sanctuary in which was found a bronze figurine deity (see Fig. SAF.01), a footed bowl or chalice, and a large amount (over 600 cm^3) of charred two-row barley. The seated figurine is unique in that it is clearly smiling and its crown is flat. Both forearms are extended and wrapped in gold, as are the hands; one is open, the other is closed—neither holds anything. The crown boasts a motif not unlike a seashell, a conch, or perhaps a feather. The eye sockets were probably inlaid. The nose and left arm are enlarged by thick erosion. Two bronze pegs protruding from the seat and feet suggest that the figurine was attached to a chair or throne of some other material. Whether this figurine is a S Gilead form of the Canaanite Baal, an Ammonite deity, or simply the tutelary god of Safut remains an open question.

3. Iron Age I. To date, a comparatively light Iron Age I occupation is evident from both ceramic and architectural finds.

4. Iron Age II. Occupation in Iron Age II is attested in every square. Most pottery types represent 8th–6th century forms, with some almost certainly from the Persian period. The Late Iron Age population overflowed the earlier LB boundaries, enclosing an area easily ten times the size of the LB settlement.

By the end of the 8th century, several rooms on the S exposure were enclosed in a 1 m thick Iron IIB casemate wall which was subsequently buttressed by a dirt-filled battered wall of glacis. One of the casemate rooms contained a destruction layer sealing an excellent collection of Iron IIC pottery. Finds included figurine heads, pilgrim flasks, Assyrian bottles, a miniature ceramic horse, and a series of cooking pots smashed in situ. From elsewhere on the tell came a late Assyrian seal and a late Babylonian seal.

5. Late Byzantine. A population decrease in the Late Byzantine period is evident in that associated architecture is found only on the very summit. Classical and Islamic evidence from nearby shows that protection of the region shifted from the tell to other sites.

DONALD H. WIMMER

SAHAB (M.R. 245142). A site in a high plateau (873 m above sea level) 12 km SE of Amman and ca. 15 km W of the E Jordanian desert. It was probably one of the last major settlements on the road to Saudi Arabia and was possibly the largest pre-Roman site on the borders of the E Jordanian desert. It is situated on the present and ancient road to the desert castles of the early Islamic period.

B. Exploration
C. Preliminary Survey Results
D. Excavations at Tell Sahab

———

A. Geography

The tell occupies an area of about 500 dunums, the highest point of the mound being some 22 m above the W plains. Its location affords the benefits of being a transitional zone between the highlands and the desert, thus producing a pleasant combination of varying climate and good agricultural conditions. Geologically, the hilly area consists of Mesozoic limestone with chert, while the plains are of Cenozoic sediments. Rainfall is within the 200–300 mm isohyet, making dry farming possible and extensive land use viable. Natural water resources have been supplemented by rock-cut cisterns over the entire survey area.

These agreeable conditions were attested by the long occupation of both the site and the surrounding region. The 1983 survey results show settlement from the Paleolithic, while the tell has occupation from the Late Neolithic and Chalcolithic periods (5th–4th millennia B.C.) to the late Iron Age (ca. 600 B.C.). After the 6th century B.C. the site was apparently abandoned until the 11th to 13th centuries A.D.

The modern town of Sahab is built on the ancient tell and has spread from there to the surrounding area, thus destroying major parts of the ancient settlement. However, much of this modern development has been responsible for revealing earlier occupational material; such activity discovered the tomb which led to the first season of excavations.

The mild environmental conditions combined with the archaeological evidence of steady occupation within this region indicates Sahab's probable importance over a long period of time. While one might, therefore, expect references to the site in historical records, to date no identifications have been made.

B. Exploration

Surveys around this area have only recently been undertaken and until 1972 little was known about the archaeology of the area. A few sites were visited in the region and reported in *Die Provincia Arabia,* Band

2, by R. E. Brunow and A. von Domaszewski at the turn of the century. Otherwise the area was known only through occasional tomb finds reported to the authorities.

The first of these was reported in 1929 and published later by W. F. Albright (1932). The second was excavated and findings published by G. L. Harding in 1948. Both tombs were dated by the authors to the Iron II period (i.e., 9th–7th centuries B.C.). Two other tombs have been officially excavated; one by R. Dajani in 1968 (1970) and the other soon to be published by M. Ibrahim. Apart from these, no attention was given to the tell of Sahab until an MB tomb was accidentally discovered in 1972. The Jordanian Department of Antiquities excavated and recorded the tomb which initiated further investigations and a 6-month rescue operation. The Sahab excavations have been directed by M. Ibrahim.

A survey was carried out in 1983 to determine the occupational history and settlement patterns of this area on the fringes of the E desert, and to establish the position of Sahab within its environment. The survey area was 15 × 13 km, with Sahab in the center of the W border of the region.

C. Preliminary Survey Results

The survey identified many sites from different stages of the Paleolithic (almost half of the 131 recorded), and also showed that the area was continuously occupied throughout the Hellenistic, Roman, Byzantine, and Umayyad periods.

Neolithic and Chalcolithic settlements with material similar to the evidence from Sahab were identified at Tell es Suwwan (25), Salbud (27), Wadi el Qattar (104) and Hweytan Abu Snesle West (125). Eight pre-Pottery Neolithic sites were identified, twelve from the MB period (el-Qattar being the largest), and five from the LB but none with as extensive an occupation as Sahab. The only tell site within the area apart from Sahab is el-Rajib (SS 83 91). The Iron Age is well represented with 45 sites recorded, many of which were fortified and were possibly watchtowers. Most of these were located on hilltops and may possibly have been part of a defense system for the town of Sahab.

D. Excavations at Tell Sahab

To date, the Sahab excavations have identified six main periods of settlement. The earliest evidence dates from Late Neolithic–Early Chalcolithic, with some EB. A continuous occupation exists throughout the MB, LB, and Iron II period, at the end of which there appears to be a period of abandonment of town occupation.

During the 1983 survey several other Neolithic/Chalcolithic settlements around Sahab were located, but Sahab was the largest of these and probably represents a typical large village farming community from the 5th–4th millennia B.C. The large number of storage facilities discovered both inside and outside domestic structures suggests a period of extensive agriculture. Some of these courtyard storage pits were huge, spanning 4 m in diameter. The presence of such large storage pits suggests anticipated long periods of agricultural yield. One particular occupational unit, in area E, implies a large family occupation—it consists of several rooms, mostly of unhewn stone, surrounding a courtyard in which storage pits were cut into virgin soil. These contained large amounts of seed, and were lined with small stones. The extensive occupation of Sahab is also evident by the combination of cave and rock shelters with rectangular domestic structures which were used for habitation. This simultaneous combination of housing at Sahab is fairly logical given the climatic range of the area. Cave shelters were excavated over the entire area. In area A, a cave was found with a pebble-and-plaster floor and ash deposits. Area B had a large cave complex subdivided by well-built stone walls and hard-packed floors. It seems clear that these cave dwellers coexisted alongside the occupants of the constructed domestic structures described above. Many of the caves had several occupation surfaces, the uppermost of which date from the EB. Most of the caves were reused as tombs in the MB (1800–1600 B.C.), LB (1400–1300 B.C.) and early Iron I (ca. 1200 B.C.) periods.

Toward the end of the 4th millennium B.C. there is a suggestion of seasonal settlement. In area E above the Neolithic/Chalcolithic levels several fragmentary walls were discovered without any clear architectural plan. In the cave sites occupational floors above the earlier levels yielded pottery similar to area E. Related to this phase were two burial jars containing human skeletons, a continuation of the Ghassulian burial tradition, and in area E was a reused pit containing 7–9 animal burials.

Evidence of the EB at Sahab is witnessed by the presence of some sherds in the uppermost levels of caves and by a number of sherds in area B, though so far there are no associated structures.

The MB evidence derives from two caves used for burials in areas A and B. Area G II, near the center of the site, yielded part of the MT fortifications connected to a typical MB glacis rampart; however, the excavation area has been too limited for more definite information. In area H III, a massive MB wall was excavated. Unfortunately the distance between this and the MB rampart is covered by modern housing and thus impossible to explore.

The fortified site, possibly indicating a move from the large-scale agricultural community to a smaller fortified settlement, was probably the closest of the MB II fortified settlements to the E desert.

In 1968 a rich LB-Iron Age tomb was discovered (Dajani 1970), but no other LB tombs have been found. The major evidence for LB occupation comes from a partially uncovered 13th-century building and the town wall. The LB town, the interior part of which is largely unexplored because of modern construction, appears to have covered an area of about 20 dunums; thus it was a town much larger than the MB fortification limits.

In area E, a large public building was discovered under an accumulation of Iron Age and modern structures. Four walls appear to be associated with this building, the largest of which continues for more than 17 m in an E–W direction. Associated with this is an almost square, towerlike structure on the E end of the exposed length of the wall.

The major excavated portion of the town wall is in the W part of the LB settlement (areas G II, III, IV) where nearly 75 m of wall has been exposed. Soundings in the S and SE (H III and IV), in the E (H II), and in the N (H II and BO19) allow some reconstruction of the course of the town wall. The complete enclosure seems to have been symmetrical and oval in shape, along a N–S axis. The wall remains are largely foundations sunk in a deep trench lined on both sides with large and medium stones.

The pottery associated with the wall includes imports and imitations of Mycenaean vessels as well as local ware. Examples of bichrome simple and carinated bowls, jugs, kraters, goblets, and pyxides imply that the site, along with other central Jordanian sites, had ties with Cyprus and the Mediterranean, as did sites in coastal Syria and those W of the Jordan.

The LB town had an apparently long occupation, from the 15th to 13th centuries B.C. The earlier date is based on a seal impression found on an LB storage jar handle discovered in the foundation trench of the town wall. The scene on the seal is typical of the period of Thutmose III and depicts a combination of three signs, possibly a cryptogram of the god-name Amon.

Sahab's unbroken occupation from the beginning of the MB to the late Iron II, with massive fortifications during most, if not all, of these major periods, strengthens the inference that it was recognized as an important regional center.

As is common in Palestine and Jordan the transition from LB to the beginning of the Iron Age is still unclear. In this respect Sahab resembles other major tell sites, such as Amman, Tabaqat Fahil, Tell Deir Alla, and Tell Irbid. The evidence shows no occupational gap, but a general cultural continuity in terms of burial practices; there are, however, gradual changes in the pottery and metalwork.

The site was heavily occupied during both Iron Ages I and II. Tombs from both periods have been found, as well as clear occupational and architectural material. On the W and N faces, the Iron Age material extends beyond the LB town; though the walled town during the Iron II became smaller, it was better planned.

Domestic architecture has been identified from Iron I, but the evidence is fragmentary. A clear picture of the Iron I settlement is hard to form. The area A structure had two architectural phases, though the purpose of the building is yet uncertain. The plastered room in area A had a large number of collared-rim storage jars. Some of these 12th-century jars bear seal impressions. One example, found on the rims of two jars, shows an animal with long horns followed by a human figure with raised hands. Another seal, repeated three times on a single jar, depicts two seated animals, an ibex on the top, with a lioness below.

Separating Iron Age I from Iron II is some evidence of destruction on the site. Apparently, scattered houses were built after the destruction of the major Iron I town, as indicated by the material from area D and some trial trenches on the E slope.

The excavations in the Iron Age II period have revealed a complex series of rooms with multiple architectural phases. Several of these rooms contained large amounts of stone mortars and pestles, complete and broken pottery vessels, and large amounts of seed. The largest and most interesting of these rooms was the rectangular "pillared-room" from area B.

This room, measuring 7.5 × 4 m, had two entrances in the SW corner of the room. Inside were four stone pillar bases set into a plastered floor running the central length of the room. The center of the floor contained a circular fireplace constructed of stones and mud. Finds from this area included a number of basalt and limestone tools, half a steatite scarab, a large number of loom weights (conical and round), and weights in at least three units. There are at least two adjoining rooms on the W side that form one unit, which in turn is separated from another unit by a corridor.

Another, smaller "pillared-room" was excavated in area G II. The function of these buildings is not certain but they may have had some industrial purpose, e.g., a textile workshop. Parallels are common in Palestine such as those found in Tell Bir es-Sabʿ, Ain Shems, Tell Beit Mirsim, Tell el-Farah (N), Tell el-Qidah, and Tell el-Mutasallim. In Jordan similar rooms are found at Tell es-Saʿidiyeh, Tell Deir Alla, Tell el-Khalifah, and Tawilan.

The pottery from area B is typical of the Iron II period, especially in the Amman region. The types include ovoid storage jars with two handles and thickened overlapped rims, bowls and platters with red and black highly burnished slip and band slips inside and outside, and profile-rimmed bowls with shallow disc bases.

The small finds, the pottery, and the stone implements are typical of the 8th–7th centuries B.C., and confirm the prosperity of the site during the first half of the 1st millennium B.C. They also indicate close contacts with Palestine and Syria. After the 7th and 6th centuries B.C., Sahab appears to have been abandoned until the 11th to 13th centuries A.D.

MOAWIYAH M. IBRAHIM

SAʿIDIYEH, TELL ES- (M.R. 204186). Most plausibly identified as ancient ZARETHAN (Josh 3:16; 1 Kgs 4:12; 1 Kgs 7:14; and possibly 1 Kgs 11:26 and 2 Chr 4:17), Tell es-Saʿidiyeh lies in the central Jordan Valley, 1.8 km E of the Jordan river, on the S side of the Wadi Kufrinjeh. The two elements of the site comprise an upper tell to the E, rising to a height of some 40 m above present plain level, and covering an area of about 10,350 m^2 at its summit, and a low, benchlike mound to the W, measuring approximately 90 × 40 m, and about 20 m lower than the upper tell.

In 1943, the site was visited by N. Glueck during his survey of E Palestine. His surface collections indicated a long history of occupation from EB I–II to Iron Age II, with extensions into the Roman and Byzantine periods (Glueck 1951:290–95). To the W of the low mound, and separated from it by a gap of about 40m, Glueck identified an additional site with sherds not only of EB I–II, but also of the

Chalcolithic period (1951:293). It was this low mound, described as "Tell es-Sa'idiyeh el-Tahta," which was investigated in 1953 by H. de Contenson. In a number of small soundings, a very thin occupation deposit was revealed, associated with pottery and lithics of the Middle Chalcolithic period (de Contenson 1960:49–56).

Large-scale systematic excavations were undertaken at the main double mound between 1964 and 1967 directed by J. B. Pritchard, and have resumed since 1985 under J. N. Tubb.

The earliest remains reached by the end of the 1987 season were of the EB Age. In area DD, on the SW side of the low mound (see Fig. SAI.01), two superimposed occupation phases of EB II have been found, both characterized by well-constructed and carefully planned buildings of mudbrick on stone foundations. In the lower phase, stratum L3, part of a pebble street has been uncovered with entrances into two houses. The most completely excavated of these has a small semicircular courtyard giving access to a long narrow rectangular room with a row of roof supports along its central axis, and five large store jars sunk into the beaten earth floor. In stratum L2, many of the walls of the previous phase were reused as foundations, but a radical change in plan took place which involved a 90 degree shift in orientation. Part of a multiroom complex has been excavated, including a quite elaborate stepped entranceway. Stratum L2 ended in a destruction, which sealed a rich and varied corpus of pottery and other finds. The pottery, in particular, shows evidence of a distinctively local and yet innovative tradition, characterized by red-on-cream "ribbon painted" wares and thin-walled, highly burnished fine wares. Noteworthy is the presence in the assemblage of four-spouted lamps, types more usually associated with the much later EB IV period.

No evidence has been found of defensive walls at any point on the lower tell; the impression is that the EB II was a period of relative stability in this area. This view is enhanced by the discovery in the region W of the site of a series of small contemporary undefended settlements—single housing units or farmsteads.

With the destruction of stratum L2, habitation on the lower tell ended. During the 13th century B.C., its entire area became an extensive cemetery. The graves cut into the substantial silt layer which covered the EB ruins, and disturbed some of the ruins as well. The cemetery, which can be related to contemporary occupation on the upper tell (see below, stratum XII), seems to have been used intensively over a period of little more than 150 years (ca. 1300–1150 B.C.). By the close of the 1987 season, 285 graves had been excavated, 45 by Pritchard on the N side (now published as Pritchard 1980), and most of the remainder in Tubb's area BB toward the center of the mound. The graves exhibit a bewildering variety of construction types, practices, burial customs, and grave goods. Some are simple subrectangular or oval pits, often incorporating elements of the preexisting EB architecture—foundation stones or even mudbrick. Others consist of neatly dug rectangular trenches, lined and roofed with mudbrick slabs. In addition, there are mudbrick tombs, often built in rows, which were intended to be partially visible aboveground.

Numerous infant jar burials have been found; the jars had been broken off at the shoulder to allow for insertion of the deceased. The most important type of burial, however, was the so-called "double-pithos" type, in which the deceased was interred in a coffin composed of two extremely large store-jars, of which the necks had been removed; these were then joined shoulder-to-shoulder. The double-pithos "coffin" was set into a grave large enough to allow offerings to be deposited around, as well as inside the pithoi. This type of burial, extremely rare elsewhere in Palestine, clearly anticipates the slightly later anthropoid coffins well known from sites such as Beth-shan and Deir el-Balah. A somewhat poorer expression of the same practice was encountered in a number of the pit graves, where the deceased had been covered with sherds of store jars, and in two cases, the deceased's head had been inserted inside complete vessels.

Generally, the burial practice was single and primary. Only a few clear examples of secondary burial have been recorded, but a third type of practice, which may be described as "derived secondary," is quite common. As a result of the continuous reuse of the same cemetery area, earlier burials were frequently disturbed by later interments, and, to show some degree of repect, some of the major remains (e.g., the skull and perhaps two of the long bones) were collected, and were either reburied in a small circular pit, or were carefully placed within the later grave.

Considerable variation has been found with regard to the disposition of the deceased, but most commonly the individual was extended on his or her back. In many instances the legs were crossed and the hands had been brought together to meet at the pelvis. In several cases a bronze bowl had been placed over the face or genitals, and from textiles preserved by the corrosion products of the metal, it is clear that the bodies had been wrapped or bound. In all cases where this textile has been analyzed, it has been found to be Egyptian linen.

The cemetery has produced a rich assemblage of grave goods. In addition to pottery, many of the burials contained bronze vessels, tools and weapons of both bronze and iron, ivory and bone ornaments, alabaster vessels, seals, scarabs and amulets, and items of personal adornment including a varied collection of beads of different styles and materials. Many imported objects have been found, principally from Egypt and the Aegean, and many of the bronzes in particular show strong Aegean influence. Among the bronzes have been found two three-piece sets consisting of bowl, strainer, and juglet, and on the basis of an illustration on an ivory box from Tell Far‘a, these have been interpreted as wine sets. See Fig. SAI.02.

The great variety of burial types and practices within the Sa‘idiyeh cemetery suggests a mixed population during the 13th–12th centuries B.C., and certain features, most notably the double-pithos burials, the large number of bronzes—many of Aegean type—the practice of binding the deceased in linen, and the very high proportion of imitation Mycenaean wares within the pottery repertoire, may imply the presence of a Sea Peoples element within the community.

The use of the cemetery appears to have ended around the middle of the 12th century B.C., coinciding with a major destruction of the settlement on the upper tell. Stratum XII in area AA (see Fig. SAI.01) shows a tightly packed complex of houses, streets, and stepped passageways which had been subjected to an intense conflagration. Large numbers of complete pottery vessels were recovered from the rooms, and many of these conform closely to types found in the latest graves of the cemetery. It is nevertheless clear that the destruction had been anticipated. Very few luxury items were found, and some rooms had been emptied completely. In addition, most of the external doorways had been blocked from the outside with large stones, suggesting a carefully planned departure of the residents.

Architecturally, stratum XII is of interest because the generally substantial mudbrick walls had been built without foundation trenches; instead they had been laid on a superbly prepared construction surface of pisee. Further, the external walls had been built as pairs with a channel of about 15 cm width between them, perhaps as a precaution against earthquake damage, or more likely to provide a system of drainage.

Remains of the city wall of stratum XII have been excavated in area EE on the W slope of the upper tell. This consisted of a massive casemate defensive wall, constructed of mudbrick on a foundation of pisee, which was laid over an earlier, apparently solid wall. The casemates were filled with brick rubble, producing a formidable defensive structure which was in excess of 13 m thick.

Belonging also to stratum XII, at least in its latest phase, was an impressive water system. Built on the N side of the tell, it consisted of a stone-built staircase, contained within substantial walls, cut into the slope. The upper part of the staircase had along its central axis a mudbrick wall, suggesting that it had been roofed over to provide a means of concealment from the outside. At the base of the tell, the steps turned 90 degrees to the E, and continued down at a somewhat steeper inclination, reaching water at a depth of approximately 6 m below present plain level. The water, from an underground spring, was fed into the system by means of a conduit in the S containing wall, and there was probably an overflow through the N wall to prevent stagnation. The system was enclosed by the joining of the side walls to form a semicircular pool, and within the curve a platform had been placed to provide access to the E end of the system at times of high water level.

Following the destruction of stratum XII, there appears to have been an ephemeral phase of squatter occupation (stratum XIB). Both in the ruins of the houses in area AA, and also in the burned-out casemates of the city wall in area EE, remains of beaten earth floors and hearths have been found. Whether this phase represents the temporary occupation of the attackers or the return of the refugee population is unknown, but it is unlikely to have lasted very long. It was followed by a major leveling of the site which involved in area AA the importation of a large quantity of fill. This became, in stratum XI

A, the foundation of a small bipartite temple. Constructed of rather narrow but substantially founded walls, it measured 7.9 × 4.7 m. The slightly offset entrance on the S side gave access to a roughly square antechamber which in turn led to a much smaller rear sanctuary. This room had a low bench against its N wall, and a small semicircular niche, at the base of which was set a circular, perfectly flat stone, presumably to serve as the base for a cultic installation. In front of the niche was found a burned area containing the bones of sheep and gazelle, and immediately in front of this was a basalt incense burner.

Almost certainly related to this building, there was found in area EE, deeply cut into the remains of the casemate wall, a large rectangular, plaster-lined bin which contained two additional basalt incense burners, a pottery trough, and a large square basalt altar. All of these items appear to have been broken in antiquity, and it seems likely that the bin was a type of *favissa.*

Stratum XIA, on the basis of the small quantities of pottery recovered, should be dated to the late 11th century B.C. There is no evidence to suggest that the stratum was destroyed, and it must be assumed that the temple simply fell out of use. In stratum X, which followed without any break, the function of the area had clearly changed, and was no longer religious in nature. The temple was leveled to within one course of its foundations, and above it was laid a large open courtyard composed of rough cobbles. This courtyard extended over the entire excavated area without any associated walls, but at irregular intervals several shallow, stone-lined depressions were constructed. Roughly rectangular, with a circularity at one end, these depressions were associated with a horizon of decayed animal manure. The large quantities of pig bones found in this stratum suggests that the area had been given over to the keeping of pigs, the depressions being best interpreted as types of pens.

No evidence for stratum X nor of strata IX or VIII, was found in area EE. Apparently the settlement shrank during these phases. Certainly there was no evidence for defensive walls belonging to these strata.

Elsewhere on the tell, in stratum IX, which followed X without a break, remains of a large but insubstantially constructed building were found, together with an adjacent courtyard. Two subphases were recognized, the upper IXA yielded evidence that it had been abandoned. The mudbrick walls were heavily eroded, and the whole stratum was covered by a layer of natural silt. Stratum IX is dated to the early 9th century B.C.

Following the abandonment of stratum IXA, which may have lasted for no more than 20 years, the area examined in the excavation appears to have become a dump for an industrial process. Stratum VIII was characterized by a dense layer, up to 40 cm thick, of finely divided ashy material containing bands of brown, blue, pink, black, and predominantly white. The nature of the industry has not yet been established, but the presence of copper slag in the deposit suggests some metalworking.

Strata VII–IV have been examined in a much larger exposure than the earlier levels. Stratum VII, divided into two subphases (VIIA the later) represents the city of the late 9th–early 8th centuries B.C. The excavated plan of some 12 building units shows clusters of dwellings separated by pebble-paved streets. Although rather irregularly constructed, the houses appear to have been carefully planned with provision for drainage. On the N side of the mound, evidence has been found of a city wall of mudbrick, about 3.5 m wide, and separated from the settlement by a stone-paved walkway. Perhaps following a short gap in occupation, stratum VI was built on a new plan. The houses in this phase, dated 790–750 B.C., were more regular and slightly larger, but generally followed the same pattern as those of the previous stratum.

Stratum V, dated 750–730 B.C., is characterized by regular and uniform planning. Houses were larger, neatly constructed, and carefully laid out on a grid of intersecting streets. A block of 12 houses has been excavated, all showing identical plans with a single doorway opening from the street into a large front room which was divided into two parts by a row of columns or roof supports. On one side of these columns the room was paved with large stones, and on the other side, which was left unpaved, there was an entrance into a smaller back room which had a floor of beaten earth. The houses in the block were arranged as two rows of six, placed back to back. Despite the extreme regularity of the plan, there is nothing to suggest that the building represents anything more than purely domestic occupation, and its construction in this form testifies to an effective city plan in the Iron Age.

Stratum V was destroyed toward the middle of the 8th century B.C. Within the excavated area, stratum IV, which followed, was devoid of buildings. Instead it consisted of a floor surface into which 98 circular pits and two rectangular mudbrick lined bins had been cut. A number of postholes dug into the surface suggest that temporary coverings had been erected from time to time, and a number of circular ovens indicate that baking also took place. From botanical remains recovered from the pits, it would seem probable that the area was for storing grain.

No stratigraphic relationship exists between strata IV and III, the latter having been investigated in a different area of the tell, some 20 m farther E, on the highest point of the mound—the so-called "acropolis." A massively constructed square building stood on the acropolis. It consisted of seven rooms built around a paved courtyard with a drain and tower at the SE corner. Dating to the Persian period, it contained a limestone incense burner decorated with geometric designs, a horse and a human figure, and bearing the inscription *lzkwr*, "belonging to Zakkur."

Over this building was constructed in stratum II a rectangular building, 21.2 × 13.3 m. The substantial nature of the external walls, approximately 90 cm in width, suggests that it was probably a type of fortress. An unusual feature of the construction was the placement of a layer of reeds between the foundation course and the mudbrick superstructure. This building, which should be dated to the Hellenistic period (4th–2d century B.C.) was destroyed by fire.

The latest building remains on the upper tell (stratum I) are foundations for a rectangular building, 9.25 × 10.40 m, best interpreted as a watchtower. Together with two plastered cisterns, these remains belong to the Roman period. The latest remains on the entire site, however, are to be found on the N side of the lower tell. Here was built, during the 7th–8th century A.D., a large rectangular enclosure, 40 × 30 m, with a block building, 18 × 5.0 m set in the SW corner. The enclosure had a number of partitions, and was entered through an extremely large gateway. It seems likely that this building was a type of khan, a staging post for caravans passing W from Ajlun across the Jordan River.

SAKKUTH AND KAIWAN (DEITIES)

[Heb *sikkût* (סִכּוּת) and *kiyyûn* (כִּיּוּן)]. A name and epithet, respectively, of the planet Saturn (Amos 5:26). Because Saturn was the most distant of the planets known to the ancients, and hence the planet was the slowest and steadiest movement across the sky, it was described in Mesopotamia by the adjective *kayamānu,* meaning "the steady one." Learned speculation enhanced Saturn's connection with stability, justice, and truth such that it even became identified with the Sun, who was perceived to have the same qualities in Mesopotamian tradition (Parpola 1983:343). Since Akkadian *m* may appear as *w* in loanwords into Hebrew, the Akkadian consonants *kymn* would appear in Hebrew as *kywn,* as in fact occurs in Amos 5:26. Frequent references to *kywn* when the planets are invoked in Aramaic and Mandaean texts in the 1st millennium A.D. (Obermann 1940) affirms the longevity, popularity, and cross-cultural transfer of this title for Saturn.

The pronunciation of the Sumerian logogram SAG.KUD as *sakkud* in Akkadian has been confirmed (Hallo 1977:15), permitting its appearance as a loan into Hebrew as *sakkût.* But since there is no cuneiform evidence to connect this name with Saturn (Borger 1988), the possible occurrence of both name and epithet in Amos 5:26 is at best hypothetical. 2 Kgs 17:30 is equally problematic in this regard.

Although Amos 5:26 may therefore make a double reference to the planet Saturn worshipped as a deity under its Mesopotamian names, such a reading is not without its problems. The Hebrew actually reads *sikkût* and *kiyyûn,* and Gevirtz has demonstrated that these unexpected vowels cannot be explained (as is commonly attempted) from the influence of the vowels of *šiqqûṣ,* "detestable thing." Equally respectable

alternative interpretations result when the possibility of different vowels is considered, especially the evidence of early texts that do not interpret the consonants *skt* as a divine name at all but instead translate the word as a singular common noun, "tent of, tabernacle of," *sukkat* (LXX, Acts 7:43, Vg; Damascus Rule 7.14–19 provides a plural form but explains it as singular). A similar problem with uncertain vocalization is encountered with the name Kaiwan. See REPHAN.

SAMUEL A. MEIER

SALA (PERSON) [Gk *Sala* (Σαλα)]. See SALMON.

SALAMIEL (PERSON) [Gk *Salamiēl* (Σαλαμιηλ)]. A personal name given as part of the genealogy of Judith (Jdt 8:1). The name is almost certainly to be identified with Shelumiel (Heb *šĕlumî᾽ēl*) the son of Zurishaddai, the descendant of Simeon, who was a leader of the tribe of Simeon during the time of Moses (Num 1:6; 2:12; 7:36, 41; 10:19). The purpose of the genealogy is to provide proof of the purity of Judith's Jewish descent, and to give the story verisimilitude.

SIDNIE ANN WHITE

SALAMIS (PLACE) [Gk *Salamis* (Σαλαμις)]. An important commercial city on the E shore of the island of Cyprus (35°10´N; 33°55´E). It is often confused with a Greek island of the same name, which is near Athens. Even though Paphos was the capital in the NT era, Salamis was still arguably the most important city. Josephus (*Ant* 13.284–87) as well as Acts 13:5 seem to indicate a large Jewish population, with several synagogues, dating perhaps to pre-Roman times.

Salamis was the 1st stop on the initial missionary journey of Paul, who went there with Barnabas (who was from Cyprus; Acts 4:26) and John Mark (perhaps also a Cypriot; Col. 4:10). From Salamis, the missionaries traveled overland to the Roman administrative capital, Paphos, at the other end of the island. The so-called *Acts of Barnabas* (22–23) allege that the eponymous missionary was later martyred in Salamis by a mob encouraged by Jews visiting from Syria.

In retaliation for a Jewish-led rebellion of the island during the reign of Hadrian, Trajan in A.D. 117 dealt severely with Salamis and many Greek Cypriotes were killed. Following this, Jews were forbidden to set foot on the island (Dio Cassius 68.32.2). After an earthquake in the reign of Constantine, the city was rebuilt by Constantius II and renamed Constantia. This new city became capital of Cyprus in the 4th century only to be decimated by an invasion in A.D. 647, and has remained abandoned since that time. Parts of the city wall and the ancient harbor, a number of public buildings, and a Roman villa have been recovered through the excavations at the site of Salamis/Constantia, about 3 miles N of the modern port of Famagusta.

CONRAD GEMPF

SALATHIEL (PERSON) [Lat *Salathihel*]. See SHEALTIEL.

SALECAH (PLACE) [Heb *salkâ* (סַלְכָה)]. A town reportedly captured from Og, king of Bashan (Deut 3:10), as part of territory given by Moses to the tribes of Gad and Reuben (Josh 12:5). Salecah is apparently an outer limit ("all of Bashan as far as Salecah") for the 60 cities of Bashan. As the southeasternmost point, it is given equal weight with Mt. Hermon at the NE tip of the region of Bashan (Josh 13:11 and 1 Chr 5:11). Thus it is suggested by the Deuteronomistic Historian, through a genealogy and a deed recorded during the days of King Josiah or perhaps Jotham, that Selecah may ideally represent the farthest reach S and E of the Israelite expansion in Transjordan. Kallai (*HGB*, 486, 491) concludes that this outer limit, Salecah, refers to the actual expansion of territories during the reign of David, which were

restored in the 8th century B.C.E. through a partnership between Jotham and Jeroboam II against the Ammonites. The modern location is usually identified as Salkhad (M.R. 311212), at the top of an imposing basalt cone, though this link is probably only due to phonetic similarity in the names.
PAUL NIMRAH FRANKLYN

SALEM (PLACE) [Heb *šālēm* (שָׁלֵם)]. The city of Melchizedek in Gen 14:18. Psalm 76:3—Eng 76:2 uses "Salem" in parallelism with "Zion," thus equating it with Jerusalem. The *Genesis Apocryphon* from Qumran (1QapGen 22:13) glosses *šlm* with *hyʾ rwšlm*, "that is, Jerusalem," and *Tg. Onq.*, Tg. Neof., and *Tg. Ps.-J.* render it outright by *yrwšlm,* "Jerusalem." This is certainly a correct tradition in view of the role of Melchizedek as the symbolic archetype of the high priests of Jerusalem in the Hellenistic and Hasmonean ages who combined sacerdotal and secular authority. The author of Genesis 14, who modified most of the place names he mentioned in order to give them an antiquarian sound, took the second half of **Yerûšālēm* (the actual form of the name before the Masoretes revocalized it). Whatever the original semantics of the city name may have been, the element *šālēm* could be construed as meaning "peaceful," alluding to the messianic "prince of peace" in Isa 9:5—Eng 9:6.

There were attempts, since antiquity, to separate Salem from Jerusalem. Eusebius (*Onomast.* no. 152) equated Salem with Salumias, a village 8 Roman miles (ca. 12 km) S of Scythopolis. Jerome adhered for a time to that location. Another identification proceeds from the translation of Gen 33:18 in LXX, Vg, and Syr as "and Jacob came to Salem, a city of Shechem." Hence the suggestions that Salem was the old name of Shechem itself (Landersdorfer 1925), or that it corresponds to the modern village Sālīm (M.R. 181179), ca. 5 km E of Balaṭa (ancient Shechem; Dhorme 1956:45; Milik 1972:137; cf. *GP*, 2:441–42). The grammar of the sentence is awkward no matter how it is understood, but the translation, "And Jacob came safely to the city of Shechem," as in RSV and other modern versions, makes better sense. Shechem bore its historical name as early as the time of the Egyptian 12th Dynasty.

Both villages proposed as sites of Salem were too insignificant to have been depicted as a royal temple city. In particular, the one near Shechem is not attested in ancient sources; the "valley Salem" in the assemblage of disparate place names in Jdt 4:4 is borrowed from Genesis 14, along with Choba in the same verse and Arioch in Jdt 1:6. The name *Sālīm* is frequent in Arabic anthroponymy and toponymy. The position of Salem on Abram's return route from Damascene to the Hebron area, and the proximity to it of the Valley of Shaveh also apeak in favor of its identity with Jerusalem.

MICHAEL C. ASTOUR

SALIM (PLACE) [Gk *Salim* (Σαλιμ)]. A town near Aenon where John the Baptist preached repentance during the latter half of his ministry and baptized converts since there was a copious supply of water (John 3:23). Salim appears to have been located W of the Jordan River (John 3:26; 1:28; 10:40).

The identification of this site is further assisted by its association with Aenon, which means "place of springs." The number of major spring sites along the W side of the Rift Valley is limited. Three of these locations have been identified as the Aenon near Salim.

Eusebius *(Onomast.*) and Jerome *(De situ et nom. loc. heb. 165)* in the 4th century locate the site 8 Roman miles S of Scythopolis (Beth-shan, M.R. 197212) near the Jordan River. The Medeba Map affirms this tradition by locating springs in that region. Modern advocates of this position point to Tell Sheikh Salim as retaining the ancient name and also to Umm el-Umdan (M.R. 199199).

W. F. Albright (1924:193) and others have argued for a site which retains the name "Salim," located 4 km away from springs named Ainun in the Wadi Farah. This site in ancient Samaria is rejected by some scholars as it is argued that John the Baptist would have avoided the area.

A proposed S site of Salim in Judea is located 10 km NE of Jerusalem in the Wadi Saleim near an important water source.

ROBERT W. SMITH

SALLAI (PERSON) [Heb *sallay* (סַלַּי)]. **1.** A Benjaminite and provincial leader who agreed to settle in Jerusalem (Neh 11:8). Used in this way, the name (along with Gabbai) occurs only here. The differences between this list and its parallel in 1 Chronicles 9 suggest that there is no direct literary relationship between them (contra Kellermann 1966 and Mowinckel 1964:146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Schneider in *HSAT*, 42–43; Brockington 1969:187; cf. Myers *Ezra, Nehemiah* AB, 185). This singular reference to Sallai and other factors have also prompted some scholars to argue that the text is corrupt and should read *gbwry ḥyl,* meaning "mighty men of valor." Sallai, it is argued, was then supplied, either because it was a variant of Sallu *(slw›),* mentioned in v 7, or because of the rhyming effect achieved with the name "Gabbai" (Brockington 1969:189–90; Williamson *Ezra, Nehemiah* WBC, 343). Less likely is the suggestion that together Gabbai and Sallai constitute a rare instance of a double name (cf. Batten *Ezra, Nehemiah* ICC, 268–69). Notwithstanding the widespread support for an emendation of the text, others continue to argue that the text should read as it stands (Myers *Ezra, Nehemiah* AB, 184).

2. The name of a levitical household (*IDB* 4:166) or the head of one (Myers *Ezra, Nehemiah* AB, 198) in the days of Joiakim (Neh 12:20). The name appears again in a parallel list as Sallai *(sly)* in 12:7 and the difference may be due to a corruption of the text (Brockington 1969:189–90; cf. *IDB* 4:166). Others regard the two names as variants of one another (Myers *Ezra, Nehemiah* AB, 198).

FREDERICK W. SCHMIDT

SALLU (PERSON) [Heb *sallû›* (סַלּוּא), *sallu›* (סַלֻּא), *sallû* (סַלּוּ)]. **1.** A Benjaminite and provincial leader who agreed to settle in Jerusalem (Neh 11:7). Sallu's line is referred to in Nehemiah 11 and 1 Chronicles 9 (v 7). The differences between the two lists suggest that there is no direct literary relationship between them (contra Kellermann 1966 and Mowinckel 1964:146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Schneider in *HSAT* 2:42–43; Brockington 1969:187; cf. Myers *Ezra, Nehemiah* AB, 185). The meaning of the name is obscure. Tracing it to the Arabic root, *sala›a,* some scholars believe the name means " (God) has restored" (Dahlberg in *IDB* 4:166).

2. One of the twenty-two priests (Brockington 1969:197–98) or families of priests (Myers, 196), who returned to Jerusalem with Zerubbabel (Neh 12:7). The name appears again in a parallel list as Sallai *(sly)* in Neh 12:20; the difference may be due to a corruption of the text (Brockington 1969:189–90); cf. Dahlberg in *IDB* 4:166). Others regard the two names as variants of one another (Myers *Ezra, Nehemiah* AB, 198).

FREDERICK W. SCHMIDT

SALMON (PERSON) [Heb *śalmôn* (שַׂלְמוֹן)]. Var. SALMA; SALA. The name of two persons in the Bible. The name possibly means "mantel"; see Noth *IPN*, 232.

1. The father of Boaz, the husband of Ruth, and the son of Nahshon, tracing the line of David (Ruth 4:21). He appears again in Chronicles (1 Chr 2:11) and in both NT genealogies of Jesus Christ (Matt 1:4–5; Luke 3:32 [Gk *salmōn*]. His name is spelled *śalmâh* (with a final *he* instead of *-ôn*) in Ruth 4:20. In each case, a few LXX or Hebrew manuscripts support the opposite variant. This final *he* is a vowel letter which was used in the text to represent *ā* before the full Masoretic vocalization system was developed in the Middle Ages. The variant spelling *śalmā*ʾ uses the final *ʾalep* to represent the same sound. The presence of variant spellings has suggested differing traditions to scholars (Campbell *Ruth* AB, 172; Myers *I Chronicles* AB, 13–14).

2. Founder of Bethlehem, whose descendents settled that general region (1 Chr 2:54–55; Rudolph *Chronikbücher* HAT, 23). He was the son of Hur (1 Chr 2:50), eldest son of Caleb (not one of the twelve spies of Numbers 13; Myers, 14).

KIRK E. LOWERY

SALMONE (PLACE) [Gk *Salmōnē* (Σαλμωνη)]. A promontory on the easternmost point of the island of Crete (35°19´N; 26°18´E), the modern Cape Sidero where once stood a temple to Athena. Paul, guarded by Julius the centurion, and other prisoners boarded a large Alexandrian grain ship at Myra which was bound for Rome. The ship reached Cnidus with difficulty and strong winds forced it to seek protection by sailing to the lee side of the island of Crete. When the vessel sailed to the S of Crete it passed by the Salmone (Acts 27:7) and made its way to the port of Fairhavens. The pilot and the owner of the ship decided to bypass Fairhavens and set sail for the port of Phoenix, where they intended to spend the winter. The ship, however, was forced off of its course by a wind of hurricane force called Euroquiloa, or "northeaster," and it was later shipwrecked near the island of Malta.

JOHN D. WINELAND

SALOME (PERSON) [Gk *Salōmē* (Σαλωμη)]. **1.** One of Jesus' female followers in Galilee who traveled with him to Jerusalem and witnessed his death and the events that followed (Mark 15:40; 16:1). It is possible that she was the mother of the Zebedees (Matt 27:56). If so, then Matthew tells us that she was ambitious for her sons and sought for Jesus to give them the chief seats on either side of him when he came into his kingdom (20:20–28).

2. The daughter of Herodias who beguiled Herod Antipas with her dancing (Mark 6:14–29; Matt 14:1–12). She is identified by Josephus as Salome, the daughter of Herodias and Herod Philip (*Ant* 18.136). To confuse matters further, Josephus also tells us that Salome first married another Philip who was also a son of Herod (the Great?), and later Aristobolus, yet another Herodian relative. See HEROD PHILIP. Salome's dance is said by the gospel writers to have led to John the Baptist's beheading. In the gospels she is depicted as a young woman who is totally compliant with her mother's wishes. She passes on her mother's request for John the Baptist's head to her stepfather. Indeed, in the Markan account, it is Salome herself who adds the grotesque touch of requesting the head *on a platter*. The NT says nothing about her later life.

BEN WITHERINGTON, III

SALT SEA (PLACE) [Heb *yām* (יָם) *hammelaḥ* (הַמֶּלַח)]. One of the designations of the DEAD SEA, due to its high content of salts (25 percent, the highest salinity in the world). This name occurs in Gen 14:3 (identified with the valley of Siddim); Num 34:3, 12; Deut 3:17; Josh 3:16; 12:3 (in this and the previous two passages, gloss to sea of the Arabah); Josh 15:2, 5; 18:19.

MICHAEL C. ASTOUR

SALT, CITY OF. See CITY OF SALT.

SALT, VALLEY OF (PLACE) [Heb *gê‹* (גֵּיא) *hamelaḥ* (הַמֶּלַח)]. Two Israelite battles, each from a different period of Israel's history, were won in this valley against the Edomites. The first occurred during the time of David under the command of his lieutenant Abishai (2 Sam 8:13). The second was conducted ca. 200 years later by King Amaziah and opened the way for him to reconquer a large part of Edom (2 Kgs 14:7; 2 Chr 25:11). Opinions are varied on the location of this valley. Some prefer to identify it with the Wadi el-Milḥ (Arabic "salt") E of Beer-sheba, because of the similarity of names and because of its location on a natural frontier of Canaan. However, since Israel was clearly the aggressor in these two campaigns, it seems more likely that the battle occurred closer to Edomite territory. Therefore, other scholars have preferred to identify the valley with the salt-encrusted lowlands of es-Sebkah, S of the Dead Sea, although this area seems unsuitable for military activity. B. Mazar (see Cogan and Tadmor, *II Kings* AB, 155 n. 7) has suggested that the Valley of Salt is identical with *gê‹ ḥărāšîm,* the "Valley of Craftsmen" (cf. 1 Chr 4:13–14).

RANDALL W. YOUNKER

SALU (PERSON) [Heb *sālû‹* (סָלוּא)]. The head of a family of the tribe of Simeon (Num 25:14). Salu's son, Zimri, placed the very life of Israel in jeopardy by cohabiting with a Midianite woman and thereby bringing about a plague. Zimri, the son of Salu, was therefore killed in order to save Israel from the plague (Num 25:6–9). A name similar to Salu but belonging to a Benjaminite named Sallu is found in the later books of the OT. See SALLU. The transliteration of the Simeonite Salu is identical in one instance to that of the Benjaminite Sallu. Salu appears in the as Gk *salō,* as does Sallu in 1 Chr 9:7. For the author of 1 Maccabees, Zimri, son of Salu (Gk *salōm*), represented those Jews whom Mattathias the Hasmonean killed, owing to their disobedience to the Law. 1 Macc 2:26 clearly demonstrates the author's dependence upon the rather than the MT by referring to the Simeonite Salom.

MICHAEL E. HARDWICK

SALVATION. Even if it does not always use a formally salvific terminology, the Bible introduces on practically every page the theme of salvation (or its absence). To express the comprehensive nature of salvation, the OT and NT employ a rich variety of terms with different nuances according to their contexts. To organize the material, particular attention will be paid to the recipients, agents, nature, and mediation of salvation.

———

A. The Hebrew Bible/OT

———

A. The Hebrew Bible/OT

Hebrew words for salvation include *nāṣal* ("deliver"), *pālaṭ* ("bring to safety"), *pādāh* (var. *pāda‹,* "redeem") and *mālaṭ* ("deliver"). Two major salvific terms are *gā›al* ("redeem," "buy back," "restore,"

"vindicate," or "deliver") and *yāša‘* ("save," "help in time of distress," "rescue," "deliver," or "set free"). The LXX translates *yāša‘* as *sōzō* ("save") 138 times.

1. The Recipients. Personal, group, and national needs indicate those who need to be saved and why they need to be saved.

a. Personal Needs. Individuals find help and deliverance in the face of very specific problems. Barren women receive the gift of a son (Judges 13; 1 Sam 1:1–2:11). Jacob seeks and receives the blessing from his father (Gen 27:1–29).

The Psalms pray for deliverance from wicked people (Ps 12:1; 43:1; 86:16), victory for the king (Ps 20:9), and deliverance from personal enemies (Psalms 7, 109). The Psalms also offer thanksgiving when the individual is delivered from trouble (Psalm 34), from dangers in battle (Psalm 18), and from death (Ps 86:13).

b. Groups. The Abraham cycle and the patriarchal narratives present gtory of the great flood (Gen 6:5–9:19) portrays a situation of general perversion and consequent destruction from which God saves a just man (Noah) and his family; they form a holy remnant from which the entire human race will be regenerated.roups of people who receive saving blessings. In Genesis 37–50 Joseph's family escapes starvation and Joseph is reconciled with his brothers. The story of the great flood (Gen 6:5–9:19) portrays a situation of general perversion and consequent destruction from which God saves just a man (Noah) and his family; they form a holy remnant from which the entire humans race will be regenerated.

It is above all the whole people of Israel who receive salvation. The Israelites in Egypt are poor slaves (Exod 1:11, 13, 16; 2:23–25; 5:1–21; 20:2) who are threatened with genocide (Exod 1:8–22). It is especially through the miraculous deliverance at the sea (Exod 14:1–15:21) that God brings the people out of Egypt (Judg 6:8–9; 1 Sam 10:18; Isa 63:7–14; Hos 11:1; 13:4). The cult of the Passover preserves the memory of the Israelites being delivered from their heavily armed persecutors through the crossing of dangerous waters (Exod 12:1–28).

The Scriptures also enshrine the conviction that God has continued to save Israel from other peoples (1 Sam 11:13; 14:23, 39; 2 Sam 8:14). The Psalms pray that God will continue to deliver his people (Pss 28:8–9; 60:5; 108:6). The Lord of history will save Israel from famine and death (Ps 33:19).

Through Deborah and Barak, God delivers the Israelites from the Canaanite oppression of Jabin and Sisera (Judges 4–5). The cycle of stories from the northern kingdom about the prophets Elijah and Elisha show God's power at work in a salvific way (1 Kings 17–2 Kings 10).

Postexilic literature (Esther, Tobit, and Judith) presents the Israelites as a minority in a Diaspora situation. God intervenes to save this oppressed people.

At times God's salvation seems restricted to a holy remnant (Isa 7:3–4; 10:20–23). Other prophetic voices attest to the Lord's steadfast love for the people as a whole and desire to renew the saving covenant with Israel (Hos 2:14–23).

Both preexilic (Amos 1–2; Isaiah 13–23) and exilic prophecy (Jeremish 46–51; Ezekiel 25–32) contain oracles against foreign cities and nations. Yet such negative utterances imply the Lord's concern with these peoples. Through that comic caricature of a prophet, Jonah, God's message (Jonah 3:1–10) brings the people of Nineveh to repentance. What seems a prophecy of doom ("yet forty days, and Nineveh shall be overthrown") is not a final rejection but a last call to conversion. Significantly, Jonah is sent to warn the Ninevites about the consequences of their sins, but not to call on them to accept the faith of Israel. It is moral conversion that the prophet has to proclaim, not a change of religion.

The sense that divine salvation is for all people turns up in Isaiah and Second Isaiah, even though this universalism takes a centralist form. The gentile nations must turn toward Jerusalem, as center, to find salvation (Isa 2:1–4; 49:6, 22–23; 60:1–14). The Hebrew Scriptures frequently denounce pagans and their idolatry, yet even preexilic prophecy maintains a certain universalism in God's saving activity (Amos 9:7). Add, too, the holy pagans like Melchizedek (Gen 14:18–22; Ps 110:4), the queen of Sheba (1 Kings 10), Ruth, and Job, who enjoy God's friendship and favor. Finally, through its covenant theme the flood story affirms God's good will toward every living creature on the face of the earth (Gen 9:1–19).

2. The Agents of Salvation. Self-salvation is not a typically biblical perspective. Deliverance comes through others. Some texts (Psalms 77 and 78) emphasize divine action with virtually no mention of human actors. Other texts (Exodus 1 and 4; Psalm 105) highlight human actors. Reconciling divine and human action was not a biblical problem.

a. Human Deliverers. The just man Abraham intercedes for the people of Sodom (Gen 18:16–33). Through him Israel and all humanity will be blessed by God (Gen 12:1–3; 15:1–6; 17:1–8; 22:15–18). A political leader and mystic, Moses delivers Israel from the Egyptian oppression, interprets God's saving activity, and mediates the Sinai covenant (Exodus). The book of Judges recognizes the salvific role of various "judges" (Judg 2:16) such as Othniel (Judg 3:9), Ehud (Judg 3:15), Shamgar (Judg 3:31), Gideon (Judg 8:22; 9:17), and Samson (Judg 13:5). David saves Israel (2 Sam 3:18; 9:19); kings have the task of saving the people (Hos 13:10) and of defending the helpless (Ps 72:4). The everlasting dynasty promised to David will make him an agent of salvation for his people (2 Samuel 7; Psalm 89; Ezek 37:24–25). In the four Servant Songs of Second Isaiah (Isa 42:1–4; 49:1–6; 50:4–11; 52:13–53:12), the servant—whether understood as a representative individual, the entire people, or both—will restore justice and light to the nations, so that God's "salvation may reach to the end of the earth" (Isa 49:6).

b. God the Savior. Whether or not human deliverers are portrayed, God's role is preeminent. It is the divine warrior—not Moses primarily—who saves the people at the sea (Exod 15:1–21). Judges and kings have the task of delivering the Israelites. Yet the Scriptures acknowledge that God took the initiative in raising up these deliverers for the people (Judg 2:16, 18; 3:9, 15). It is God who saved and saves both individuals (2 Sam 12:7; 22:18, 44, 49; Pss 25:5; 27:1) and the nation as a whole (Exod 6:6; Deut 7:8; 13:5; 32:15; 33:29; Isa 41:14; 43:14; 44:24; Psalm 78; 1 Macc 4:30). Hence the Psalms pray for deliverance (Pss 69, 77, 79, 80) and praise the Lord as the God who has kept and will keep Jerusalem safe (Psalms 46, 48, 76, 87).

The names of Joshua (Num 13:8, 16) and others make them living witnesses to the saving power of God, Israel's faithful protector. The Lord heals the people like a doctor (Exod 15:26; Num 21:4). He feeds them in the desert (Exodus 16) and miraculously supplies them with water (Exod 15:22–25; 17:1–7). "The Day of the Lord" is above all a day when the Lord works some striking deed of salvation in favor of Israel.

3. The Nature of Salvation. There is a strong emphasis on the this-wordly nature of salvation. Material and national prosperity is prominent. Yet it would be false to contrast an OT, very earthly salvation with a NT, spiritual and thoroughly other-worldly salvation. Even a brief examination of the language of "peace," "blessing," "life," "law," "justice," and "promise" would seriously modify any such sharp contrast.

a. The Earthly Dimension. Salvation involves being delivered from slavery (Deut 24:18), separation from one's family, and the threat of death. It means victory in battle, the freedom to marry, the gift of descendants, a long life, and the protection needed to enjoy one's rightful patrimony. The final blessing attributed to Moses before his death sums up Israel's sense of being a uniquely favored nation, saved by God to live freely in a fertile land of its own (Deut 33:28–29). The oracles of Balaam celebrate God's saving acts and purposes for the people delivered from actual or threatening oppression at the hands of Egypt or other nations (Num 22:41–24:25).

In Isaiah's terms, salvation means Israel enjoying earthly peace with other peoples (Isa 2:1–5). The messianic king will not only rule with wisdom and justice, but will also restore a proper harmony with nature (Isa 11:1–9).

b. The Spiritual Dimension. One cannot overlook the spiritual, other-worldly elements involved in the making of the Sinai covenant, the giving of the law, the building of Solomon's temple, the role of ideal kings, and much else in Israel's history. The redemption and restoration of Israel (Isa 43:14–44:5) after the Babylonian Captivity illustrate strikingly the spiritual aspect of salvation.

Like a valley of dry bones, the people will be raised to life, brought back from Exile, and given a new beginning (Ezek 37:1–14). God will cleanse the people from their sins, to give them a new heart and spirit (Ezek 36:22–32). Jerusalem will be rebuilt, and the temple and the land will be restored (Ezekiel 40–48).

These visions of a salvific future go beyond the merely political and social to involve a new religious relationship with God. They hold out the hope of enjoying the Lord's intimate presence in the temple, and as renewed people freely living again with God in their own country (Jer 31:17).

To depict the fidelity and intensity of that divine love, which the people should once again experience, Second Isaiah uses the most powerful images available; the Lord loves his people like a spouse or a mother (Isa 49:14–16; 54:1–8; Hos 2:14–23; 11:1–9).

c. Future Salvation. As many Psalms testify, the Israelites experienced God's salvific power in situations that regularly recurred, such as pilgrimages to Jerusalem and worship in the temple. Yet the same people were also called to await and accept new and extraordinary interventions from God.

Amos expected Israel's present existence to end through some new divine action (Amos 7:1–9; 8:1–2). Hosea proclaimed a renewal which would let the people experience a fresh start (Hos 2:6–7, 14–15; 3:4–5). Isaiah announced the coming of a new Davidic king (Isa 9:2–7; 11:1–10), Jeremiah a new covenant (Jer 31:31–34), Ezekiel a new life for the people (Ezek 37:1–14), and Second Isaiah a new exodus as God comes to restore the people (Isa 40:1–11).

These prophetic expectations assume more and more an eschatological dimension (Isa 43:5–44:5; Psalms 46, 76; Zechariah 14). In the book of Joel a catastrophic locust plague leads the prophet not only to call the people to repentance (1:2–2:27) but also to speak of the judgments and blessings to come at the end (2:28–3:21). In the last days, "all who call upon the name of the Lord shall be saved" (Joel 2:32). Eventually the expectations of future salvation takes the form of apocalyptic hopes for the resurrection of the dead and a new life with God in a transformed world (Isa 26:19; 65:17–25; 66:22; Dan 12:1–3).

4. The Mediation of Salvation. Over and over again the Hebrew Scriptures testify to the conviction that God's saving self-communication was mediated through events that the people experienced, interpreted, remembered, and reenacted. Various episodes effected salvation, above all the Exodus from Egypt. Several covenants, in particular the Sinai covenant, promised salvation. It is worth highlighting certain points about the means, signs, places, and conditions of human deliverance.

a. The Means of Salvation. At crucial stages in the Exodus story, theophanies reveal God's saving presence (Exodus 3, 19, 33). There is a strong earthly dimension to divine deliverance, yet the means for saving the people are not to be reduced to saving on an ordinary military level (Hos 1:7; 1 Macc 3:18–19). Through a providential plague Jerusalem and Judah are saved from Sennacherib (Isa 37:33–37). As creator and lord of history, God controls the destinies of the nations whose deliverance is not to be found in armies, great heroes, and war horses (Ps 33:10–19). Salvation comes through the gift of wisdom (Prov 1:20–2:22; 8:1–36; Wis 8:2–9:18). It is mediated through a new covenant to be written in the human heart (Jer 31:31–34; Ezek 11:19).

b. Signs and Places. Visible signs and places are repeatedly understood to convey the promise and power of divine salvation. The signs often take a "living" form, like the rainbow in the story of the universal covenant after the Flood (Gen 9:12–17), the three visitors who appear to Abraham at the noontime siesta (Genesis 18), the child in the Immanuel sign (Isa 7:10–17), and the food which is provided day by day in the wilderness.

At times it is in the fields and countryside that God mediates help or promises deliverance. Thus the Lord appears to Abraham by the oaks of Mamre, an ancient sacred place slightly north of Hebron (Gen 18:1). Gideon is visited by the angel of the Lord under the oak of Ophrat (Judg 6:11). In the days before the monarchy, the shrine of Shiloh is a place where God hears prayers, grants saving blessings, and calls the prophet Samuel (1 Samuel 3).

But it is above all the temple in Jerusalem which from the time of David was seen as the place par excellence for receiving God's help and blessing. After the Babylonian Captivity the prophet Haggai, assisted by Zechariah, encourages the building of the new temple, the place where God will give full and final prosperity (Hag 1:1–2:9).

c. The Conditions for Salvation. On the human side, certain conditions are required. God responds to those who exhibit a trusting faith (Ps 22:4). He delivers those who fear him and hope in his steadfast love (Ps 33:18–19).

In particular, those who care for the poor, the stranger, and the weak will not lose God's covenanted protection (Exod 22:20–27). The law of holiness brings not only cultic requirements but also ethical obligations toward such defenseless people as strangers (Lev 19:33). The Deuteronomic Code stresses the people's responsibility toward the legally helpless, the object of God's special concern: "He executes justice for the fatherless and the widow, and loves the sojourner, giving him food and clothing. Love the sojourner therefore; for you were sojourners in the land of Egypt" (Deut 10:18–19). Echoing a ceremony of covenant renewal, Deuteronomy presents salvation as a choice of divine blessing rather than divine judgment, a choice of the way which promises to bring life, peace, and freedom: "Behold, I set before you this day a blessing and a curse: the blessing, if you obey the commandments of the Lord your God … and the curse, if you do not obey the commandments of the Lord your God" (Deut 11:26–28; 28:1–68; 30:15–20).

In a classic passage Micah sums up the appropriate human response to God's offer and gift of salvation: "What does the Lord require of you but to do justice, and to love kindness, and to walk humbly with your God?" (Mic 6:8).

B. The NT

The NT uses the very *sǭzō* ("save," "keep from harm," "rescue," "heal," or "liberate") 106 times, and its compound *diasǭzō* 9 times. The corresponding nouns *sōtēria* ("salvation"), *sōtēr* ("savior") and *sōtērion* ("salvation") turn up 45, 24, and 4 times respectively. We find the very *ruomai* ("rescue") 15 times in the NT, which also uses many other terms ("freedom," "justification," "life," "reconciliation," "redemption," "resurrection," and "rule of God") to express salvation.

1. The Recipients. a. Personal Needs. At times, "save" involves some individual being delivered from physical danger. Thus Paul is rescued from various perils, including shipwreck, on his way to Rome (Acts 23:24; 27:20, 31, 34, 43, 44; 28:1, 4). God "delivered" Paul from an unspecified danger in the province of Asia (2 Cor 1:10). The ark meant that Noah and his family "were brought to safety through the water" (1 Pet 3:20). In this context "save" carries baptismal overtones as well (1 Pet 3:21).

According to the Synoptic Gospels, sin (Luke 15:18), sickness (Luke 8:48; 17:19), deformity (Mark 3:4; Luke 18:42), demonic possession (Mark 1:34), the threat of death (Mat 14:30), the power of wealth (Mark 10:25–26 par.; Luke 19:1–10), and the constant and pervasive domination of "evil" or "the evil one" (Matt 6:13 par.) put people in need of deliverance. Elizabeth's problem is very specific: her infertility (Luke 1:7, 18, 25). The gift of a son leads her husband Zechariah to make his prophetic prayer of thanksgiving for God's saving interventions (Luke 1:67–79).

The Synoptics report Peter (Matt 14:30) and the core group of disciples (Matt 8:25 par.) crying out to be "saved" from drowning. In both cases the stories symbolize for the hearers and readers of the gospels various problems (that go beyond mere physical danger) and a corresponding salvation which they can receive from the risen Lord. Likewise "save" in the context of Jesus' crucifixion (Mark 15:30–31 par.) is used in the sense of "rescue from death," yet the overtones suggest much more than mere deliverance from physical death (Matt 27:49; John 12:27; Heb 5:7).

b. Collective Needs. Like the Hebrew Scriptures, the NT highlights the general rather than the individual needs that make people candidates for salvation. Where Mark 10:45 par. does not specify from what "the many" will be rescued, other passages make clear the common need to be delivered from the power of sin (Matt 1:21; Mark 1:5 par.; Acts 2:38; 3:19, 26; 10:43) and death (Luke 1:79).

"All have sinned," Paul writes, "and fall short of the glory of God" (Rom 3:23). Sin and death are personified forces which enslave Jews and gentiles alike (Rom 5:12–7:25). Cosmic powers hold human beings in bondage (Gal 4:3, 9; Col 2:8, 20; 1 Cor 15:24). In a sense, those under God's good and holy law need to be delivered from it, as they resist it, break it, or use it in a misguided attempt to justify themselves (Rom 5:20, 10:4; 1 Cor 15:56; Gal 3:10–25). In a classic passage, Hebrews sums up the condition (from which Jesus delivered us) as a bondage to sin, the devil, death, and the fear of death (Heb 2:14–18).

Luke uses Isaiah to portray our presalvation state as that of poverty, captivity, blindness, and oppression (Luke 4:18). Elsewhere this common state is called that of being "strangers to the covenants of promise,

having no hope and without God in the world" (Eph 2:12). It is the condition of those who live "in darkness and the shadow of death" (Luke 1:79; Col 1:13).

2. The Agents of Salvation. a. Human Deliverers. In a variety of ways human beings serve as agents of salvation. Through an encounter with the risen Lord (1 Cor 9:1; 15:8) which he describes as "a revelation of Jesus Christ" (Gal 1:12), Paul knows that he has been called to proclaim God's Son "among the Gentiles" (Gal 1:16). He is "eager" to visit Rome and preach "the Gospel" which is "the power of God for salvation to everyone who has faith" (Rom 1:15–16; 1 Cor 1:18; 15:1–2). Paul's missionary activity helps to bring about salvation (Rom 11:14). He lists the spiritual gifts which Christians "appointed" by God use in the saving service of others (1 Cor 12:28).

From the wider group of his disciples Jesus appoints "twelve" to preach and cast out demons (Mark 3:13–19 par.). They are sent out to preach, heal, and deliver people from diabolic powers (Mark 6:7–13 par.). In the post-resurrection situation "the eleven disciples" receive a missionary mandate to "make disciples of all nations" by bringing them baptism and the teaching of Jesus (Matt 28:16–20).

Acts describes the beginnings of the Church in Jerusalem and its outward movement which eventually brings Paul to Rome (Acts 28:15–31). Through Peter and others, people receive salvation in the form of conversion, the forgiveness of sins, baptism, and the gift of the Spirit (Acts 2:38; 3:18–19; 5:31–32; 10:43–48).

b. God the Savior. The NT applies the term "Savior" to God 8 times (for example, Luke 1:47; 1 Tim 1:1) and to Jesus 16 times (for example, Luke 2:11, John 4:42; Acts 13:23; Phil 3:20). No one else is called "savior." It is the same with *ruomai* ("to rescue" or "deliver"): when the agent of deliverance is named, it is always God (for example, Matt 27:43; 2 Cor 1:10; Col 1:13; 2 Pet 2:7) or Jesus (1 Thess 1:10).

Mary's son is to be called "Jesus" ("God is salvation"), because he will save "his people from their sins" (Matt 1:21). Luke makes it clear that the true bringer of peace and salvation is not the emperor Augustus but only "Christ the Lord" (Luke 2:1, 10–11). It is exclusively in the name of Jesus that salvation comes (Acts 2:38; 5:31): "there is salvation in no one else, for there is no other name under heaven given among men by which we must be saved" (Acts 4:12).

Through the crucified and risen Jesus comes the "forgiveness of sins" (Acts 13:38). Acts makes the universal and absolute claim that all, both Jews and gentiles, are to be "saved through the grace of the Lord Jesus" (Acts 15:11).

The Pastoral Epistles are rich in the explicit vocabulary of salvation, speaking both of "God our Savior who desires all men to be saved" (1 Tim 2:3–4; Titus 2:11) and "Christ Jesus" who "came into the world to save sinners" (1 Tim 1:15). When "the goodness and loving kindness of God our Savior appeared, he saved us … through Jesus Christ our Savior" (Titus 3:4, 6). The alignment of "God" and "Jesus" as Savior reaches its climax in the phrase about the object of "our blessed hope," which can be translated as either "the appearing of the glory of our great God and Savior Jesus Christ" or "the appearing of the great God and our Savior Jesus Christ" (Titus 2:13).

3. The Nature of Salvation. The Synoptic Gospels present salvation in terms of "entering" the kingdom of God (Mark 10:23–26 par.), "accepting" it like a child (Mark 10:15 par.), or "sitting at table" in God's kingdom (Luke 13:23–30 par.). Let us see what this entails.

a. The Earthly Dimension. Unlike the OT, the motif of a political oppression (from which Christians and others wish to be delivered) turns up comparatively rarely (Luke 13:1–5; Acts 12:1–17; Rev 16:17–19:3).

Luke and Acts reflect some "national" expectations of salvation. The hymn of Zechariah draws on OT traditions to speak of God's fidelity to the covenant in saving his people from their enemies (Luke 1:68–79). Cleopas and his companion on the Emmaus road express a similar hope for national salvation to come through Jesus (Luke 24:21). The disciples' question in Acts 1:6 ("Lord, will you at this time restore the kingdom to Israel?") seems to reflect a similar nationalistic interpretation of salvation. In these last two cases Jesus himself corrects an inadequate view of salvation (Luke 24:25–27; Acts 1:7–8).

At the same time, Jesus' message of repentance calls on the financially secure to care for the poor, the maimed, the lame, and the blind (Luke 14:12–14). The judgment to come encourages "all the nations" to attend now to the earthly needs of the hungry, strangers, the naked, the sick, and prisoners (Matt 25:31–46). The present experience of salvation leads Zacchaeus to give half of his goods to the poor (Luke 19:8–10). Jesus invites a rich man to sell his possessions and give the proceeds to the poor (Mark 10:21–22). Before Jesus begins his ministry, John the Baptist preaches a message of justice and aid for the needy (Luke 3:10–14). After Jesus ascends into heaven, Jerusalem Christians share their wealth and take care of the poor (Acts 4:32–5:11). In short, the NT version of salvation includes a practical concern here and now for needy people (Rom 12:8; 1 Cor 13:3; Heb 13:16; 1 John 3:17; Jas 1:27; 2:14–17).

b. The Spiritual Dimension. In the Synoptic Gospels, through his words, deeds, and presence Jesus proclaims "the rule of God" and "the kingdom of heaven," which are reverent circumlocutions for divine salvation. He is "Emmanuel, which means 'God with us' " (Matt 1:23), who calls people to change their way of life, believe in the good news, and enjoy a new relationship with God (Mark 1:15).

Jesus' miracles not only physically heal men and women but also symbolize what he ultimately wants to do—namely, bring salvation to their whole person. He tells Bartimaeus, "Your faith has made you well" (Mark 10:52; see 5:34; Matt 9:22, Luke 7:50; 8:48). A paralytic is healed, but the assurance "Your sins are forgiven" shows that the cure is spiritual as well as bodily (Mark 2:1–12).

Jesus' preaching, teaching, and healing (Matt 4:23, 9:35) initiated the final saving intervention of God (Matt 12:28), that was expressed in particular through the divine concern to forgive sinful men and women. Jesus proclaimed God's compassion to those who were marginalized by respectable people: "I came not to call righteous, but sinners" (Mark 2:17 par.). Tax collectors and other close collaborators with the occupying Roman army, women of bad reputation, tanners and those whose occupations made them ritually unclean, socially powerless and disadvantaged people, lepers, and others whom religion and society had left in some depressed condition found Jesus promising them happiness: "Blessed are you poor, for yours is the kingdom of God" (Luke 6:20). Some people were scandalized when Jesus set out to communicate the divine compassion by dining with sinners and so taking them into God's company. These critics derided him as "a glutton and a drunkard, a friend of tax collectors and sinners" (Matt 11:19). Through the parable of the prodigal son (Luke 15:11–32) Jesus defended his conduct in receiving and forgiving those who had been "dead" and "lost" through sin. His visit to a chief tax collector meant that "salvation" had come to that house (Luke 19:9).

Unlike the Synoptic Gospels, Acts does not so much use the image of God's rule to express the present reality of salvation. It speaks directly of being "saved": the day Pentecost fulfills the promise, "whoever calls on the name of the Lord shall be saved" (Acts 2:21; 15:1, 11). Through conversion and baptism in the name of the crucified and risen Jesus, people are saved through the forgiveness of sins and the gift of the Spirit (Acts 2:38; 3:18–19; 5:31–32; 10:43ff.). Healings effected in the name of Jesus manifest the present reality of salvation (Acts 3:6; 4:9–10).

In a rich variety of ways Paul's letters speak of what "the day of the salvation" (2 Cor 6:2) or "the gospel" of salvation (Eph 1:13) means. It brings a new freedom from sin (Rom 6:1–23), from the law (Rom 7:4; Gal 2:15–21), from death (Rom 6:21), and from the cosmic powers (Gal 4:8–10; Col 2:16–23). Salvation means life "in Christ" (Rom 8:1; 16:7; 1 Cor 15:22), the gift of the Holy Spirit (Rom 5:5; 8:9, 11), "peace with God" (Rom 5:1), "justification" (Rom 4:25), being a "new creation" (2 Cor 5:17), and enjoying "reconciliation" (Rom 5:10–11; 2 Cor 5:18 + 20) and existence as "adopted" sons and daughters of God (Gal 4:4–7).

For John, salvation characteristically means being "born again" (John 3:3–6) to become "children of God" (John 1:12) who through the Holy Spirit share in the life of Christ. Here *zōē* (used 36 times in John's gospel) goes beyond mere *bios*, or biological existence, to mean life that will never end.

c. Future Salvation. We have just sampled major ways in which the NT witnesses to and describes the present experience of salvation. At the same time, it indicates that at best, human beings experience only a fragmentary anticipation of the full and final salvation to come from God.

The Synoptics record Jesus' promise of eschatological salvation: "Whoever loses his life for my sake and the gospel will save it" (Mark 8:35; 10:29–30). Those who persevere under persecution and suffering "will be saved" (Mark 13:13). An eschatological discourse on the coming of the Son of Man lists various signs of the end and adds: "When these things begin to take place, look up and raise your heads, because your redemption is drawing near" (Luke 21:28).

In the main Pauline Epistles the futurity of salvation is especially prominent. Apropos of the final destiny of Israel, Paul passes from a negative quotation from Isaiah ("Though the number of the sons of Israel be as the sand of the sea, only a remnant of them will be saved" [Rom 9:27]) to maintain, on the authority of the same prophet, that "all Israel will be saved" (Rom 11:26). In his own case Paul is sure that sufferings will bring his "deliverance" (Phil 1:19). He tells the Philippians to look to the future: "Our commonwealth is in heaven, and from it we await a Savior, the Lord Jesus Christ" (Phil 3:20). He exhorts the Thessalonians to put on "for a helmet the hope of salvation. For God has not destined us for wrath, but to obtain salvation through our Lord Jesus Christ" (1 Thess 5:8–9; see also 1 Thess 1:10); the Romans are encouraged "to wake from sleep," since "salvation is nearer to us than when we first believed" (Rom 13:11). This coming salvation will mean sharing in Christ's glory (Rom 8:17; 1 Cor 15:49–57; Phil 3:20–21). It will free from corruption the whole of creation; even in hoping for this fullness of redemption, believers already experience something of that full salvation (Rom 8:18–24).

The future vision is reflected in Hebrews. Through suffering, Christ became "the pioneer" of human salvation (Heb 2:10). It is at his second coming that he will "save those who are eagerly waiting for him" (Heb 9:28). In its own way the letter of James shares this eschatological version of salvation (Jas 4:12; 2 Tim 4:18). Only once (Jas 5:15) does *sǭzō* refer to a present experience of salvation. 1 Peter comforts believers with the hope that they are "guarded through faith for a salvation ready to be revealed in the last time" (1 Pet 1:5). The NT ends with the vision of that consummation of salvation when the Lord Jesus comes and God makes all things new (Rev 21:1–22:5).

4. The Mediation of Salvation. The classical NT statement on the universal mediation of salvation declares: "There is one God, and there is one mediator between God and men, the man Christ Jesus, who gave himself as a ransom for all" (1 Tim 2:5–6). Let us see some details.

a. The Means of Salvation. Paul clearly appreciates the role of God's free and loving initiative in effecting human salvation: "God shows his love for us in what while we were yet sinners Christ died for us … if while we were enemies we were reconciled to God by the death of his Son, much more, now that we are reconciled, shall we be saved by his life" (Rom 5:8–10). John is equally clear about this divine initiative: "God so loved the world that he gave his only Son, that whoever believes in him should not perish but have eternal life. For God sent his Son into the world, not to condemn the world, but that the world might be saved through him" (John 3:16–17). Paul, too, speaks of Christ being "sent" to bring salvation (Rom 8:1–4; Gal 4:4–5). The Synoptic Gospels express the climactic and salvific intervention of God by speaking of the kingdom of God being "at hand" (Mark 1:15), "coming" (Mark 11:10; Matt 6:10 par.; Luke 17:20), or "appearing" (Luke 19:11).

Christ's obedience brought him to crucifixion, resurrection, and exaltation (Phil 2:8–9; Heb 5:8). Through dying and rising he won the victory over "the principalities and powers" (Col 2:12–15). Being thus "made perfect he became the source of eternal salvation to all who obey him" (Heb 5:9). Christ's obedience brought "the free gift of righteousness" and "life for all men" (Rom 5:17–21). He "was put to death for our trespasses and raised for our justification" (Rom 4:25; see 1 Pet 1:18–19).

Through his blood Christ expiated human sin (Rom 3:25) and established a new covenant (Mark 14:24; 1 Cor 11:25). In a range of high-priestly categories, Hebrews presents the sacrificial and saving deed of Christ (Heb 8:1–10:18). Through his offering made once and for all (Heb 10:11–12), he entered into the heavenly sanctuary (Heb 9:11–12:24), and remains forever the living way into that sanctuary and to God (Heb 10:19–22).

b. Signs and Places. In Luke's infancy narrative an angel of the Lord announces the birth of "a Savior who is Christ the Lord" (Luke 2:10–11) and adds: "This will be a sign for you: you will find a babe wrapped in swaddling cloths and lying in a manger" (Luke 2:12). Later in the same gospel Jonah's

successful preaching (the sign of Jonah) which saved the Ninevites is contrasted with the failure of "this generation" to repent and be saved when faced with the preaching and "greater" sign of salvation: the Son of Man's presence (Luke 11:29–30, 32). In Matthew, "the sign of Jonah" is understood to refer also to the "three days and three nights the Son of man will spend in the heart of the earth" between his death and resurrection (Matt 12:38–41; 16:1–4).

Mark's eschatological discourse about the signs of the end opens with Jesus announcing the destruction of the temple buildings and four disciples asking him, "when will this be, and what will be the sign when all these things are to be accomplished?" (Mark 13:3–4). In Matthew's version the question about the sign becomes more personal: "When will this be, and what will be the sign of your coming and of the close of the age?" (Matt 24:3). Luke writes of the cosmic "signs" (Luke 21:11, 25) that will accompany the glorious and redemptive coming of the Son of Man (Luke 21:27–28).

Right from the story of the marriage in Cana, John calls Jesus' miraculous deeds "signs" (John 2:11). The gospel reaches its conclusion by explaining its saving purpose in presenting various signs worked by Jesus: "These [signs] are written that you may believe that Jesus is the Christ, the Son of God, and that believing you may have life in his name" (John 20:30). Paul (2 Cor 12:12) and Acts (5:12; 6:8; 14:3) designate as "signs" the miraculous deeds that effectively accompanied the spread of the saving message.

As with these visible signs, many places reveal and mediate salvation in the NT. In Luke's infancy narrative shepherds are "out in the field" when "the glory of the Lord" shines around them and an angel announces the birth of "a Savior" (Luke 2:8–11). That gospel of salvation moves from the sign of a baby in a manger (2:12) to the ambiguous sign of an open and empty tomb which the words of Jesus and two angels interpret in terms of the new life of resurrection (24:1–9). The same gospel begins and ends with the temple, the place par excellence of prayer and divine blessing (1:8–23; 24:52–53). At the same time, whereas Luke's gospel reaches its climax in the neighborhood of Jerusalem when Jesus is "taken up" and enters into his glory (Luke 9:51; 24:26, 50–51; Acts 1:2, 6–11), the salvific geography of Acts eventually takes Paul from Jerusalem to Rome (Acts 21:15–28:16), where the book ends with him "preaching the kingdom of God and teaching about the Lord Jesus Christ quite openly and unhindered" (Acts 28:31).

In Mark's gospel it is at the place of the skull (15:22 par.) that Jesus "gives his life as a ransom for many" (10:45). The fact that "Jesus suffered outside the gate in order to sanctify the people through his own blood" becomes the basis for an exhortation that relativizes the salvific significance of Jerusalem: "Therefore let us go forth to him outside the camp, and bear the abuse he endured. For here we have no lasting city, but we seek the city which is to come" (Heb 13:12–14). The NT closes with the vision of "the holy city, new Jerusalem" where God's people will enjoy a new life forever (Rev 21:2–22:19).

Jesus' dialogue with the Samaritan woman likewise relativizes the importance of sacred places, even Jerusalem (John 4:20–24). John's gospel climaxes with a search for the presence of Jesus (John 20:2, 13, 15). The risen Lord is to be found in the worshipping community (Matt 18:20; 1 Cor 12:3) and in the presence of suffering humanity (Matt 25:35–40). Even the whole cosmos becomes the place of reconciliation through Christ who died on the cross and became "the first-born from the dead" (Col 1:18–20).

c. The Conditions for Salvation. Through God's "own purpose and grace" and not by virtue of their "works," human beings are "saved and called with a holy calling" (2 Tim 1:9). This calling leads them to be saved through repentance (Acts 2:38), the "regeneration" of baptism and "renewal in the Holy Spirit" (Titus 3:5; see 1 Pet 3:21). Often the NT sums up the conditions for salvation by speaking of the need to be "justified" through faith (Rom 1:16–17; 3:21–26) or "saved" through faith (Eph 2:5–8; Acts 16:31). At times this salvation through faith rests on a knowledge of the Scriptures (2 Tim 3:14–15).

The gift of salvation is understood to put the baptized under an obligation to live in holiness and persevere in their struggles with suffering (1 Pet 4:1, 13–14). They are to "work out" their salvation (Phil 2:12) and "strive to enter" God's "sabbath rest" (Heb 4:9–11). They should see the delay of the Parousia "as salvation" (2 Pet 3:15), since they thus have time for improvement (2 Pet 3:14–18), as they wait for "new heavens and a new earth in which righteousness dwells" (2 Pet 3:13).

C. Issues of Interpretation

A number of important biblical themes are intertwined with that of salvation. Research and debate on those other themes affect, to a greater or lesser extent, the interpretation of what the Bible says about salvation. To illustrate this briefly I want to recall some points in the 20th-century discussion of salvation-history, kingdom, and covenant.

1. Salvation-History. In his two-volume *Old Testament Theology* (1962–65), G. von Rad presents the story of Israel's salvation-history as first confessed in ancient creeds like those of Deut 26:5–9 and Josh 24:2–13 and then expanded in various ways. This history of salvation is a story of ever-increasing expectations as divine promises point to future fulfillments. While many prefer von Rad's overall interpretation to that of R. Bultmann (who dismisses OT history as a history of failure and miscarriage), they find serious problems in von Rad's version of salvation-history. He appears, for instance, to separate the "facts" of salvation-history from the actual events of public history.

For O. Cullmann, in *Christ and Time* (German original, 1946), and *Salvation in History* (German original, 1965), the reality of external historical events is central to salvation-history. God's saving acts in history reach their climax in Jesus Christ. Hence Luke's scheme of salvation-history, which presents Christ as the center of time, is no aberration, but the heart of NT theology. Critics believe that Cullmann has not sufficiently clarified the relationship of salvation-history to ordinary history. They have other objections to his scheme of saving history: they point, for instance, to the fact that the wisdom books and other sections of the Bible are not always clearly oriented to a historical way of thinking.

In his two-volume *Theologie des Neuen Testaments* (1948–53), R. Bultmann does not present salvation in terms of the external facts of past history (not even that of Jesus) but as the authentic existence to which the proclamation of the cross calls me and which puts an end to my old world, with its sin and false securities. The salvation event is the eschatological "now" that challenges me to the decision of faith and the chance of a new life "beyond" the world. E. Käsemann and many others have criticized Bultmann for neglecting the theological significance of the Jesus of history, the genuinely futurist eschatology of Paul, and the public and cosmic nature of salvation expressed by the NT.

This brief look at von Rad, Cullmann, and Bultmann can serve to illustrate a crucial issue. Any interpretation of the biblical account of salvation will be deeply affected by the view one holds of history, time, and the historical mediation of salvation.

2. The Kingdom of God. Turning away from contemporary presentations of Jesus as a supreme teacher of ethics, J. Weiss (1863–1914) proposed a different key for the reading of the gospels: Jesus proclaimed the kingdom of God as imminent—a view that A. Schweitzer popularized and developed. In *The Quest of the Historical Jesus* (1968) Schweitzer portrayed Jesus as the disappointed herald of a divine consummation which did not come.

The enduring contribution made by Weiss and Schweitzer was to establish the common consensus that eschatology is not peripheral but central to a correct understanding of the kingdom of God in Jesus' teaching. But what did Jesus mean by the kingdom? Against Schweitzer, C. H. Dodd maintained a realized eschatology: for Jesus the kingdom was not some eschatological climax approaching in the immediate future, but had already come. The emphasis was on a kingdom of God that was accessible here and now. In the aftermath of Schweitzer and Dodd, many scholars have argued for a mediating interpretation of Jesus' preaching of the kingdom: an inaugurated eschatology in which the promised kingdom had already come but was not yet fully operative. This scheme of "already" but "not yet" proposed that Jesus allowed for some interval between his death and the final consummation of the kingdom.

There have been these and other changes in the interpretation of what the kingdom of God meant in Jesus' own preaching and for the evangelists. All such shifts and debates about the kingdom obviously influence any understanding of what the NT indicates about the salvation offered by God through Jesus Christ.

3. Covenant. There are three major approaches to salvation which are interconnected but distinct: salvation as (a) deliverance from evil, (b) ritual purification from sin, and (c) the formation of a new relationship with God. W. Eichrodt serves to illustrate this point. In his three-volume *Theology of the Old*

Testament (German original, 1933–39), Eichrodt argued for an underlying unity in the OT. Its central theme he found in the divine covenant with Israel and God's desire to establish a covenantal fellowship with all peoples. Whatever we hold about particular details in Eichrodt's argument, his thesis would encourage us to approach salvation in terms of salvation as a new covenant-relationship with God.

Besides the issues of salvation-history, kingdom of God, and covenant, many other areas of research can modify what we understand the Bible to say about salvation. These would include: the OT messianic expectations; the saving function of the message of the prophets; the contribution of wisdom literature; the nature and value of apocalyptic; beliefs about the afterlife; the social environment of Israel and emerging Christianity; Jesus' understanding of his identity, role, and imminent death; his resurrection, exaltation, and the coming of the Holy Spirit; the nature of justification by faith; the effect on early Christians of the delay in God's final manifestation. Beyond question, the interpretation of biblical salvation is radically influenced by one's view of the relationship between the OT and the NT. For those of Jewish faith the Hebrew Bible constitutes the complete scriptural account that shapes their understanding of the nature of salvation.

GERALD G. O'COLLINS

SAMARIA (PLACE) [Heb *šōmrôn* (שֹׁמְרוֹן)]. The place name "Samaria" has a twofold sense. First, it refers to the capital city of the N kingdom of Israel, from the time of its construction by Omri in the early 9th century B.C. (1 Kgs 16:23–24) to its conquest by the Assyrians in the late 8th century (probably 721 B.C.; attributed to Shalmaneser V in 2 Kgs 17:1–6, but to Sargon II in Assyrian records). This city has been identified with the ruins of Sebastiya (M.R. 168187).

Second, after the destruction of the city the name "Samaria" (Assyrian *Samerina*) was applied to the larger district in which the city had been situated, following the Assyrian practice of naming a province after its capital or principal city. The natural borders of this region were defined by the valleys of Jezreel and Aijalon on the N and S respectively, by the coast to the W, and by the Jordan river valley on the E. In pre-Assyrian times this region and its population had been referred to after the old Israelite territorial/tribal name Ephraim (in Hosea 36 times and Isaiah 12 times; cf. Jer 31:5–6). Sometimes the name Ephraim was reserved only for the hill country of S Samaria, while the hill country of N Samaria was called Manasseh. Later, however, the area was repopulated by heterogeneous populations from

throughout the Assyrian empire, whom the Judeans of Jerusalem generally regarded with contempt. See SAMARITANS.

This entry consists of four articles that treat the history and archaeology of Samaria. The first focuses exclusively on the history and archaeology of the city itself, while the second focuses on important ostraca that were discovered during the excavations of the city. The third article focuses on archaeological survey work that has been done within the larger region, while the fourth focuses on papyri that have been discovered in this region. See also EPHRAIM (PERSON) and DALIYEH, WADI ED-.

SAMARIA THE CITY

A. Biblical Overview
B. Name, Topography, Location
C. History of Excavation
D. History during the Israelite Period
E. History during the Assyrian-Hellenistic Periods
F. History during the Roman-Byzantine Periods

A. Biblical Overview

References to Samaria in biblical writings relating to the Israelite kingdom are to the city and not the district, with only a few exceptions—e.g., "cities of Samaria" in 1 Kgs 13:32 (an anachronism inasmuch as the city of Samaria had not yet been built and named); 1 Kgs 21:1 (where Ahab is called "king of Samaria" [read "king in Samaria"]); and perhaps also 2 Chr 22:9 (where Ahaziah is said to have been "captured while hiding in Samaria"; the earlier account in 2 Kgs 9:27–29 had stated that he was wounded at the ascent of Gur near Ibleam and died in Megiddo). The MT reference to "mountains of Samaria" in Amos 3:9 should be read "mountain of Samaria" along with the LXX.

The Assyrians did not completely destroy Samaria, although a large part of it was burned. It was rebuilt and became an administrative center which appears to have maintained hegemony over much of the Judean territory during the Babylonian and early Persian periods. With the coming of the Macedonians in 332 B.C., and after the suppression of a local uprising, Samaria was rebuilt as a Greek city. This city was destroyed by the Jewish ruler John Hyrcanus in 108/107 B.C. and later rebuilt by Herod the Great, ca. 30 B.C. Herod renamed the city Sebaste (Gk *Sebasté*), in honor of Caesar Augustus (Gk *Sebastós* = Lat *Augustus*). After the rebuilding and renaming of the city, Samaria was used as a name only for the region, a usage which is seen in the NT. Samaria continued to be known as Sebaste throughout the period of Roman and Byzantine rule. The name survives in the modern Arab village of Sebastiyeh.

The gentilic "Samaritans" (Heb *šomĕrōnîm*) is not used in the Hebrew Bible for residents of the city of Samaria. The term appears only in 2 Kgs 17:29, where it is used for the people of mixed ethnic and religious background who were settled in the region by the Assyrians. This designation is used by Josephus (Gk *Samaritai*) not only for these colonists but also, and primarily, for a people of the region of the Hellenistic and Roman periods who constituted a distinct religious community based at Mt. Gerizim and Shechem (whom he regarded as descendants of the Assyrian colonists). It was the members of this religious community who are the "Samaritans" of the NT—a people who at that time had no relationship with the pagan city of Sebaste. The contemporary, surviving Samaritan community explains the origin of its name as deriving neither from the city nor the district, but from the Heb *šōmĕrîm* [Sam Heb = *šāmĕrîm*], "observers, keepers" (i.e., of the Torah).

B. Name, Topography, Location

The Deuteronomistic Historians utilized a local folk etymology to explain the naming of Samaria. Omri is said to have purchased the "hill of Samaria" from a man named Shemer for two talents of silver: "and he fortified the hill, and called the name of the city which he built, Samaria, after the name of Shemer, the owner of the hill" (1 Kgs 16:24). The name is more readily explained, however, as "watch-mountain," from the root *šmr* (to watch, guard, observe) and from the topography. Samaria was built on a hill rising over 300 feet above the valleys on the N, W, and S, with a commanding vista of a long sloping ridge to

the E (of which the hill was the summit). It was strategically located (M.R. 168187) near the crossroads of the major N-S, E-W highways—leading to Shechem and the Jordan valley on the E, the coastal plain on the W, Megiddo and the Jezreel valley on the N, and Jerusalem on the S.

The site was thus one of considerable military and commercial advantage, although it had a limited water supply. It was more easily defended than the earlier capital at TIRZAH (modern Tell el-Far‘ah), which was especially vulnerable on its W approach. Tirzah, for example, was taken by Omri in the brief (one-week) military infighting that followed Zimri’s assassination of Baasha (1 Kgs 16:15–18). Samaria, on the other hand, was able to withstand a siege of three years prior to its conquest by the Assyrians (2 Kgs 17:5).

C. History of Excavation

There were major archaeological campaigns in 1908–10, under the direction of G. Schumacher (1908) and G. A. Reisner and C. S. Fisher (1909–10), and from 1931–35 under the direction of J. W. Crowfoot, E. L. Sukenik, and with major publication responsibilities by K. M. Kenyon and G. M. Crowfoot. Minor campaigns were undertaken in 1965–67, directed by F. Zayadine, and in 1968 by J. B. Hennessy.

The initial campaign excavated the W portion of the acropolis, where royal buidings and a casemate wall of the Israelite period were uncovered. See Fig. CIT.06. Three building phases were distinguished: a palace was attributed to the time of Omri; the casemate wall and a storehouse to the time of Jehu; and buildings on the W of the casemate wall to the time of Jeroboam II. [But see below on the clarification of building phases and the attribution of constructions to kings, based on the campaigns of the 1930s.] Also excavated on the acropolis were Hellenistic remains, including round towers and a wall, mistakenly attributed to the Israelite and Babylonian periods respectively, and the remains of an Augustan temple built by Herod. In the area to the W of the summit, a city wall of the Roman period and a gate were uncovered, and, on the E, a theater, a basilica, a forum, and a stadium. Of epigraphic significance was the discovery in 1910 of 63 ostraca (plus 44 additional illegible sherds), uncovered in a building to the W of the palace (the so-called “Ostraca House”). A number of ivory objects were also found. An even larger number of ivories were uncovered during the excavations of the 1930s. See SAMARIA (OSTRACA) below.

The campaigns of the 1930s extended the areas excavated in the first expedition, including the royal buildings of the Israelite period on the acropolis and the round towers of the Hellenistic period. A third, extremely well-preserved Hellenistic tower was excavated on the NE of the acropolis. This tower has been called “the most impressive remnant from the Hellenistic period to have survived in Israel.” A colonnaded Roman street to the S of the acropolis was cleared and, on the N, the remains of a Roman temple dedicated to Kore were discovered. Some EB I pottery was also found, attesting to an earlier, pre-Israelite settlement. Also, pottery found in the fill of buildings identified by K. Kenyon as belonging to *Periods I–II* of the Israelite period, the times of Omri and Ahab, has been identified by some (W. F. Albright, G. E. Wright, Y. Aharoni, R. Amiram, and N. Avigad) as being of a type from the 10th to early 9th centuries. This suggests that a small settlement had already existed on the hill of Samaria before Omri built his capital there, although Kenyon maintained that the site was unoccupied from EB I to the time of Omri.

The campaign of 1965–67 was initiated to provide better access to the acropolis and viewing of the theater and colonnaded street for visitors. It was discovered that the market area of the colonnaded street remained commercially active in the Byzantine period, but was destroyed in the early-to-mid 6th century (either during the suppression by Justinian of a local revolt in 529, or by an earthquake in 551). The 1968 excavations concentrated on the residential section (including a rock-cut water system) to the N-NW of the summit. This area was found to have been developed only during the Hellenistic and Roman periods, suggesting a concentration during the earlier Israelite period nearer to the citadel on the E and S of the hill, and closer to the original, natural water supply.

The stratigraphy of Samaria is complicated by the fact that the builders usually recycled the stones of earlier structures and cut their foundation trenches down to bedrock, resulting in foundations of buildings of different periods located side by side, rather than superimposed on one another. Kenyon established a

stratigraphy of nine building phases and pottery periods for pre-Hellenistic Samaria, of which the first six were from the time of the Israelite monarchy. Differences of opinion exist, however, on the attribution of construction activities to specific rulers and on the relationship between the building periods and the ceramic phases (see Wright 1959). As already noted, some have interpreted the pottery of Kenyon's *Period I* as belonging to a time earlier than the buidings of *Period I.* Non-correlations between the pottery and buildings of other periods have also been suggested (notably, *Periods II–IV*). The pottery of Israelite Samaria was of high quality, especially the red burnished vessels popularly known as "Samarian ware."

For purposes of standard reference, Kenyon's six building/ceramic phases of the Israelite period were as follows: *Period I,* the time of Omri (inner wall of acropolis and palace); *Period II,* time of Ahab (casemate wall and east gate); *Period III,* time of Jehu and his successors (repair of casemate wall and earlier buildings, new buildings); *Period IV,* time of Jeroboam II and his successors (repair of casemate wall and alteration of earlier buildings, new buildings); *Periods V–VI,* time of Assyrian hegemony and destruction of the city (alterations to existing buildings, burned layer). The building phases of post-Israelite Samaria were: *Period VII,* time of Assyrian administration; *Period VIII,* time of Babylonian rule; *Period IX,* time of provincial status within the Persian Empire.

The masonry of Samaria of the Israelite period was of extremely high quality. Foundation stones were laid in rock-cut trenches in rows of headers with upper courses of headers and stretchers (two headers alternating with one stretcher). The ashlars for the courses set below ground level were cut with marginal drafts on three sides and irregular bosses. The stones for the upper courses were dressed smooth. They were laid without mortar and dressed on the site for precise setting in their courses. This style is characteristic of Phoenician masonry. The influence of Phoenician design on the Israelite architects is not surprising, considering the observations of the biblical historians on Phoenician cultural influence in the N kingdom in the mid 9th century (e.g., 1 Kgs 16:29–34). See *EAEHL* 4:1032–50; *IDBSup,* 771–72.

The design of some of the ivory plaques, inlays, and toilet articles found in Samaria, especially those in high relief, also indicate Phoenician and other Syrian influence. The ivories of this type are similar to 9th century ivories discovered at Arslan Tash and are attributed to the time of Ahab (cf. 1 Kgs 22:39, on the ivory houses which Ahab built). The largest of these ivories was found in situ with a jar-inscription which enabled dating to the 9th century. Other ivories, those in low relief with gold foil and glass and stone inlays, are characterized by Egyptian motifs. These are similar in design to ivories found at Nimrud, which have been dated to the 8th century (cf. Amos 3:15; 6:4, on the "houses of ivory" and "beds of ivory" of Samaria during the reign of Jeroboam II). The ivories found at Arslan Tash and Nimrud were probably of Syrian, Phoenician, and Israelite origin, plundered by the Assyrians in the western campaigns. See IVORY.

D. History during the Israelite Period

The selection and development of Samaria as the capital of the N Israelite kingdom by Omri invites comparison with the action of David in establishing Jerusalem as the capital of the united monarchy, over a century and a quarter earlier. Each move represented a venture, the adoption of a new base of operation for the monarchy, and each selection involved a place not previously associated with the nation and its history. In each case the move was associated with the building of a fortress and palace and resulted in the strengthening of the king's rule and the stability of the ruling house (but lasting a much shorter time in Omri's case). A significant difference between the two moves was that Jerusalem was a city of some antiquity (the city wall had been built ca. 1800 B.C.) and Samaria was a place with no urban history (even if settlements had existed there earlier). This meant that Omri would have to create those civil and cultic institutions necessary for a capital city.

But first Omri needed a city. He had come to power following the death of king Baasha by besting his rival Zimri, Baasha's assassin, who had established himself in the (then) capital, Tirzah. When it became evident that Omri had taken the city, Zimri set fire to the citadel "and burned the king's house over him with fire, and he died" (1 Kgs 16:15–18). Omri thus inherited a burned capital city, an inauspicious beginning for a monarch. Nor was his reign secure politically. There followed a civil war of four years in which it was necessary to suppress yet another claimant of the throne, Tibni the son of Ginath (1 Kgs

16:21–23). In the excavations at Tirzah (Tell el-Far‘ah) by the École Biblique of Jerusalem, R. de Vaux uncovered two distinct phases of occupation of the 10th–8th centuries, each of which ended with a destruction: the first was a city of the 10th century, destroyed in the early 9th century, evidently by Zimri, and the second a city of the 8th century, destroyed by the Assyrians. Between these two clearly distinguished levels, and set in the debris of the 10th-century city, were walls of unfinished buildings. De Vaux proposed that these belonged to the uncompleted work of Omri, who abandoned the rebuilding of Tirzah to establish his new capital at Samaria. According to the Bible, Omri reigned six years in Tirzah before he moved the capital to Samaria (1 Kgs 16:23).

Unlike David and Jerusalem, the establishment of Samaria by Omri was not associated with an attempt to relate the new capital to Israel’s historic cultic traditions (in the case of David, the ark of Yahweh and the tent sanctuary). Nor does the biblical record indicate that Omri patronized the Yahwistic cult centers of Bethel and Dan, as the Israelite kings had before him. In fact, the Deuteronomistic Historians offer very little information about Omri. But we are given some information on the cultic situation during the reign of Omri’s son Ahab, which may have been a continuation of his father’s policy. According to 1 Kgs 16:32, Ahab “erected an altar for Baal in the house of Baal, which he built in Samaria.” This was seen as part of the general apostate character of the king following his marriage to the Phoenician princess Jezebel, a worshipper of the Sidonian Baal. It is Jezebel who is said to have been the patron of the functionaries of the Baal cult (1 Kgs 18:19). Ahab is otherwise represented as a Yahwist (1 Kgs 21:28–29; 22:1–8), or as a disloyal Yahwist who had “forsaken the commandments of Yahweh and followed the Baals” (1 Kgs 18:18). Nonetheless, the cult of Baal was officially established in Samaria during the time of Ahab, if not earlier, under Omri. The temple of Baal remained active in Samaria throughout the reigns of Ahab’s two sons, Ahaziah and Joram, until it was desecrated and converted into a public latrine by Jehu, in the purge of baalism which accompanied his ascent to the throne (2 Kgs 10:18–27).

Although the story of the rise and fall of the Baal cult during the reign of the house of Omri begins and ends with the temple of Baal in Samaria (1 Kgs 16:29–2 Kgs 10:27), much of the principal action of the story takes place elsewhere—notably on Mt. Carmel (1 Kgs 18:19–45; 2 Kgs 2:25; 4:25) and in Jezreel (1 Kgs 18:45–46; 21:1–29; 2 Kgs 8:28–10:11). Jezreel is represented as a second capital of the kingdom of Israel in this story (see 1 Kgs 21:1, “Now Naboth the Jezreelite had a vineyard in Jezreel, beside the palace of Ahab king of Samaria”). A. Alt argued that the two capitals were the result of the deliberate policy of Omri and Ahab in establishing Samaria as a capital city after the Canaanite city-state model: Samaria was to be the capital of the city-state, the site of the (Canaanite) temple of Baal, with Jezreel being a traditional Israelite capital, with a Yahwistic cult on nearby Mt. Carmel. This opinion was recently reversed by Y. Yadin, who argued that the temple of Baal in Samaria was actually in Jezreel, i.e., in the district of, not the city of, Samaria: Jezreel and Mt. Carmel were the centers of Jezebel’s baalistic campaigns, not the centers of traditional Israelite cultic and political traditions. Yadin cited what he believed to be a parallel phenomenon in the case of Athaliah, the daughter of Ahab and Jezebel who seized the throne in Jerusalem at the time of Jehu’s coup in Israel (2 Kgs 11:1–20). According to Yadin, Athaliah established a baalistic center at Ramat Rahel, while allowing the sanctuary of Yahweh to remain in Jerusalem. Yadin’s argument is not, however, very convincing, and of the two positions, that of Alt appears to be a better model for understanding the development of Samaria as the new capital under Omri and Ahab.

Nothing remained of the temple of Baal in Samaria at the time of the writing of the Deuteronomistic History, nor was a temple uncovered in the excavations. What were discovered from the time of Omri and Ahab (Kenyon’s building *Periods I–II*) were fragments and foundation trenches of a royal quarter with a palace and a defense system of two walls, a casemate wall (a double wall with cross-walls and fill between) and an inner wall. The inner wall (ca. 5 feet broad) encompassed an area of ca. 5,840 feet E–W and 292 feet N–S. The much stronger casemate wall, not all of which was uncovered, extended the secured area by ca. 54 feet to the N and 98 feet to the W. The casemate wall on the N side was ca. 32 feet across, with an exterior face 6 feet thick, an interior face 3 feet thick, and a filled space between of ca. 23 feet. It was less broad on the W side (ca. 16 feet) and on the S and SE, where for topographical reasons it

became a single wall set up against the inner wall. The inner wall was originally attributed to Omri and the casemate wall to Ahab, but it seems more likely (following Avigad) that Omri would not have occupied his new capital until after the stronger fortification had been completed.

A pool ca. 33 × 16.5 feet was found within the casemate wall at the NW corner. This would have been "the pool of Samaria" mentioned in 1 Kgs 22:37–38, in the story of Ahab's death in battle at Ramoth-gilead and the return of his body and chariot to Samaria: "So the king died, and was brought to Samaria; and they buried the king in Samaria. And they washed the chariot by the pool of Samaria, and the dogs licked up his blood, and the harlots washed themselves in it, according to the word of the Lord which he had spoken." Also uncovered, on the middle terrace level of the summit, about 500 feet to the E of the casemate wall, were remains of a building, tower, and wall which were probably part of a gate system. This has been attributed to Ahab (building *Period II*), and would have been the "gate of Samaria" which was the site of the grain market during the time of Joram (2 Kgs 7:1) and the "threshing floor at the entrance of the gate of Samaria," where kings Ahab and Jehoshaphat received counsel for war from the Yahwistic prophets (1 Kgs 22:10). All in all, the city was extremely well fortified and was able to withstand two sieges mounted by the Syrians, one in the time of Ahab (1 Kgs 20:1) and the other during the reign of Joram (2 Kgs 6:24). In fact, the city was not taken by a besieging army until the time of the Assyrian conquest in 721 B.C.

There is evidence of some destruction in the royal quarter during building *Period III,* which may have resulted from Jehu's coup d'état, or from some natural situation such as accidental fire or earthquake. But the time of Jehu was one in which earlier buidings and the casemate wall were repaired and new buildings were constructed. These appear to have been modest in comparison to the repairs and new constructions of building *Period IV,* the time of Jeroboam II.

The reign of Jeroboam II (ca. 786–746 B.C.) would have to be considered the time of Samaria's greatest prosperity, due to the influx of wealth from the Israelite king's hegemony over neighboring lands, including Syria (2 Kgs 14:23–29). A picture-window of the cultural history of Samaria of this time is given in the oracles of the prophet Amos, who carefully noted the signs of power and affluence he saw there: strongholds, defenses (3:10–11), couches, beds (3:12; 6:4), winter houses, summer houses, houses of ivory, great houses (3:15; 6:11), wine (4:1; 5:12; 6:6), houses of hewn stone, vineyards (5:11–12, 17), beds of ivory, choice meats, musical instruments, drinking bowls, and fine oils (6:4–6). These impressed him, but negatively. What caught his eye especially was the indolence and spiritual insensitivity of Samaria's nobility and their oppression of the poor (3:9–12; 4:1–3; 5:11–12; 6:1–7; 8:4–6).

During the reign of Jeroboam II, the temples of Dan and Bethel were the Yahwistic shrines of the N kingdom, notably Bethel (Amos 7:13, "for it is the king's sanctuary, and it is a temple of the kingdom"). The "calf of Samaria" of Hos 8:5–6 ("I have spurned your calf, O Samaria / The calf of Samaria shall be broken to pieces [or, go up in flames]") is a reference to one of the bull calves set up by Jeroboam I in the sanctuaries of Bethel and Dan (1 Kgs 12:28–30). The particular referent is to the calf of the temple of Bethel, as is evident from a parallel oracle in Hos 10:5, "the inhabitants of Samaria tremble for the calf [following Gk and Syr; Heb reads "calves"] of Beth-aven." Beth-aven is clearly a contemptuous surrogate for Bethel. The incorporation of calf iconography into the Bethel cult paralleled Canaanite iconography, in which El was venerated as a bull calf and the storm god Hadad was sometimes depicted riding on the back of a bull. In this connection, reference should be made to a proper name found on one of the Samaria ostraca (Ostracon 41), which appears to read Egelyau, "Calf of Yahweh," or "Yahweh is Calf."

That Bethel (so too Gilgal) was the site of pilgrimage by the nobles of Samaria is seen also in the juxtapositioning of the oracles of Amos 4:1–3 and 4:4–5, the former heaping contempt on the rich women "in the mountain of Samaria" and the latter urging them (in ironic speech) to "come to Bethel, and transgress; to Gilgal, and multiply transgression." A parallel oracle in Amos 5:4–5 (cf. also 8:14) suggests that there was a pilgrimage route for the people of Samaria connecting the sanctuaries of Bethel, Gilgal, and Beer-sheba: "Seek me and live; but do not seek Bethel, and do not enter into Gilgal or cross over to Beer-sheba; for Gilgal shall surely go into exile, and Bethel shall come to nought."

The royal patronage of the historic Yahwistic sanctuaries of Bethel, Dan, and Gilgal does not preclude the possibility of pagan cults in Samaria during the time of Jeroboam II. Amos rebuked those who took oaths by a goddess of Samaria (8:14, "Ashimah of Samaria"), although he did not indicate that her veneration included a temple. That pagan worship characterized Samaria in the time after Jeroboam II, shortly before its destruction, is indicated in Micah 1:6–7: "Therefore I will make Samaria a heap in the open country, a place for planting vineyards; and I will pour down her stones into the valley, and uncover her foundations. All her images shall be beaten to pieces, … and all her idols I will lay waste." The idolatry of Samaria and its subsequent destruction were cited by Isaiah as a warning for the people of Jerusalem: "Shall I not do to Jerusalem and her idols as I have done to Samaria and her images?" (10:11).

The power and prestige of Samaria declined rapidly following the death of Jeroboam II, as the nation not only lost the tribute of neighboring vassals, but became itself a vassal of the Assyrians (building *Periods V–VI*). King Menahem paid a heavy tribute to Tiglath-pileser III rather than risk a siege of his city (2 Kgs 15:17–22; Assyrian Annals). An ill-fated alliance of Samaria with Damascus against Tiglath-pileser during the reign of Pekah, with an unsuccessful military campaign against Jerusalem (2 Kgs 16:1–9; Isa 7:1–8:4), resulted in the loss of a considerable amount of Israelite territory to the Assyrians and a deportation of the population (2 Kgs 15:29–31). Samaria appears to have been spared at that time only because of the assassination of Pekah by Hoshea, whom Tiglath-pileser claimed as a confederate/puppet ("they overthrew their king Pekah and I placed Hoshea as king over them"). But with the death of Tiglath-pileser, Hoshea rebelled against the new Assyrian monarch Shalmaneser V—i.e., he refused to pay tribute and sought to forge a counteralliance with Egypt (2 Kgs 17:1–6). Assyria responded and Samaria is said to have withstood a siege of three years after the capture and imprisonment of the king. But the city was finally taken by the Assyrians, in spite of its strong defences, either by Shalmaneser V in 722 or Sargon II in 721.

E. History during the Assyrian-Hellenistic Periods

Of the conquest of Samaria, Sargon wrote: "I besieged and conquered Samaria, led away as booty 27,290 inhabitants of it, I formed from among them a contingent of 50 chariots and made remaining inhabitants assume their social positions. I installed over them an officer of mine and imposed upon them the tribute of the former king." He also boasted, "I conquered and sacked … Samaria, and all Israel [literally, Omri-Land]." Of the rebuilding of Samaria, Sargon wrote: "The town I rebuilt better than it was before and settled therein people from countries which I myself had conquered. I placed an officer of mine as governor over them and imposed upon them tribute as is customary for Assyrian citizens." The reports of deportation and settlement of foreign peoples correspond generally with the biblical history (2 Kgs 17:6, 24). It is also known, from recent excavations in the upper city of Jerusalem, that the Judean capital expanded considerably in the late 8th century (perhaps to four times its previous size), evidently due to the influx of refugees from Samaria and the territories annexed by Assyria.

The excavations of Samaria reveal few remains from the Assyrian and Babylonian periods *(Periods VII–VIII).* Material objects uncovered include a portion of an Assyrian stele attributed to Sargon II and a fragment of a Babylonian cuneiform tablet with the name of the local governor, Avi-ahi. Among the scanty remains of the Persian period *(Period IX)* were found remnants of a throne which had belonged to one of the governors.

Knowledge of the political status of Samaria during the early Persian period is derived primarily from what is reported of the power and activities of Samaria's governors in the Jewish accounts of the Judean restoration (i.e., in the biblical books of Ezra and Nehemiah). From these it is learned that the development of Judah as a functional entity within the Persian province "Beyond-the-River" was severely restricted by Judah's neighbors until the time of Nehemiah, who came to Jerusalem as governor in the 20th year of the reign of Artaxerxes (445/444 B.C.). Even then the rebuilding of Jerusalem's wall was resisted (unsuccessfully) by Sanballat, governor of Samaria, and Tobiah and Geshem, his Ammonite and Arab confederates (Neh 4:1–23). In his memoirs, Nehemiah refers to the oppressive policies of the governors who were before him (Neh 5:14–15). A. Alt argued that the governors of reference could not have been Nehemiah's Jewish predecessors, Sheshbazzar and Zerubbabel, but would have been the

governors of Samaria who had exercised hegemony over Judah prior to Nehemiah's appointment. Alt further maintained that Samaria had exercised hegemony over Judah from the time of the collapse of the Jewish state following the destruction of Jerusalem, most particularly after the assassination of the puppet governor Gedaliah and the failure to establish an effective administrative center at Mizpah (582 B.C., see Jer 40:1–41:3). Recent epigraphic discoveries (seal impressions and bullae of the Persian period which appear to bear the names of Judean governors before the time of Nehemiah) may necessitate the modification of Alt's position, but his assessment of Samaritan authority over Judah in the early Persian period appears to be valid. It should be noted also that when the Jewish colonists of Elephantine sought permission to rebuild their sanctuary (which had been destroyed in the 14th year of Darius II, 410 B.C.), they wrote not only to Bagohi, governor of Judah, but also to Delaiah and Shelemiah the sons of Sanballat, who had succeeded their father as (co-) governors of Samaria.

Other governors of the family of Sanballat down to the beginning of the Hellenistic period are known from the papyri of Wâdī Dâliyah and Josephus (*Ant* 11. 304–47), from which it may be surmised that there were two subsequent governors who also bore the name Sanballat. It was the last of these (Sanballat III) who was governor at the time of Alexander's conquest of the region. He was probably the last of this illustrious family to govern in Samaria. During (or shortly after) his administration, a revolt against Macedonian rule broke out. The revolt was quashed by the general Perdiccas and Samaria was rebuilt as a Greek city. At the time of the revolt, some of the Samaritan nobility fled to the wilderness of Wâdī Dâliyah, where they perished. The remainder of the disenfranchised citizenry of Samaria appear to have taken up residence in nearby Shechem, which was rebuilt at this time. It was also at this time that a "Samaritan" temple was built on Mt. Gerizim, above Shechem. This was not a temple of the Hellenistic city of Samaria, but of the Yahwists of the Samaritan district (based at Shechem) who desired a sanctuary of their own.

It is to the Hellenistic city of Samaria that the massive towers excavated in the first and second campaigns belong. In addition, a new wall (with insets and towers, enclosing an area of ca. 750 × 400 feet) was built following the fortification lines of the old Israelite casemate wall, and perhaps also a second wall on the lower terrace. This extensive wall is now attributed to the 2d century B.C., sometime after Samaria had been taken by the Seleucid king Antiochus the Great, ca. 198 B.C. (*Ant* 12. 133)—it had previously been a city with municipal rights under Ptolemaic rule. The need for a new wall to secure the city was occasioned by the rising power of the Maccabees and the Hasmonean rulers who succeeded them. It was a legitimate concern. The wall was destroyed and the city was taken by John Hyrcanus and his sons Aristobulus and Antigonus in 108/107 B.C., after a siege of one year. This was part of Hyrcanus' campaign to take the Hellenistic cities (Strato's Tower, Samaria, and Scythopolis) which blocked his control of the territory between Judea and the Galilee. (He had previously subdued the "Samaritans" of Shechem by destroying their city and their sanctuary on Gerizim in 128 B.C.) According to Josephus, the fortifications of Samaria were so undermined by tunneling that their collapse and subsequent destruction by erosion "removed all signs of its ever having been a city" (*Ant* 13. 280–81; cf. *JW* 1. 64–66, where Aristobulus and Antigonus are credited with having "confined its people within the walls, captured the town, razed it to the ground, and reduced the inhabitants to slavery").

The city Hyrcanus destroyed included a temple of Serapis-Isis, remnants of which were found in the fill beneath the Roman temple of Kore. In addition to architectural discoveries, small finds from the Hellenistic period at Samaria have been especially rich, including coins, inscriptions, sculpture, pottery, and stamped jar handles—all of which attest to the commercial prosperity of the city at this time.

F. History during the Roman-Byzantine Periods

Samaria was among those Greek cities wrested from Jewish control by Pompey (63 B.C.). It was rebuilt in 57–55 B.C. by Gabinius, after whom the city was renamed, and given independent status under the proconsul of Syria (*Ant* 14. 74–76, 86–88). The city was further repaired by Herod, ca. 37 B.C. (*Ant* 14. 284), who used it as a base in his campaigns against Antigonus Mattathias. It was rebuilt on a grand scale by Herod after it was ceded to him by the emperor Augustus, ca. 30 B.C. (*Ant* 15. 217, 292–98; *JW* 1. 403). Herod renamed the city Sebaste (Gk *Sebastḗ*), in honor of his imperial patron (Gk *Sebastós* = Lat

Augustus; Sebasté = Lat *Augusta*, used as an honorific title, sometimes of military legions; the port of Caesarea was named *Sebastós*, i.e., the port city of Augustus, see *Ant* 17. 87 and *JW* 1. 613).

Josephus relates that Herod surrounded Sebaste with a strong wall (strengthening also its outer walls) and built in the center a sacred area with a massive temple consecrated to Augustus. He then repopulated the city with six thousand colonists, to whom he gave apportionments of the rich farmland round-about. Save for the dimensions of the wall (a circumference of 20 stades, about 2 miles), Josephus does not offer many details about the city—except to note that the Augustan temple "in size and beauty was among the most renowned," and that the city itself, although smaller than the previous city at the site, "did not fall short of that of the most renowned cities."

The excavations at Sebaste reveal that it was indeed a splendid city, although most of the impressive remains visible today belong to the time of Septimius Severus (A.D. 193–211), when the city was known as Lucia Septimia Sebaste. Also excavated were remnants of the city of the time of Gabinius, to whom the street grid and the design of the forum are attributed. The wall of which Josephus wrote (not all of which was uncovered) enclosed an area with a diameter of ca. 1/2 mile E–W and 1/2 mile N–S. The city gate was on the W, where two round towers were found dating to Herod's time (ca. 46 feet across and preserved to a height of ca. 33 feet). Remnants of the Augustan temple built by Herod (and later modified by Septimius Severus) have been uncovered, including a monumental staircase leading to an altar on a 14-feet-high platform (with an area of ca. 272 × 236 feet), a fragment of a statue of Augustus, and sacristy buildings. See Fig. SAM.01. The temple itself had a base of ca. 79 × 115 feet. In addition to the imperial shrine, the cult of Kore was also represented in Sebaste. Her temple (base of ca. 118 × 51 feet; octagonal altar with dedicatory inscription; sacred precinct of ca. 275 × 147 feet) stood to the N of the Augusteum. Her cult was associated also with the stadium (statue and dedicatory inscription to the goddess). Statues of Apollo, Dionysus, and Hercules were found in addition to those of Augustus and Kore. Both the Augustan and Kore temple complexes were damaged when Sebaste was burned by Jewish insurgents during the first revolt against Rome, A.D. 66. These and other structures were rebuilt and expanded by Septimius Severus in the late 2d–early 3d centuries (the height of Sebaste's prosperity). Remains of this later period include the west gate, the reconstructed stadium (ca. 755 × 197 feet), the colonnaded street (2,625 feet long, 41 feet wide, with ca. 600 surviving columns, 18 feet high), the forum (ca. 420 × 238 feet), a theater (external diameter of ca. 213 feet), a basilica (ca. 223 × 107 feet), tombs, and an aqueduct.

Sebaste is not referred to at all in the NT, at least not by name. References to Samaria are to the district only and not to the city of that former name. Some hold that "the city of Samaria" visited by the evangelist Philip was Sebaste, i.e., "the (principal) city of Samaria" (Acts 8:5; KJV), and that Simon Magus (Acts 8:9–13) may have been a functionary of the cult of Kore. However, the reading "a city of Samaria" is preferred (so most modern translations).

Sebaste became a bishopric during the Byzantine period and a site of Christian pilgrimage. The latter phenomenon was due to the identification of local tombs as the burial places of John the Baptist and the prophets Elisha and Obadiah (identified/confused with the associate of the prophet Elijah, 1 Kgs 18:3–16). Pilgrims also venerated two nearby caves as the places where Obadiah hid the Yahwistic prophets during the time of Ahab and Jezebel (1 Kgs 18:4). A tradition later developed (by the 6th century) that John the Baptist had been beheaded in Sebaste (*contra* Josephus, *Ant* 18. 119, who located the incident at the fortress of Machaerus).

The bishops of Sebaste were present at the major ecumenical councils of Nicea, Constantinople, and Chalcedon and at the Synod of Jerusalem. But the classical pagan tradition of the city was not easily extirpated. During the time of Julian II ("the Apostate," A.D. 361–363), the pagans of Sebaste desecrated the tombs and relics of the saints (Philost. *h. e.* 7. 4–80; Rufinus, *Eccl Hist* 2. 28–1034). The restored holy places were seen by Egeria and Paula and Jerome in the late 4th century. Jerome mentions strange, appalling religious rites in front of the tombs, which may have been vestiges of pre-Christian pagan customs.

The suppression of paganism following the death of Julian appears to have resulted in architectural changes in the city, including the eradication of the old temples and the conversion of the Roman basilica

on the E of the summit into a cathedral church. A church of John the Baptist was built in the 5th century, on the E side of the city, over the alleged tomb. Five capitals which had probably belonged to this church were found in the remains of a Crusader cathedral church of the 12th century. Also, remnants of another 5th-century basilica church were found to the S of the summit, in the excavation of a medieval monastery marking the site where Herodias received the head of John the Baptist (Matt 14:3–12; Mark 6:17–29).

Sebaste declined rapidly in the 6th century, probably as the result of an earthquake in 551. As previously noted, the market area of the colonnaded street was destroyed at this time and not rebuilt. The reduced city came under Muslim Arab control in the following century, ca. 634. When the Christian pilgrim Willibald visited Sebaste in 726, he referred to it as a village.

SAMARIA OSTRACA

The Samaria Ostraca were discovered by G. A. Reisner in 1910 in the excavation of Samaria, capital of the ancient N kingdom of Israel. They comprise the earliest corpus of ancient Hebrew writing extant today, consisting of 66 pen-and-ink inscriptions on potsherds which record delivery of quality wine and fine oil to the capital city during the 9th, 10th, and 15th years of the king who was, in all probability, Jeroboam II (786–746 B.C.E.). Reisner published a few of his many photographs of the ostraca along with 63 hand-drawn facsimiles (1924, 2:pl. 55; 1:239–43). There are also about 40 unpublished fragments, listed by register number (1924:246), including a few whole pieces which are fairly legible. All are part of the collection of the Archaeological Museum in Istanbul.

Studies of the ostraca have been continuous since the Reisner, Fisher, and Lyon publication of 1924. Significant early works are Noth (1927; *IPN*; and 1932), Albright (1931), Diringer (1934), Maisler [Mazar] (1948), Moscati (1951), and Birnbaum (1954–57). Renewed interest in the ostraca followed Yadin (1959), Cross (1961), and *LBHG.* Extensive studies of the ostraca since that time by Rainey, Kaufman, and Lemaire are included in the bibliography below. Bibliography down to 1968 may be found in Gibson (*TSSI* 1), Teixidor (1967–81), and Lawton (1984).

———

A. Importance of the Ostraca

In brief, the ostraca are important for the following reasons: They contribute to the development of a relative typology of early Hebrew scripts. They provide a reasonably accurate absolute date on other than paleographical grounds, namely their locus in the fill of the foundations and floors of a building complex which was used for a considerable time prior to the destruction of the city, and also because a number of the ostraca bear the Egyptian hieratic numerals which indicate the 15th year. Moreover, many samples of letters of the alphabet written by a number of scribes increase our knowledge of how the letters were formed. The ostraca shed light on administrative record keeping. They provide the geographical location of clan districts within the tribal area of Manasseh. They give us new place names and personal names. They suggest a possible sociological distinction between persons whose names are formed with a Baal element and those whose names are Yahwistic or non-Baalistic. Orthographically, the ostraca indicate contracted diphthongs which, along with some other variations, reflect a dialectical difference from the Hebrew of Judah at that time (Cross and Freedman 1952:48–49). Three main issues have been debated recently: the date of the ostraca, whether the ostraca belong to one reign or two, and whether the significant person whose name is preceded by the letter *lamed* (*l*-man) was a tax collector, or an owner and sender, or a recipient of the product.

B. Samples of the Text

The ostraca may be classified in two groups for the recognition of similarities and differences between ostraca of different years. Only selected ostraca are presented here.

1. Type 1. Three examples of this include the following:

(a) No. 4 (as reconstructed from duplicates 5–7)

bšt · htšʿt · mq In the ninth year from Qosoh
ṣh · lgdyn · nbl to (credit of) Gaddiyaw, a jar
yn · yšn · of old wine.

(b) No. 1

bšt · hʿśrt · lšm in the tenth year to (credit of)
ryw · mbʾrym · nbl [· *yn* ·] Shemaryaw from Beerayim, a jar of
yšn · old [wine.]
grʿ · ʾlysʿ · II Gera Elyasha 2
ʿzʾ · q[*d*]*b*[*?*] · I Azza Qadbesh (Lemaire 1973: 83) 1
ʾlbʾ [·] [I] Eliba 1
bʿlʾ · ʾlyš[ʿ ·] [I] Baala Elyasha [1]
ydʿyw [·] [I] Yadayaw [1]

(c) No. 13

bšt · hʿśrt · mʾbʿ In the ninth year from Abiezer
zr · lšmryw · nbl · to (credit of) Shemaryaw, a jar of
yn yšn · lʾṣḥr · mtwl old wine to (credit of) Etshar from Tawil

2. Type 2. Note the following:

No. 22

bšt · XV mḥ In the 15th year from Heleq

lq · lʾśʾ · ʾh to (credit of) Asa

mlk · Ahimelek.

ḥlṣ · mḥṣrt Heles from Haserot

3. Comparison. These two most common types shown above (1 a-c and 2) may be compared graphically as follows:

1.	2.
year (ninth or tenth)	year (15th)
from a town (or clan district in Nos. 3 and 13)	from a clan district
(credited) to a person with a single name	(credited) to a person with two names
commodity (not named in No. 2)	commodity not named
secondary personal names (Nos. 1 & 2)	secondary personal names (one name plus town or two name and no town)

Types 1 (b and c) manifest all of the characteristics of type 2 but in a less strict form. Aharoni (*LBHG*, 366) and Lemaire (1977:80) argue that the difference between types 1 and 2 suggests that they belong to different reigns.

C. Archaeological Data

1. Locus of the Ostraca. The commonly held view that the ostraca were found in the surface destruction debris on the floor of the Ostraca House, which was demolished with the fall of the city in 722/721 B.C.E., stems from Reisner's published report in which he states that the ostraca were found on the "living floor" of the courtyard. He goes on to report, however, that they were found in "the lowest part of the debris of occupation." Beneath the identified top surface of the floor, the ostraca were found in packed layers of dirt 20 to 40 cm. thick (1924:63, 223, 401). In his field diary he states that a number of the ostraca were found in dirty yellow debris that lay below the black surface debris. (Reisner, unpublished: 593). Clearly, ostraca dating only a few years apart could not find their way into widely varying depths of so-called occupational debris. The ostraca were, then, part of the makeup fill of the foundation walls and floor, and must be considered to be as old or older than the building to which later structural modifications were made including different kinds of doors and additional walls (Reisner 1924:116; Kaufman 1982:231–33). In several of the room and corridor areas where the ostraca were unearthed, both 9th- and/or 10th-, and 15th-year ostraca were found together as if, before being thrown out, they were in a common cache. With the possible exception of the jar label (no. 63), bearing a number probably between 12 and 14, no years other than 9th, 10th, and 15th are reported among the ostraca (Kaufman 1966:140; Lemaire 1977:37).

2. Pottery Typology. Pottery evidence is ambiguous due to the difficulty of dating the bowls and jars of Pottery Period IV accurately (Holladay 1966:69; 1976:Chart 2:269). It is clear, nevertheless, that at least one period of pottery existed between that of the ostraca and the fall of Samaria (Kaufman 1982:233). K. Kenyon and G. Crowfoot examined the ostraca in Istanbul, and concluded that most of them were written on Period IV pottery. Kenyon stated that none were later; Crowfoot believed that a few also resembled pottery of Period V. In their view both periods lay within the first half of the 8th century (Crowfoot et al. 1957:203, 470). At any rate, Period VI contains water decanters which do not appear in Reisner's levels associated with the ostraca, and a few samples of inscribed Period VI pottery from the Joint Expedition (Crowfoot et al. 1957:2, 470), bear a script which is clearly later typologically than that of the Samaria Ostraca. The evidence would indicate that the ostraca are no later than the penultimate pottery period before the destruction of the city, and this fits with the evidence that they were part of the fill of a substantial building project.

D. Paleography

The script of the Samaria Ostraca is a broad sampling of early cursive writing by skilled scribes using cut reed pens and ink. They wrote fairly rapidly with broad and thin strokes. A number of letters bear reflexes or tics which result from the readiness of the hand to proceed to the next horizontal of a letter or to the next letter itself. An intriguing question for which there is no ready answer is what the relationship might have been between this scribal tradition and that of the scribes of Egyptian hieratic writing. The technique is similar, and the Samaria scribes, who used the hieratic numerals, may well have been influenced by Egyptian scribal style even if indirectly through international relations with Egypt or Phoenicia. Incidentally, all of the letters of the alphabet are present on the ostraca with the exception of the letter *ṭeṭ*.

In typological development, the script of the ostraca is considerably later than that of the Mesha Inscription (ca. 840 B.C.E.). Between Mesha and the Samaria Ostraca in time are the ivory plaque found in Nimrud (probably taken there from Israel by the Assyrians) (Millard 1962:45) and the inscriptions from Kuntillet ʿAjrud (Meshel 1978:figs. 10–12). On the other hand, the script of the Samaria Ostraca is clearly earlier typologically than that of the several ostraca discovered at Samaria by the Joint Expedition inscribed on pottery from Period VI and dated by S. Birnbaum to the third quarter of the 8th century (Crowfoot et al. 1957:2, 24). Detailed description of the characteristics of individual letters and comparison with their counterparts in several other inscriptions has been done by Kaufman (1966:4–100; 1982:238).

The alphabet of the Samaria Ostraca shows some variety within the corpus, as we might expect from the number of scribes, but these variations are within the limits dictated by the formal shapes of the letters. See Fig. SAM.02. Special attention is drawn to the reflexes or tics on the horizontals of the letters *ʾalep, zayin, yod, samek,* and *ṣade.* Qop is uniformly written with a closed circular head. The so-called "S-headed" open *qop* should be excised from all charts of the Samaria Ostraca. Reisner may have been influenced in seeing this form because he read the combined letters *pe* and *reš* in ostracon no. 16a as *qop.*

Defending the two-reign theory, Y. Aharoni (*LBHG*, 366) and A. Lemaire (1977:80) date the 9th- and 10th-year ostraca to the reign of Joash (801–786 B.C.) and the 15th-year ostraca to the reign of Jeroboam II (786–746 B.C.). By this theory, the two groups of ostraca are separated by 21 years. Apart from the question of why the ostraca would have been kept for so long in close proximity as indicated by their being scattered together in the fill, the paleographical data does not appear to demand two periods, nor does the change in form of the notation on the 15th-year ostraca demand a different king as an explanation.

The paleographical argument against the two-reign theory is the fact that the characteristics described as advanced in the 15th-year ostraca are found as well in the 9th- and 10th-year ostraca. These would include the reflexed *ʾalep,* the two-horizontal *ḥet,* and the *lamed* with an angular hook. Other letters singled out in support of the two periods are *waw* and *qop.* Lemaire (1973:44–54; 1977:41) interprets some examples of *waw* as having been written with a single continuous stroke of the pen, a style which would fit better in the second half of the 7th century as in the Mesad Hashavyahu letter. The so-called "S-headed" *qop* which Lemaire cites as advanced is found in Reisner's inexact hand-drawn facsimiles of 15th-year ostraca nos. 22–24 and 26, but not 27 (1924, 1:240). It appears to be indefensible as a form as stated above, and even Reisner's published photograph of no. 22 (1924:2 pl. 55e5) does not substantiate the form, although the closed circular head will break open, being written with two strokes, in roughly another generation at Samaria as is shown by the script of the ostraca of the Joint Expedition (Crowfoot et al. 1957:14; pl. 1).

E. Hieratic Year Number

In concert with the paleographical and archaeological data, the year number 15 on many of the ostraca demands a reign of at least that many years, and the period of Jeroboam II seems right. Reisner had no doubt that the numerals were hieratic ten and five (undated: 13; 1924:1. 229–30). Yadin's series of numbers from 1–9 enabled him to claim that the figures in question were five and four (1961:9–25). The result for a while was that the 15th-year ostraca became 9th, and the whole corpus was assigned to the reign of Menahem (746–736 B.C.). Soon, however, interest in hieratic numerals in the Arad inscriptions

(Aharoni 1966:17) and on weights (Scott 1965:137) and fractional weights (Kaufman 1967:39–41) demonstrated that the numerals were to be read at face value.

F. Function of the Ostraca

The ostraca functioned in an accounting system, perhaps as temporary records. They were written in Samaria, since sherds broken from a common bowl or jar bear different place names, and the same scribal hand on ostraca such as 17a, 17b, 19, and 21 records different personal and place names (Yadin 1962:65; Kaufman 1966:155). Therefore they are not waybills from the source of the product. Some ostraca bear identical notations (16a and 16b, 17a and 17b and 4–7). Each would appear to record a separate jar of oil or wine. All 9th-year ostraca and three of the 10th record wine. All of the oil notations are written on thin gray jar sherds of Reisner's type I-3, and all but one of the wine notations are written on reddish bowl sherds of type I-14 (1924:1. 232–38). None of the 15th-year ostraca are written on the hard gray ware; most are written on bowl sherds, and half of these are of the I-14 type. Since the 15th-year ostraca mention no product, the pattern suggests that the unnamed product may have been wine.

The main issue in determining the function of the ostraca is the role of the men whose names are preceded by the preposition *lamed.* Its range of meanings, "to," "belonging to," "for," or even "to be credited to," are explained in three ways: (1) the *l*-men were tax officials to whom tax in kind was delivered (Shea 1977:26); (2) the *l*-men were owners or important officials who sent the commodity to the royal city as tax in kind (Yadin 1959:186; Cross 1975:10; Kaufman 1966:159; 1982:236–37); (3) the *l*-men were important officials who received the commodity from lands given to them by the crown, they being resident in Samaria "eating at the king's table," but providing their own subsistence from their land (Rainey 1962:62; 1967:32–41; 1979:91–94; Lemaire 1977:76; Aharoni *LBHG,* 322). According to the third theory, the ostraca would be directives, written at the royal storehouse in Samaria, assigning the commodity to the *l*-man who lived in the city.

The *l*-man can be associated with as many as four towns or three clan districts. No two *l*-men are related to the same town. Other persons without *lamed* are associated with only one *l*-man and one town, although several of these secondary men can be related to the same *l*-man and the same town as in ostraca nos. 1 and 2. The non-*l*-man would appear to work for the *l*-man, and is taken to be a tenant or servant responsible for delivery.

Rainey's theory (3) is based both on a land grant system operative in Ugarit in the Bronze Age in which the *lamed* refers to recipients of goods, and on biblical references (1 Sam 8:14; 22:7; 2 Sam 9:7–13). Rainey's Ugaritic references are directives ordering the giving of something, a tithe, tribute, or grain, to a person or persons. Whether the function of these texts is precisely parallel to that of the Samaria Ostraca is open to question. The latter contain no wordings that would indicate that they were directives.

Another hypothesis set forth recently in support of the second theory is as follows: Inscribed jars bearing personal and place names and content were not uncommon in Egypt and Israel (Lemaire 1977:68, 135; Avigad 1972:3). If jars of wine or oil delivered to Samaria bore inscriptions, as has been suggested by Yadin (1959:186) and by the presence of ostraca nos. 61–63, which are partial jar labels (unlike the other ostraca inscribed on prebroken sherds) the data contained on the label might have been the primary source of information used for writing the ostracon for a given transaction. The scribe at Samaria might not have needed any other data than the deliverer's name, which appears on the 15th-year ostraca at the end, often discontinuous with the rest of the notation by half a line. If that were the case, the scribe would be crediting the delivery to the owner whose name appeared on the jar. The *lamed* of ownership would become the *lamed* of "to the credit of," and the *l*-man would be a sender (Kaufman 1982:237). While the identity of the *l*-men has not been ascertained indisputably, we should expect evidence that the palace in the time of Jeroboam II was taxing its subjects, probably in kind, for the maintenance of high living noted for its lavish use of wine and fine cosmetic oil (Amos 6:6; Diringer 1934:38).

G. Place Names and Personal Names

The place names provide valuable geographical data. Town names corresponding with modern village names serve to locate clan divisions such as Asriel and Heleq. While Reisner had not recognized the name Asriel on ostraca nos. 42 and 48, new photographs confirm that reading by Albright (1931:249) and Cross

(1962:36). The town name Yashub now locates Asriel in the S part of Manasseh. Similarly, Reisner's town *sq* on ostraca nos. 16a and 29, is to be read as *spr* (Sepher), and its identification with Saffarin, W of Samaria locates the clan Shemida (Cross 1961:14; Michaud 1958:58). Albright believed that the town name *ttl* on ostraca nos. 13 and 21 was to be identified with modern Till (1931:250). This is supported by a new reading of the place name as *twl* (Kaufman 1966:136). Another probable reading is *gt pr›n* (Gat Paran) for Reisner's *›ztpr›n* on ostracon no. 14 (Michaud 1958:57; Kaufman 1966:136). The reading, *b›rym,* on ostracon no. 1, is preferable to Mazar's *p›rym* (1948:129).

The towns of the ostraca lie in a cluster around the city of Samaria at a distance of 4 to 8 miles, except for Yashub, at 12 miles, and Gat Paran, at 10. With the exception of Shechem they belong to the tribal area of Manasseh. None are from N Manasseh, which may have extended to the Esdraelon Valley. None are from Ephraim. The ostraca do not appear to represent nationwide taxation but rather convenient local sources of wine and oil. For distributional patterns see map-chart (Kaufman 1982:236). See also HEPHER (PLACE).

Personal names on the ostraca reflect the piety of the namers in keeping with the biblical practice. Albright's calculation (*ARI,* 160–61) that the ratio of Baal names to Yahwistic or non-Baal names in the ostraca is 7:11 appears now to have some sociological implication: only one *l*-man has a Baal name, while all of the rest of the Baal names belong to secondary men who work for the *l*-men. While Baalism was a force to be dealt with in the 8th century, the owners and senders of the wine and oil appear on the whole to be Yahwistic or at least non-Baalistic as far as their names are an indication. Recent photographs provide new readings for some of the personal names published by Reisner in the following ostraca: (1) *gr‹,* (9) *›dn‹m,* (13) *›ṣḥr,* (42) *›dnyw,* (50) *l› ryw,* (57) *‹bd›yw,* (58) *pdyw* (Kaufman 1966:141–44). The personal names on the ostraca have been examined by Noth (*IPN*), Diringer (1934), Lemaire (1977:47–55), and Lawton (1984:332–46).

A. Borders

Samaria's N border extends W from the Gilboa mountains along the juncture of the mountains and the Plain of Jezreel, and from there to the mountains of Um el-Fahm and Nahal ʿEiron (Zertal 1986:12–15; Karmon 1980:349–60). Its E border extends along the escarpment of the hills leading down to the Jordan Valley. Its W border is along the junction connecting the foothills and the Sharon Plain. Its S border is somewhat controversial, but most researchers consider it to be in the region of Mt. Baal-hazor, along the streams of ʿAuja and Shiloh, which are tributaries of the Yarkon River (Ziv 1983:10–27).

The area of Samaria is estimated to be some 2250 km^2, and is rectangular in shape, having sides 50 km long and 45 km wide. The city of Nablus lies at its center. Geographers divide the district into three main units: Central Samaria, W Samaria, and E Samaria.

Central Samaria includes the area N of the Qalqilya-ʿAzun-Nablus road. This region on the slope of the mountains readily lends itself to agriculture, and is thickly settled. The Nablus Mountains, with some of the highest peaks in Samaria, are in this area: Jebel Hureish (764 m above sea level), Mt. Ebal (940 m above sea level), and Mt. Gerizim (881 m above sea level).

The Nablus Mountains region is surrounded by valleys that have attracted man since ancient times: the Dothan Valley, the Jaba Valley, the valleys of Nahal Shekhem, ʿAskar, Farʿah, Tubas, and Bezeq (Zababida). The Sanur valley lies at their center. The area of the valleys is some 15 percent of the total area of the region.

W Samaria consists of offshoots of mountain ranges extending from E to W and descending toward the Sharon Plain. South of Tulkarm they are composed of hard dolomite limestone, which creates a stony, dissected landscape.

From N of Tulkarm to Nahal ʿEiron the landscape is less rugged, consisting of chalk hills compatible to settlement. It ranges 100–500 m above sea level.

E Samaria consists of mountain ranges extending S-SW from the anticline of Farʿah. In this area the landscape consists of alternate ridges and valleys: Ras Jadir (712 m above sea level) and the Bukeia Valley; Jebel Tamun (539 m above sea level) and the Tirzah Valley; Jebel Kabir (792 m above sea level) and the Beit Dagan Valley.

Several of the peaks in the E are more than 900 m above sea level. Because of the limited rainfall in E Samaria (an average of 200 to 400 mm per annum), there have been no permanent settlements at any time throughout history.

Modern archaeological and geographical research contains studies in which Samaria is divided in a more detailed and discriminating manner than in this three-region division. A. Zertal divides the N part of Samaria, the hill country of Manasseh, into 23 geographic units, in accordance with landscape and geomorphological considerations (1986:12–15). I. Finkelstein divides S Samaria, the hill country of Ephraim, into six landscape units, each of which, in his opinion, is an independent geographic and settlement region (1986b: 117–19).

For the most part, Samaria has a Mediterranean climate. The average annual rainfall is from 550 to 700 mm, dependent on the altitude of any particular locality. Dew is plentiful in the mountains. In E Samaria there are various types of desert lithosols.

B. Roads

Two main historical routes extend the length of Samaria: the way through the slopes of the mountains in Central Samaria, and the way that follows the foot of the mountains, parts of which coincide with the well-known Via Maris, in the W. In the Classical periods, there were additional parallel routes, which were located between the two mentioned above (Dar 1981:376–82).

More than a dozen historical roads crossing the width of Samaria have been discovered. The most important passes through Nahal Shechem and Wadi Farʿah and connects the coastal plain, the slopes of the mountains, and the Jordan Rift. The city of Nablus, which is situated at the juncture of the two branches of this road, attained its important status because of its strategic command of the route.

Other roads across Samaria pass through the beds of wadis, and some pass over mountain ranges that rise from W to E.

The archaeological research conducted in the area has proved that Samaria's road network preceded the Roman-Byzantine period, and that parts of it were appropriated into the Roman system, which also set up milestones along them (Zertal 1986:183–94; Dar 1986:126–41).

C. Archaeological Periods

During the last 20 years, Samaria has been the object of intensive field research, which has revealed the character of the settlement distribution in the region. More than 1,000 archaeological sites are known in Samaria. The foundations for the renewed research were laid by the Emergency Survey of 1967 and 1968 conducted by groups led by Z. Kallai, R. Gophna, and Y. Porat (Gophna and Porat 1972:196–202). Y. Porat conducted a supplementary survey of the region, but it was not published. The surveys have revealed that ruins are typical of Samaria, and are usually situated on top of domes or at the tips of spurs. Tels are also prevalent, and as a rule they are situated near the internal valleys of the region.

1. Early Bronze Age. Some 80 sites of the EB were surveyed, and ceramics from periods I and II were discovered. In addition, strata of settlements of this period were unearthed in the well-known excavated sites of Tel el-Farʿah (Tirzah), Samaria-Sebaste, and Tel Dothan.

Most of the sites are situated in the internal valleys, near conveniently available sources of water. They may have hewed out catch basins in the chalk rock, which holds water well. The mountain settlers preferred the soft rendzina soils, which are easier to cultivate. Not many archaeological sites were found in the stony terra rosa areas. In some W Samarian sites, evidence of EB agricultural activity was discovered. The researchers believe that Mediterranean viniculture and olive growing began developing during this period (Gophna 1982:105). Study of the settlement pattern in the mountains of Samaria during the Bronze Age reveals central fortified sites (cities) and subsidiary unwalled villages spread out among

them. The fortified settlements may have controlled the agricultural and pasture lands in their surrounding areas.

In the mountains of Nablus and in Wadi Far‘ah, A. Zertal has explored six fortified enclosures dating from EB I and II. They are remarkable for their location and their command of the region.

Some 15 sites dating from the EB IV were explored. Some of them were walled settlements such as Bir Hassan, on the outskirts of the Dothan Valley, and Bab a-Naqb in Wadi Far‘ah. In Nablus, as well, evidence of settlement from this period was found. Black ceramics dating from the EB IV, of the type found by N. Glueck on the E side of the Jordan, were found in several sites in the mountains of Samaria.

It is customary to think of this period as a combination of local and newly arrived populations. The settlements are small and spread out, and they were not long-lived (Gophna 1982:122–23).

2. Middle Bronze Age. The Emergency Survey of 1967 and 1968 revealed for the first time the wide distribution of sites from the MB in Samaria (Gophna and Porat 1972:197–98). Today we know of some 170 sites in Samaria; 120 of them are in the area of Manasseh in the N, and about 50 are in the less settled area of Ephraim in the S (Zertal 1986:175–79; Finkelstein 1986b: 169).

Seventy percent of the MB settlement sites were established on virgin soil, especially in the 18th century B.C. Researchers noted the following characteristics of these sites: (1) most were on the edges of the inner valleys; (2) they depended on sources of flowing water; (3) most of the settlements were small and unwalled, and were originally established in this period; and (4) in difficult-to-settle regions, such as the desert frontier and the NW portion of Samaria, there were almost no settlements. The residents of Samaria began during this period to clear the forests in Samaria, to hew cisterns and seal them against seepage, and to develop advanced mountain agriculture based on orchards, field crops, and cattle.

In the internal valleys, fortified cities (e.g., SHECHEM, which became a center for its surrounding rural settlements) began to emerge. Each fortified mound became a center for 10–20 rural settlements (Zertal 1986:197). Only in Iron Age II and in the Persian period were there more sites in Samaria than there were in the MB. According to Zertal’s calculations, the population was less than 50,000 (Zertal 1986:214).

3. Late Bronze Age. There was a sharp decrease in the number of settlements in Samaria during the LB. Only 36 sites were surveyed, indicating that there were 70 percent fewer settlements than there had been in the MB. In the area of Manasseh, the reduction in the number of settlements was not as sharp as in the land of Ephraim (Finkelstein 1986b: 169; Zertal 1986:201–10). Settlements concentrated on the larger central mounds of Samaria. Their reduced number may have been a result of the military campaigns of the pharaohs of the 18th Dynasty against the land of Shechem or, possibly, of temporarily diminished water sources.

According to Zertal’s calculations, 80 percent of the cultivated lands in the region of Manasseh were abandoned, and the woodlands expanded again. In contrast to the sharp reduction in the number of unwalled settlements at that time, Shechem became the capital of a principality ruled by Bani Lebaya. The principality of Shechem, which is well known from the documents of el-Amarna, ruled most of Samaria under the patronage of the New Kingdom in Egypt.

4. Iron Age I and II. During the Iron Age I, the process of the Israelite settlement in Samaria took place. Small rural de novo settlements began to appear. Today we know of ca. 200 settlement sites in the mountains of Samaria, indicating a large-scale settlement process, which is attributed to the tribes of Ephraim and Manasseh. These settlement sites shared many common geographical and archaeological characteristics: most were small unwalled settlements whose area was from 2–4 dunams which relied upon rainwater collected in hewed cisterns. They were established in stony mountain areas, all the way to the frontier of Samaria. A small number of settlements were established on ruins of settlements and mounts from the MB or LB periods. Ceramic storejars with distinguishing collared rims, trench silos dug into the ground, and four-room houses are considered characteristic of the Israelite settlement in the mountains of Samaria. On the basis of various considerations, archaeologists have concluded that the process of Israelite settlement in the mountain regions took place during the last half of the 13th and the beginning of the 12th centuries B.C.

On the basis of extensive surveys and excavations carried out by Finkelstein and Zertal at ʿIZBET SARTA and SHILOH (Finkelstein 1986a and 1986b) and at Mount EBAL (Zertal 1986:225–75), several proposals concerning the settlement process in the mountains of Samaria were suggested; settlement was not uniform throughout the region. See also SEILUN, KHIRBET. Some sites show a continuity from the LB to the Israelite settlement. Additionally, the settlement pattern tends to shift from E to W into the areas that are void of crowded Canaanitic settlement, thus indicating that there was coexistence between the Canaanitic and Israelite populations.

Researchers propose the following sequence in the development of the settlement economy: from a pasture economy on the edge of the desert, to a pasture-and-field crops economy in the internal valleys, to, finally, a plantation economy in the mountains.

The site excavated by A. Zertal on Mount Ebal, above Nablus, is an interesting find dating from the settlement period (Zertal 1986:224–74; 1986–87). Zertal has identified a large two-layered ritual site dating from the period of 1250–1150 B.C. He also found bones of kosher animals and ceramic and archaeological evidence that admirably establish the date of the site.

Most of the sites established in Iron Age I continued to exist into Iron Age II, when many new settlements were also established. The total number of Samarian mountain settlements yielding pottery from Iron Age II is ca. 320. This process of accelerated settlement continued from the period of the kingdom until the Assyrian conquest of Samaria.

In Iron Age II, even marginal agricultural areas at the edge of the desert were settled. Also, various branches of agriculture were developed and many technical innovations introduced during that period. D. Eitam has identified W Samarian settlements whose populations supported themselves by producing olive oil (Eitam 1987:16–36). Kh. Jemeʿin, a walled rural settlement dating from Iron Age II, operated a communal olive press, a wine press, and a wine cellar (Dar 1986:13–73). In Iron Age II, for the first time in Samaria, farmhouses of the type prevalent particularly in the W of the region made their appearance. A single-period farmhouse of this type was explored in Qoren Liqrana, 2 km E of Kafr Tult. The dimensions of the farmhouse were 27.10 × 29.30 m, and it was built of stone (Dar 1986:2). It included an internal quadrangular tower and an external round tower. It is possible that the farmhouse served as a center for an extended family, which was normal in Iron Age II and lasted into Roman times. To the best of our knowledge, these farmhouses are the most ancient that have been found in the E Mediterranean region.

The first archaeological indications of solutions for the security problems of Samaria in Iron Age II were found during a survey of W Samaria. Approximately a dozen enclosures and strongholds were located. They formed a defensive line on the slopes of the mountains of Samaria and defended the main passes from the coastal plain to the center of the mountains. These enclosures and strongholds included Tel Qaʿada and Shufa near Tulkarm; the enclosures of Beit Lid, which defended the approach to Shechem and Samaria; Kur, Qarnei Shomron, the stronghold of Nahal Qanah, Haris, and Qarawat Bani Hassan (Dar 1986:213–17). It is probable that in E Samaria, there was a defense and stronghold network similar to that explored in W Samaria.

5. Persian Period. The history of the mountains of Samaria during the Persian period has not yet been fully understood, but archaeological surveys have found ceramic evidence at ca. 300 sites of widespread Persian influence. Despite the political changes in Samaria from the end of the Iron Age and into the Persian period, many sites show a continuity, and apparently the population did not decline.

The major settlements of Samaria, (e.g., Shechem and the city of Samaria) have yielded archaeological finds from this period (Stern 1973:31–34), but the evidence is scanty. Only a few excavations at Persian sites have been carried out in the countryside of Samaria, and the general picture is not yet clear. At Qedumim decorated pottery was found in a cistern, in addition to imported Attic pottery from Greece (Magen 1982). The excavator believes that the settlement is situated on a previously Samaritan site. Remnants from the Persian period were found in agricultural towers near Qarnei Shomron, in SW Samaria, and at Um Rihan in NW Samaria (Dar 1986:108).

The distribution of the Persian period farms in the mountains of Samaria is an interesting phenomenon. In two regions, more than 20 farmhouses dating from Iron Age II and the beginning of the Persian period

were explored. A large concentration was found in SW Samaria between Nahal Qanah in the N and Nahal Natuf in the S (Finkelstein 1981:331–48), and a smaller concentration was found in the region of Um Rihan in NW Samaria (Dar, Safrai, and Tepper 1986:105–14). The distribution of the farmhouses indicated agricultural activity on marginal and stony lands in the Persian period and before it. Some of these farms were established in Iron Age II, but continued to be active in the Persian and Hellenistic periods.

It should be noted that the enclosures and military strongholds from Iron Age II, which were investigated in W Samaria, continued into the Persian period. Ceramic evidence from that period was found in Tel Qa‹ada, in Shufa, in the enclosures of the Beit Lid region, in Kur, and in Qarnei Shomron.

The Persian authorities of Samaria may have reactivated part of the defense line of their predecessors. The well-known documents of Wadi Daliyeh have indicated security problems at the end of the Persian period, and the recent discovery of an Aramaic economic document in the caves of Ketef Yeriho have added to our knowledge. It contains a list of money borrowers, all of whose names are Jewish (Eshel 1988:18–23). It is attributed to the years 300–335 B.C., and may relate to the rebellions against Artaxerxes III, which took place at that time in Palestine. See DALIYEH, WADI ED-.

6. Hellenistic Period. As many sites can be attributed to the Hellenistic period in Samaria as to the Persian period. However, complete data on the latest investigations have not yet been published.

In the principal settlements of Samaria, such as Shechem and the city of Samaria, substantial finds from the Hellenistic period were discovered, but little excavation has taken place in the rest of the region. A fortified city from the Hellenistic period was recently excavated on Mt. Gerizim, and covers ca. 300 dunams (Magen 1986:91–101). A defense wall, a gate, and a stronghold measuring 23 × 25 m were among the finds. The splendor and the high quality of the construction of the dwellings are striking. They were evidently built according to a uniform plan, which consisted of a stone-paved courtyard surrounded by rooms. The two-story houses had toilets and bathrooms, and their walls were well-plastered. In light of the unearthed ceramics and coins, the excavator proposed that the city was built at the beginning of the 2d century B.C. and was destroyed during the military conquests of John Hyrcanus.

We lack sufficient data on the city's founders and its inhabitants in the Hellenistic period. The residents were probably members of the Samaritan community who separated themselves from their fellow Jews in Jerusalem, and consequently suffered from the Hasmonean conquests. However, another plausible assumption is that the settlement on Mt. Gerizim was part of the Ptolemaic or the Seleucid settlement in the region, and that its conquest by John Hyrcanus was part of the Hasmonean rulers' activities against the foreign population in the mountains of Samaria.

During the Hellenistic period, widespread settlement activity took place, and its distinguishing feature was field towers, hundreds of which have been surveyed in both N and S Samaria. A typical field tower is a small stone structure whose dimensions average approximately 4 × 4 m. These towers were used in the processing of agricultural produce, especially in grape growing and wine production. In many instances the tower is situated in an enclosed agricultural area, probably the estate of the farmer who operated it (Dar 1986:88–125). Some of the towers were built in the Hellenistic period, and in the opinion of S. Applebaum, they are evidence of the Hasmonean dynasty's settlement project in Samaria (Applebaum 1986:257–69). There is also a possibility that parts of the settlement areas in W Samaria were property of the king in the Hellenistic period and that they became Kings Mountain Country from the Hasmonean period and thereafter.

The fortifications network of W Samaria, which was put into operation in Iron Age II and continued to operate in the Persian period, was not entirely abandoned in the Hellenistic period. In most of the enclosures, Hellenistic ceramics were found in quantities that testify to continued activity. The outstanding site is the acropolis of Kh. Firdusi, N. of Qarawat Bani Hassan (Dar 1986:218–21). An investigation was carried out there on a fortified area covering approximately 35 dunams, leading to the discovery of a wall, a fortified tower, and large storage areas reminiscent of Hellenistic Pergamum and Herodian Masada.

7. Roman Period. Several hundred sites from the Roman and Byzantine periods were explored in Samaria. The line of archaeological differentiation between these two periods is not yet clearly drawn, so the distinction between them is primarily historical. This was a peak period of settlement in the region, from the point of view of the number of settlements, and evidently the number of residents also peaked at that time. All the marginal stony lands, including those on Samaria's desert frontier, were settled and cultivated by the local population, which included indigenous elements of Samaritans and Jews who were joined by settlers of pagan origin. The Hellenistic and Roman governments first seized important settlements such as Shechem and Samaria-Sebaste, but subsequently they spread their rule to the rural settlements.

In Shechem-Neapolis, excavations revealed important parts of the Roman city, including the theater, the hippodrome, the amphitheater, a section of the street of the cardo, and the stairs leading to the temple of Zeus-Jupiter, which was located at er-Ras on Mt. Gerizim. An approximately 3-m-thick section of the city's wall was also discovered.

In addition, a mosaic floor of a citizen's luxurious dwelling from the 3d century A.D. and a number of magnificent mausolea were found at the foot of Mt. Ebal.

The theater was found at the foot of Mt. Gerizim, and part of it is built into the side of the mountain. It is one of the largest theaters in W Palestine, with a diameter of approximately 110 m (Magen 1984:269–77). The orchestra is colorfully tiled, and along the row of stone seats belonging to the community's dignitaries, are engraved the names of the families for whom the seats were reserved. Parts of statues of dolphins and of women were found among the ruins. The theater was probably built in the 2d century A.D.

Between Mt. Gerizim and Mt. Ebal, where Roman Neapolis once stood, parts of the hippodrome were unearthed. It is approximately 320 m long and 80 m wide. In the E part of the hippodrome, a section of the amphitheater, elliptical and with dimensions of some 80 × 100 m, was unearthed. Magen estimates that it could seat 10,000 spectators.

In the center of the Casbah of Shechem part of the Roman cardo was discovered. Underneath it is an impressive sewage canal. Several mausolea were discovered at the foot of Mt. Ebal. The names of the buried are carved on some of the sarcophagi; they were Jews or Samaritan citizens of the polis (Damati 1973:118–20). In the W part of the city, another magnificent mausoleum was found. It has three complete burial caves (Magen 1987:72–91). The agricultural area of the polis was investigated by Z. Safrai, who detected systematically arranged plots of land on the mountains surrounding the city (Safrai 1986:83–126). He found that the average size of the plots was about 13 to 17 dunams, and believes that they belonged to the settlers of the Roman polis of Neapolis. The archaeological findings of Samaria-Sebaste have been well-known for some time, and no new excavations that changed the picture have been carried out there.

A. Zertal carried out excavations in NW Samaria at Kh. al-Hammam and discovered a siege defense system from the early Roman period (Zertal 1981:112–18). The system includes a dike, camps, and a rampart. A branch of the Roman Caesarea-Ginei (Jenin) road passes near the site. Archaeological evidence from the time of the First Temple through the Early Roman Period (1st and 2d centuries A.D.) was discovered at Kh. el-Hammam. Zertal identifies this site as Arruboth of the Bible, and Narbatha of the time of the Second Temple, the place to which the Jews of Caesarea fled when the rebellion against Rome broke out (in 66 A.D.). This sophisticated siege defense system is attributed to the campaign of the Roman Governor Cestius Gallus, who hastened to suppress the rebels in Judea.

Extensive field studies of the rural landscape of Samaria in the Roman period have been carried out. In addition, a number of excavations were made in villages and towns of the region. The population of the region was mostly rural, and lived in clusters of villages or in towns of unstable size. The archaeological difference between a village and a town is strictly physical. A village has a small number of houses and families, whereas in a town, the built-up area covers approximately 20 to 40 dunams. On the other hand, the social differences between town and village are considerable.

A rural Samaritan settlement was excavated in Qedumim, but its total area was not investigated. It contained two fine olive presses, stone dwellings, and ritual purification baths. Also discovered were iron

agricultural tools including a plowshare, and axe, and chisels (Magen 1982). The village of Qedumim, whose origins are in the Persian period, was destroyed in the Samaritan insurrection against the Byzantines in the 5th and 6th centuries A.D.

Kh. Buraq is a medium-sized town whose well-preserved condition enables measurement of its developed area (some 25 dunams), its crafts area, and its overall agricultural area. This settlement had some 60 or 70 houses with courtyards and a population of 1,000 to 1,500 (Dar 1986:51–76). The overall agricultural area of Kh. Buraq is estimated to be 1,800 dunams, and each family theoretically held about 25 dunams on the average. In the agricultural area, some 70 field towers, corresponding to the number of houses in the settlement, were investigated. The agricultural installations of the village indicate that its residents made their living from vineyards, from olive orchards for the production of olive oil, from grains, from flocks, and from crafts such as hewing stones. In the Roman period, the residents of Buraq produced more than they needed for their own consumption, and sent large quantities of wine and oil to market. With the proceeds they could afford a higher standard of living, as indicated by the material finds in their settlement.

Um Rihan is a large town whose built-up area covers approximately 36 to 40 dunams. Similar to its sister settlement, Kh. Buraq, it is almost completely preserved. The town had some 100 houses (Dar, Safrai, and Tepper 1986). A well-made network of narrow streets linked the parts of the town. This network served, among other things, to collect runoff water into hewn cisterns. The houses are built of hewn stone, and have cellars and upper levels.

The town was defended by a network of watch- and lookout towers, and the outside walls of houses were arranged to form an enclosing line around the settlement. The remnants of a Roman bath house and the Latin inscription of a public building were found, along with 8–9 oil presses, and a considerable number of wine presses. Some 100 field towers were surveyed—and some of them were excavated—in the agricultural area of Um Rihan. Reconstruction of the economic basis of the town in the Roman period shows that olive oil, wine, cereals, sheep, and livestock were the mainstays of its agricultural economy. Evidence of local iron-tempering and glass-blowing was also found in the excavations. It is estimated that the town had 3,000–3,500 residents—Jews or Samaritans who abandoned it after the revolts of the 5th century A.D.

Farmhouses which had originated in Iron Age II were still prevalent in the Roman period. One, in N Samaria, was still intact. The farm, called Qasr e-Lejah, is located on a stony spur E of Um Rihan (Dar 1986:10–12; Dar, Safrai, and Tepper 1986:109–13). It measures 26.5 × 36.0 m, and contains a tower in which the master lived, living quarters for the workers, storehouses, and a fine olive press. Surrounding the farm are cisterns for winepresses, which are carved into the rock. The finds indicate that olive oil and wine were among its basic agricultural products. Evidently its owner was well-to-do, and perhaps was close to the Hellenistic-Roman authorities.

In the Roman period the number of field towers reached its peak, but it was then that they also lost their important position in the agricultural system. More than 1,200 towers were surveyed in Samaria, and from them, we learn of developed plantation agriculture, especially viniculture and wine production (Dar 1986:88–125). The towers were widespread in Samaria in the early Hellenistic and Roman periods, and they served as centers of the agricultural estates of the farmers of the region. Evidently, in wake of the events of the Jews' rebellions against Rome, they lost this function in the 2d century A.D. The field towers did not disappear from the landscape of Samaria in the Late Roman and Byzantine periods, but their use and importance in the agriculture of the region diminished, and they became ordinary field structures.

In the Roman period, the road network in Samaria attains its widest scope and distribution. The network, some of which existed in the earlier biblical periods, encompassed all of Samaria, linking its settlements, and linking the farmer to his fields. Until the Roman period, the road network was organic and adapted to the settlement distribution of the region. A rural road network that served the agro-economic needs of the villagers was detected in Samaria. Thus, for example, 18 roads from the center of the village Qarawat Bani Hassan were found, with a total length of about 35 km (Dar 1986:126–46).

In addition to the rural roads, a network of roads connected settlements, irrespective of size. An enormous amount of work went into constructing the roads system, which included quarrying, making the shoulders, and hewing water cisterns for the use of travelers and animals.

Evidently in the Roman period, the main ancient routes became Roman Kings Highways, and milestones were set up along them. In W Samaria, I. Roll and E. Ayalon found Roman roads that connected the polis cities on the coastal plain with the polis cities in the hill country (Roll and Ayalon 1986:113–34). Other surveys have discovered milestones along the routes connecting Sebaste and Appolonia; Neapolis and Joppa; Neapolis and Apollonia; Neapolis and Lod; and Gophna and Antipatris.

The rural and state road network of Samaria is an indication of organized administration, of social and economic openness, and of extensive commerce.

PAPYRI

The Samaria papyri are a group of fragmentary remains of legal papyri once belonging to wealthy patricians of Samaria. In the early spring of 1962, Taʿâmireh Bedouin came upon them in a cave in the Wâdī ed-Dâliyeh (about 14 km N of Jericho, on the W rim of the Jordan rift), along with the bones of their owners—men, women, and children. See also DALIYEH, WADI ED-.

F. M. Cross suggests a likely explanation. After an abortive revolt in 331 B.C.E., Samaritans fleeing Alexander's forces hid in these caves with their title deeds in hand. But Alexander's forces found them out and built a fire at the mouth of the cave to suffocate them. There the papyri and skeletons remained undisturbed for nearly 23 centuries.

The earliest dated papyrus comes from sometime between the 30th and 39th year of Artaxerxes II (Mnemon), therefore between 375 and 365 B.C.E. The latest is from 335 B.C.E. in the reign of Darius III

(Codomannus). Most of the papyri were probably written during the reign of Artaxerxes III (Ochus; 358–337 B.C.E.). Whenever the place of execution is extant on the papyrus, it is "Samaria."

There are 18 fragments large enough to call "papyri," and about 9 other pieces of some size. Various types of deeds are represented among the papyri, but by far the most prevalent type is the slave sale. The first 9 papyri—all deeds of slave sale—can be reconstructed rather fully despite their fragmentary character because they adhere so closely to a common formula. There is less hope for reconstructing those papyri that fall into other categories. For instance, there are two documents that look like pledges of a slave in exchange for a loan, a sale of a house, a sale of living quarters or storerooms in a house, a sale or antichretic pledge of a vineyard, manumission or release of a pledged slave, a receipt for a payment associated somehow with a pledge, and one small fragment that looks like a judicial settlement by oath.

The Samaria papyri afford the paleographer rare and valuable examples of 4th-century Aramaic script, filling in the gap between the better documented Aramaic scripts of the 5th and 3rd centuries. The documents are written in a conservative form of Official Aramaic—the standard Aramaic used by scribes in the Persian period (from Darius I to Darius III) to draft documents of an official nature (e.g., legal documents and administrative correspondence). The language shows very little Persian influence. Otherwise, it is essentially indistinguishable from the Aramaic of the 5th-century Arsames correspondence and Elephantine legal papyri.

The greatest importance of the Samaria papyri lies in their contribution to the history of law. The formulary for selling slaves exemplified in the Samaria papyri seems to derive in its basic structure from the formulary used for the sale of movables in the late Neo-Babylonian period (from the time of Darius I on). Aramaic scribes appear to have adopted this basic structure and then freely modified it, in part by drawing on formulas from other types of late Neo-Babylonian documents and in part by assimilating it to their own native legal traditions. A comparison between the law of the Samaria papyri and cuneiform law contributes to a growing awareness of an extensive and ongoing symbiosis between Aramean and Babylonian scribal traditions throughout the Persian and Hellenistic periods. Further, the evidence of the Samaria papyri both clarifies and expands our picture of the role of Aramaic scribes as creative intermediaries of cultural traditions throughout the ANE.

The Syria papyri also give us a peephole on the political and social life of 4th-century Samaria. For instance, we learn that Samaria was then a city within the Persian province of the same name administered by a governor and prefect. Several names of governors and prefects are attested in the papyri, including one Sanballat. The vast majority of sellers, buyers, and slaves alike bear Yahwistic names. Further, the slaves sold become slaves for life, directly violating the regulations of Lev 25:39–47.

SAMARITAN PENTATEUCH. The Samaritan Pentateuch (Sam. Pent.) is the Samaritan version of the first five books of the Hebrew Bible, which constitute the entire canon of the Samaritan community. The renewed interest in the Sam. Pent. by biblical scholars has focused on its importance as a

source for the history and origins of this community, which still exists at Nablus and at Ḥolon; as a valuable textual witness to an early recension of the Hebrew Bible and to the antiquity of the text preserved in the MT; and as empirical evidence of a documentary hypothesis for the composition of literatures in the ANE.

A. History of Investigation

The history of research into the Sam. Pent. can be grouped into five periods: early Jewish and patristic writers; J. Morinus to G. Gesenius; Gesenius to P. Kahle; Kahle to P. Skehan and F. M. Cross; and the present state of the study.

Whereas patristic writers accepted the Sam. Pent. as a viable text, early rabbis did not because it was written not in Aramaic script but in paleo-Hebrew. However, this early period is obscure, and little is known of the use and value of the Sam. Pent. outside the Samaritan community.

It was not until the 17th century that a rediscovery of the Sam. Pent. by European scholars led to a renewed interest in the text and its tradition. In 1616 Pietro della Valle acquired a complete codex of the Sam. Pent. and forwarded it to Europe. In 1631 J. Morinus pronounced the new codex infinitely superior to the MT, and published its text in the Paris Polyglot of 1645. B. Walton corrected that edition in the London Polyglot of 1657, to which Cassellus appended in vol. 6 the famous collation of 6,000 variants between the MT and Sam. Pent., 1,900 of which agreed with LXX.

In the period from Morinus to Gesenius theological bias informed attitudes toward the Sam. Pent. Roman Catholics, wanting to embarrass Protestants, who had recently replaced the authority of the Church with the original Scriptures, preferred the Sam. Pent. and found support in its ancient script. Morinus also observed that the two translations authorized by the Roman Catholic Church, the Vg and LXX, often agreed with the Sam. Pent.

Gesenius' classic study in 1815 of the Sam. Pent.'s origin and age, and of its character and critical value, dominated the field for the next century. He thought the Samaritan sect and its text began when Alexander the Great allowed the Samaritans to build their temple on Mt. Gerizim. Consequently, Samaritan priests introduced sectarian readings into the Jewish text they received. Concerning the agreement between the Sam. Pent. and LXX, Gesenius (1815:14) drew the conclusion: "The Alexandrian translation and the Sam. Pent. came from Judean codices which were similar to each other." He refers to this common source as "*the Alexandrino-Samaritanus* recension," in contrast to the Judean recension, which obtained authority among the Jews. The Alexandrino-Samaritan recension, he argued, was a vulgar text, received by the Jews in Alexander and by the Samaritans in Palestine, who further simplified and popularized the text by correcting its difficulties and adding glosses and conjectural emendations. The Jews of Jerusalem, by contrast, Gesenius argued, "because of their piety … tried to preserve the ancient text unchanged though it was harder to understand, more obscure, and not completely free from defects" (1815:14). According to him both the history and character of the Sam. Pent. unite in their testimony that it has no critical value. Gesenius was followed with slight modifications by Z. Frankel, S. Kohn, and J. Nutt. While A. Geiger held the same view toward the Sam. Pent. as Gesenius, he introduced much new material, recognized that most variants antedate the Samaritans, and was more critical of the MT. Although Gesenius' work is a masterful tour de force, it is often arbitrary.

In 1915 Kahle inclined scholars to look more favorably toward the Sam. Pent. with his theory that the Sam. Pent. was very old, the LXX was derived from many old translations and standardized by the

Church, and the MT was a late creation from older sources. Therefore, even though Kahle conceded that the Sam. Pent. was a vulgar text, because of its antiquity he asserted it must preserve many more genuine readings than the four allowed by Gesenius. Kahle also judged that the text was much older than the time of the schism. He argued for the early character of the "pre-Samaritan text" based on the agreement of the Sam. Pent. with the book of *Jubilees*, the book of *1 Enoch*, the *Assumption of Moses*, the LXX, and the NT. J. E. H. Thomson, out of a desire to refute the documentary hypothesis, dated the Sam. Pent. to the age of Ahab, and M. Gaster, taking an uncritical attitude toward the Sam. Pent., accepted as genuine even Gesenius's "most desperate" sectarian readings. J. Hempel in 1934 accepted Kahle's reconstructed history of the recensions of the Pentateuch, but after carefully collating, comparing, and weighing texts having Samaritan readings against the MT, he concluded that the MT was a much better text than the Sam. Pent. R. H. Pfeiffer, B. Roberts, F. G. Kenyon (1975) and F. F. Bruce, ignored Gesenius and, following Kahle, stressed its antiquity and implied authority, especially where it agrees with LXX. O. Eissfeldt, A. Weiser, and E. Würthwein, though following Kahle, are more cautious, and B. Roberts (1969; cf. 1951:188) became more cautious after the discovery of the Qumran literature (QL).

The discovery of the QL enabled scholars to view the Sam. Pent. more clearly in its textual and historical horizons. In 1955 P. Skehan announced that 4QpaleoExod^{m} (Q^{m}) belonged to the Samaritan recension with its paleo-Hebrew script, full orthography, and lengthy repetitions. In 1959 he noted that this recension, which stood behind the Sam. Pent., lacked the "sectarian readings" of the Sam. Pent. from which it derived.

In 1964 R. Hanson dated Q^{m} on paleographic grounds to 225–175 B.C., which antedates the existence of the Qumran community (ca. 150 B.C.–A.D. 68). However, on the same grounds, M. McLean (1982) revised its date from 100 to 25 B.C. J. Sanderson (1986:308) essentially confirmed Skehan's study but found that "all of the characteristics of that 'sectarian' expansion about Gerizim had their precedent in those shared expansions." Note, however, that Q^{m} itself does not have room for the Sam. Pent.'s inclusion about the altar on Gerizim as part of the Decalogue. She (1986:189) also found "very little evidence … to support the notion of a relationship between the Sam. Pent. and the LXX, whether or not Q^{m} is included," but she did not interact with the evidence presented in Waltke's unpublished dissertation (1965) which suggested such a relationship. Finally, on text critical grounds Sanderson suggested that Q^{m} "represents a somewhat earlier stage in the development of the tradition than Sam. Pent. " (189).

Following W. F. Albright (1955:27–33), from 1956 on F. M. Cross revised Kahle's notion of the development of the Torah text by his theory of three local texts, each developing naturally in isolation from the other. According to this model, the LXX originated in Egypt, proto–Sam. Pent. in Palestine, and proto-MT in Babylon. According to Cross, the Sam. Pent. diverged as a sectarian recension ca. 100 B.C., and proto-MT became the standard text of the rabbis ca. A.D. 100. In 1965 Waltke sought (1) to establish on the basis of Gerleman's earlier study (1948) that the proto–Samaritan text-type reached back at least to the time of the Chronicler; (2) to reestablish on the basis of later research Gesenius' classifications of the Sam. Pent.'s secondary readings; and (3) to suggest on the basis of collating Exodus 1–10 in the Sam. Pent., LXX, and MT that proto-MT influenced proto–Sam. Pent. at a later stage before its adaptation by the Samaritan sectarians.

In 1975 Talmon rejected both limiting the number of text-types to three and, more importantly, the notion of an Urtext from which others diverged. In his view the text was known from the beginning in a variety of forms. In 1978 Albrektson rejected the theory that the rabbis consciously produced a standard text; instead, he argued, the MT emerged as the standard text because it was the text of the Pharisees who supplanted other religious groups. From 1980 on, E. Tov has argued in the direction pioneered by Talmon against both the notions of an Urtext and of grouping QL mss into fixed text-types. Instead, he (1981:247) argued, they relate to each other "in an intricate web of agreements, differences and exclusive readings," although he does grant that Q^{m} is close to the Sam. Pent. (1982:22–23). Even though Cross' theory of local texts may have to be modified, QL confirms the internal evidence of the Sam. Pent.'s readings that the text-type of the MT is older than the Sam. Pent.

B. History of the Samaritan Pentateuch

The history of the text can be analyzed as consisting of three phases: its prehistory, its origination as a sectarian recension, and its later history.

1. Prehistory of the Sectarian Recension. The prehistory of the Sam. Pent. can be surmised from the relatively direct evidence of QL and from the indirect evidence of early Jewish literature, NT, LXX, the book of *Jubilees,* and the canonical book of Chronicles. Geiger (1876:67) recognized that the variant readings of the Sam. Pent. derive from a nonsectarian recension.

a. Sam. Pent. and QL. An important group of relatively early texts unearthed at Qumran is the one characterized by harmonistic expansions and linguistic simplifications like those found in the Sam. Pent. These texts include one in paleo-Hebrew script, 4QpaleoExod^{m} (Sanderson 1986); others in Aramaic square script, 4Q158, 4QTestim (Allegro 1956; Skehan 1957); and unpublished texts, 4QNum^{b} (Cross 1961:186; 1963 newsletter), 4Q364, and 4QDeut.^{n} Scholars refer to these texts, which themselves show a complex pattern of agreements and disagreements with one another and with known recensions, as proto-Samaritan because it was the type of text which the Samaritan sectarians adapted by slight alterations for their Torah. Sanderson (1986:308) draws the conclusion that "the Samaritans used a biblical text that is a very natural descendant of texts that other groups also used at that time," including "sectarian" readings. Furthermore, the Sam. Pent. "appears to represent a very close collateral line of the Sam. Pent. textual family and/or a slightly later representative than Q^{m}." By collating the Sam. Pent. with the MT, LXX, and the fragment of 4QTestim containing the extended interpolations from Deut 5:28–29 and 18:18–19 (= Sam. Pent. Exod 20:21b), Waltke (1965:218–24) found that the Sam. Pent. stood closer in its orthography and linguistic tradition to the MT than 4QTestim. The second fragment containing Num 24:15–17 cannot be identified uniquely with any text-type, and its third fragment, containing Deut 33:8–11, shows definite affinities with the earliest form of the LXX (Skehan 1957:435). According to K. Matthews (1986:198–99), although 11QPaleoLev is written in paleo-Hebrew script, it does not fit the pattern of such scrolls in 4Q, for it is not characterized by "Samaritan" readings.

b. Sam. Pent. and NT. Speakers in the NT depended on a text-type similar to the Sam. Pent. in several passages. Stephen's statement that Abraham went to Canaan *after* the death of Terah (Acts 7:4), comports with the chronology in the Sam. Pent. that Terah died at 145 (cf. Gen 11:26; 12:4) and not with the statement in the MT that he died at 205 (Gen 11:32), 60 years after Abraham left. In 7:5 Stephen quotes Deut 2:5b using the word *klēronomia,* whose Hebrew equivalent *yršh* appears only in the Sam. Pent., but not in the MT or LXX. In that same sermon (7:32) Stephen quotes from the Sam. Pent. of Exod 3:6 and not from the LXX or MT. In v 37 he unexpectedly interpolates a passage from Deut 18:15 in a way similar to the Sam. Pent. Finally, the writer of Hebrews (9:3) probably locates with the Sam. Pent. against the MT and LXX the golden altar of incense behind the veil of the holy of holies. These agreements between the NT and the Sam. Pent. are best explained as the use of the proto-Samaritan text-type in some NT literature (Pummer 1976:441–43).

c. Sam. Pent. and LXX. We already observed that according to Cassellus, the Sam. Pent. agrees with the LXX against the MT in 1,900 readings, and that according to Gesenius this is best explained as a dependence upon an earlier common recension. Waltke's (1965:226–56) collation of the first ten chaps. of Exodus led him to agree with Gesenius that the Sam. Pent. and the LXX stem from an earlier common tradition, and with Wiener (1911:217) that the Sam. Pent. is nevertheless more closely related to the MT. He found no contact between the MT and LXX. These conclusions, however, must be reevaluated in the light of Tov's criticisms (1981:267–71) and Sanderson's findings to the contrary. Sanderson (1986:189) found that the LXX shows "itself to be much further removed from the other three witnesses than any of them is from each other." However, Cross found the contacts of 4QNum with LXX "striking" (1961:138–39). If they ultimately stem from an early, yet secondary source, as we suggest, the closer agreement of the Sam. Pent. with the MT than with some earlier mss of QL may be due to the influence of proto-MT on that collateral line of text from which the Sam. Pent. derives. Proto-MT may have been adopted by the Pharisees as early as 175 B.C., allowing time for its influence on the proto-Samaritan text-type before the emergence of the sectarian recension at 100 B.C.

d. Sam. Pent. and the Book of Jubilees. The book of *Jubilees* was dated by R. H. Charles between 135 and 105 B.C.E. (1917:xxix–xxx), but by Zeitlin (1939:3–8), with Albright's approval (*FSAC*, 346–47), "in the early time of the Second Jewish Commonwealth in the pre-Hellenistic period." According to Charles' statistics (1917:xxxiii–xxxix) it has affinities with the Sam. Pent. and even more striking affinity with the LXX against the MT. In sum, its affinities are similar to those of 4QNum, suggesting once again that the earlier proto-Samaritan text-type had more affinity with the LXX and less with the MT than the Sam. Pent.

e. Sam. Pent. and The Book of Chronicles. The similarities between Chronicles and the LXX, and QL of Samuel in contrast to MT of Samuel put beyond reasonable doubt that the Chronicler did not revise his sources but relied on sources already differing from the MT (cf. Gerleman 1948:34; Cross 1964:293). Gerleman (1948:9) found that the genealogies and lists of names in 1 Chronicles 1–9 "show greater resemblance to the Samaritan Pentateuch than to the Massoretic." Elsewhere he wrote: "It is … not only in morphological and syntactical details that the textual tradition of the Chronicler shows affinity with the Samaritan Pentateuch. The resemblance extends also to the actual composition, the arrangement of the material, the form of the narrative" (1948:21). Finally, he observed that the correspondence pertains to the LXX as well: "We have seen that the texts from which the lists of names in 1 Chronicles 1–9 have been taken show remarkable correspondence not only with Samaritanus, but also with the Septuagint" (28). If Gerleman's analysis is valid, one finds in the light of QL and other Jewish literature strong evidence for positing a very early, though already modernized, recension from which the LXX and proto–Sam. Pent. independently developed.

f. Conclusion. Collateral lines of the text-type known as proto-Samaritan, characterized by widespread glosses, expansions from parallel passages, modernizations, and smoothings spanned the time of the Chronicler to the 1st century of the Christian era. Some lines of this text-type show affinity with the LXX probably because of an earlier common source. Shortly before the creation of the Sam. Pent. as a sectarian recension (ca. 100 B.C.), a collateral line of proto-Samaritan texts was probably influenced by the developing proto-MT.

2. Origination as a Sectarian Recension. In 1968 J. Purvis, following the lead of W. F. Albright (*FSAC*, 346 n. 12), chiefly on grounds of script, orthography, and text-type, demonstrated that the Samaritan text diverged as a sectarian recension in the Hasmonean era (ca. 100 B.C.E.). "A comparison of archetypal forms of the Samaritan letters with the late history of Paleo-Hebrew writing indicates that the Samaritan script began to diverge from Paleo-Hebrew as it was used among the Jews at a comparatively late date (late Hasmonean and early Roman times)" (Purvis *IDBSup*, 774). At this time also internal *matres lectionis* were at their height as attested in the oldest evidence of the Sam. Pent., and its text-type reflects a developed stage of Cross' Palestinian (= proto-Samaritan) recension. Cross, who supervised Purvis' thesis, agrees (1969:65). Other scholars, such as M. Smith (1971:182–92), R. J. Coggins (1975), R. Pummer (1976–1977), and F. Dexinger (1981) reached similar conclusions about the origin of the Samaritans. Coggins (1969) and B. Roberts (1969) found Purvis' arguments about script and orthography more convincing than his argument about text-type, whereas J. Macdonald (1970) was more persuaded by the last argument than the first two. In sum, the Sam. Pent. probably originated ca. 100 B.C. However, we need not necessarily conclude with Purvis and others that the Samaritan sect began at this time. Ben-Ḥayyim (1971:225) justly asks "whether one can really come to … the time of the formation of the Samaritan sect according to the orthographic form and the script of its Holy Writ. Can the Jewish version of the Torah with its square script testify as to the time of the crystallization of Judaism? Does the existence of the Dead Sea Scrolls, with the differences in the writing even in the Torah, teach us the opposite of the supposition of the author [Purvis]?"

3. History of the Sectarian Recension. The text of the Sam. Pent. is found in three kinds of sources: manuscripts of the Hebrew text, translations, and Samaritan literature. The manuscripts give direct evidence of the Sam. Pent.'s text but they are medieval. The other sources, although secondhand, indirectly bear witness to the Samaritan text during the first millennium, and, more importantly, interpret obscure passages in the Sam. Pent.

a. Manuscripts. The manuscript purchased by P. della Valle was written in A.D. 1345/46 and is the basis of the polyglots and Blayney (1790). It is Codex B, a reliable ms, in von Gall's critical, eclectic text (1918). His eclectic text, however, is based on questionable canons of criticisms (such as preference for defective orthography), and it contains errors, relies too heavily on the MT, and lacks important sources such as the ʾAbishaʿ Scroll. Hempel (1934:256) justly urges caution in its use. Von Gall's best ms in Exodus is *E* (A.D. 1219).

Samaritan manuscripts are dated by their cryptograms and/or by scribal techniques as identified by R. Gottheil (1906), E. Robertson (1938), and S. Talmon (1963). By collating manuscripts extending from the 13th to 16th centuries, Waltke (1965:42–64) documented that the Sam. Pent. is a uniform tradition drifting away from the MT through scribal error. Kahle (1915:402–3) earlier reached the same conclusion.

The sacrosanct text preserved by the Samaritans as the palladium of their religion is the *Sefer ʾAbishaʿ* scroll. According to its cryptogram, labeled as "a planned deception" by E. Robertson (1962:235), it was written by ʾAbishaʿ, son of Phineas, son of Eleazar, son of Aaron … in the 13th year after the Israelites ruled the land of Canaan in its borders round about." F. Pérez Castro (1959) distinguished nine hands in its composition and dates the oldest portion to A.D. 1149. This manuscript is the basis for the edition of the Sam. Pent. edited by Ṣadaqa (1961–65); they supplemented it with a manuscript written by Abu al-Barakat, a scribe of the 12th to 13th centuries.

L. F. Giron-Blanc (1976) offered the text of codex Add. 1846 University Library Cambridge (A.D. 1100) and variants from fifteen unpublished manuscripts. Oral readings of the Sam. Pent. by contemporary Samaritans have been made by several, especially Ben-Ḥayyim.

Although Samaritan scribes were not as careful as the Massoretes, they preserved a uniform text. Von Gall (1918:lxviii) questioned whether all the manuscripts go back to one archetype, but Kahle (1915:402–3), who is famous for his theory that vulgar texts precede a standardized *textus receptus*, on the basis of manuscripts and translations drew the conclusion that "the Samaritan Pentateuch at 200 A.D. could not have read essentially otherwise."

b. Translations. The Samaritans translated their Torah into Greek, Aramaic, and Arabic. These translations, although lacking complete critical editions of their often corrupt texts, prove that the Sam. Pent. survived as a uniform tradition from the earliest period. Their main value, however, is not in restoring the original text of the Sam. Pent. but in interpreting some of its unusual readings.

The Greek translation is known as *Samareitikon* from Origen's reference to it in his Hexapla. Its only extant form is found in the Giessen fragments preserving the text of Deuteronomy 24–29, including the Samaritan sectarian readings in Deut 27:4, 12. Glaue and Rahlfs questionably argued that though the Giessen fragments do not overlap with Origen's *Samareitikon* readings, both share an affinity with the Samaritan Targum, and therefore belong to the same translation. On firmer ground they claimed that though it is independent and more accurate than the LXX, nevertheless the Samaritan translator used the LXX. It contains three readings that agree with MT against the medieval Samaritan manuscripts.

The Samaritan Targums *(Sam. Tg.)* are written, according to G. Dalman, in a dialect of West Aramaic. Its readings, which never gained recognition because of its misunderstanding of the Hebrew language and text, became debased in the hands of scribes ignorant of Aramaic (J. Montgomery 1907:271). P. della Valle brought the first manuscript of the *(Sam. Tg.)* to Europe. This text, published in the Paris and London polyglots and by Brüll (1873–76), according to Kahle, is "the worst known ms of the Samaritan Targum" (1959:53; cf. Kohn 1865:24–30). A. Tal in his critical three-volume edition juxtaposes ms Or 75623 of the British Museum on the right-hand page and ms 3 of the Shechem Synagogue on the left because these two manuscripts represent two stages of development in the history of Samaritan Aramaic, two different linguistic strata; only in a few cases do they reflect changed exegesis (1980–83:1.vi). Kahle (1898), followed by L. Goldberg (1935), validated that the various manuscripts represent a number of independent translations from the end of the 1st millennium B.C. to the 11th century A.D. The *Vorlage* of *(Sam. Tg.)* is the same as that represented by the extant manuscripts of the Sam. Pent. L. Goldberg showed that *Tg. Onq.* secondarily influenced the *Sam. Tg.*, and Kahle (1959:191–95) dated this influence to between A.D. 800 and 1000.

Kahle in 1904 contended that the Samaritans in the 10th century first used the Arabic version of the Pentateuch prepared for the Jews by Sa‹adia Gaon (ca. A.D. 1000), and shortly thereafter began to adapt this text to the Sam. Pent. About the middle of the 13th century, Abu Sa‹id revised the translation(s), producing a text that became the recognized version for the Samaritans. Abu Sa‹id's *Vorlage* agreed with various codices and translations. Moreover, it can be demonstrated that he himself does not always adhere faithfully to his *Vorlage* for theological reasons and due to his own negligence and inconsistency. A partial, critical edition of it with extensive notes in Hebrew is given by H. Shehadeh (1977).

c. Quotations of Samaritan Pentateuch in Samaritan Literature. Quotations attesting the Samaritan text at an early period can be found in Samaritan inscriptions, the Samaritan Chronicles, the Samaritan liturgy, Samaritan commentaries, and other religious treaties. For further discussion, see Stenhouse 1989 and Tal 1989. A comparison of these sources with Samaritan manuscripts, the MT, and LXX yield the following conclusions about the text after A.D. 200: (1) the Sam. Pent. was transmitted as a uniform tradition; (2) the earlier text had a much higher percentage of *plene* readings; (3) the earlier text stood closer to the MT but gradually drifted away from it through scribal errors; (4) similar variants are found in all stages of the text; (5) the uniform tradition is not influenced by either the MT or LXX.

C. Character of the Samaritan Pentateuch

Essentially following Gesenius, secondary variant readings of the Sam. Pent. can be classified into eight groups (see also Waltke 1965).

1. *The Samaritan text has been corrupted by scribal errors.* All traditions have suffered in the hands of scribes. Several errors are peculiar to the Sam. Pent. (a) Confusion of gutturals; e.g., *›dwrm* in the Sam. Pent., *hdwrm* in MT (Gen 10:27). In the light of the Sam. Pent.'s prehistory, the widespread confusion of gutturals in the text is not surprising for, as Goshen-Gottstein (1958:107) says: "the system of four separate laryngeal and pharyngal phones has collapsed in QS [= QL], probably under the impact of Aramaic—direct or indirect." (b) Confusion of labials; e.g., in Gen 31:40, the Sam. Pent. unintelligibly reads *ḥrp* "harvest-time, autumn" for *ḥrb* "scorching heat" (MT; LXX). (c) Confusion of dentals; e.g., in Exod 37:22 the masc. *›ḥd* modifies the fem. *mqšh,* in the Sam. Pent. instead of *›ḥt* in MT. (d) Confusion of palatals; e.g., in Gen 14:23 MT reads *śrwk* "thong, sandal" from the root *śrk* "twist," whereas the Sam. Pent. reads *śrwg* whose root is unattested. (e) Confusion of *d* and *r;* e.g., *ś/šm›bd* in the Sam. Pent., versus *šm›br* in MT and *symbor* in LXX (Gen 14:2). (f) Confusion of the letters *›alep, he, waw, yod;* e.g., *ga›oh ga›a* in MT, but *gwy g›h* in Sam. Pent. (Exod 15:1).

2. *The Samaritan text preserves a linguistic tradition which differs from the linguistic tradition preserved by the Tiberian grammarians.* It is beyond the scope of this article to write a grammar of Samaritan Hebrew though several observations are in order. Before the discovery of the QL, Gesenius (1815:26) though the Sam. Pent. reflected "the norms of an unlearned and inaccurate grammar," Kahle thought it represented a relatively older tradition than the MT (1921:230–39; 1947:97), and Sperber (1939:153–247) followed by R. H. Pfeiffer (1941:103; cf. D. W. Thomas 1951:240) thought it represented a North Israelite dialect. In the light of the QL, Ben-Ḥayyim (1957–62:3.vii) drew the conclusion that Samaritan Hebrew "generally represents a later stage of development than that denoted in the Tiberian vocalization. However, this does not mean that no elements older than those of the Tiberian Hebrew, esp. in morphology, are not to be found in it. Preservation of ancient elements in a later stage is a well-known phenomenon in the history of languages."

3. *The Samaritan text has been modernized by replacing archaic Hebrew philology with a later tradition.* Ben-Ḥayyim observed and demonstrated that "on the whole the Samaritan tradition … is closer to Mishnaic Hebrew than is the Tiberian [= MT] tradition" (1965:208). In orthography the Sam. Pent. systematically alters the *he* for final *ō,* a feature of early Hebrew orthography (Cross and Freedman 1952:69), to the later *waw* (cf. Gen 9:21; 49:11; Exod 22:26). The internal *matres lectionis yod* and *waw* are used more extensively than in the MT, and it even employs *›alep* as an internal *mater.* In morphology the earlier short form of the prefix conjugation with *waw*-relative is often replaced in Sam. Pent. with the long form of the prefix conjugation, probably under the influence of Aramaic, which lacks the distinction. Sperber cites many examples of this phenomenon (1939:187, 193), but he is not always careful to

distinguish an inner Sam. Pent. variant from an original variant (cf. *Hipʿil* of 3d weak verbs in Gen 31:42; Num 16:10; 31:50, and of inclusion of its final *he* in Gen. 41:22; Deut 3:1; 10:3). The Sam. Pent. also frequently introduces "pseudo-cohortative" forms, an archaizing practice in late Hebrew writing (Gerleman 1948:15), whereas the MT rarely has this form (cf. Exod 6:5; Deut 2:13; 3:4; 10:2, 3). The earlier *waw*-relative with the suffix conjugation is sometimes replaced by the Sam. Pent. (Moran 1961:64–65) with the normal prefix conjugation. The Sam. Pent. systematically replaces the earlier inf. absol. (Moran 1961:61) found in the MT with finite verb forms, imperatives, and adverbs (A. Kropat 1909:23; Gerleman 1948:18; cf. Gen 8:3, 5, 7; Num 15:35; 25:17; Deut 31:26). The inf. constr. after a particle is replaced with a finite tense constr. (cf. Gen 46:30; Num 3:13; 9:15 and Deut 12:30). The rare and early indefinite pronouns are replaced with later and more customary forms (e.g., *zû* in Exod 15:16 with *zh,* and *nḥnw* with *ʾnḥnw* in Gen 42:11; Exod 16:7, 8; Num 32:32). The earlier enclitic *mem* construction (H. Hummel 1957) is replaced with the construct form (cf. Deut 33:11). Even as Chronicles has a tendency to use *Hipʿil* for both *Qal* and *Piʿel* in Samuel-Kings (Kropat 1909:14), so also the Sam. Pent. sometimes prefers *Hipʿil* (cf. *Hipʿil* for *Qal* in Gen 22:23; Deut 20:8, and for *Piʿel* in Num 33:52). A Geiger (1876:58) says the Sam. Pent. "treats *he* locale rather roughly." Both the textual evidence and the Jewish ridicule of the Samaritan exegetes indicate Samaritan ignorance of this archaic suffix, well-established already in Ugaritic (cf. Gen 37:24; Exod 10:19). The Samaritan text-type is clearly modernized relative to the MT.

4. *The Sam. Pent. presents an exegetically and linguistically more straightforward text than the MT by removing grammatical difficulties, and replacing rare constructions with more frequently occurring constructions.* The Sam. Pent. has a more consistent orthography than the MT. Talmon (1951:147) observed: "But whilst the MT might use the same word in the same sentence once in *plene* and once in defective spelling, S is more consistent and harmonizes such instances as, for example in Gen. 1:14, 15, 16; 7:2; 8:20." The Sam. Pent. replaces the asyndetic constructions of the MT with the smoother syndetic constructions (cf. Gerleman 1948:10–12). The Sam. Pent. corrects discrepancies in syntax by correcting verb or attribute to agree with the customary gender of the noun (cf. Gen 13:6; 49:15, 20), or with the number of the subject (cf. Gen 10:25; 30:42; 46:27; Exod 4:29; Num 9:6), or with other verbs (Exod 39:3; Lev 14:42; 19:27; Num 13:2; 21:32). Lack of syntactical agreement is a feature of early Canaanite (Moran 1950:60–61). The Sam. Pent. tends, with the Chronicler (Gesenius 1815:28 and Kropat 1909:9–10), to discard the collective form in favor of plurals. Talmon (1951:147–48) noted: "Collective nouns are treated somewhat haphazardly by the Massoretes. The number of verbs and adjectives connected with them is flexible and apparently influenced by the context. S, on the other hand, strives to establish a more consistent treatment and, in most cases, deliberately chooses between given possibilities. Once accepted, a definite number will be used predominantly in connection with the collective noun concerned." The Sam. Pent. replaces passive constructions with active constructions (cf. Gen 10:1; Exod 27:7; Num 3:16; 28:17; Lev 4:35; 6:23; 11:13; 25:34), rare forms with more customary forms (e.g., with inf. constr. of *tertiae infirmae* verbs *ʿswt* is substituted for *ʿsh* in Gen 50:20; with *Pe-waw* verbs *yld* replaces *wld* in Gen 11:30), and rare and lively expressions with customary and prosaic expressions. Geiger (1876:58) observed: "For him [the scribe of Sam. Pent.] the lively expressions are no longer fitting, and so he chooses the more sober, and seemingly more regular expressions" (cf. Gen 7:2; 17:17; 21:28; Exod 25:20).

5. *The text of the Samaritan tradition has been supplemented and clarified by the insertion of additions and interpolations of glosses from parallel passages.*

Small additions have been added to the text of SP to achieve greater clarity. Clarifying smaller additions include: subjects (cf. Gen 2:24; 21:33; 29:23; Exod 2:16; 15:25); appositives (cf. Gen 26:5; 38:13; 48:7); various nouns (cf. Gen 48:14; Exod 15:22 [Blayney 1790]; Lev 5:24; Num 23:26), various prepositions (cf. Gen 48:5; Exod 2:14; 12:28 [Blayney], 43), the particle *ʾt* (cf. Gen 44:26; Exod 2:9; Lev 4:17; Num 22:41 [Blayney]; Deut 2:2), and various other particles (cf. Gen 2:12, 19; Exod 18:21; 21:8; 29:33).

The Samaritan text has been harmonized and supplemented by parallel passages. An outstanding characteristic of the "Samaritan" tradition, stretching back to at least the time of the Chronicler, is its predilection for duplicates and supplementations of the text with the aid of parallel passages.

Sometimes the Sam. Pent. has harmonized and supplemented one passage by another with little alteration of the text. Concerning this class of variant readings see the detailed discussion in Gesenius (1815:45). Geiger (1876:59) notes that the Sam. Pent. also changes the borders in Gen 10:19 exactly as it alters the text of Deut 34:1–3 from Gen 15:18 (cf. Exod 23:31). The latter is the only case where the Sam. Pent. has been reduced.

Other times the Sam. Pent. expanded the text by larger interpolations. In Genesis, Geiger (1876:59) notes that the Sam. Pent. added to the text of Gen 30:36 from 31:11–13 (that an angel appeared to Jacob in a dream revealing his portion in Laban's herds), and to Gen 42:16 using the text of 44:22 (that Benjamin could not leave his father). "A large harvest of these examples," says Gesenius (1815:45), "is offered in Exodus where you have interpolations either from the same book or from Deuteronomy"; see 6:9 (cf. 14:12); 7:18 (cf. vv 16–18); 7:29 (cf. vv 26–28); 8:1 (cf. v 1); 8:19 (cf. 16:19); 9:5 (cf. vv 1–5); 9:19; 10:2; 11:3 (cf. 4:22, 23); 18:25 (cf. Deut 1:9–18); 20:17 (cf. Deut 27:2, 5–7); 20:21 (cf. Deut 5:26, 28; 18:18–22; 5:27, 28). In some of these passages the narrative is filled out by the repetition of God's speeches to Moses for Aaron, indicating that they were delivered as commanded, or that the delivery corresponded to God's speech. Additions to the decalogue deserve separate treatment. Similar additions to Numbers, paralleling Deuteronomy 1–3, are also found: Deut 1:6–8 preceding Num 10:11; Deut 1:20–23 preceding Num 13:11; Deut 1:27–33 following Num 13:33; Deut 1:42 preceding Num 14:41; Deut 2:2–6 following Num 20:13*b;* Deut 2:9 following Num 21:11; Deut 2:17–19 following Num 21:12; Deut 2:24–29, 31 following Num 21:20 and included in 21:21–23; Deut 3:21–22 following Num 27:23; Deut 3:24–28 following Num 20:13. Likewise, Deut 2:8 and 10:6–7 are based respectively on Num 20:17–18 and Num 33:31–38*a*.

J. Tigay astutely observes that the hand of a redactor is at work in these interpolations to achieve a smooth text. For example, in the interpolations of Deut 1:9–18 in Samaritan Exod 18:21–27, Tigay (1975:334–35) notes that the redactor-scribe "preserves the version of Deuteronomy and drops that of Exodus," and changes persons from first to second or to third where necessary "as suits the narrative context of its new home in the Samaritan Exodus." He recognizes the same editorial activity in Samaritan Exod 20:18–26 with its interpolations from Deuteronomy 18 and 5, and in Samaritan Exod 20:17ff. with its additions from Deuteronomy 27.

6. *The Sam. Pent. has been corrected to remove historical difficulties and objectionable passages.* In Gen 50:23 the Sam. Pent. changes the phrase *ʿl brky ywsp,* "upon the knees of Joseph," to *bymy ywsp,* "in the days of Joseph," because it seemed improper that Joseph's grandchildren should be born upon his knees. In Deut 25:11 MT's *mbšyw,* "his private parts," is changed to *bśrw,* "his flesh," because it seemed too obscene to mention that in a fight a woman would grab a man's private parts. In Deut 28:30 *šgl* was deemed too vulgar for public use and so changed to *yškbn* in *Qere* and the Sam. Pent. It is beyond the scope of this article to debate the issue of original text with reference to the well-known differences in pentateuchal recensions concerning the genealogical tables of Genesis 5 and 11:10–26, as well as the addition of "in the land of Canaan" in Exod 12:40. Regarding the former, Cross (1969:86) notes that recalculated chronologies are one of the special characteristics that are found in texts that "develop over a long span of time in geographical isolation." Regarding the latter it is noteworthy that the LXX reads "in the land of Egypt and in the land of Canaan," whereas the Sam. Pent. reverses them, "in the land of Canaan and in the land of Egypt," a well-known inconsistency with glosses. König (*HDB* extra volume, 70) noted that the MT of Exod 12:40 existed in Ezekiel's times because the 390 plus 40 years in Ezek 4:5–6 is "nothing else than a reflection of the 430 years of the Egyptian bondage of Egypt."

7. *The Samaritan text has been interpreted as well as clarified by small changes.* The Sam. Pent.'s tendentious exegesis, like its other changes, have the one purpose of bringing the text closer to the people. This tendency, which was present among exegetes during the Sam. Pent.'s formative period, found complete expression in the later Midrashic literature. For a detailed discussion of one example of this kind

of variant, see Gesenius' observations concerning Gen 22:2, where the MT reads *hmryh* but the Sam. Pent. reads *hmwr›h* (1815:30–31).

8. *The Samaritan text has been adapted to Samaritan theology. It is evident, for example, that the Sam. Pent. has been adapted to defend the honor of God.* It avoids any suggestion of polytheism; e.g., the plural predicates with *›ĕlōhîm* in the MT (Gen 20:13; 31:53; 35:7; Exod 22:8) are changed to the singular. It also avoids anthropomorphisms; e.g., "my own people" for "my first-born son" (Exod 4:22), "breath from you" for "breath of your nostrils" (Exod 15:8), and "he forgave" for "he repented" (Deut 32:6). Similarly, the Sam. Pent. transcendentalizes the concept of God; e.g., wherever in the MT God is said to deal directly with man without a mediator, or to descend to earth, the Sam. Pent. substitutes the angel of God (cf. Num 22:20; 23:4, 5, 16).

Secondly, the Sam. Pent. has been adapted to defend the honor of Moses and other great persons of antiquity. In Gen 49:7, in order not to allow a curse to fall upon the most holy men, Levi and Simeon, in place of *›rwr ›pm,* "their anger is cursed," the Sam. Pent. reads *›dyr ›pm,* which, according to *Sam. Tg.* and Abu-Sa›id means, "their anger is beautiful." In Deut 34:10 instead of "there arose not again a prophet like Moses in Israel," the Sam. Pent. reads "there will not arise again …"

Thirdly, the Sam. Pent. preserves legal differences from MT. Geiger (1857:467; 1866:527–73) and Heller (1923:203–8) pointed out many differences between the Samaritan interpretation of the law; occasionally these differences influence the text. For example, whereas any kind of work is prohibited in many biblical passages on holy days and sabbath days, the Bible allows an exception on passover, which disallows work "save that which every man must eat, that only may be done by you" (Exod 12:16). But the parallel passage in Deut 16:8 lacks this exception in the MT. The LXX resolves the problem by inserting the addition from Exod 12:16, and the Sam. Pent. resolves it by changing *kl ml›kh* "all work" to *kl ml›kt ‹bdh,* "any kind of servile work."

Lastly, the Samaritan text has been adapted to defend Mt. Gerizim as the cultic center of YHWH. The Samaritan creed is: "My faith is in Thee, Yhwh; and in Moses, son of Amram, thy servant; and in thy Holy Law; and in Mount Gerizim Bethel; and in the Day of Vengeance and Recompense" (Montgomery 1907:207). Only the point about faith in Mt. Gerizim distinguishes them from other Jewish sects such as the Sadducees and the Qaraites. The last Halaka of the Talmudic tractate, *Masseket Kutim,* reads: "When shall we [Jews] take them [the Samaritans] back? When they renounce Mount Gerizim and confess Jerusalem." This difference explains why they restricted their canon to the Torah, which according to the MT was theologically neutral in this matter, and rejected the Prophets and Writings, both of which celebrate Jerusalem/Zion. By Occam's razor, all other explanations for their limited canon, such as that the Torah had not as yet become canonical by the time of the Samaritan schism, can be rejected as unnecessary.

In part, the Samaritan controversy with the Jews involves the interpretation of text, such as the identification of Salem in Genesis 14, of Moriah in Gen 22:2, and of Luza in Gen 28:19. Sometimes, however, the text has been altered. In Deut 11:30 the Sam. Pent. reads "opposite Shechem" after *mwr›*. More significant differences in the text, some of which antedated the Samaritans, favor their theology. Following Exod 20:17, as part of the Decalogue, Sam. Pent. includes a lengthy passage composed from Deut 11:29–30 and 27:2b–3a, 4–7, commanding the Israelites to build an altar on Mt. Gerizim. In Exod 20:24 the Sam. Pent. reads "in *the* place where I *have caused* my name to be remembered," as opposed to the MT, "in *every* place where *I will cause* my name to be remembered." Similarly, Deut 27:2–7 is found after Deut 5:21, also as part of the Ten Commandments, as well as in twenty other passages (Deut 12:5, 11, 14, 18, 21, 26; 14:23–25; 15:20; 16:2, 6–7, 11, 15–16; 17:8, 10; 18:6; 26:2; 31:11). In Lev 26:31 "your sanctuaries" takes the place of "your sanctuary." Finally, in Deut 27:4, whereas the MT prescribes building an altar on Mt. Ebal, the Sam. Pent. dictates Mt. Gerizim. The effect of these differences is that the Sam. Pent.'s Torah prescribes only one sanctuary and altar in the land, Mt. Gerizim, and elevates that law to the status of the Ten Commandments. Pummer (1987:3), citing Coggins, Kippenberg, and Dexinger, says: "the Samaritans in all probability, like other groups, began to adapt certain passages in the Pentateuch to their particular theology." The Sam. Pent.'s additions to the Decalogue have all the

earmarks of interpolated glosses, and their interpretation of the first commandment as part of the introduction is strained. The general character of the Sam. Pent. and MT inspires more confidence in the latter with reference to these theologically biased readings.

D. Value of the Samaritan Pentateuch

The Sam. Pent. is of little value for establishing original readings. Out of eighty-five readings where Sanderson thought she could assign preferable readings involving the MT, LXX, Sam. Pent., and Q^m, she found no variants where the Sam. Pent. uniquely or even with LXX preserves the preferable reading (1986:85, 88). She found two preferable readings where the Sam. Pent. agreed with Q^m, "both representing small errors on the part of MT" (1986:58), and four preferable readings where the Sam. Pent., LXX, and Q^m agreed, revealing errors or lapses on the part of MT (1986:75). The chief textual value of the Sam. Pent. is its indirect witness that MT is "a superb, disciplined text" (Cross 1964:271).

The Sam. Pent. is of greater interest for literary criticism. First, as Tigay (1975) noted, the supplemented proto-Samaritan texts and Sam. Pent. give indirect empirical evidence for the documentary hypothesis. More accurately, it validates a documentary hypothesis. The phenomenon of sewing formerly independent documents into a new, unified whole can be observed from the Gilgamesh Epic through Tatian's *Diatasseron.* Before his very eyes the critic can observe the redactor at work splicing texts together. The resulting work is not a "crazy patchwork" of sources, as once thought, but a unified whole. Second, and this has not been previously noted, the modernized Sam. Pent. along with early Jewish sources suggests that the Pentateuch was begun to be modernized before the time of the Chronicler, entailing that the archaic text-type of the Pentateuch preserved in MT must be much older.

The Sam. Pent. is also of interest for canonical criticism, because alongside QL it bears witness to texts being adapted to meet the needs of the living community. We are not suggesting, however, that sectarian differences merely represent varying ideologies of equal worth. Rather, we suggest, one should guard against absolutizing confessions and relativizing truth.

The Sam. Pent. has intrinsic value for the study of religion in general and for the understanding of the Hebrew Bible and its interpretation in early pre-rabbinic Judaism in particular. Its preservation as a uniform tradition makes it especially valuable in this respect.

Finally, as noted by Pummer (1987), the Sam. Pent. assisted the Samaritans in preserving themselves as a unified community for over two millennia. In this respect it is of indirect value and interest to sociologists and anthropologists. For further discussion of these issues, see SAMARITANS.

SAMARITANS [Heb *haššōmĕrōnîm* (הַשֹּׁמְרֹנִים)]. The people who dwelt in Samaria, particularly in the tribal regions of Manasseh and Ephraim, and who have maintained a unique identity to the present. Subsequently the form of Israelite religion that developed in the area centered around Mt. Gerizim.

A. Introduction

1. Problems. The Samaritans are not easily brought into sharp focus. Sources are often contradictory, sketchy, or nonexistent. It is problematic how distinct the Samaritans are from the Jews of different periods, what constitutes the basic distinguishing focus, or how much interaction existed between the Samaritans and other sects based on the Mosaic Pentateuch. The geographic origin of the people called Samaritans has been seen in Mesopotamia and both N and S Palestine, raising the question whether their basic characterization is geographical, ethnic, or doctrinal.

2. Name. As a cultural designation of a particular people the term Samaritan *(haššōmĕrōnîm)* appears biblically only in 2 Kgs 17:29 where it is associated with idolators. The Samaritan Chronicle seems to accept usage of that term as a designation of the inhabitants of the city of Samaria. The Samaritans derive their name not from this geographical designation, but rather from the term *šāmĕrîm*, "keeper [of the law]" (Coggins 1975:10–12).

B. Origins

1. Samaritan Version. The Samaritans have insisted that they are direct descendants of the N Israelite tribes of Ephraim and Manasseh, who survived the destruction of the N kingdom of Israel by the Assyrians in 722 B.C.E. The inscription of Sargon II records the deportation of a relatively small proportion of the Israelites (27,290, according to the annals [ANET, 284–85]), so it is quite possible that a sizable population remained that could identify themselves as Israelites, the term that the Samaritans prefer for themselves.

Samaritan theology of history would place the basic schism at the time Eli moved the sanctuary from Shechem to Shiloh, establishing both an illegitimate priesthood and place of worship. From the time of Moses until that move was the Era of Divine Favor. With that move began the Era of Disfavor, which would exist until the coming of the Taheb or savior (Macdonald 1964:15–21).

2. Old Testament Version. Jewish accounts, characterized by 2 Kings 17 and Josephus (*Ant* 9.277–91) claim that the Samaritans are descendants of colonists brought into the region of Samaria by the Assyrians from other lands they had conquered, including Cuthah, and thus the Jewish designation of Samaritans as Cutheans (*Ant* 9.290). The Jews have argued that the veneer of Israelite religion displayed by the Samaritans is the result of instruction by an Israelite priest repatriated from Assyria after the colonists had been attacked by lions sent by God (2 Kgs 17:25–26).

C. History

1. Persian Period. Ezra 4, the earliest source of information on relations between Jews and Samaritans during this period, reports opposition by the Samaritans to both the building of the temple (4:4–5, 24) and

the building of the walls (4:17–23) of Jerusalem. Since Haggai and Zechariah are silent on any Samaritan obstruction to the temple and Ezra 4:7–23 seems to be an intrusion reflecting the troubles during Nehemiah's time, it is likely that the city wall was the real issue and the earliest breach between the two communities was expressed in political rather than religious terms. The Tobiads of Transjordan, who also claimed descent from Israelite tribes, had close ties with the Samaritans during this period (Spiro 1951) and likely joined them in their opposition to the building of the city walls. The identity of the opposition is not obvious and various identifications have been made (Coggins 1975:65–68).

The 5th century B.C.E. Elephantine papyri include letters requesting help to build a temple from both the Samaritan and Jewish priests (*CAP*, 30), implying an already existing schism. Indeed the Samaritan Chronicle of Abu'l Fath claims that Zerubbabel and Sanballat, subsequent leaders of the Jewish and Samaritan communities, were already feuding about the appropriate location of the restored temple while still in Babylon (Stenhouse 1985:89–95). The Persian king, "Surdi," likely Darius spelled backward, ruled in favor of Sanballat and sent him home to Mt. Gerizim with funds to construct the altar and by implication the temple.

Josephus agrees that Sanballat, whom he calls a "Cuthean," was appointed as a political leader by Darius and subsequently promised a temple to his son-in-law, Manasseh, son of a Jewish high priest who had murdered his brother and married a Samaritan woman. In Josephus' account, Manasseh renounces Darius and transfers his loyalty to Alexander the Great, who supports the building of the Samaritan temple.

The accounts pose several serious questions. The first is chronological: how to account for Sanballat's apparent longevity if he ruled from the time of Darius to that of Alexander the Great? A second question is the issue of the Samaritan temple. Was there such a structure and, if so, when was it built? Lastly, what was the origin of the Samaritan priesthood?

There are basically three possible explanations for Sanballat's apparent long tenure. Some argue that Josephus incorrectly brought the event down to the period of Alexander (Montgomery 1907:68), while some say that the Alexandrian dating is correct and Josephus was incorrect in associating Sanballat with the temple (see list in Purvis 1968:11). A compromise allows that on the basis of papponymy there could have been two different Sanballat's involved (Wright 1965:170ff.).

Some scholars believe that the Samaritan temple was built in 388 B.C.E., during the Persian period (Spiro 1951:312). The basis is the 260 years that constitute the Samaritan "Era of Favor," supposedly the time from the entry into Canaan until the days of Eli when the sanctuary disappeared on account of the sin of Eli (MacDonald 1969:115–18). It is assumed that the Samaritans projected their own experienced era of favor, the life-span of their temple, onto the ancient story. We know their sanctuary was destroyed in 128 B.C.E. (Josephus *Ant* 13.254–56); 260 years earlier would be 388.

Most scholars accept Josephus' implicit Hellenistic date late in the 4th century, mainly on the basis of Josephus alone. The archaeological evidence is minimal. There was a resettlement of Shechem at that time (Wright 1965:167ff.). Robert Bull had some expectation that Building B at Ras el Tin would prove to be the Samaritan temple (Bull 1967:393), but in the light of Magin's more recent excavations reported by R. Pummer (1989:169–74) that hope now seems unlikely and the remains of the temple still elude us. Perhaps there never was a temple on the scale implied by Josephus, but rather a more modest tabernacle. In the postexilic period, Samaritans probably had neither the political nor financial need for a temple.

The turmoil that led to the resettlement of Shechem may also account for the nucleus of the Samaritan priesthood, if not the Samaritan people themselves. Fossum speculates that as the N shrine at Bethel was desolated, priests may have migrated from that site to Shechem and the designation of Mt. Gerizim as Bethel may be a vestige of that move (Fossum 1985:41).

The chronicles of Abu'l Fath concur that relations between Samaritans and Jews worsened throughout the Persian period (Stenhouse 1985:81), and this emerging schism benefited the Persians by diminishing the likelihood of any broadly based Palestinian rebellion.

2. Hellenistic Period. The arrival of Alexander the Great polarized the political loyalties of Samaritans and Jews, at least temporarily, because the Samaritans initially gave support to Alexander by contributing

8,000 Samaritan troops to his Egyptian campaign. While Alexander was in Egypt, the Samaritans revolted and killed their newly appointed governor, Andromachus. In retaliation, Alexander destroyed the city of Samaria and established a garrison of 600 troops there. Many of the Samaritans fled to ancient Shechem at the base of the mountain, and this became their chief religious center. The city they rebuilt at Shechem in 331 B.C.E. survived for more than 200 years, until it was destroyed by the Jewish king John Hyrcanus in 107 B.C.E. (Wright 1965:172).

By contrast, the Jews remained loyal to Persia and did not support the Greeks. In time, the Samaritans, sobered by Alexander's destruction of Samaria and subsequent conflicts between Ptolemies and Seleucids, shared Jewish wariness of the Greeks. However, the issue of Jerusalem versus Mt. Gerizim became a major factor separating Samaritans from Jews.

The latter site may or may not have included a temple. The rather limited documentary and archaeological evidence is ambiguous. The primary source is Josephus, whose stories related to the Samaritan temple suspiciously duplicate his own and other familiar stories of temple building (Anderson 1989). Samaritan sources seldom mention a temple or provide specific information about one. Archaeological remains are at best suggestive (see above); no local tradition corroborates it, and the Samaritan chronicles are vague (Montgomery 1907:36). Their focus was the place rather than the structure, and the structure was likely quite modest.

Descriptions of Samaritan response to the reign of the Seleucid tyrant Antiochus IV (175–164 B.C.E.) are varied. 2 Macc 6:2 implies that the Samaritans unwillingly renamed their sanctuary Zeus Xenios. But Josephus claims they quite willingly renamed it Zeus Hellenios (*Ant* 12.257–64). The more resistant Jews were unhappy with the Samaritan position, as is evident in Jewish polemics of the time: Sir 50:26 and portions of the LXX version of Joshua.

John Hyrcanus, Jewish governor and high priest, focused and expressed the deepest Jewish bitterness toward the Samaritans, and inspired by such anti-Samaritan stories as Genesis 34 (recalled in *Jubilees* 30; Judith 9; and *Testament of Levi* 5–7), destroyed the Samaritan sanctuary in 128 B.C.E. Shechem was also destroyed, and during the next decade most Samaritans drifted back to Samaria, leaving behind only a residual community at the foot of Gerizim.

3. Roman Period. In NT times Samaritans struggled with their own schisms and shared practices and beliefs with a variety of Jewish groups. Simon Magus (Acts 8:9ff.) was the leader of an unorthodox, possibly gnostic-influenced Samaritan group that continued to play a role in Samaritan history, and was particularly visible in the 4th century (with the movement of Dusis) and 14th century C.E. (through the writings of the Samaritan chronicler Abu'l Fath). The Dositheans, whom some of the Church Fathers associated with Simon Magus, were more likely an alternate contemporary sect, perhaps in part derived from the Sadducees. For further discussion, see Fossum 1985:45–55; 1989.

The Qumran community evidences some beliefs and practices shared with the Samaritans. Both sects were exclusive and used the imagery, "sons of light," to affirm their special chosen status. Both were critical of the Jerusalem Temple, though for quite different reasons, and they shared a unique emphasis on Deut 18:18 in their messianic expectations. Each group had a Nazarite movement and a purification ritual using the ashes of a red heifer. Each used a complex calendar combining both solar and lunar designations, perhaps going back to Zadokite reckoning, although the Samaritan calendar was influenced by later Byzantine and Islamic calendars as well. Neither group celebrated Purim or Hanukkah. Some Qumran texts, particularly 4QEx $^{\alpha}$ (Skehan 1955:182–87; currently designated as 4QpaleoExod^{m}, see Sanderson 1986:11), preserve a "Samaritan" text type leading some to conclude that these two groups had unique ties. However, most critics assume that these texts demonstrate the fluidity of texts at this period and not necessarily any special affinity between these two sects.

According to Acts 8, Samaria was one of the first missionary fields for the disciples, and there has been considerable discussion of the role of the Samaritans in the formulation and orientation of parts of the NT. The most concentrated debates focus on the gospel of John (Bowman 1958 and Purvis 1975), Stephen's speech in Acts (Spiro 1967 and Lowy 1977), and the Epistles to the Hebrews. Bowman contends that John consciously addresses a Samaritan audience. Attention to the Samaritan woman in chap. 4, reference

to "other sheep" in 10:16, and the use of Samaritan imagery such as "light" and "word" is cited as evidence. Spiro argues that the speech in Acts 7:22ff. reveals Stephen's Samaritan origin since he, like the Samaritans, challenges the Jerusalem Temple and priesthood, refers to the key Samaritan biblical verse, Deut 18:18, and when he quotes from the OT cites a recension akin to the Samaritan text. Lowy, however, argues that there was sufficient variety of text among all groups to account for such idiosyncratic readings.

Less convincing is the thesis that the Epistle to the Hebrews was addressed to Samaritan Christians. "Hebrews" would have been a tactful term with which to address the Samaritans (the title they preferred for themselves, see Josephus *Ant* 11.344), and the focus on the tabernacle rather than the Jerusalem Temple, the list of the faithful in Heb 11:32–40 (all of whom would be acceptable to Samaritans), and the strong argument for the superiority of Jesus over Moses are all relevant issues.

Whether or not they were recipients of NT writings, the Samaritans were often part of the NT story. Usually they were objects of scorn rather than serious obstacles to the NT mission, much the same role they had played in the time of Ezra and Nehemiah. John 4:9 simply states that the Jews had no dealings with the Samaritans. Jesus himself instructed the Twelve not to enter any town of the Samaritans, but rather to go only to the lost sheep of the house of Israel (Matt 10:5–6; cf. John 4). On other occasions, Jesus used that very antipathy to shame his hearers in the stories of the Good Samaritan (Luke 10:29–37) and the Ten Lepers (Luke 17:11–19).

In the next few centuries the gospels were influential in shaping Samaritan thinking: sometimes in opposition, as in the strong Samaritan affirmation of monotheism in response to the developing Christian Trinity; other times expanding upon the Christian conceptualizations of Moses.

Samaritan fortunes initially improved under Roman rule. Pompey (63 B.C.E.) ended the Jewish persecution of Samaritans, and Herod the Great 37–4 B.C.E. carried out an extensive building program in Samaria. Samaritans were emboldened to harass Jews, notably during the period from 6–9 C.E., when they created disturbances at the Jewish Passover, and in 52 when they slaughtered Jewish pilgrims at En-gannim in the border town of Galilee. These actions earned a series of reprisals from both Jews and Romans. As a result of one such action, the Samaritans were successful in having Pontius Pilate deposed, but generally they paid dearly. Samaritans fleeing Roman oppression under Vespasian gathered by the thousands at Mt. Gerizim and held the Romans at bay for a month before their water ran out and more than 10,000 men were slaughtered.

Hadrian, the Roman emperor from 117 to 138 C.E. usurped the Samaritan holy place and constructed a large temple to Zeus Hypsisto (Bull 1967; 1968). Features of that temple are preserved on coins dating to between 138 and 253 C.E. (Bull 1968:58–60). The metal doors he used in his new temple purportedly were taken from the ruined Jerusalem Temple. Centuries later they were to adorn two Samaritan synagogues before being taken off by the Ottoman Turks.

Early in the Christian era, waning Roman control facilitated a flowering of Samaritan theology and hymnody represented in the work of Marqah, Baba, and the hymn writer Amram Darrah. Generally scholars have followed Montgomery (1907:294) in placing these figures in the 4th century; however Crown (1986:104) and Stenhouse (1988:246–53) argue effectively for a 3d century date. Marqah's son, Nana, and Amram Darrah contributed richly to the growing liturgical tradition. The Samaritans had been strongly influenced by Judaism and continued to be, but as Christianity grew in strength and influence, it, too, played a role in the growing heterodoxy of Samaritan thought.

The Samaritan recension of the Pentateuch was widely available: there is evidence that the scribes of Codex Alexandrinus made some use of a copy; Origen, Eusebius of Caesarea, Epiphanius and Cyril of Jerusalem among other Church Fathers referred to it; Jerome used it in his translation of the Vulgate; and the Talmud reflects awareness of it, if only in a generally critical sense.

Synagogues were built in the vicinity of Nablus and in such remote places as Rome, Thessalonica and possibly Delos, and under the leadership of Baba the apparently Dosithean influenced laity party gained in power over against the priests, perhaps as a compromise to strengthen the Samaritan community in the

face of adversity. Marble remnants of Samaritan synagogues preserved with the few surviving Samaritan inscriptions (for example at Imwas), suggest reasonable prosperity within the community.

4. Byzantine Period. Under Byzantine domination the Samaritans experienced three centuries of severe repression. The primary community remained anchored to Nablus, the town at the foot of Mt. Gerizim, throughout the Byzantine period, despite an uninterrupted Diaspora responding to the frequent military operations in Palestine. The almost continuous presence of a place of worship at Gerizim until 484 C.E. offered a primary focus for the community through the upheavals and it is estimated that half a million Samaritans remained in Palestine. When they did leave Palestine, they tended to convert to Christianity and become assimilated into the local culture. Nevertheless, there was a Samaritan Diaspora estimated at 150,000 that maintained its religious identification with communities in such key centers as Cairo, Rome, Constantinople, and Thessalonica (remains of Samaritan synagogues have been found in the latter two cities).

They became targets of Byzantine wrath on two major counts: their theology, which the Christian Byzantines felt was influenced by gnosticism, and their claim to such holy places as Jacob's well and Joseph's tomb. Unlike the Romans, the Byzantines more frequently distinguished between Jew and Samaritan and treated the latter much more harshly. When the Samaritans rebelled against repressive legislation, particularly in 526 and 529, they were decimated by Byzantine forces.

5. Middle Ages. The increased political turmoil encouraged migration to other Middle Eastern centers. Communities developed at Aleppo, Tyre, Caesarea, Ascalon, Gaza, Damascus and Cairo. In 636, all of these cities came under Muslim rule. The Samaritans were not badly treated and assimilated the Arabic language and Muslim ideas. The Pentateuch probably was translated into Arabic in the 11th century, with its classic formulation attributed to Abu'l Said in the 13th century. By the time of the advent of Islam, the Samaritans were too diminished to significantly influence the Muslims, although some motifs, like depictions of the day of judgment that appear in the *Memar Markah,* have notable parallels in the Quran. The Samaritans were affected very explicitly by Islam: *Elah,* a close parallel to *Allah,* became a preferred term for God; they began using part of the Muslim creed, "There is no God, but God"; and they introduced prayers and other statements with the Muslim form, "In the name of God."

In 1099 the Crusaders arrived and left their mark by converting the Samaritan synagogue at Nablus into a church, the tower of which still survives. When the Muslims returned to power in 1244, they made the building into a mosque, and in subsequent centuries the Samaritans had varying degrees of access to their central city.

The 14th century witnessed a new surge of theological and literary activity growing out of a reconciliation among several Samaritan sects, particularly the priestly-centered orthodox and the more lay-oriented Dositheans. The revered Abisha Scroll of the Pentateuch was discovered in 1355. Much of the manuscript dates from prior centuries, but it is likely that some portions were written in the 14th century to restore and link ancient fragments. In the same year, Abu'l Fath drew from several previous sources to write in colloquial Arabic a history of the Samaritans commissioned by the high priest Phineas. Another work, *Joshua,* an historical commentary with parallels to the biblical book, was also completed in this century. From this accumulated base of authority, the priests maintained control but were more open to heterodoxy (Crown 1967).

In response to a series of hardships during the following century, the Samaritans migrated among the major cities of the Diaspora, reaching a peak in the years 1474–85, during which they copied and exchanged a substantial number of Pentateuchs. The end of the 15th century witnessed some building restoration in Nablus.

Muslim oppression drove Jews, Christians, and Samaritans into quite congenial relations at this time. Jews and Samaritans accepted each other's authority in local communities. Samaritans in Cairo accepted the authority of the Jewish rabbi and Jews in the region of Nablus accepted the authority of the Samaritan high priest. Samaritans were in direct relationship with Christians, as well. For example, in 1497 the sale of a Pentateuch (von Gall 1914–18 vol. 2) was witnessed by two Christians.

6. Modern Period. The 16th century set the stage for a continuous diminution of the Samaritans and the unrelated birth of Samaritan studies in Europe. The invasion of the Ottoman Turks early in the 16th century led to greater oppression of the Samaritans provoking many Diaspora Samaritans to return to Nablus. The high priest at Nablus was exiled to Damascus, where the Samaritan leaders came into contact with the Jewish community. The Samaritan scholar Abraham ha-Qabasi wrote a book, *Sayr al Qalb,* containing a second list of the 613 precepts (the number of Pentateuchal commandments based on the numerical value of the word "Torah"), undoubtedly influenced by Jewish scholarship. This was one of the treasures brought back to Nablus in 1538 when the author returned with the high priest. Within a century, the Samaritan community at Damascus had disappeared and the demise of the Egyptian community was not far behind. A mid-16th-century traveller notes that Nablus was *the* city of the Samaritans and that they were located nowhere else in the world. Persecution of non-Muslims continued throughout the century.

Concurrently, European scholars became aware of the Samaritans and their literature. In 1537 Guillaume Postel acquired a Samaritan grammar and included comments on it and the Samaritans in his work *Ce Traite des douze langues,* published the following year. It was the first western information published on the Samaritans since Jerome's prologue to the book of Kings (de Robert 1988; 15–21). By the latter half of the 16th century Joseph Scaliger, a self-taught Semitist, had begun a correspondence with the Samaritan communities at Nablus and Egypt in an attempt to secure a copy of their Pentateuch. In 1584 he did receive some materials including a copy of the Samaritan *Joshua* which had been written in 1362–63 by Abd-el Ghani. He also received letters, some of which arrived after his death, but no copy of the Pentateuch was sent. The Samaritans may have been reluctant to entrust their sacred text to outsiders, although some speculate they were holding out for money or perhaps a text was sent and lost at sea.

The opportunity for Westerners to study the Pentateuch had to await the early 17th century, when Pietro della Valle did find a Pentateuch (von Gall's Codex B, dated 1345/46 C.E.) in Damascus. It arrived in Paris in 1623, where it was studied and published by Jean Morin. Morin remained at the center of all discussion of the Sam. Pent. for three decades, from the arrival of the della Valle codex through its publication in the Paris polyglot of 1645 until the rather incomplete catalogue of Samaritan texts that he published in 1657.

After the publication of the Walton or London polyglot of 1657, a flurry of interest in the Sam. Pent. sent emissaries to the Middle East in search of more copies. Because the Samaritan text seemed to support the Roman Catholic–favored LXX version of the OT against the MT which Jews and Protestants considered the "original" text, an extensive polemical literature developed between Roman Catholics and Protestants. No thorough, systematic examination and comparison of the text was accomplished.

Within a year of the receipt of Codex B in Paris, others began to appear in the British Isles, solicited mainly by Archbishop Usher in his quest for accurate dating of biblical events. He received a total of six pentateuchal manuscripts dating the next decade, of which von Gall's N, dated 1362/63 C.E. is the most easily identifiable.

The Samaritans for their part became confused about the European interest and concluded that a community of Samaritans were living in Europe, particularly in England. A few Englishmen encouraged this delusion as a strategy to elicit more Samaritan writings and as a tool for proselytizing.

When the priestly line of Aaron came to an end in 1623–24, the Samaritans sent two letters to their "brethren" in England hoping to reinstitute the line. Samaritans have given particular importance to the priest, Phineas, who is assumed to be the grandson of Aaron. Since the *Taheb,* or Messiah, was expected to descend from this line, it was urgent that the line not be broken. In practice, the priesthood resorted to the Levitical family.

French scholars used the same deception for similar ends. A fascinating sidelight to the story of French Samaritans is the evidence that there may have been some such presence. Two Arabic Samaritan Pentateuchs completed in 1685 were copied from a text brought to Paris by Capucin "rabbis" in 1684 (Anderson 1978:45).

During the 19th century, European scholars were intrigued with the possible links between the Samaritans and the Karaites, an antirabbinical sect of Judaism that emerged late in the 1st millennium C.E.

Both groups used complex calendars that required specialists to establish the feast days for a particular year, and even the formula for some feasts, like Pentecost, differed from orthodox Judaism. In response to direct questioning the Samaritans affirmed their distinctiveness (de Sacy 1831:52–63). Many of their mutual practices can be traced back to Zadokite traditions at Qumran and may help establish the family tree of a particular style of Judaism.

During the 19th century the Samaritans were denied access to their sacred Mount, their literary efforts had long since dwindled, and in the early 20th century their total population was less than 200. That number has more than doubled with the community equally divided between Nablus and Holon, a suburb of Tel Aviv.

Historical tensions between Rabbinic Judaism and Samaritanism are minimal. Both are heirs of traditions and festivals authorized in the Pentateuch. Samaritans were legally considered a form of Jew during much of the history of occupation in Palestine, and often Samaritan and Jew recognized each other's authorities. Yet Samaritans do not consider themselves Jews and this distinction can be noted in both religious and social practices. They do not celebrate Purim or Hanukkah or the four minor fasts that are rooted elsewhere in Jewish tradition. They are reluctant to marry Jews; although, as a modern expediency, Samaritan men may marry Jewish women. For their part, Jews still have reservations about Samaritans and will not allow Samaritan burials in the Jewish cemetery at Tel Aviv.

D. Literature

1. Pentateuch. Only the Torah is canonized and it is read and revered in all services of worship. The unique artifact of the Samaritan community is the Abisha Scroll, a copy of the Pentateuch, housed in the synagogue at Nablus and attributed to Abisha, the great grandson of Aaron, the brother of Moses. It signifies both the scope and reverence accorded to Samaritan scripture.

About 150 pentateuchal manuscripts survive, some in a fragmentary state. They date from about the 9th century C.E. to the present century, with the largest production coming from the 14th and 15th centuries. The Sam. Pent. evolved somewhat independently from Judaism beginning or following the Hasmonean period (142–53 B.C.E.), although all text types remained quite flexible for at least a couple of centuries as evidenced by the discoveries at Qumran. Samaritan texts reflect awareness of later Jewish versions as well. The major points of explicit and intentional difference between the Samaritan and Jewish Torah relate to the Samaritan concern to establish the priority of Mt. Gerizim, witnessed most dramatically in the addition of the commandment to build an altar at the site (added to Exod 20:17) and the reading of "Gerizim" for "Ebal" at Deut 27:4.

While most of the pentateuchal manuscripts are written in Hebrew, it is not uncommon for Aramaic or Arabic or both to appear in adjoining columns, and there are exclusive Arabic and Aramaic texts.

Attempts have been made to cluster pentateuchal manuscripts into families of texts with sufficient common characteristics to indicate geographical, chronological, or scribal relationship (Anderson 1988). Punctuation, for example, is more likely influenced by geography, while the time period has more effect on the text choices. The majority of manuscripts come from four primary centers: Damascus, Egypt, Shechem, and Zarephath. For further discussion, see SAMARITAN PENTATEUCH.

2. Targum. The *Sam. Tg.* (a paraphrase of the biblical text in the vernacular Aramaic often found in a column paralleling the Hebrew text) offers remarkable parallels to the *Tg. Onq.*. A. Tal has done significant study of the *Sam. Tg.* in several works, including the editing of a critical edition (1980–83).

3. Memar Marqah. This work, "Sayings of Marqah," a series of sermons expressing Samaritan theological beliefs, is attributed to the 3d or 4th century theologian Marqah, but examination of the language betrays several periods of Aramaic linguistic style, and the work was obviously enriched over the centuries. It is divided into six parts. The first five parts expand on biblical stories and develop homilies on biblical verses. The last section is a midrash on the letters of the Hebrew alphabet, though essays on only twelve letters remain. (For a summary of these sections, see Tal 1989:462–65.) Marqah is the most highly venerated of all nonbiblical personages by the Samaritans, and in later tradition he is described as a priest. Macdonald (1963:xvii–xix) notes the assimilation of Christian concepts in Marqah, particularly the attribution to Moses of traits John uses to describe Jesus.

4. Liturgical Works. The earliest part of the liturgy is called the Defter, a collection of Marqah's compositions, hymns composed by his father, Amram Darah, and by his son, Nanah. With subsequent additions, it constitutes the prayer book of the Samaritan community (Tal 1989:450–62). More than one hundred liturgical manuscripts appear in catalogues of various Samaritan collections. They cover a wide range of festivals (Sabbaths, Passover, Unleavened Bread—separated from Passover by the Samaritans—Weeks, Booths, and Atonement) and special occasions such as circumcision, marriage, and burials. Much of every service is devoted to hymns, the longest of which are usually acrostics in which each succeeding verse or stanza begins with the subsequent letter of the Hebrew alphabet. Cowley has written the standard treatment of the liturgy (1909).

5. Asatir. In Islamic times a wide diversity of literature developed. *Al-Asatir* ("Stories") of Moses, an Aramaic work of about the 11th or 12th century C.E., preserves ancient traditional stories paralleled in the OT pseudepigrapha. E. Robertson (1938–62:2. xxxi–xxxii) describes it as a haggadic supplement to the Pentateuch. It was held in high regard by the Samaritans, since they assumed it had been written by Moses. A translation and modern commentary has been published by Z. Ben-Hayyim (1943–44).

6. Joshua. The Samaritan *Book of Joshua,* quite independent of the OT book, was written in Arabic and contains legendary material describing the period from Joshua until the 4th century C.E. Crown (1967) has suggested that the Dosithean sect of the Samaritans had a book of Joshua that is no longer extant, but which may have been included in some part in this extant work during the reconciliation of priestly and lay movements in the late Middle Ages.

7. Chronicles. In Islamic times a wide diversity of literature developed. Chief among them was a series of Chronicles. *Ha-Tolidah* ("Genealogy") was composed in Hebrew in 1346 and contains genealogical lists to the time of the entry into Canaan. Another chronicle, The Shalshalah ("Chain"), is a genealogy of the high priests from Adam to the present, begun by Eleazar ben Phineas and brought up to date by Jacob ben Harun in the 20th century C.E. The *Kitab al-Taʾrikh* ("Annals"), the "great chronicle" composed by Abu'l-Fath in the 14th century is an account from Adam to Muhammad (Stenhouse 1985). For further discussion, see Stenhouse 1989.

8. Chronicle II. Another Chronicle, which Gaster referred to as a continuation of Abu'l Fath, has been described by Macdonald (1969) and Cohen (1981). Apparently originating in the 14th century C.E., it seems to draw on several Jewish writings, possibly even a pre-MT, various Samaritan priestly sources, and the chronicles of Abu'l Fath to create material which is in part parallel to the biblical books of Joshua, Judges, Samuel, Kings, 2 Chronicles, and Psalms. It is quite critical of several biblical heroes, including David, Solomon, and Elijah.

E. Beliefs and Practices

The Samaritan creed has been succinctly stated in letters from the Samaritans to inquiring Western scholars (Montgomery 1907:207):"We say: My faith is in Thee, YHWH; and in Moses son of Amram, Thy servant, and in the Holy Law; and in Mount Gerizim Bethel and in the Day of Vengeance and Recompense."

1. Monotheism. The Samaritan concept of God has shaped itself in the direction of the rigorous monotheism of Islam rather than the dispersal suggested by the Christian Trinity or the emanations of Gnosticism. They borrow the Muslim slogan, "There is no God, but God" for use in their services and writings. *El* or *Elah* is most commonly used for God (akin to Islamic Allah). The tetragrammaton, YHWH, is in regular use. Samaritans, like Jews, avoid making images and are even reluctant to apply the anthropomorphic concept of "Father" to God, whom they see as the ineffable and incorporeal creator and sustainer who has entered into unique covenant with Israel.

2. Torah. Torah, the Law of God, emanates from the divine fire as part of the covenant. Its verses are carved in stone to decorate synagogues, inscribed on amulets for personal protection, and carefully copied by hand on parchment or good paper. Wealthy families owned beautifully hand-printed copies which were passed down through many generations and now reside in the collections of such institutions as the Bibliothèque Nationale, the British Museum, the John Rylands Library at the University of Manchester, and Michigan State University. The practical and legal aspect of Torah has been emphasized to define the

location of the altar and the services to be performed there, elevating its interpreters, the priests, to unique authority.

3. Moses. Moses as mediator of the Torah deserves adoration as the third focus of Samaritan faith. Blessings are offered "in the name of Moses the faithful," the last and most exalted of the prophets. Little is made of his death, but his birth is exalted in a treatise, *Molad Mosheh.* He is depicted as a preexistent primordial light who came to illuminate the world. The restorer who will come as the agent of God will be one like Moses.

4. Mt. Gerizim. The Samaritan version of Moses commanding the building of an altar on Mt. Gerizim (Deut 27:4) is probably earlier than the MT citation of Mt. Ebal. On the other hand, the Samaritans themselves presumably inserted the commandment in the Decalogue (after Ex 20:14 and Deut 5:18) ordering the building of an altar for sacrifice on Mt. Gerizim. It is, in their view, the navel of the world where Abel built the first altar, and where God told Abraham to sacrifice Isaac. The *Memar Marqah* enumerates thirteen honorific names for the mountain. Tradition calls it the oldest and highest mountain in the world, and its peak survived the flood in the time of Noah. Here the Samaritans have built a series of altars and sanctuaries at three major sacred spots and continue to celebrate their festivals. The mutually exclusive claims of Gerizim and Jerusalem define a very tangible distinctive difference between Jew and Samaritan, though some caution against overstating its significance (Purvis 1986:88 and Coggins 1975:113).

5. Day of Vengeance and Recompense. The eschatology of the Samaritans is not unlike that of other heirs of the Israelite tradition. A coming Day of the Lord will be ushered in by a Messiah and characterized by a long period of peace and security before the final end. The Samaritan periodization of the history of salvation includes an Age of Disfavor preceding Moses, an Age of Grace lasting 260 years after Moses, a second Age of Disfavor initiated by the evil priest, Eli, and the New Age of Grace to be initiated by the Messiah. The designation of the Messiah as *Taheb,* a cryptic term, whose role is to be modeled after Deut 18:18, is also unique to the Samaritans.

6. Festivals. The calendar by which the feasts are determined originated with the Jewish calendar. However, it has become so complex through influence of Byzantine and Arab usages that only the priest can calculate the appropriate feast days for any given year. On the Day of Simmuth, 60 days before Passover, each member of the community pays a half shekel and receives the calendar in which the priest has calculated the festivals for the next six months. During the year, the Samaritans celebrate Passover, the Feast of Unleavened Bread, The Feast of Weeks, the Feast of the Seventh Month, Yom Kippur, the Feast of Booths, and "the eighty days of solemn assembly." The Festival of Unleavened Bread, the Feast of Weeks, and the Feast of Booths are celebrated on Mt. Gerizim. Although Passover is distinct from the Feast of Unleavened Bread, the Samaritans remain on the mountain through the days of each.

Regular services of Sabbath are celebrated in the synagogue. On the Day of Atonement, the main festival of the synagogue, the law is read and the Abisha Scroll is displayed for adoration. All services use extensive readings from the Torah, hymns, and prayers.

ROBERT T. ANDERSON

SAMEK. The fifteenth letter of the Hebrew alphabet.

SAMGAR-NEBO (PERSON) [Heb *samgar-nĕbô* (סַמְגַּר־נְבוֹ)]. One of the Babylonian military officers who (along with Nergal-sharezer, Sarsechim the Rabsaris, and Nergal-sharezer the Rabmag) was charged with the disposition of the city of Jerusalem after it had been captured by the Babylonians in 587 B.C. (Jer 39:3). Some perplexities occur in the passage (39:1–13) containing the names of these (and other) officers: the LXX presents a garbled version of the first three vv (LXX Jer 46:1–3), omits vv 4–15, and then resumes the narrative in Jer 52:4–16.

The name of the ranking Babylonian officer, Nabuzaradan, "the captain of the guard," appears four times in the passage and itself presents no difficulties. He functioned as the liaison between King Nebuchadnezzar and the Babylonian forces in Jerusalem, supervising the deportation of Judeans to Babylon, apportioning Judean lands to the indigent, and carrying out royal orders concerning the prophet Jeremiah (39:9–14). However, there are numerous problems associated with the other four Babylonian officers listed in 39:3. Apparently this same group is referred to again in v 13, but there only two officers are mentioned: Nebushazban the Rabsaris (not mentioned in 39:3) and Nergal-sharezer the Rabmag (a name which also occurs twice in 39:3; is it possible that all three occurrences of the name Nergal-sharezer refer to one and the same individual?).

The names Nebu-shazban, Nabu-zaradan, and Nergal-sharezer are all theophoric with a divine name in the initial position. The names Samgar-nebo and Sarsechim are different, however, in that they do not begin with a theophoric element (the god Nebo/Nabû appears in the final position in Samgar-nebo's name). A major problem has been that despite the thousands of Babylonian names known to us, none exhibit any affinity to the Samgar- element in Samgar-nebo's name. A dramatic breakthrough transpired

when E. Ungar (1930:36, 290) pointed out an entry in the court- and state-calendar of Nebuchadnezzar mentioning the name Nergal-šarri-uṣur (Neriglissar) prince of Sin-magir. The name was immediately recognized to be that of Nebuchadnezzar's son-in-law and eventual successor. The province of Sin-magir was identified as being located N of Babylon, an area that was well-known as early as the Isin dynasty (ca. 2100 B.C.). Nergal-šarri-uṣur was identified with Nergal-sharezer in Jer 39:3, and it was suggested (Bewer 1925) that the first name in v 3 should be read "Nergal-sharezer [prince] of Sin-magir, the Rabmag." Bright (*Jeremiah* AB, 243), following Rudolph (*Jeremia* HAT, 208) and appealing to v 13, reconstructs v 3 to read "Nergal-sharezer, lord of Sin-magir, the Rab-mag; Nabushazban the Rab-saris." Thus, the first element in the name Samgar-nebo is seen to contain an actual reference to the province of Sin-magir (Akk *simmāgir*), while the theophoric element and the next name *(nbwśrskym)*—which may be a corruption of *nĕbûšazbān śar sāsîs,* "Nabushazban the Sar[variant of Rab]-saris"—as well as the second reference to Nergal-sharezer, are essentially deleted. Another approach is to read *nbwśrskym* as another proper name, Nebusarsekin. Of course, all proposed emendations can be rejected in toto, and one can hope that future discoveries will help to clarify the serious difficulties that remain in Jer 39:3.

EDWARD R. DALGLISH

SAMLAH (PERSON) [Heb *śamlâ* (שַׂמְלָה)]. The sixth ruler mentioned in the Edomite king list, Gen 36:31–39 (v 36; also 1 Chr 1:47). Opinions vary concerning the date of this list. Suggestions range from the 11th century B.C. (Weippert 1982:155) through the 8th to 6th centuries B.C. (Bennett 1983:16) to the 6th/5th centuries B.C. (Knauf 1985). Scholars tend to agree, however, that the succession scheme of this list is artificial, and that, in all likelihood, the rulers mentioned were contemporaries (Bartlett 1972:27; Weippert 1982:155). The name has parallels in ancient N Arabian epigraphy, in classical and contemporary Arabic. It may signify "cloak" (Arabic *šamlah*). If the consonants alone are taken into account, the name can also be derived from **Śām›allāh,* "The God has placed" (Knauf 1985:248). Because of the form *›al-* for the definite article, Samlah would then represent one of the earliest attestations for Nabateans in Edom. Samlah's place or region of origin, Masrekah, cannot be identified.

ERNST AXEL KNAUF

SAMMUNIYEH, KHIRBET. See SHIMRON (PLACE).

SAMOS (PLACE) [Gk *Samos* (Σαμος)]. One of the most important islands of the Aegean, located one mile from the W shore of Asia Minor (modern Turkey) SW of Ephesus and NW of Miletus (37°45′N; 26°49′E). Samos is a mountainous island, hence its name, which means "height" or "mountain"; it is 14 miles in width and 27 miles long.

Samos is mentioned in 1 Macc 15:23 as one of the recipients of a letter sent by the Roman consul Lucius. The passage in 1 Maccabees records a letter, which instructed rulers of various regions to treat the Jews with favor. This request was prompted by the gift of a shield made from 1,000 minas (1 mina equals about 1.25 pounds) of gold which the Jewish ambassadors brought to the Roman ruler. The inclusion of Samos on this list attests to its large population of Jews during the 2d century B.C.

Paul, after visiting Macedonia, traveled to Troas and then went cross-country to Assos. There he joined his companions on the ship and sailed S to Chios and Samos, eventually traveling on to Jerusalem. It was common for ships to overnight at convenient harbors and set sail early in the morning to take advantage of favorable morning winds. The ship carrying Paul during his third missionary journey may have "touched

at" Samos and anchored there overnight (as in the RSV), or perhaps the vessel "came near" to the island and set anchor at the nearby promontory of Trogylium (Acts 20:15). The confusion comes from variant textual evidence, but the earliest manuscripts omit the phrase "and having remained in Trogylium" (cf. KJV). This phrase may have been added to the later texts as gloss to explain the Greek word *paraballo,* which technically means "to touch land" and therefore does not require the ship to make an actual landing.

Samos was inhabited in the Early Bronze Age by the Late Mycenaeans. The Ionians established settlements on the island during the early Iron Age. Samos was a great naval power and established several colonies throughout the Mediterranean, including Dicaearchia (Puteoli) in Italy, and Zanucle (Messana) in Sicily. During the 6th century B.C., the island was ruled by tyrants, of which the most powerful was Polycrates, whose death is recorded by Herodotus (3.39ff.). Samos participated in the Ionian rebellion and joined the Athenian League after the Greeks defeated the Persian fleet at the Battle of Mycale, which was fought in the narrow strait that separates Samos from Ionia (Hdt. 9.100ff.). Samos was a loyal ally of Athens for many years.

During the First Mithridates War, Samos joined the rebellion against Rome and at the conclusion of that uprising in 84 B.C., Rome joined the island to the province of Asia.

Samos became prosperous due to the benefits of Cicero, and through its one-time residents, Antony and Cleopatra. Later, Augustus made the island a free state (Dio Cassius 54.9; Pliny *HN* 5.37). Both Herod and Marcus Agrippa visited the island and gave many gifts to the inhabitants (Josephus *Ant* 16.2.2; *JW* 1.21.11).

Samos, the chief cultural center for Ionia, was the home of the famous moralist Aesop and the philosopher Pythagoras. Samos also had the largest temple of its day (built in 569 B.C.)—an Ionic style building which was dedicated to Hera (Hdt. 3.60; Paus. 7.4). This temple was located in the capital city of the island, which was also known as Samos.

JOHN D. WINELAND

SAMOTHRACE (PLACE) [Gk *Samothrąkē* (Σαμοθρᾳκη)]. A small island located in the NE Aegean Sea (40°27´N; 25°32´E). It lies approximately 20 miles S of Thrace (Samos of Thrace, or the Thracian Samos) on a sea route between Macedonia and the Hellespont (Dardanelles) in Asia Minor. The name Samos, meaning "height" or "mountain," reflects its mountainous topography. With a summit more than one mile above sea level, Samothrace represents the highest point on all of the Aegean Islands. It is in view of the Trojan coast and represents the most conspicuous landmark for ships on the sea route. In the *Iliad* (13.12), Homer called Samothrace Poseidon's island, because Poseidon surveyed the plains of Troy from the top of its mountains.

Few people lived on the island before the 7th century B.C. During Greek and Roman history, Samothrace remained relatively insignificant, probably due to its rugged coastline and lack of a satisfactory harbor. In 190 B.C., Samothrace became independent after the Romans defeated Antiochus the Great at Magnesia (1 Macc 15:23). The island later came under Roman rule in 133 B.C., though Romans permitted autonomy on Samothrace after 19 B.C.

Although unsuitable as a trade center, ships would anchor on the N shore of Samothrace near a town by the same name. The mountains provided a relatively safe place to shelter ships at night from SE winds, and ancient sailors preferred to anchor overnight when convenient or possible. The mountains also made it possible to locate Samothrace easily from sea. Consequently, the N shore of the island became an anchorage for many ships.

After receiving the vision of a man beckoning to him from Macedonia, Paul left Troas in order to set sail for Europe across the Aegean Sea (Acts 16:9–10). With the benefit of good wind conditions, Paul sailed as far as Samothrace on the first of a two-day voyage (Acts 16:11). The ship undoubtedly anchored on the N shore of the island before continuing to Neapolis, the port of Philippi (Acts 16:12). There is no record of Paul going ashore at Samothrace, though some speculate that he did during a later voyage E which took several days longer to complete (Acts 20:6).

In the ancient world, Samothrace was best known as a center for the worship of the pre-Greek deities known as the Cabiri. The Cabiri were twin fertility gods, possibly of Phrygian or Phoenician origin. The gods were supposed to protect people in danger, particularly at sea. Many sailors revered them as navigational guides and protectors. Thus, Samothrace became a center of worship for this mystery cult, which involved an initiation ritual to secure the favor of the gods for this life and the next. Philip of Macedon and Olympias his wife, the parents of Alexander the Great, became initiates on the island. The popularity of the Cabiri rivaled the cults of Demeter and Persephone at Eleusis, which represented the principal religious mysteries of ancient Greece. Upon receiving financial support from Macedonian and Egyptian kings, the people of Samothrace built magnificent buildings and monuments to their gods.

Beginning in the 19th century, archaeologists excavated a number of buildings, including a sanctuary for the gods and the largest round classical building before Hadrian's pantheon in Rome. In the Nike Fountain was found the *Winged Victory,* also called *Nike of Samothrace,* a statue probably built to commemorate a naval victory by the Rhodians in ca. 190 B.C. Today the statue is displayed prominently in the Louvre and considered one of the greatest Greek sculptures.

SAMPSAMES (PLACE) [Gk *Sampsamēs* (Σαμψαμης)]. One of the cities in the area of Asia Minor to which the Roman consul Lucius wrote a letter in support of the interests of the Hasmonean kingdom under Simon (1 Macc 15:23). The name Sampsames is unknown and probably corrupt (unfamiliar names lead to scribal confusion; most of the geographical names in chap. 15 are otherwise unknown). It might perhaps be identified with Samsun (41°17´N; 36°22´E), a port city on the Black Sea in modern Turkey. Samsun is built on the ancient Hellenistic city of Amisus, a trading port of the independent kingdom of Pontus. It was a large and wealthy city, and therefore possibly able to influence foreign policy as regarded the fledgling Hasmonean kingdom over against the disintegrating Seleucid empire. Another possible identification might be the city of Samosata (37°31´N; 38°30´E), to the N of Edessa, again part of the kingdom of Pontus. However, the location of Sampsames has not yet been satisfactorily identified.

SAMRA, KHIRBET ES- (M.R. 221086). The Arabic name means "The Black Ruin," as does the site's less common name, Kh. es-Sauda. A third name is sometimes used: Qala‘at es-Samra, "The Black Castle." This site should not be confused with Kh. es-Samra in Judah (M.R. 187125). See SECACAH. The site is in fact built of black basalt, which gives the area a somber look. The ruin was often visited by those who were following the Roman road *(Via Nova Trajana).* M. Germer-Durand (1902) identified it with Hatita, mentioned on the *Tabula Peutingeriana,* and H. C. Butler (1904) identified it with Gadda, listed in the *Notitia Dignitatum* (where Hatita is also referred to as Aditha). The distances between the sites, compared with the Roman miles written on the *Tabula Peutingeriana,* favor Hatita, while a Greek inscription recently found near the site features the Greek form *Adeitha*.

The basalt outcrop on which Samra is situated stands 15 m above the bend of a little wadi. The site measures only 200 × 250 m. Without springs and enjoying only a light rainfall, it was habitable because of the construction of large cisterns, aqueducts, and birkeh (pools), one of which, 1 km from the site, measures 50 × 50 m. Owing to the scarcity of water and the poverty of the soil, agriculture was neither prosperous nor sufficient. The economy had to rely upon other factors. The remains, which have been seriously damaged by robbery, present a close network of structures relatively well organized. The École Biblique et Archéologique de Jérusalem has excavated there since 1981 under the direction of J.-B. Humbert.

This site, which could not subsist on agriculture, obtained its livelihood as a staging post on the caravan route linking the Red Sea with the rich cities of Syria (Palmyra). In addition, its position on the edge of the desert made it a junction between the Decapolis and routes passing up the Wadi Sirhan to Arabia. At first a Nabatean post halfway between Philadelphia (Amman) and Bostra, Samra became a strategic point

on the great road which the Romans built after annexing the province in A.D. 106 and was eventually integrated into the *limes Arabicus.* Under Diocletian (ca. 300) the Nabatean guard post was replaced with a fortress. Measuring 60 × 60 m, it has towers at each corner and in the center of each side. The main gate on the E side was flanked by two towers and permitted the passage of vehicles. The building was restored under Valentinian, Valens, and Gratian (Latin inscription ca. A.D. 375), but was abandoned in the Byzantine period and given over to domestic use. Eventually, the little town was surrounded by a wall.

It is difficult to know how the town which grew up around the fort became Christian. The seven churches excavated could have been built under Justinian or just after his reign (A.D. 565), when Bostra and its district were undergoing extensive redevelopment. The mosaic floors were laid when the buildings were being reconstructed, which the inscriptions date ca. 630/640. This is, of course, when Islam was sweeping through the region. The mosaics were defaced by iconoclasts, but it is noteworthy that the sanctuaries remained in use almost until the end of the Ummayad period (750).

The special interest of Samra lies, however, in its cemetery. Cemeteries from this period are rare (Umm el-Jimal, Kerak) and Samra is the only one to yield monuments written in Syro-Palestinian. These testify to the existence of a community speaking this language, which is Palestinian in origin and written in a script derived from the Syrian Estrangelo of Mesopotamia. The translation of the Bible into Syro-Palestinian was made by Christians of the Chalcedonian faith who firmly opposed the Monophysites of Syria. The cemetery was first non-Christian and had gravestones in Greek (notable is one for a veteran of the Roman army at the end of the 4th century). It then became overwhelmingly Christian, as indicated by more than 600 rough stones and simple slabs which have been found engraved with crosses of various styles. About 100 stones bear the name of the deceased in Greek or Syro-Palestinian. The list of names is extremely varied: there are those of the local (pagan) stock with Nabatean, Palmyrene, and Arab names; there are names which show acquaintance with the Old and New Testaments, and there are a few Latin names. That these varied cultures should be found in such an association may be explained by the need for soldiers, merchants, and missionaries to use the main route from inland Syria to Aqaba.

After destructions caused by repeated earthquakes and the ravages of plague throughout the 8th century, Samra was completely abandoned before 800.

A. Introduction

Judges 13–16 records the story of Samson, a *šōpeṭ* (warrior-deliverer) from the tribe of Dan. Samson's heroic exploits approximate a private vendetta against the Philistines, arising from his amorous adventures with three women. The narrative, however, interprets these incidents as motivated by a religious factor, God's desire to vex the uncircumcised neighbors of the Danite clan. Samson's erotic liaisons with foreign women led to his enslavement and eventual death by his own hands.

The name Samson appears to be a diminutive form of *šemeš* (sun), hence "little sun." Various features of the story suggest a connection at some stage with solar worship: e.g., *Šamaš* the sun god; the city Beth-

shemesh (lit. "house/temple of the sun [god]"); the blinding of Samson, analogous to a solar eclipse; the similarity between Delilah's name and the Hebrew word for night *(laylâ).* The prominence of fire in the episodes further strengthens the hypothesis of solar mythology, as does the incident of the foxes, which recalls a ritual for preventing mildew reported to have taken place during the Roman festival of Cerealia.

The present form of the story resembles a saga, which recounts the amazing deeds of a single individual, exploits that greatly affected the course of events for the Danites. Its component parts, although unrelated, mesh nicely, largely the result of the overarching Deuteronomistic framework and two themes: Samson's inability to guard the secret of his strength and his failure to keep the Nazirite vow, imposed on him by divine mediation and reinforced by his mother, throw into focus the Deuteronomistic conviction that disobedience brings certain retaliation from on high (see, e.g., Boling *Judges* AB, 252f.).

The narrative draws on literary conventions that find expression in various parts of the canon. Its motifs appear also in the Torah, Prophets, Writings, and the Deuterocanon. Moreover, the story weaves an intricate tapestry from separate strands of Hebrew rhetoric. Familiar themes, motifs, and rhetoric unit in a suspense-filled tale about squandered potential. The mighty Samson fell victim to his own fascination for foreign women; his plight provided a lesson very much needed in Israelite society, which harbored exclusive ideas about pure religion.

Christian interpretation of this story quickly recognized some startling similarities between Samson and Jesus, despite significant differences. Resemblances between Samson and Heracles also occasioned comment. In the 17th century John Milton reinterpreted the Samson narrative as an epic psychological and spiritual struggle against primal evil. Artists, musicians, and poets testify to the emotive power of the biblical story about Samson, and the movie industry has exploited is sexual features.

B. Literary Components of the Narrative

The Samson narrative features prayers, etiologies, victory songs, riddles, heroic deeds, a birth story, and a recognition account. Elements such as these originated in oral tradition and circulated for a considerable time before being incorporated into the Deuteronomistic rendering of Israel's early existence. At least one item in the account, the riddles, may antedate inclusion in the story of Samson's wager on the occasion of his wedding at Timnah.

Three prayers rise to heaven in the raucous story, one generated by Manoah, Samson's father, and the other two by the warrior-judge in dire circumstances. Although the divine messenger gave clear and specific instructions to Samson's mother about her diet prior to his birth and about the intended life-style for her son, Manoah entreats the deity to return and instruct both parents on the rearing of their child. "O Lord, let the man of God whom you sent come again to us and teach us what we ought to do for the boy who will be born" (13:8). The verb that describes Manoah's actions belongs in cultic contexts. No such language escapes Samson's lips, nor does the narrator introduce the vocabulary of the cult when describing the fervent requests of a weakened fighter. An exceedingly thirsty Samson calls on the Lord as follows: "You have given this great victory into the power of your servant, but now I am about to die with thirst, and I shall fall into the grasp of the uncircumcised" (15:18). Samson's penultimate words address the Lord in a similar manner: "O Lord God, remember me, I pray, and strengthen me just this time, O God, that I may avenge myself a vengeance from the Philistines for one of my two eyes" (16:28). The narrative emphasizes the deity's readiness to answer prayer, even prayer inspired by selfish motives.

Samson's initial prayer occurs in the context of two topographical etiologies. One explains the origin of the name Partridge Spring (En-hakkore), the other identifies the locale in which Samson used an unconventional weapon against some Philistines (Ramath-lehi). In all probability, the name "Spring of the Caller" is secondary, and the original sense of calling had nothing to do with humans or prayer. The usual formula for an etiology occurs here: "Therefore its name was called … which is at … until this day" (15:19). This formula does not appear with the other etiology in the Samson narrative. In this instance certain features of the hill probably resembled the jawbone of an ass (15:17).

Two victory songs stand in juxtaposition, one celebrating the slaughter of Samson's enemies and the other praising the god Dagon for delivering Samson into the hands of the Philistines. After slaying a thousand enemies Samson announces—he does not sing (*ʿanah* or *šir*) like Miriam and Moses—that

"With the jawbone of the ass, ass upon asses, with the jawbone of the ass, I have slain a thousand men" (15:16). Nine words suffice for Samson (actually five, since the word for "ass" occurs four times and "jawbone" twice). The Philistine victory song excels in repetition of a single sound, the first person plural ending *-ēnû* punctuating the joyous shout eight times. "*Our* god has given into *our* control Samson *our* enemy … *Our* god has given *our* enemy into *our* grasp, and the ravager of *our* land, who has killed many *of us*" (16:23b, 24b).

Samson's song breathes the spirit of braggadocio, whereas the Philistine song acknowledges a higher power as vanquisher. The Israelite hero attributes the victory to himself, despite his innate strength and a handy weapon. The Philistines obtained their foe through bribery and deceit, but in a solemn assembly they acknowledge divine assistance.

Samson's victory over a young lion and subsequent discovery of honey in its carcass provided private information that he used to formulate a six-word riddle on the occasion of his wedding to the beautiful Timnite woman: "Food came from the eater; sweetness came from strength" (14:14). Four cipher words furnish a clue for opening the riddle: food, eater, sweetness, strength. Only one word lacks initial *m*, the twice-used verb *yāṣā*ʾ. The Philistine's response, acquired through threat of death from Samson's bride, takes riddle form: "What is sweeter than honey, and what is stronger than a lion?" (14:18a). Like Samson's riddle, this one has only six words, five of which begin with the letter *m*. The only exception derives from his riddle (*ʿaz*, strength). The parallelism in Samson's riddle is synonymous, but the response has ascending parallelism. Samson's closing retort includes a riddle-like accusation: "Had you not plowed with my heifer, you would not have found out my riddle" (14:18b). The metaphor of plowing, widely used for sexual experience in the ANE, seems here to have a more general sense of exploiting someone's vulnerability.

Riddles often have several answers, and Samson's may actually have antedated its incorporation in the Samson narrative (Gunkel 1913). It could have described an erotic relationship between "eater" and the "eaten," sweetness and strength, with reference to both sexes as eater, strong, and eaten. Alternatively, the riddle could allude to soldiers' gorging themselves on delicacies at the wedding until they vomit.

The heart of the story consists of five heroic exploits perpetrated on the Philistines, the first one resulting from the lost wager. Bristling from the thought that his bride has betrayed his trust, Samson kills thirty hapless citizens from Ashkelon and removes the clothes from their corpses to pay his wager (14:19).

Later in a fit of rage over being denied admission to see his bride, who has been given to his best man, Samson catches three hundred foxes, ties their tails together, sets them on fire, and turns the frightened animals loose in the grainfields of the Philistines (15:4–5).

One grievance leads to another, steadily escalating in magnitude. The aggrieved Philistines pursue Samson, whose flight into the land of Judah endangers this tribe and prompts them to bind him for his pursuers. Snapping the ropes, he grabs an ass's jawbone and kills a thousand of his pursuers (15:9–17).

Seeking respite from his hostile engagements, he visits a prostitute for a different kind of game. Somehow, news of his whereabouts reaches the citizens of Gaza, who stealthily surround her house and lie in wait, anticipating the emergence of an exhausted Samson after a full night of loveplay. Their intended victim departs unexpectedly, tearing down the door to the city and ripping up its posts, depositing door and posts near Hebron far away in the hill-country (16:1–3).

His final heroic exploit wipes out more than three thousand mocking Philistines, but Samson also dies in the process. Called to make sport at a celebration honoring Dagon, Samson invokes divine remembrance in order to heap revenge on the people who had put out his eyes. Then he pulls down the two columns supporting the weight of the sacred edifice, filled with jubilant worshippers (16:23–30).

Only two of these exploits (14:19; 15:14) are attributed to the power of the spirit, and they involve the killing of Philistines. The final episode (16:28) *implies* special power external to Samson, the gift of prayer. It follows that only two episodes, those involving foxes and Gaza's gate, accord with the understanding of Samson's strength as a permanent possession dependent on keeping the Nazirite vow.

Such a view of his strength resides in the story of his unusual birth. An angel appears to Samson's barren mother and informs her that she will give birth to a wondrous son (13:3–5). Both she and the son must abstain from strong drink, according to the divine messenger, and the boy will be a Nazirite from birth.

This birth announcement stands alongside a recognition story in which the messenger conceals its identity until Manoah demonstrates worthiness. The return of the messenger, a response to prayer, implies divine acceptance of the childless couple. The angel's subtle hint as to its true identity evokes mystery, recalling a divine epithet about the one who does wonders (13:19). Manoah perceives the secret, offers an appropriate sacrifice, and cowers in terror as the visitor departs in the flame. A perceptive wife, however, calms her husband's fears. Her intuition tells her what Manoah must learn through question and answer.

C. Motifs

Several motifs occur in the Samson narrative: a barren wife who gives birth; a helpless hero in the power of a woman; a quest for the deity's name; a hero's death wish; loss of charisma; and terror in the presence of theophany. The author varies the motifs, selecting only individual elements that contribute to the total purpose of the story. A religious ethos permeates most of these subplots.

Like her predecessor Sarah, Manoah's wife received a divine visitor who communicated news of a forthcoming birth. Unlike Sarah, she was still capable of giving birth, hence her response was thoughtful silence rather than disbelieving laughter. Sarah's husband repeatedly asked for a son, whom God had already promised, but no such request from either Manoah or his wife surfaces in this story. Missing also is any allusion to mockery of the barren woman by a rival wife, which occurs elsewhere in tales about Rachel and Hannah. Neither of these women learned of her pregnancy from a divine messenger, although Hannah heard from the priest Eli that God had responded favorably to her fervent request for a son. The NT accounts of Elizabeth and Mary alter the components of the motif radically, particularly the latter, which involves an unmarried woman. Manoah's wife alone received two visits from an angel.

The story about a mighty hero falling helpless before a designing woman takes place in several biblical narratives. The Canaanite warrior, Sisera, succumbed to the treacherous hands of Jael, wife of Heber the Kenite (Judges 4–5). Another foreigner, Haman, paid at Esther's hands for plotting to eradicate the Jewish population in Persian captivity (Esther) and Holofernes lost his head to the lovely but merciless Judith (Judith). In all these instances the women feigned friendship or love, and the hero let down his guard and forfeited his life. Lust dominated in the episode involving Holofernes and possibly in the story of Haman, although both he and Sisera had less cause to abandon suspicion. In Samson's case, tearful imploring led him to reveal vital information that set into motion his conflicts with the Philistines and eventually led to his capture and eventual death. Delilah's teasing adds a new dimension to this motif.

Because knowledge of a deity's name was thought to convey power over that god in the ancient world, such information was guarded closely. At times a hostile deity begrudgingly provided a name to a persistent combatant, and at other times a willing deity nevertheless was evasive. Jacob used his own changed name (Israel) to conclude that he had striven with God, hence the deity's essence is striving and the place is Peniel. Moses received enough hints in the name "I am who I am" to conclude that the use of the Tetragrammaton, YHWH, was being avoided. Manoah gained vital knowledge about "one who does wonders," a clue that came amid faltering syntax but that resulted in a worthy counter-clue that echoed Manoah's own name (v 19, *minḥâ;* "cereal offering").

The death wishes of Elijah, Jonah, Tobit, and Sarah (Tobias' future wife) came when they found themselves in miserable circumstances, like Samson's captive existence without sight. All of them, including Samson (16:30), requested death from God, and three of them chose to live longer after listening to divine arguments. Jonah sat and waited for Nineveh to disintegrate before his eyes, and the story leaves him there. Both Tobit and Sarah obtained vindication for the loss of sight and honor. Neither Elijah nor Samson enjoyed public exoneration. The prophet anointed a successor and journeyed into the heavens, borne on a fiery chariot, according to tradition. Samson fell under the debris of a crowded temple.

Pro-Davidic circles interpreted Saul's collapse as loss of charisma, despite similarities with David's own fall from favor. In this account, the hero betrayed his high calling, prompting God to withdraw the blessing that accompanied his special vocation. That departure of favor opened the door to adversity, which stalked Saul until his enemies destroyed Israel's first king. Samson, too, turned his back on the Nazirite profession, treating it lightly when gathering honey from the carcass of a lion and when selecting the jawbone of an ass as a weapon. His behavior at the wedding may also have involved use of strong drink, but that is not explicitly stated. Clearly, he toyed with cutting his hair until it became reality (16:6–19). At that point loss of charisma took place, for Yahweh's spirit departed, at least temporarily (vv 20–22).

Whenever the deity manifested itself in the OT, humans naturally reacted with appropriate dread. Jacob expressed astonishment over seeing God and surviving; Moses stood in awe, barefoot and stammering; and Isaiah experienced *mysterium tremendum et fascinans.* Notably, Samson felt no such terror before anyone. His father and mother knew terror before God's emissary, having to muster their confidence in the presence of a perceived danger from a holy one.

D. Rhetorical Features

The Samson narrative uses many different kinds of rhetorical devices: anticipation and repetition, retardation and restraint, assonance, contrast, double entendre, humor, hyperbole, dialogue and monologue, suspense. The narrator looked forward to coming attractions and glanced backward at what had already taken place; slackened the pace of the story and heightened suspense; invoked laughter and tears, both from the sublime and the ridiculous; painted contrasting pictures; achieve intimacy by dialogue and distance by monologue.

The story opens in the context of Israel's surrender to the power of the Philistines and an envisioned emancipation as a result of Samson's actions. The identity of the divine visitor is intuited and subsequently disclosed, and Delilah's gradual mastery of her lover anticipates the departure of the spirit of the Lord. Even a sparse reference to the renewed growth of Samson's hair promises ill for the uncircumcised. Normally, anticipation serves to hasten the flow of the narrative while repetition serves to slow it down. The angel's instructions to Manoah's wife occur twice, the second time on her lips and with significant variation (as in Eve's report on the initial divine prohibition in Gen 3:3). Often the repetition consists of a refrain or a formula, although slight changes occur from time to time. The episode with Delilah contains several repetends concerning the source of Samson's strength and the way to conquer him, the consequences of such victory over him, the proximity of the Philistines in another room and the announcement that they were attacking him, the reiteration that the source of his strength still remains unknown, and the declaration that Samson told her all his mind. The language of enticement, vexing, and ignorance spans the whole story.

Several observations function to slow down the story to a crawl or to relieve tension at crucial junctures: the narrator's comment that Manoah did not know the identity of the angel (13:16), the remark that Samson's parents did not recognize Yahweh's hand in Samson's fascination with the Timnite beauty (14:4), the reminder that young men used to celebrate differently during weddings (14:10), and the identification of two sites in the story as currently locatable (15:17, 19). The pace is virtually suspended in air by the twice-mentioned report that Manoah and his wife watched the angel vanish in fire.

Wordplays abound in the story: e.g., puns on the Hebrew word for "ass"; clever plays on sibilants *(wayya‹as šam šimšon mišteh);* frequent initial *mem*s; and puns on "thirst" and "find" *(wayyimṣa›; wayyiṣma›; baṣṣama›).* "Philistines" and "I shall fall" *(pilištîm; wĕnapaltî)* as well as rare rhymes indicate that the narrator appreciated the niceties of language.

Contrast contributes to the delineation of character. Pairings such as love and hate, friend and foe, strength and weakness, knowledge and ignorance, joy and sorrow fill the narrative. The verbs *yārad* (to go down) and *‹ālāh* (to go up) feature prominently in the story, giving the words symbolic weight. As the flame and angel ascend to heaven, Manoah and his wife fall to the ground. The transcendent and the merely human are thereby effectively distinguished.

Certain expressions in the narrative are filled with implication for the future. For example, the word *yaḥel* (to begin) occurs four times in crucial contexts, each time with a different infinitival object: Samson will begin to deliver Israel (13:5), the divine spirit began to stir the lad (13:25), Delilah began to afflict her lover (16:19), and his hair began to grow back (16:22). Only the second and third activities referred to by the verb *yaḥel* actually come to completion: the lad was certainly stirred up, and Delilah afflicted Samson mightily. The first and last activities do not reach successful conclusion, i.e., Samson does not deliver Israel from the Philistines and his hair does not grow back to full length.

Identifying humor in ancient texts proves difficult, but some features of the Samson narrative must surely have evoked raucous laughter. Samson's method of starting a fire (15:4) and his postcoital activity (16:3) fall into this category, as does, perhaps, the side trip to visit the carcass of a lion while on his way to marry the Timnite woman (14:8).

The story has hyperbole from start to finish. Exaggeration of numbers, distances, and deeds takes place, for anything can happen in legends. The heightening of numbers (thirty Ashkelonites, three hundred foxes, a thousand Philistines, three thousand Judahites, three thousand-plus Philistines) lends suspense, turning Samson into a hero of magnificent proportions and thus magnifying even more his eventual fall to a woman.

Lively dialogue provides balance for the violent activity reported in the story. The conversation, always brief and to the point, offers characterization and brings readers more directly into the movement of the story. A woman talks to an angel, a man to his wife, parents to their son, lover to lover, enemy to enemy, Judahite to Danite, Samson to God, a prisoner to his youthful servant. In the story monologue inevitably aborts. Samson expressed his intention to visit his bride, to get one final revenge and quit, and to shake off his ropes and go out as usual. Similarly, the Gazites uttered a collective monologue ("At the crack of dawn we will kill him") that failed to materialize.

The episode with Delilah is full of suspense, whether by use of the refrain ("The Philistines are upon you, Samson") or by the gradual disclosure of Samson's vital secret. The allusion to the beginning of the regrowth of Samson's hair creates eager expectation, a suspense-creator that the narrator for some reason failed to follow up.

E. Function of the Story

The powerful story about a secret betrayed and a vow ignored addressed a difficult problem in Israelite society: the attraction to foreign women. Early proverbs in Egypt and in Israel attest to the desirability of foreigners, whose ways were different and whose sexual appeal was great. The Samson narrative juxtaposes an ideal Israelite wife (and mother) with three foreign women: the beautiful Timnite represents an erotic attachment based on physical attraction, the harlot illustrates a detached type of sexual relief; and Delilah depicts the dangers of unreciprocated love. Samson's inability to emerge unscathed from such liaisons stood as a warning for lesser beings. The message could scarcely be missed: if the mighty Samson could not manage relationships with foreign women how could ordinary Israelites succeed in such ventures? The attraction of exogamy persisted as late as the Exile, making the Samson story timely long after its original composition.

F. Postcanonical Readings of the Story

Josephus (*Ant* 5.8) embellished the account by commenting on the beauty of Manoah's wife and introducing the theme of jealousy. This Jewish historian also toned down Samson's waywardness by having him stay at an inn in Gaza. The early Church described Samson as a saint, despite his pride, immoral conduct, and suicide. Resemblances with Christ occurred to some interpreters: both had wondrous births; both freed Israel; both defeated a lion (in Jesus' case, Satan); the spirit departed from both; each struggled alone and succumbed to foes as a result of a bribe; both were bound; both broke down gates (Jesus destroyed the gates of hell); both achieved victory in death.

Milton's *Samson Agonistes*, an autobiographical epic treatment of primal temptation, transforms the hero into a thinker. Milton freely adapts the plot, having Manoah and Delilah confront the enslaved Samson, introducing a champion of the Philistines, Harapha, and adding a chorus and public messenger. Samson defends God's justice and grieves over the dishonor he brought to the Lord. Manoah questions

answered prayer, which had reversed the role of father and son, making the old father look after his son, but he will gladly hand over his possessions to obtain his son's release. Delilah tries various ploys to get Samson back, defending her actions as (1) natural feminine curiosity and weakness; (2) an attempt to keep him at home; (3) love for State and God; and (4) love for Samson. Harapha, no match for Samson, accuses him of murder, theft, and betrayal of country. In Milton's eyes, Samson suffers faithfully in a battle with Dagon, achieving catharsis. Samson symbolizes everyone's struggle against sin and ultimate victory; his defeat was only a temporary tragedy of spiritual suffering resulting from failure in a high calling.

JAMES L. CRENSHAW

SAMSON, WIFE OF. Samson's determination to marry a Philistine woman from Timnah is surprising in view of his mission—to deliver Israel from Philistine oppression (13:5). Samson's parents object (14:1–3), but unknown to Samson or his parents, it is all part of the divine plan (14:4). The fact that the Danite Samson can marry a Philistine suggests that the Israelites and Philistines managed to live side by side in the Shephelah with some measure of harmony; his parents' objection to the marriage and its disastrous consequences (Judges 14–15) illustrate the extent of hostilities between the two peoples.

The Bible does not record the woman's name. The story of Samson and the Timnite (14:1–15:8) is modeled on the account of Samson and Delilah (16:4–22). In both accounts the Philistines rely on a woman's help to discover Samson's secret: in 16:4–22 the source of his great strength; in 14:15–18 the answer to his riddle. Whereas they bribe Delilah (16:5), they threaten the Timnite (14:15). Both women wear down Samson's resistance by harassing him (14:17; 16:16); the Timnite relies on tears whereas Delilah uses words. Both use love to cajole Samson into revealing his secret (14:16; 16:15).

When Samson, having been outwitted by the Philistines, angrily returns to his father's house, his father-in-law apparently takes it as a sign that Samson has renounced any claim to his daughter, and the Timnite becomes the best man's wife. Thus when Samson reappears, the woman is denied to him (15:1–2). Reprisals and counter-reprisals in chap. 15 allow Samson to wreak more havoc among the Philistines, thereby fulfilling God's purpose (14:4). The Timnite is a victim of their hostility. The threat she sought to avert by revealing the answer to Samson's riddle comes to pass: the Philistines "burned her and her father with fire" (15:6).

J. CHERYL EXUM

SAMU◦, ES-. See ESHTEMOA (PLACE).

SAMUEL (PERSON) [Heb *šĕmû◦ēl* (שְׁמוּאֵל)]. The Hebrew Bible portrays Samuel in a variety of roles: priest, prophet, judge, and "seer." Moreover, at a critical juncture in the history of the Israelite people, Samuel appears very instrumental in the establishment of the monarchy. In the words of one writer, "all the great predicates which Israel had to bestow in the period before the growth of the

monarchy have been heaped on this man—and in spite of this, or more accurately, because of this, it is difficult to classify the historical Samuel." (Möhlenbrink 1940–41:65; cf. Weiser 1962:93–94).

A. Historical Studies

The first block of material relating to Samuel (1 Samuel 1–3) portrays him as an aspiring priest (note 1 Chronicles 6 connects his lineage with Levi; 1 Samuel 1 with Ephraim), serving under Eli at the sanctuary of Shiloh (1 Sam 2:11, 18; 3:1). Later passages in 1 Samuel report his performing sacrificial functions often associated with priests (7:9; 9:13; 10:8; 16:1–5). The stories of young Samuel are commonly classified as legend or idyll, and Samuel's associations with the priesthood have been widely questioned (Press 1938:222–23; Wildberger 1957:462; Cody 1969:72–80; for a different view, see Willis 1972). The biblical text never applies the label "priest" to Samuel. At the time of Samuel, the offering of sacrifices did not require that one be a priest (*AncIsr*, 355). After the ark of the covenant was captured and the shrine of Shiloh apparently destroyed by the Philistines (cf. 1 Samuel 4) there is no report that Samuel sought to rebuild Shiloh or restore the ark of the covenant to a prominent position in Israelite cultic life, or that he moved to the sanctuary at Nob, as did other priests from Shiloh (cf. 1 Sam 14:3; 22:11–12). It is quite conceivable that, at a time when levitic ancestry was not a prerequisite for priestly service (*AncIsr*, 361–62), Samuel was apprenticing for the priesthood, but the calling of the Lord turned him to other forms of ministry. Later Israelites, assuming a priestly role for Samuel, assigned to him a levitic ancestry (1 Chr 6:7–13; contrast the lineage in 1 Sam 1:1).

1 Sam 9:5–14, 18–21 refers to Samuel as a *seer*, one who has the gift of clairvoyance (note also 1 Chr 9:22; 26:28; 29:29). The prevailing historical-critical position is that a folktale about Saul meeting an anonymous local seer was at some point reworked to identify the seer with Samuel and to insert the account of his anointing of Saul as prince (Bardtke 1968:301–2; Mayes 1978:13–14, 17–18; McCarter *1 Samuel* AB, 26, 186; for a different analysis of this pericope see Robertson 1944:180–83; Willis 1972:49).

1 Sam 3:20 explicitly labels Samuel a prophet. This is the epithet which later tradition commonly used for him (2 Chr 35:18; 1 Esdr 1:20; Sir 46:13–20). According to 1 Sam 8:10–18, 10:17–19, and 15:1–2, Samuel delivers messages from the Lord, even employing the prophetic formula, "Thus says Yahweh," (10:18; 15:2). In 7:8–9 and 12:23 he exercises the prophetic function of intercession (cf. Jer 7:16; 27:18; *3 En.* 48A: 5). 1 Sam 9:1–10:16 and 16:1–13 cast Samuel in the role of king-designator in a fashion similar to Ahijah and Elijah (1 Kgs 11:29–39; 19:15–17; cf. 2 Kgs 9:1–12). As Saul begins to fall out of favor with God, Samuel announces God's words of judgment to the king (13:13–14; 15:17–19, 22–23). Even in the séance scene in 1 Samuel 28, Samuel acts as a prophet, announcing doom upon the ill-fated king (Beuken 1978). A number of recent works have suggested that the mantle of prophecy was cast upon Samuel by later handlers of the tradition. Prior to the composition of the final (Deuteronomistic) version of 1 Samuel, it is hypothesized, there was an edition prepared by prophetic circles, which developed the character of Samuel into a figure who speaks and behaves like the prophets of a later era (Fohrer 1968:223–25; Birch 1976:140–47; McCarter *1 Samuel* AB, 18–23).

The role with which the greatest number of scholars associate the historical Samuel is that of *judge.* 1 Sam 7:15 declares that "Samuel judged Israel all the days of his life," an expression akin to that used of the so-called "minor judges" who are mentioned briefly in the book of Judges (10:1–5; 12:7–15) and whose activity is usually assumed to have been primarily judicial. This aspect of Samuel's "judgeship" is credited by a number of commentators as rooted in historical fact (Hertzberg *1 and 2 Samuel* OTL, 67; Bardtke 1968:294; Willis 1972:50–53; *BHI*, 186). The language in 1 Sam 7:13–14 about the subduing of enemies and peace in the land is reminiscent of statements made in connection with the accomplishments of the "major judges" such as Ehud, Gideon, and Jephthah (Judg 3:30; 8:28; 11:33), whose fame rests on military exploits. 1 Sam 12:11 mentions Samuel in the same breath with Jerubbaal, Barak, and Jephthah, whom the Lord raised up as deliverers for Israel's sake. The fact that 1 Sam 9:16 and chaps. 13–14 contradict the statement of 7:13–14 that the Philistine threat was subdued at this time makes the report of Samuel's military activity dubious. Scholarly consensus considers the portrayal of Samuel as a military

deliverer to be a late fiction created by the Deuteronomistic editors (*NDH*, 55; McKenzie 1962:14; Mayes 1978:8).

Since virtually all of the accounts surrounding the establishment of Saul's kingship assign Samuel an instrumental role, it is hard to avoid the conclusion that he was a major figure in the transition to monarchy, but scholars are divided over where in these accounts genuine historical recollections are to be found.

Although 1 Sam 8:1–5 is often adjudged to contain reliable information (Wildberger 1957:457; Weiser 1962:29–33; Mayes 1978:11), many critics believe that the description of Samuel's activity in the rest of chap. 8 reflects later generations' unhappy experiences with the Israelite kingship (McCarter *1 Samuel* AB, 161–62; Van Seters 1983:251–52). Some, however, do attribute the speech (vv 10–18) to Samuel, who feared the imitation of exploitative governmental practices common among Canaanite kings and a jeopardizing of Yahweh's kingship, as well as encroachment on his own prerogatives (Mendelsohn 1956; Bardtke 1968:294–95; Halpern 1981:186, 216–24).

As noted above, the references to Samuel in 9:1–10:16 are widely thought to have been inserted at a secondary stage of the tradition by prophetic editors. Some have suggested that the foreign origin of the anointing ritual, with its magical connotations, makes it unlikely that Samuel would have utilized the practice (Bardtke 1968:302; cf. Weiser 1962:52–57).

Several traditions of varying historical value seem to have been combined in 10:17–27. There is no reference elsewhere in the OT to choosing a king by lot, which is an unlikely way to select a king (Wildberger 1957:455; McKenzie 1962:11; Weiser 1962:65). It seems more reasonable that Saul was identified via an oracle from God specifying the tallest man to be the divine nominee. Although 10:25 is often attributed (with reference to Deut 17:14–20) to later redactors, a fairly widespread interpretation is that this refers to a constitutional document spelling out royal regulations negotiated by Samuel with the popular assembly (Halpern 1981:222–35; Ishida 1977:45–46, 53; cf. McCarter *1 Samuel* AB, 193–94). The prophetic oracle in vv 18–19 is usually regarded as an addition by prophetic or Deuteronomistic editors (Birch 1976:47–51).

Most scholars agree that chap. 11 has substantial historical value, but that the references to Samuel in vv 7, 12–14 are secondary additions (Irwin 1941:113–14, 129; Birch 1976:54–56; Mayes *IJH*, 325). Chap. 12 is generally conceded to be a composition of the Deuteronomistic writers of the 7th or 6th centuries (Fohrer 1968:225; Mayes 1978:10–11; Van Seters 1983:258).

With regard to the two accounts which relate Saul's rejection by Samuel (13:7 b–15; 15:1–35), the usual conclusion is that the present stories are revisions of traditions originally sympathetic to Saul, seeking to explain two historical phenomena: Saul's failure to establish a dynasty and the final rupture between the king and Samuel (Press 1938: 209–10). Prophetic circles responsible for the present shape of the stories were seeking to enhance the concept of prophetic authority vis-à-vis the king (Birch 1976: 74–85, 95–108; McCarter *1 Samuel* AB, 230, 269–71; Mayes *IJH*, 330).

The parlous times following the events related in 1 Samuel 4 called for a figure whose authority was recognized on a relatively wide front within the league of Israelite tribes to assist them in making the transition to a new system of governance, while not abandoning the sacral traditions. At a time when "offices" such as priest, prophet, and judge were not precisely and finally defined, Samuel apparently engaged in activities which tradition eventually associated with one or another of these roles. Subsequent generations very reasonably enhanced the portrait of Samuel with features common to these various functionaries (cf. Weiser 1962: 9–16; Willis 1972: 41).

B. Literary Studies

In contrast to historical-critical and traditio-historical studies, which attempt to distinguish the diverse sources underlying 1 Samuel and the different social and historical situations which produced these sources and their redactions, literary critics of the Bible attempt to read the final text as a single coherent narrative. These scholars perform a "close reading" of the narrative, carefully scrutinizing narratalogical features of the text—features such as plot arrangement, quoted speech, repetition of key words, parallels

of situations, contrasts, and ambiguity—which may assist the reader in construing the character of the dramatis personae (cf. Alter 1981; Sternberg 1985).

The contrast achieved, in 1 Samuel 2, by juxtaposing references to Samuel's growth and faithful service with reports of the wickedness of Eli's sons—separated by some historical critics into separate narrative cycles—prompts an understanding of Samuel as a worthier holder of the priestly office than the family of Eli (Willis 1979: 208n; Eslinger 1985: 119–20, 127–28). This impression is fortified further in chap. 3 by several literary devices, such as the contrast of Samuel sleeping in the temple of Yahweh, while Eli sleeps "in his own place" (Fishbane 1982: 195–200). The opposing parallelism between 3:1 and 3:20 conveys the great significance of Samuel's activity (Simon 1981: 122). The remark in 3:19 recalls the motif from Deut 18:15–22 of the prophet like Moses whose word comes true (Miscall 1986: 44–45).

Instead of taking the absence of Samuel from 1 Samuel 4–6 as an indication that these chapters originated in a different socio-historical situation than the Samuel material, the literary critics read this as a deliberate authorial technique to help characterize Samuel. The nonmention of Samuel in connection with the events which proved so tragic for Israel is a narrative device to represent the difficulties which the nation experiences without the presence of Samuel (Willis 1979: 212; Polzin 1989: 58–60). This is underscored by the marvelous success which Israel enjoys vis-à-vis the Philistines as soon as Samuel reenters the narrative in 1 Samuel 7.

The chapters surrounding the inauguration of the monarchy (1 Samuel 8–12) may be read as an account of a very human and ambivalent Samuel who is pressed into service as a kingmaker against his will. Out of loyalty to the kingship of God (1 Sam 10:18–19; 12:12) Samuel resists the move to human kingship, but finally yields to the instruction of God (8:7, 9, 22; 9:16–17) and makes Saul king. When God repents of making Saul king, Samuel again exhibits ambivalence: he shows sympathy for the king (1 Sam 15:11, 35; 16:1) and, instead of delivering a frontal accusation, gives Saul a chance to supply an explanation for his disobedience (15:19). Exemplifying his own declaration that a human may repent though God will not (15:29), Samuel yields to the importuning of the repentant Saul (15:31) and continues to grieve (16:1) over the fallen king (Sternberg 1985:503–15).

In contrast to the aforementioned examples, other readers have discovered in the narrative clues which suggest that Samuel is to be construed as imperceptive, insensitive, self-seeking, and manipulative. (This usually accompanies interpretations of Saul as a more heroic figure than has traditionally been the case and of God in rather unflattering terms: see especially Gunn 1980 and Eslinger 1985; Polzin 1989).

1 Samuel 2 and 3 predispose the reader to expect that Samuel will be the "faithful priest" for whom God will build a "sure/faithful house" (2:35), but this turns out to be a feint on the author's part. Why did Samuel not turn out to be the promised priest? Perhaps the explanation lies in 8:1–3, which relates what Buber (1967: 76) refers to as "the delinquency of Samuel." The wickedness of Samuel's sons recalls the motif of Eli's evil sons. From that earlier experience Samuel should have learned of the dangers of filial corruption. Like Eli, Samuel hears of his sons' wickedness from others, but the narrator makes no mention that Samuel sought to rebuke his sons (contrast 2:23–25); in 12:2, he blithely ignore their wickedness.

In various ways the narrator appears to raise doubts about Samuel's prophetic credentials. Does 1 Samuel 3 depict a Samuel who goes to the priest Eli repeatedly because he is a humble and devoted servant of the elderly clergyman (Simon 1981:125), or is the repeated trip to Eli a reflection of Samuel's dullness and lack of perception (Polzin 1989:49–51)? Although in 1 Samuel 9 Samuel is called a "seer," it is only after he *hears* God's instruction (vv 15–17) that he comprehends who this Saul is: even when he "sees" Saul (v 17) he does not really see, until the Lord speaks. Samuel's affirmation about God's nonrepentance in 15:29 seems to place him in direct contradiction to both the narrator (15:35) and the Lord (15:11). In the scene of David's anointment, Samuel blunders and needs God's correction (16:6–7; see also Alter 1981:149; Sternberg 1985:94–97; Polzin 1989:95, 140, 153–55).

Analysis of the rhetoric in Samuel's speeches in 1 Sam 8:10–18 and 12:1–17 reveals him to be petulant, truculent, and ungracious (Good 1981:65). The speeches depict Samuel manipulating the audience through a one-sided description of kingship (8:11–17), threats (8:18), and meteorological pyrotechnics

(12:16–18). He is selective in what he recalls of the facts and in what he reveals of God's will: no mention in 8:10–18 of the Lord's principal objection to kingship (on theocratic grounds) nor of the Lord's willingness, in spite of this, to grant the people a king (cf. 8:7–9); no recognition in either speech of the wickedness of Samuel's sons, a basic motivating factor in the people's request for a king (cf. 8:3–5; see also Gunn 1980:64; Preston 1982:33–34; Eslinger 1985:386).

Even in the closing scene in which Samuel appears, the story of his being summoned from the realm of the dead by the witch of Endor (1 Samuel 28), he is made to appear cold and insensitive in contrast to the tender hospitality which the witch extends to the desperate king Saul (Preston 1982:36).

An imaginative retelling of the Samuel material, much in the fashion of the writings of Josephus, is found in *Pseudo-Philo* 50–59, 64 (Harrington *OTP* 2:364–73, 376–77).

GEORGE W. RAMSEY

SAMUEL, BOOK OF 1–2. This entry consists of two articles. The first examines the critical problems associated with the text, composition, and content of 1–2 Samuel, while the second article focuses on the narrative and theological aspects of the text.

TEXT, COMPOSITION, AND CONTENT

The books of Samuel, two of the Former Prophets, are named either for the prophetic figure who dominates chaps. 1–3 and 7–15 of 1 Samuel, or because 1 Chr 29:29–30 credits the seer with recording the acts of David. The text, considered one of the most disturbed in the Hebrew Bible, was initially a single story. The division into the eighth and ninth books in the MT, but ninth and tenth in English, derives from the LXX, where Samuel and Kings each have two parts that together comprise the four "Books of Kingdoms" *(basileiōn A-D).* The apportionment may have been introduced because of the

length of the manuscript and the desire to conclude a first unit with the account of Saul's death. Although the separation detached the figure Samuel from episodes in 2 Samuel, the tradition continued in Latin versions and in the 15th and 16th centuries C.E. began to make its way into the Hebrew text where it influenced the Jewish canon, first in hand-copied manuscripts (1448) and then through printed editions. The first Rabbinic Bible, the "Bomberg Bible" published by Daniel Bomberg in Venice in 1516–17, accepted the division, and it was retained when the Second Rabbinic Bible was published in 1524–25.

Textual and source critics expend considerable effort in trying to recover an elusive "original" text of Samuel. Any attempt to summarize their contributions or that of other scholars who study the composition or content of the books must be sketchy and correspondingly arbitrary. The descriptions can only identify major currents and turning points that have brought scholarship to its present state. In the case of composition and content, the choices affect not only impressions regarding the tradition of scholarship, but also an understanding of the Bible itself. Assertions about the book's composition and content are controlled in part by the questions asked, methods and approaches taken, and theories projected by researchers. The stance represented in this article assumes that 1–2 Samuel are religiously motivated cultural artifacts that originated and have been transmitted by human agents in physical space and historical time. It presumes also that the books reflect early attitudes about the social world(s) of Yahwists, Israelites, and others who lived relatively customary lives in the E Mediterranean basin sometime between the beginning of the Iron Age I (ca. 1200 B.C.E.) and the beginning of the Common Era.

A. Text Tradition

In the last century, critics such as Thenius (*Samuels* KEHAT), Wellhausen (1871), Driver (1890, *NHT*), and others sought to emend the MT and recover a Hebrew original by relying heavily on the ancient versions, especially the LXX. Imbued with the evolutionist, diffusionist, and comparativist enthusiasms of their day and lacking early Hebrew manuscripts, they were attracted by the fullness and antiquity of the Greek and other versions. In them, they sought their own and the Bible's origins. A more accurate original Hebrew text could be restored, it was hoped, that would reflect a pristine religion against which later developments might be judged. The versions examined by comparative methods offered grounds for improved readings, but new primary data were needed before certainty about the Hebrew text tradition could be attained. By the time Driver's notes were revised in 1912, knowledge of Hebrew orthography, philology, and idiom, and of Palestinian topography had increased greatly, as had familiarity with characteristics of the versions and text families. Kittel's *Biblia Hebrica*, Kautzch's revision of Gesenius' grammar, and the lexicon of Brown, Driver, and Briggs had been published. These stood together with an expanding list of critical commentaries as witnesses to the growing interest and confidence in the details of biblical scholarship and comparative methods.

Although certainty about the relationship between the LXX and the MT remained in doubt during this century (de Boer 1938, 1949), the LXX remains an indispensable source for the text of Samuel. New confidence in the version was restored following the discovery of three Hebrew Samuel manuscripts in Cave IV at Qumran (4QSam ^{a,b,c}) in the 1950s. The fullest, 4QSam^{a}, written in the first half of the 1st

century, ca. 50–25 B.C.E. (McCarter *1 Samuel* AB, 6), holds the greatest promise for textual criticism. The fragmentary 4QSam^{c} preserves only portions of 1 Samuel 25 and 2 Samuel 14–15, but also dates from the early 1st century B.C.E. The second principal manuscript, 4QSam^{b}, dates from the late 3d century B.C.E. but witnesses only to portions of 1 Samuel (Cross 1961; Ulrich 1978:10).

Comparisons with the QL first seemed to confirm the proximity of an early Hebrew tradition to the *Vorlage* of the LXX. Later, however, critics surmised that the QL stands closer to the Lucianic manuscripts (LXX^{L}) than to the Codex Vaticanus (LXX^{B}). This suggests that the Lucianic tradition, which draws on the OG, represents a move toward a Palestinian Hebrew text tradition represented by the QL. Today, at least eleven early witnesses to Samuel (besides the fragmentary 4QSam^{c}) must be weighed in the search for primitive traditions. In addition to the 4QSam^{a,b} and LXX^{L,B} they are Codex Alexandrinus (LXX ^{A}), the MT, the OL, *Tg. Jon.* (Jewish Aramaic version), Syr Peshitta, Vg, and Josephus *Ant*.

The delay in publishing the QL diminished its expected impact. Bible translators have been able to use the material occasionally, and for Samuel, McCarter's commentary and Ulrich's study are particularly valuable contributions. As a result of these publications, however limited, critics now tend to accept fuller versions of stories where several forms exist. For example, the expansive description of Nahash's disfiguring of peoples from the eastern tribes (4QSam^{a}, 1 Sam 10:27 b–11:1), previously known only through Josephus *Ant* (6.68–71), is no longer considered secondary (McCarter *1 Samuel* AB, 199). Implicit in such choices, however, is a lingering evolutionary hope for an "original" Samuel.

B. Composition

During the 20th century, continental, British, and American scholarship continued to seek original meanings of Samuel texts by separating portions of the books according to literary units. Individual sections were divided according to authorship, form, source, redactor, or other phenomena that had left their mark in the text. As philological, archaeological, historical, and comparative skills improved, many forms of biblical criticism developed. Many were modeled on textual criticism and archaeology and sometimes were described as excavative methods. They were used in order to identify discrete textual units and to trace the trajectories through which they had passed on their way to becoming the Hebrew canon. The approaches became virtual "subspecialties" within biblical studies. Paradoxically, however, they inspired doubt as well as confidence: doubt because the methods tended to fragment the text and suggest a religious evolution that challenged the historical certainties of the 19th century; certainty because the methods presumed to resolve contradictions and obscurities in the texts.

Critical scholarship held its own, but studies on 1–2 Samuel were influenced and overshadowed by contemporary discussions of other portions of the Hebrew canon, particularly the Pentateuch. Full and independent attention was given to Samuel only after many of the issues raised in those units had been argued. The tendency to treat the Pentateuch, especially Genesis, first, and Samuel later affected the way the composition of the books was examined and described. Interest in Samuel increased gradually and eventually independently as history was abandoned in Genesis studies and thought to survive in Samuel, but no sharp division marks clearly defined chronological phases in Samuel criticism. Several fundamental hypotheses were proposed at the beginning of the ventures, and until recently much of the subsequent discussion was refining or reacting to earlier expositions. Nevertheless, two phenomena deserve mention. The first is the important study of Leonhard Rost (1982), first published in 1926. Although itself derivative, the work was exceptionally influential, especially after the 1960s, when works by von Rad (*PHOE*, 166–205) and Weiser (1948) that were based on it became available in both German and English. The second is the increasing role that archaeology played in biblical studies, especially Samuel studies, in the postwar era. Then, Iron Age archaeologists and biblical specialists showed renewed interest in the Davidic and Solomonic eras because they assumed that the texts were solidly historical, and comparative philological studies advanced, especially under the influence of the Ras Shamra texts, in ways that provided greater access to the culture of Syro-Palestine.

1. Early Approaches. Repetitions, doublets, contradictions, breaks, and uneven seams in the narrative led critics as early as Eichhorn (1780–83) to abandon the synagogue tradition of a unified text in order to

look for parallel traditions within and outside Samuel that linked seemingly isolated literary units. Thenius followed this direction in his commentary on Samuel (*Samuels* KEHAT), but it was Wellhausen's revision of Bleek's introduction (1878) that laid the groundwork on which many later Samuel studies were built. Wellhausen developed the first elaborate multisource explanation of parallel strands. He identified 2 Samuel 9–20 and 1 Kings 1–2 as distinctive, and, without returning to the synagogue tradition, he credited the section with critical literary unity and historical accuracy. But Kittel (1892) and others argued somewhat contrarily that similarities between Samuel and other materials were due to a common background of thought and that Samuel, including the succession story, should be investigated in its own right. It would be for Rost eventually to reconcile these two positions, but the bases for his analysis of the succession narrative were already in place.

2. Early 20th Century Criticism. Much of the debate during the first half of the 20th century centered around three questions inherited from the century before: Were the books compiled from repetitious narrative strands or independent literary blocks? What was the relationship between the Samuel traditions, on the one hand, and the Pentateuch, Deuteronomistic History (DH), and their sources on the other? Did the authors of Samuel write history?

a. End of the Quest for Parallel Literary Strands. Contemporary pentateuchal criticism led many early 20th century scholars to continue the search for extensions of the sources J and E in Samuel and for Samuel parallels in the books of Joshua and Judges. Budde (*Samuel* KHC) divided the narrative into parallel strands J and E, but in Samuel these were substantially redacted by the Deuteronomist. Thus, he proposed that a pre-Deuteronomic Samuel was redacted first by the Deuteronomist who introduced Deuteronomic views and excised sections that were objectionable. Eventually, the excluded sections were reintroduced by other editors who misplaced them, thereby confusing the original order.

Alternative documentary and fragmentary hypotheses followed (Gressmann 1921, Caspari *Samuelbücher*). Each assumed an integral original story, inferred compilation over time, and credited repetitious sections of the books to early writers and later redactors, such as Elohists, who introduced redundant and inconsistent sections. Owing to the evolutionary presuppositions of the day, the later materials were usually described as "additions" and thought to be historically less reliable than earlier sources. This approach continues until today, but the search for literary strands that extend beyond the books of Samuel reached its zenith when Eissfeldt (1931) proposed three parallel sources (I, II, and III) as continuations of presumed Heptateuchal traditions L, J, and E.

b. Rost's Succession Narrative (SN). The quest for parallels abated gradually. In his 1926 work, Rost expanded Kittel's proposal *contra* various documentary and fragmentary hypotheses, but he did so by examining a unit Wellhausen had already delineated, 2 Samuel 9–20 and 1 Kings 1–2. On the basis of style, themes, literary devices, and, to a lesser extent, content, he presumed to identify not only the narrative's limits but also its relationship to other sections of Samuel, including 2 Samuel 7 (the Dynastic Oracle) and 2 Sam 6:16, 20–23 (that signals the end of Saul's line). The SN was, Rost argued, the longest unit in Samuel and the work of a single writer close to the events who may have written the early account from experience. He insisted that the writer, who was more author than compiler, used literary techniques such as foreshadowing to weave an integral account of Solomon's succession to the throne. The compiler of Samuel, on the other hand, arranged preexisting sources, including literary units, sequentially and not in parallel.

The study had enormous influence on Samuel studies and, although now seriously out of date, still stands as a starting point for investigations of the SN and other sections of 1 and 2 Samuel. The thesis or portions of it gradually made their way into introductions and interpretative studies. Weiser (1948) argued for a pre-Deuteronomistic compilation of Samuel that reflected the theological viewpoint of prophetic circles and the Elohist (but earlier than E) and that was assembled from heterogeneous literary compositions. These independent fundamental units—the ark narrative, the story of Saul's rise, and the SN—were brought together with others from disparate sources by an awakening national consciousness inspired by David's successes. The consciousness and Samuel tradition continued together so that the Deuteronomistic revisers who inherited them saw little to emend or change. Weiser's insistence, against

Noth, on the earlier pre-Deuteronomic layer has been more widely accepted (Birch 1976) than his claim for Deuteronomic unity (Cross 1967; Würthwein 1974; Veijola 1975; Langlemet 1976).

Von Rad (*PHOE,* 166–205) focused attention on the SN as history writing. By insisting that the document was nearly contemporary to the events it described, he inferred both an early date, perhaps Solomonic, and a high degree of historical accuracy. These and other factors led him to interpret the narrative as theological history that demonstrates how the deity intervenes in human affairs. See also COURT NARRATIVE (2 SAMUEL 9–1 KINGS 2).

c. Noth's Deuteronomistic History. The relation of the Samuel traditions to materials beyond the books of Samuel took another turn when Noth (*NDH*) proposed that the narrative, Deuteronomy through 2 Kings, was a unified history produced by a single compiler during the Exile. This was to deny an earlier unified Samuel stratum and to reopen questions regarding early Israel's historical consciousness. Responses were predictably varied. Those who continued to argue for the existence of literary strands recognized an exilic or postexilic Deuteronomistic redactor but denied that the individual was a purposeful historian (see Hölscher 1952; Eissfeldt 1947). Others accepted the fundamental hypothesis of a DH but saw it as a work by more than one person and believed that it had passed through two or more redactions before, during, or after the Exile (Pfeiffer 1948; Carlson 1964; Cross 1967; Dietrich 1972; Veijola 1975). The discussions tended to cut Samuel free from its early monarchic moorings and to allow sections to be examined apart from the SN. See DEUTERONOMISTIC HISTORY.

3. Recent Criticism. During the 1970s and 1980s, the composition of Samuel was linked to other historical, literary, archaeological, and sociological realia. Interpreters continued to rely upon the standard critical methods of the preceding decades, but these gradually gave way to or were used in conjunction with new approaches and forms of analysis borrowed from disciplines outside biblical studies. Earlier concerns for isolating units and tracing compilation and redaction processes were displaced by interest in thematic and final form readings of the canonical text and in the social worlds that yielded and were envisaged in the texts. The shifts were accompanied by surges of interest in orality, narrative, literacy, monarchy, ecology, canon, and other elements of the ancient social environment that demanded 1–2 Samuel and their contexts be reexamined even though no consensus about their date and interpretation could be expected. The prominence of Jerusalem and centralization in the stories, the presence of extended narrative units, and the long history of scholarship that blurred distinctions between literary and historical criticism made Samuel an important testing ground for new hypotheses about the literature and its setting. After several generations of preoccupation with details and particulars, scholarship began to emphasize holistic settings and texts.

a. Transition from Traditional Approaches. The standard forms of criticism endured and were used to examine the composition of Samuel, but the sections placed under scrutiny became longer and were often chosen because of thematic unity. In this, the influence of Rost can be seen again. Sections of Samuel that deal with specific themes such as the ark (Campbell 1975), the rise of Saul in 1 Samuel 7–15 (Birch 1976), and David in 1 Samuel 15–2 Samuel 5 (Gronbaek 1971) were treated, but much of the work was still done on the SN or portions of it. Studies on individual character roles (Conroy 1978) and themes (Brueggemann 1972) were typical ways of defining units of composition and bringing differing historical, literary, and religious questions to them. See following article on Narrative and Theology.

On the basis of theme and literary structure, Flanagan (1972) challenged the unity of Rost's SN by suggesting that it contained an earlier Court History that did not include 1 Kings 1–2 and portions of 2 Samuel 11–12. Although the study seemed to move against the thrust toward analyzing longer literary units, it had originally been part of a treatment of the entire 1–2 Samuel. Moreover, it opened the path leading to a totally Davidic Samuel, as suggested by the canonical division of the books, and toward treating the entire Samuel corpus, including the so-called appendices in 2 Samuel 21–24, as an integral composition (Flanagan 1988:236–72). With the Solomonic succession theme removed, the focus of the books shifted to the legitimation of Jerusalem and tensions between Saul and David that are amply described in the narrative (Flanagan 1979).

A number of investigations followed Rost's definition of the SN but sought different readings (Whybray 1968; Clements 1976; Fokkelman 1981). Gunn's study (1978), however, was transitional and managed to encompass, on the one hand, the excavative and literary approaches and, on the other hand, fragmenting and holistic interests. Although offered as a study on the SN, not only did it extricate the narrative from the exclusive realm of history writing that Rost and many since had prided themselves in demonstrating, but it also treated the unit as a section in a larger integral whole and pointed away from the 19th century preference to isolate "original" units as a first step toward interpretation. Gunn achieved his ends by insisting on one of Rost's own observations, namely, the difficulty in determining an absolute thematic beginning for the SN. Rost had noted connections with 2 Samuel 6–7 particularly. On the same grounds, Gunn strengthened these and other associations, argued that an early date for the SN was not ensured, and suggested that its purpose might be entertainment.

b. Return of the Biblical Guild. For Gunn and the discipline, the work was not radical, but it signaled development. Its timing and the fact that he had recently founded a journal and press (1976) devoted to innovative approaches to biblical scholarship marked it as a turning point in Samuel studies. Many works with a similar approach followed shortly, some published under Gunn's editorship and others appearing in *Semeia*, an American journal for experimental approaches to biblical studies begun in 1974.

Gottwald's monumental study on Yahwist tribalism (1979) centered on materials in Joshua and Judges, but affected studies on the composition of Samuel enormously. While writing the volume, the author co-chaired a social world research group within several learned societies. By linking the endeavors—a forum for deliberation and a published statement that reflected the discussions—he applied the model being explored in *Semeia*. Again, the work's impact derived not from the fact that it was radical, which it was, but because it built on a hypothesis proposed by Mendenhall nearly two decades before and because a cross-section of biblical specialists was prepared to accept its sociological approach and conclusions. The work restated issues that Mendenhall had raised and that had been pondered ever since, and the biblical guild had already begun to reflect on the book's problems and advantages. Indeed, Gottwald relied heavily upon traditional source criticism and only secondarily applied a Marxist critique to conclusions drawn from those approaches. By eroding the historical tribal roots of centralization in Israel in the books of Joshua and Judges, however, Gottwald forced reevaluation of the stories of Saul and David which had now lost their presumed beginning. The reasons, modes, and structures of Samuel's composition were threatened.

The pathways toward new literary and social world studies widened when Gunn inaugurated a monograph series devoted to areas of research in a second press he founded in 1980 (Almond). One series nurtured ahistorical literary critical approaches while the other hastened the advance of comparative historical social world studies. Both evoked scholarship that moved beyond the standard source criticisms. Because the editors of each simultaneously chaired research seminars in learned societies, the research and publication model was applied again. By happenstance, the series provided outlets for the research presented in the seminars so that the two approaches were quickly defined and legitimated.

Rejoining scholarship to the crafts of communication reunited orality and literacy, this time in the service of biblical scholarship. Now, individuals were forced to engage peers' review at every step of the research and communication process. The sociology of biblical knowledge was altered substantially, and as a consequence, the temporal lag between proposal and consent was lessened. Plurality and simultaneity of hypotheses and interpretations became the hallmarks of scholarship on Samuel. These displaced the uniformity and consecutiveness of 19th and early 20th century scholarship just as Darwin's treelike variability had displaced Spencer's chainlike progressivism as an explanatory model for change. Scholars represented and could choose among options, and they could no longer trace their intellectual pedigree by listing a series of prominent, but mostly dead, mentoring or institutional ancestors. Because of the rapid and intense sharing of ideas across disciplines and at every level in scholarship, it became increasingly difficult to trace scholarly traditions by citing a few authors' names or dominating theories. Consensus regarding the composition and meaning of Samuel that had been gradually evolving suddenly devolved, and differing sets of questions and priorities moved to the fore.

In the classical sense, the *opus magnum* on Samuel during this period was still McCarter's two-volume Anchor Bible commentary. Its size and attention to detail guaranteed it prominence in the continuing discourse on Samuel. Drawing upon traditional archaeological and philological approaches developed within the Albright school, the author introduced readings derived from the QL and offered cautious interpretations that continued to see the texts as primarily historical and compiled over time.

c. Influences from Other Disciplines. Biblical studies in general and Samuel studies in particular continued to adopt insights and approaches from literary studies, comparative sociology, and archaeology. These had affected the critical understanding of the composition of Samuel along three trajectories. One branch led increasingly toward literary studies and away from history, and historical and source critical interests. The other continued to lead toward critical historical and archaeological interests, but this branch subdivided according to methods and approaches. One offshoot continued to perceive Samuel as historical, compiled over time from earlier smaller literary sources, and literally representative of a physical world that could be confirmed by successful archaeology. The other offshoot shared the first's concern for history, archaeology, and traditional forms of criticism but was less confident in its ability to discover literal or detailed historical referents to match episodes and characters in the biblical text. Instead, those who shared these views accepted wider use of heuristic models—iconic, sociological, and statistical—as aids for understanding the social world in the Samuel text and the early Iron Age that the texts purport to reflect. For this as for the literary branch, the social sciences offered the greatest hope for new understandings. The difference separating the first and third group, however, was interest in history and the confidence placed in texts as a means for reaching the past.

Because of their preference for holistic and final form readings, literary and canon critics of this era showed little concern for the composition of Samuel, at least as the issue was previously defined. Historical critics—those who relied on traditional methods as well as those who followed social world approaches—continued to examine the date and setting of individual units, accept the existence of earlier and later sections, and propose groups or circles as "authors."

C. Content

To discuss the content of Samuel is to choose among the levels of signification in the richly multivalent text and to select one of the approaches outlined above. The orientation here is toward social world criticism and the information the books hold regarding the human ecology in ancient Israel during Iron Age I. The exposition is limited by data within the books, i.e., 1 Samuel 1–2 Samuel 24, and for the most part does not exploit relevant but external information from archaeological or comparative studies that would be weighed in a different mode of analysis. Similar restraint excludes comparisons with Psalms 132 and 89, other portions of the DH, and 1 Chronicles.

1. Presuppositions. a. Extent of the Narrative. This summary presumes that 1–2 Samuel represents the views of Jerusalemite writers who, among other things, seek to reconcile and integrate a spectrum of attitudes and beliefs that spread among diverse peoples. Differences and contradictions in the stories have ecological, political, social, economic, and religious bases. By their existence, the texts signal continuing hope for social unity grounded in belief. The unifying force of Yahwist religion is central to the stories. Tensions among factions and perspectives that can be felt, for the most part, follow from contemporary differences rather than successive revisions of the texts. Hence, 1–2 Samuel, although formed from separate traditions, cycles, and stories, is a unified account that captures the urgency of the compilers' time, whether it is a pre-Deuteronomic or Deuteronomic era. From its beginning, the text is complete more or less as it now stands. The completeness extends throughout 1–2 Samuel and includes the so-called appendices in 2 Samuel 21–24, but does not include the material now in 1 Kings 1–2 that Rost makes part of the SN.

b. Social Structure in the Stories. Many commentators continue to envisage the centralizing processes that lead to Davidic kingship and full statehood. In fact, they presume that the books describe and promote this development. Social world critics, however, argue against this historical interpretation of monarchy in favor of chieftaincy (Flanagan 1981; Frick 1985). In this summary, the role of a paramount tribal chief is assumed as the image of leadership that suits Saul and David because it offers greater

potential for understanding the narrative and its parts. A tribal ethos controls the character roles and plots that fill the narratives' drama.

2. Overview. Three distinct but overlapping cycles of stories unfold in 1–2 Samuel: (1) a Samuel cycle (1 Samuel 1–25); (2) a Saul cycle (1 Samuel 9–2 Samuel 2); and (3) a David cycle (1 Samuel 10–2 Samuel 24). Interlaced ark, Jerusalem, and house themes run through the stories giving them continuity and vibrance. Thematic advances and fulfillments alternate with reversals and displacements. The story unfolds so that Saul (1 Samuel 7–15), then Jerusalem (2 Samuel 6), then David (2 Samuel 7), then David and Jerusalem, i.e., Davidic Jerusalem (2 Samuel 20, 24) are legitimated. In the process, however, the ark, which looms as the sign of the deity's presence in the beginning of the books (1 Samuel 4–6), recedes and is displaced by David who carries out the deity's will in the absence of the ark (2 Samuel 24). The pressure toward high centralization heard in requests for a king (1 Samuel 7–10), plans to build a temple (2 Samuel 7), and a census that would provide for taxation and conscription (2 Samuel 24) are juxtaposed with scenes showing resistance to the centralizing processes. Statements about the dangers of centralizing (1 Samuel 8), denial of the temple plans (2 Samuel 8), and the plague sent in punishment for the census (2 Samuel 24) signal socio- and religio-political displeasure with plans and maneuvers leading toward Jerusalemite power.

The stories are also economic. They illustrate a world reconciling ideals and beliefs with material realities. By linking religion and resources in a check and balance relationship, overcentralizing is resisted and centralized chieftaincy legitimated. Statehood with its temples, taxes, *corveé,* and militia drains away surplus and essential resources so that a subsistence economy such as that in Iron Age Syro-Palestine is depleted. Excesses would lead to exploitation and social stratification that victimize peoples, to religious and economic imbalance, and to politico-economic schizophrenia that would inspire religious schism. In Samuel, such maladaptation is avoided by having David be leader in Jerusalem, but forcing him to lead without the symbolic and technological advantages of kingship.

Genealogies and lists of family members and officers provide an outline for the books. The patronage networks and real and fictive kinship relationships typical of segmented societies can be seen in the materials (1 Sam 14:49–51; 2 Sam 2:2–3; 3:2–5; 5:13–16; 8:15–18; 20:23–26). The fluidity of the genealogies and lists, i.e., the manner in which names change and move about, also indicates on one plane that rural and independent tribal roles are giving way to urbanized and administrative bureaucracies. Although a number of factors no doubt contributed to the changes, the genealogical patterns suggest a sociopolitical metamorphosis. The decreasing concern for wives' and mothers' patronymics (compare 2 Samuel 2–3 and 3:2–5 with 5:13–16, 8:15–18, and 20:23–26) reflect interests that are turning increasingly from politics based on marriage and affiliation to administrative concerns for consolidation and succession. But the process is not complete, as comparisons with ethnographies of societies with a chieftaincy indicate (Flanagan 1988:325–341).

On another plane, David's journey is charted from his position as member of Saul's house, to northern outcast, to southern fugitive warrior and overlord, and finally to centralist leader of two tribal moieties in Jerusalem. The momentum toward centralizing leadership controls the genealogies and lists, but in order to grasp the individual and communal human drama in the stories, that thrust must be measured against the religious restraints visible elsewhere in the narratives.

3. Principal Cycles. The complexity and richness of the stories make every person and episode important for appreciating the narrative in its entirety or parts. The role and status of outsiders, whether women or men, cannot be ignored. Abigail (1 Samuel 25), Michal (2 Samuel 6), Tamar (2 Samuel 13), the woman from Tekoa (2 Samuel 14), and wives (cf. genealogies) for instance, are essential to the storyline, as are Samuel's sons (1 Samuel 8), the crippled Mephiboseth (2 Samuel 9), and others. Nevertheless, in another era and genre, the account might be classified as "Great Person" stories because of the way the course follows decisions and actions of the principal figures, Samuel, Saul, and David.

a. Samuel Cycle. The figure Samuel dominates the opening chapters of 1 Samuel and sets the stage for the drama that continues through 2 Samuel 24. Only at the end of the second book are the problems outlined at the beginning resolved. Samuel, who portrays at least four social roles in the narratives (priest,

judge, prophet, and seer [McKenzie 1962]), looms as a representative of a charismatic, prophetic tradition that values the deity's immediacy and spontaneity in human affairs. Samuel's responsibilities as one who articulates the deity's will, discerns and anoints preferred leaders, and awakens religious consciences are loosely interwoven with stories of the ark. Samuel's inexplicable birth and early years are reported (1 Samuel 1–3), only to be interrupted by the religio-political tragedy symbolized by the Philistines' capturing of the ark (chaps. 2–4), before his life as chief-maker is taken up again (chap. 7).

Samuel's apparent ambiguous and indecisive responses to the northern crisis reflect differing opinions and modes of social organization among the Yahwists (chaps. 7–15). A portion of the stories' participants and audience resists a segmented ethos in which problems are solved and order maintained by competition among equals. And yet, according to the storyline, that system is being threatened by marauders and warriors from the outside—the Philistines—who promise to dominate the peoples and their land. In light of this, the story portrays the Yahwists as being simultaneously pushed by the Philistines and pulled by survival instincts toward leadership which is organized as a centralized monopoly of force, and it credits the story's ultimate monopolizer, David, with the slaying of a symbolic enemy giant, Goliath (1 Samuel 17–18).

Stripped of Western and modern evolutionary presuppositions and political preferences, the stories portray Samuel and the Philistines in contrasting but complementary roles. Both are mediators who absorb social hostility and thereby allow the divided Yahwists to transfer their frustrations out of their midst and into other realms. In the case of Samuel, the transfer is toward a holy man who is not socially, politically, or economically a member of any party. Like "marginal" religious figures and shrines in other societies, his paradoxical involvement/non-involvement roles allow him to adjudicate and resolve conflicts that otherwise would destroy the community.

In the case of the Philistines, the transfer of responsibility is accomplished by having an enemy to blame, one who is portrayed negatively as a motley band of outsiders, disturbers, and aggressors. A closer examination of the group's role, however, reveals similarity with mediators in other societies. Mediating individuals and groups are often craft specialists and traders whose services are essential to their neighbors. Their skills are especially important where ecologically diverse groups interact. Marginal and transitional areas that are populated simultaneously by pastoralists and cultivators, nomads and sedentaries, are typical examples. But the mediators are looked down upon socially and despised personally by the very people who depend on them. In spite of this, they, like the Philistines, often yield great power and enjoy considerable status as overlords of expansive holdings. Future leaders for the warring factions who consider them as mutual enemies are sometimes chosen from their midst (Flanagan 1988:300–304).

In Samuel, the mediation of the most holy Samuel and least holy Philistines is inadequate. In the end, only one person can provide the needed service: David whom Samuel has chosen and who will serve Saul, the Philistines, and Judah.

b. Saul Cycle. But before the problems would pass, the community had to suffer Saul's phobias and incompetence (1 Samuel 9–31). Although the narrative portrays matters sequentially, and therefore presents Saul as a Yahwist attempt to resolve the difficulties, in the story his inadequacies compounded the troubles. The reader has the impression that Saul's regime is ended almost as it begins. In their hindsight perspective, the compilers include several traditions of Saul's emergence (1 Samuel 9–11). Quickly his role is recognized as transitional and his fate tragic (13:7–15; chap. 15). As a result, the destiny of Saul's family and David's involvement with it is as important as the consequences that befall Saul personally. The legitimacy of David, an outsider/insider, over against Saul's house is a fundamental theme in the Samuel narrative. David becomes a member of the inner circle, befriends Saul's son Jonathan, and marries Saul's daughter Michal. The inclusion with the royal house will be essential when David seeks legitimacy as leader of the northern tribes (2 Samuel 5–6). Then his former affiliation with Saul, institutionalized by political marriage, gains him acceptance through optative affiliation. This is a tribal practice whereby the husband of a daughter succeeds vicariously in lieu of the daughter/wife when the father has no legitimate male heirs (Flanagan 1981:55, 57). The situation describes Saul's because

elsewhere in Samuel, virtually all his male heirs in the first and second generation, except for the crippled Meribaal, are killed (1 Samuel 31; 2 Samuel 21). The presumption would be that the grandfather/chief's lineage would continue *via* offspring from the ruling daughter and her husband. But Michal's childlessness prevents this and makes it possible for the line to pass to the house of David (2 Sam 6:23).

Saul's animosity also serves the interests of David. In terms of the story, the suspicions are unfounded and unprovoked (1 Samuel 19–20). David is victimized and pursued by Saul and consequently is forced to seek refuge with the Philistines (chaps. 21–27) and to build a personal power base among the Judahites (1 Samuel 30–31; 2 Samuel 2). Again the strategy is typical. A losing contender for succession withdraws to a remote marginal region and begins again to weave a fabric of alliances that will satisfy his immediate urge to lead, even if the followers are fewer, and stand him in good stead in the next campaign for paramountcy. On the surface, however, because of Saul's paranoia David appears innocent of culpability and intrigue and is fully justified in his rather passive rise to power.

Regardless of the independent meaning of the Saul stories, together as a cycle within the Samuel narrative they depict the worsening conditions of the Yahwists. Samuel's initial judgment must be reversed, Saul's actions are misguided, and Philistine power, the indirect cause for Saul's election, continues to grow. The Yahwists obviously need new blood and fresh leadership. The stage is set for the shepherd David to begin his ascent from pasture to palace.

Modern interpreters' propensity for seeing continuity and ignoring the discontinuities in the stories has obscured an important distinction that the ancients would have recognized. It is the separate socio-political systems in the N and S, i.e., in Israel and Judah. Saul appears only as leader of a northern confederation of tribes. The Samuel stories indicate clearly that a separate southern confederation is led by David before he leads all Israel. He seeks refuge in the S, the house of Judah act independently in electing him (2 Sam 2:4), and he exercises leadership in Judah while Saul's son, Ishbaal, leads a separate confederation (2 Samuel 3–4). There are signs of continuing hostility dividing Saul's and David's houses (2 Sam 3:1). As in the Samuel cycle, divisiveness threatens the Yahwists and poises David to be the solution.

c. David Cycle. Although the David cycle reaches into Samuel's and Saul's careers, readers have a sense of relief and anticipation when the hero is finally on his own in 2 Samuel. His first years were lived on the run and in the shadow of Israel's two biggest problems, Saul and the Philistines. With the former's demise and the latter's blessing, he is free to unite the Yahwists first by becoming paramount chief in Hebron, an ancient Yahwist city (chap. 2), then by succeeding the incompetent Ishbaal, leader of the N (chap. 4), and finally by combining centers of religious and political alliance in Jerusalem (chap. 5).

The relocation is accomplished by a ritual marking the final displacement of Saul's house and the transfer of legitimacy to David personally (but not his house) in Jerusalem (2 Samuel 6). The scene depicts a rite of passage, a primary social act that both symbolizes and enacts the transfer (Flanagan 1983). Role reversals typical of such rites are manifested: David dances nude before the ark, Michal looks down on and chastises him, the lowly hold him in esteem while the royalty despise him. The popular and divine bases for his leadership are at one, and only his predecessor's family and their allies are at odds.

The relocation of the ark also marks another step in the displacement of the sacred symbol. Its value as a unifying force for the N tribes and sign of the deity's presence among them is now affixed to the new capital and leadership. Placing the ark in the custody of David recalls and revives its traditional religious, political, military, and social power while suggesting David's authority over both the people and their traditions. Structurally, however, the arrangement cannot last. It can only be a phase in the course of events that ultimately will require David to submit his leadership to divine control. In the view proposed in this summary, the submission, accomplished in 2 Samuel 21–24, is part of the storyline of the David cycle, whereas the Solomonic succession scene in 1 Kings 1–2 is not. Accordingly, the appendices in chaps. 21–24 demonstrate that Yahweh will be custodian of David, not David of Yahweh.

The route to this fuller transformation is cluttered with trials and tribulations for David. It leads through the court story (chaps. 9–20) and the appendices (chaps. 21–24). After establishing himself and the sacred chest in Jerusalem (chap. 6) and arranging for the house arrest of Meribaal, the only surviving Saulide and

potential contender (chap. 9), difficulties erupt within his own house. First Ammon, then Absalom demonstrate their ineptitude, the former by risking his life for a passing moment of pleasure with his sister (chap. 13), the latter by attempting premortem succession, capturing the royal harem, and pursuing his father during his flight into exile (chaps. 13–18). The rebellion of one and the deaths of two sons and successors reveal David's tenuous hold on leadership. As in other tribal societies, his ascendancy marks only a pause in the continuing struggle among competitors for paramountcy.

David's return to his house in Jerusalem (20:3) witnesses to the deity's favor and moves the story toward David's full submission. At David's request the ark is left in Jerusalem during his exile (15:24–29), as are ten concubines in the harem (15:16). Ironically, David sets up a concubine-test for Absalom (16:20–23) and an ark-test for Yahweh (15:25–26). Will custody over the royal harem be the sign of David's political authority as it is in other ANE societies, or will David's forced departure but willful leaving of the ark and his return to Jerusalem, again without the ark's companionship, be the sign of his political and religious legitimacy? The court story unfolds to show that the ancient customs and their symbols are displaced. David returns according to Yahweh's will, and the ark is not mentioned.

Further tests, however, are still ahead (chaps. 21–24). David's paramountcy must be submitted to the deity. This is accomplished by a ritualistic, as it were, cosmic duel in which a census and plague are set off against each other as instruments in the hands of a combating human and God. David proclaims a census—according to the story, at divine urging—that in ancient practice provides the basis for taxation and conscription. The maneuver bespeaks the motives of a would-be king, in this case a person who seeks to advance his leadership to another level of bureaucracy and control. The divine response is a plague, a direct attack on the economic base that could support the taxes and conscription. The information from David's census is immediately eradicated and its value depleted. David loses and submits. He buys an altar place and offers sacrifices. Yahweh remains the sole ultimate authority in Jerusalem.

4. Unity of the Cycles. Examined as a continuous but self-contained story without the additions in 1 Kings 1–2 that Rost attached to his SN, the contents of Samuel are a story of David, his rise, and his survival. This image is linked to others in the Hebrew Scriptures by the story of David's covenant, i.e., the dynastic oracle in 2 Samuel 7. As it stands, the deity's election of David's house anticipates the court story as well as Solomon's ascendancy in 1 Kings 1–2, and with minor editing, it legitimates the construction of a temple. The pro-temple revision stands in opposition to the anti-centralizing thrust of the narrative exposed here. In terms of the structure of the story as it now stands in the DH, the divine election of David's house over that of Saul is ritually confirmed in chap. 6 and finalized and further sanctified in chap. 7. In terms of the structure of the David myth, however, readers would expect the oracle later in the cycle, perhaps in conjunction with the purchase of the temple site in 2 Samuel 24. Then, for the first time the possibility of a Davidic dynasty is a serious but paradoxical issue. Saul's forces and the ark's power are suppressed; with two sons already dead, David's own lineage is becoming threatened; and divine assurance for Jerusalem—a major theme of the myth—is needed and welcomed. It seems probable that the oracle was once the final assertion in the religious myth in 1–2 Samuel, and that the episode moves ahead in the cycle when the stories are integrated with others in order to make David and the stories the center of later religio-political claims.

On many planes, the narratives are simultaneously the story of the emergence of Jerusalem as the place of Yahweh's presence, the story of Israel's affiliation with Judah, the story of a nomadic cult object settling in a sedentary urban center, and the story of a religion's adaptive ability in the face of economic and political necessity. The list could be much longer, and one of the contributions of recent critical scholarship has been to increase its length by exposing the rich polyvalence of this classical text.

By opening onto multiple meanings in the story, the new criticisms have challenged modern scholars' ability to describe the "content" of the text. The challenge, in effect, denies the goal of earlier criticisms insofar as they are directed toward the authentic "original" statements and events of the past. Instead, the newer literary and social world critics agree that the stories' mutability testifies to their enduring meaning and power and that these are first sought in the texts rather than in the tracing of their parts. The texts witness to the cosmologies and beliefs that are ancient Israel's.

The shifts in understanding the Samuel texts, their composition, and their content draw attention to the question of their historicity. No unanimous consent can be expected, but the self-consciousness that modern critics bring to the question are made explicit in ways that the source criticisms begun in the 19th century ignored. Literary critics state the limits of their interests and hypotheses and are clear when these do not include questions of history. Social world critics, on the other hand, express continuing concern for the past and the means whereby it is examined and understood, but they also are aware of the limits that the partiality of information, passage of time, and accidents of discovery place on their endeavors. Many assume that the texts of Samuel do not correspond statement for statement in one to one relationships with historical referents that existed in Iron Age I or later. Instead, the words woven into stories reflect and depict ancient social worlds that can be known generally by drawing together literary and archaeological information and illuminating that information, its congruences, and its contradictions by comparative materials found in ancient and modern societies, especially those where similar ecologies and social systems can be expected.

NARRATIVE AND THEOLOGY

As a unified whole, the corpus of 1 and 2 Samuel figures significantly in the narrative presentation of Israel's memory and faith. This narrative complex, which encompasses Joshua through 2 Kings, is central in the canon as well as in the study of Israel's history and theology. Moreover, the received form of 1 and 2 Samuel reflects specific narrative concerns such as the juxtaposition of human power and divine authority, and frames these with theological intentionality and literary ingenuity. Finally, a survey of the narrative elements of the books brings into focus how the literary form accomplishes the narrative intent.

———

A. Literary Context

1. In the Canon. Canonically, these books are reckoned as part of the "Former Prophets" in combination with the books of Joshua, Judges, and 1 and 2 Kings. They are peculiarly linked to 1 and 2 Kings and in the LXX, these four books are named 1, 2, 3, and 4 Kingdoms, suggesting that the real subject matter of the literature is the monarchy. While our more familiar designation "Samuel" relates this literature to the person of Samuel, who looms so large as "kingmaker," the connection to 1 and 2 Kings correctly reflects the overriding theme of the literature, namely Israel's venture toward and experimentation with monarchy.

The general canonical grouping, "Former Prophets," serves notice that this literature is not to be regarded as "historical" in the sense that it simply narrates "what happened." The word "Prophet" indicates that this literature expresses a peculiar view of the ongoing historical process, one which is open to and shaped by the rule of God through the (usually verbal) interventions of God's authorized speakers. That is, prophetic speech is not incidental to this view of history, but is constitutive to the meaning and course of historical experience. As we shall see, in much of 2 Samuel this direct intervention is subdued, but even there it is the active engagement of Yahweh, the God of Israel, which decisively influences the outcome of events.

2. In Critical Scholarship. Under the influence of Martin Noth (1981), the canonical corpus, "Former Prophets," has come to be regarded as "the Deuteronomistic History." That is, the literature of Joshua, Judges, Samuel and Kings is reckoned on this hypothesis to be one sustained historical-theological effort (Fretheim 1983:97–133). It is named "Deuteronomistic" because the theological presuppositions and impetus for the perspective of the literature derives from the book and tradition of Deuteronomy. This corpus in its present form, according to scholarly consensus, is dated sometime around the destruction of 587 B.C.E. and the Exile, though scholars are divided on a more precise dating. Cross (*CMHE*, 274–89) has proposed two editions of the material, before and after 587, and Smend (1971:494–509), Veijola (1977), and Dietrich (1972) have attempted a more refined distinction between three layers of the material. In its present form, this entire literature is a reflection upon (not a report of) Israel's historical experience as that experience relates both to the actual demands of historical realism and as it relates to the dominant theological claims of Israel's covenantal tradition. Indeed, it is a major achievement of this

literature to hold together in a coherent way the demands of historical realism and the claims of the covenant traditions, so that they are perceived as intimately and integrally related to each other.

The literature of 1 and 2 Samuel seems less directly involved in the Deuteronomistic program than the rest of that larger corpus. Nonetheless it cannot be understood apart from that larger enterprise. In its present articulation, the narrative data concerning Samuel, Saul, and David is offered for reflection at the end of the monarchal period, when this great ambition of Israel had come to a sorry end. The narrative uses older materials of many kinds in the service of this reflection. At the same time, scholars are agreed that this "end-time" utilization has not severely distorted the earlier memories, nor has it muted the courage and vitality of the earlier period reflected in the material itself. In the literature of 1 and 2 Samuel (more than anywhere else in the Deuteronomistic corpus) the claims and intentionality of the earlier material have been respected on their own terms. Interpretation, then, must take into account both the early intentionality and the later reflective utilization of that early intentionality. One need not choose between the two, as they come together in this carefully and artistically crafted presentation.

B. The Literature in its Full and Final Form

The canonical nomenclature of "Former Prophets" and the critical consensus concerning "Deuteronomistic History" require us to begin our analysis by asking about the shape of the literature of 1 and 2 Samuel in its full and final form. To begin in this way is to acknowledge an important shift in scholarly approach. The long-standing critical practice has been to analyze the sources and traditions which have gone into the making of the corpus (see *IDBSup*, 777–81; *IDB* 4:202–9; for the more recent analysis of layers of sources in Dtr, see McCarter *1 Samuel* AB, 14–17 and *2 Samuel* AB, 4–8). Both the older source analysis and the newer fragmentation of sources in Dtr share a concern to start with the lesser units. Our approach is to begin at the other end with the completed form of the text. This approach is reflective of the developing direction of scholarly procedure.

1. Historical Transformation. It is helpful to see what Israel accomplished in the course of this literature by considering the condition of Israel at the beginning and at the end of the corpus. That is, we inquire about the historical transformation wrought through this literature. Preceding this corpus, in Judges 17–21, Israel reflects a loose tribal organization in which "there was no king in Israel; every man did what was right in his own eyes" (Judg 17:6; cf. 18:1; 19:1; 21:25). That is, there was no viable, reliable social order and no legitimated public structure of governance. The result, as characterized in these materials, was a chaotic, barbaric social practice and a correspondingly doubtful religion which is presented as image-generating and idolatrous (Judges 17–18). That is where the book of Samuel opens. (The placement of the book of Ruth at this point in our English Bible is a departure from the Jewish order of books which is assumed in this and parallel analyses.)

At the other end of our literature, when 2 Samuel ends and we move from 2 Samuel 24 to 1 Kings 1–2, we are confronted with a situation completely contrasted with that of Judges 17–21. Now, at the end of David's life, the narrative 1 Kings 1–2 focuses on the question of succession to the throne and the rivalry of David's sons, Adonijah and Solomon. By this time the dynastic principle has been fully established and is unquestioned, at least in the circles adhering to this literature. Now the social issue is not chaos and barbarism, but bureaucratic ruthlessness and rival claims to legitimacy.

The books of Samuel are the narrative rendering of Israel's move from tribal chaos and barbarism to monarchic legitimacy and bureaucratic ruthlessness. The historical achievement of Israel in the course of this decisive and irreversible transition is a remarkable one and should not be underestimated. Israel has been in the process of building public structures of legitimacy and institutions of accountability and order. While the narrative tends to focus on personalities, this larger public agenda is crucial.

2. Narrative Concerns. With reference to this historical transformation, we may identify three dimensions of narrative concern in the books of Samuel.

a. Social Analysis. The basic course of development in this literature generally reflects the course of events. To be sure, the literature is cast imaginatively with considerable legendary accretion. However, that legendary propensity is not accidental but instead represents sophisticated artistic ability. What might be missed because of this particular narrative quality is the historical realism, the political finesse and the

capacity for critical and sober assessment that is present in the text. Not only is the alien principle of monarchy introduced into Israel through a series of deep conflicts, but additionally there is a shift in economics, so that a community of economic marginality begins to move toward affluence and an accumulation of surplus wealth which requires new social forms. The debate over the temple in 2 Sam 7:1–7, which parallels the debate over monarchy in 1 Samuel 7–12, indicates an awareness of how radically the shifted political and economic realities impinge upon theological notions and liturgic practices. The narrative shows a discernment of the interrelatedness of economic-political and theological-liturgic matters, and it is this interrelatedness that embodies the practice of social criticism.

b. Legendary Imagination. Historical realism in this corpus is mediated through literature that exercises the freedom of artistic legend concerning the major personalities. The literature is focused in turn on the persons of Samuel, Saul, and finally David. We are unable to and uninterested in sorting out every factual element, but there can be little doubt that the birth story of Samuel, the call narrative of Samuel, David's triumph over Goliath, and many other narratives take important liberties of imagination in the presentation and portrayal of the main characters. This literary freedom is no cause for suspicion, nor are we mandated to purge the material so that we might get to "the facts," for the only facts available to us are mediated in these imaginative forms, and the very engagement of this imagination is crucial to the facts which are mediated to us. The narrative intends that we experience the historical memory in this freighted imaginative mode. We are required to recognize exactly the kind of literature this is, and to see that "the facts" are precisely these inventive, imaginative portrayals without which this literature would lose its power, its significance, and its interest for us. This is not scientific-factual, scholastic literature, but it is nevertheless exactingly artistic literature of a quite sophisticated kind. It understands that the narrated historical transformation of Israel is to be understood as wrought precisely through these "larger-than-life" characters. Without the formidable persons, the move from Judges 17–21 to 1 Kings 1–2 would never have been accomplished.

c. Involvement of God. The literature then partakes of legendary imagination and of discerning social analysis. A third factor is perhaps most decisive, with particular reference to the term "Former Prophets." This literature is intensely theonomous. It understands that ultimately the historical process is not shaped by political-economic factors, nor by inventive personalities, but by the purposes and governance of Yahweh, which may operate visibly or unnoticed. The literature is committed to this perception of reality and neither apologizes for it nor explains it. The modern reader is not free to regard this central motive as an intrusion or an embarrassment. Yahweh is a central character in the narrative, a quite expected presence in the drama, and a proper agent of historical events. Insofar as this factor is a problem for interpretation, it must be remembered that it is not a problem for the narrative or the narrators, but only for modern "scientific" interpreters.

3. Frame of the Narrative. We may notice how the literature is framed. At the outset, in 1 Samuel 1, the presenting problem (as so often for Israel) is the matter of barrenness. The narrative method of dealing with this crisis is that Hannah makes a vow and speaks a prayer (1:11). The issue is resolved in vv 19–20, when a son is born and identified in the narrative by the formula, "Yahweh remembered her" (cf. Gen 30:22). The son, Samuel, is identified with the beginning of Israel's new historical process. In vv 21–28 the reference to Yahweh as history-maker is clear: Elkanah awaits Yahweh keeping his word (v 23); Hannah credits Yahweh with the gift of a son (v 27); the narrative ends with the worship of Yahweh (v 28). The historical drama and the legend of personalities is here overridden by the decisive power of Yahweh to cause a beginning for barren Hannah, for hopeless Elkanah, for oppressed Israel. Consequently, this new history is underway.

The issues are framed similarly at the end of the corpus in 2 Samuel 24. This chapter offers a remarkable statement concerning the relation between David, the well-established king, and Yahweh, who actually governs. The substance of the narrative consists in the prayer of David and a response from Yahweh. Twice David confesses sin (vv 10, 17), and once he pleads for Yahweh's mercy (v 14). The answer which then completes the Samuel corpus (v 25) is that Yahweh heeded the supplication and lifted the curse. The situations of Hannah and David, at the beginning and end of this literature, are very

different, but the dramatic moment is the same. In both there is petition and in both there is a transformative divine response:

> The Lord remembered her (1 Sam 1:19).
>
> The Lord heeded the supplication for the land (2 Sam 24:25).

The two framing narratives take into account the course of events and the cruciality of major personalities, but they attest to the confiction that finally it is Yahweh's remembering and heeding which shapes Israel's life. It is Yahweh's attentive engagement which moves Israel from chaotic, barbaric social practice (Judges 17–21) to a legitimated monarchic structure (1 Kings 1–2). The narrative of 1 and 2 Samuel traces the ways in which this move is made, albeit with fits and starts of human anguish, historical uncertainty, and moral ambiguity. While the narrative celebrates the achievement, it does so without obscuring the problematic of the achievement.

In assessing the theological tenor of the canonical form of 1 and 2 Samuel, Childs (*IOTS*, 263–80) has placed particular emphasis upon the two poems of the Song of Hannah (1 Sam 2:1–10) and David's psalm of praise (2 Sam 22:2–51). Again, the placement of these two poems as a second level of envelopes (inside the two narratives ending in prayer) cannot be accidental. Both are undoubtedly independent poems which have been intentionally placed where they are. 1 Sam 2:1–10 relies on a poetic tradition reflected in Psalm 113; 2 Sam 22:2–51 also utilizes a liturgic tradition, as is reflected in Psalm 18. The Song of Hannah ostensibly celebrates Samuel's birth, but in fact the poetry lauds the readiness of Yahweh to perform transformative acts in the public life of Israel. Childs (*IOTS*, 273) regards the poem as "an interpretive key for this history which is, above all, to be understood from a theocentric perspective." If, as seems clear, the narrative traces the fall of Saul and the rise of David (cf. 1 Sam 18:7; 21:11; 24:17, 20; 25:28; 26:25; 28:17; 2 Sam 3:1), then the affirmation that God "brings low and exalts" (1 Sam 2:7) asserts Yahweh's irresistible sovereignty and anticipates David's emergence and dominion in the literature. Likewise, 2 Samuel 22 is a recital of the ways in which David's remarkable achievements are to be referred to the power of Yahweh. This psalm is a well-crafted combination of reference to Yahweh's sovereignty and deep appreciation of the activity of David as the bearer of Israel's history on its way from chaos to order.

Carlson (1964) has offered a very different attempt to understand the present shape of the literature. While he has focused exclusively on 2 Samuel, it is not difficult or unreasonable to extrapolate how his analysis might comprehend 1 Samuel as well. He sees 2 Samuel as juxtaposing "David under the blessing" (2 Samuel 2–5) and "David under the curse" (9–24). Under this rubric, part of 1 Samuel would likely be a longer narrative statement of David under blessing, because in that literature, everything that happens to David moves toward his final triumph.

In Carlson's analysis, 2 Samuel 11–12 is singled out as the pivotal passage wherein the mood, direction, and intentionality of David's narrative is inverted. From that point forward, David's family and throne are under assault, and each episode develops further the dimension of the tragic which is countered only by Yahweh's resilient promise which is still operative. Humphreys (1982; 1985) has characterized the Saul narrative in 1 Samuel as "tragic," but that tragic quality does not touch the character of David until the latter part of the narrative. Such a delay in the articulation of the tragic no doubt serves the narrative intention of the text.

By a very different route, Alter arrives at a judgment about the David material that is oddly parallel to that of Carlson:

> Indeed one of the most striking aspects of the entire David story is that until his career reaches its crucial breaking point with his murder-by-proxy of Uriah after his adultery with Bathsheba, almost all of his speeches are in public situations and can be read as politically motivated. It is only after the death of the child born of his union with Bathsheba that the personal voice of a shaken David begins to emerge (1981:119).

Alter is interested in literary, not theological questions, but as Carlson identified 2 Samuel 11–12 as the point of transition from blessing to curse, so Alter identifies that text as the move from a public to a

personal David, and we may say, from a triumphal to an anguished David, from an opaque to a transparent David.

Through all these different analyses with attention to literary and theological issues, we may conclude that the Samuel corpus is composed with great literary finesse and with theological intentionality. It is aimed at presenting the character of David as the bearer of Israel's historical possibility and as the vehicle for God's purposes in Israel. This entire literary, theological assertion about Israel's possibility and God's purposes hinged on the narrative events of 2 Samuel 11–12 (see Brueggemann 1985:chap. 3).

C. Survey of the Narrative Elements

Wide scholarly consensus holds that the present books of Samuel have been formed by joining together independent literary pieces which in and of themselves are important literary achievements. Alter, who asks a very different set of questions than is usual among biblical scholars, dissents from this view, "… . the evidence for a unified imaginative conception of the whole David story seems to me persuasive" (1981:119 n. 1). However, Alter's view is against the consensus, and in any case "a unified imaginative conception" does not necessarily preclude earlier independent elements. On the whole, most scholarly analysis has been preoccupied with efforts to identify and/or reconstruct those earlier pieces. The most that can be said with confidence is that this literature, which now moves from poem (1 Sam 2:1–10) to poem (2 Sam 22:2–51), from the prayer of Hannah (1 Samuel 1) to the prayer of David (2 Samuel 24), is formed as it stands by a long traditioning process working with extant materials. That long process is not completely visible to us, but with the aid of a rough scholarly consensus, we may identify several narrative elements.

1. 1 Sam 1:1–4:1a. The early Samuel materials of 1 Sam 1:1–4:1a present the historical problem of Israel in crisis. These materials, drawn from a variety of sources, focus on the birth, authorization, and establishment of Samuel as a key leader in premonarchic Israel. The centrality of the Song of Hannah assures one that the narrative does not have an excessive interest in the person or personality of Samuel. It is clear that the person of Samuel is early placed in the service of the liberation of Israel from historical oppression. Thus Samuel is of interest as he is included in the anticipation of Israel's social well-being under the new organization of life wrought by David.

2. 1 Sam 4:1b–7:2. The second element of the text is 4:1 b–7:2 (with a conjectured continuation in 2 Samuel 6). This narrative reflects the situation of a vulnerable tribal organization, though the narrative is stunningly silent on the leadership role of Samuel. The central subject here is the ark of the covenant which is taken as a rallying symbol of the tribal confederation and as a mark of God's powerful, effective presence. Scholars have concluded that this narrative at one time circulated independently. In terms of the overall move from chaotic tribal organization to an ordered monarchy, this narrative serves (congruent with Judges 17–21) to indicate that the old organization and the old modes of trust in Yahweh were not adequate for the Philistine threat. Indeed, the books of Samuel make sense only if one recognizes that there is a social, political, and therefore theological issue about the adequacy of old forms of public life. The capture of the ark is not only a religious failure, but it also bespeaks an organizational and institutional crisis which is present throughout this literature.

Miller and Roberts (1977) have seen that the Ark Narrative is shaped, not unlike the Plague Narrative of Exodus 5–11, as a battle between the gods which culminates in the triumph of Yahweh over rival gods and their images. Thus the debacle of the image of Dagon is a liturgic, narrative assertion of the power of Yahweh. That is, the repeated retelling of this narrative functioned in ancient Israel as a paradigmatic statement concerning the sovereignty of Yahweh vis-à-vis all other religious claims. The "Ark Narrative" (as this piece is named) no doubt is quite distinct, but when it is juxtaposed with 1 Samuel 1–3, and particularly the Song of Hannah, the combined narrative asserts the power of Yahweh to govern the history of Israel in irresistible ways. It is probable that the Ark Narrative, because of its ties to the tribal order, also attests to the validity of leadership embodied in Samuel as the last of the judges. Samuel, however, is not mentioned by name in the narrative, which means that enhancement of Samuel's leadership here is at best only by inference. The more important point is that Yahweh is the real governor of the historical process. The same point is made in the Succession Narrative (cf. 2 Sam 11:27; 12:24;

17:14) in a very different mode. Israel here sees its narrative history, an implementation of the powerful themes of the Song of Hannah.

3. 1 Sam 7:3–15:35. The emergence of monarchy is the theme of 1 Sam 7:3–15:35, which is particularly linked to the person of Saul. There is no doubt that this narrative is the result of an intensive redactional process, but the exact features of this are impossible to determine. While the story is cast around the disputed leadership of Samuel and the emergence of Saul, the real debate does not concern personalities. Rather, it concerns the relationship between the faith of the community and public forms of power and how the trust Israel has in Yahweh should be implemented in institutional forms.

The narrative discloses to us opinions which believe not only that monarchy is required to cope with historical threats, but that monarchy is a gift from Yahweh to Israel for the securing of the community. A counter opinion, more forcefully expressed, argues that monarchy is a departure from faith in Yahweh even as it is a departure from the old tribal organization. Both opinions are expressed in this complicated narration of chaps. 7–15. It is a truism of scholarship that the narrative contains two sources reflecting two strongly held political opinions which judge the institution of monarchy positively and negatively. Scholarship moreover has held that the pro-kingship source is from the period itself, whereas the anti-kingship sources are later, reflecting disillusionment with the tyranny of Solomon.

It seems more probable that the two opinions were in fact alive at the same time. The two opinions reflect a genuine dispute and a genuine probe of a serious issue upon which the theological answers were not yet clear. As Mendelsohn (1956) has shown, Israel could appeal to models of tyrannical kingship very early in its existence. The debate was not an artificial or simply pragmatic one. Instead, the issue turned (as it frequently does) on the concrete institutional form that is to be given to zealous faith.

The two voices in the text need to be assessed not only as serious theological offers, but also in terms of sociopolitical reality. It is common to say that kingship arose in response to the external threat of the Philistines. But Gottwald (1983) has suggested an alternative. As economic prosperity developed in Israel and some group(s) came to be affluent, Israelites in the community developed an accumulation of wealth (surplus value) that needed to be defended and legitimated. The institution of monarchy emerged, on this reading, to defend and maintain the social inequity in Israel. From the outset (on this reading), monarchy was sponsored by and in the interest of the affluent, dominant class. As the monarchy defended such a disproportion, so monarchy was accompanied within one generation by the temple which served to legitimate the economic monopoly which might earlier have received a harsh critique, but now is given religious sanction. Thus the debate about kingship is not an isolated theological question about the will of Yahweh, but the debate contains within it a covert discussion of social power, social theory, social organization. It is a debate about egalitarianism and social inequity in institutionalized forms. The yearning "to be like the nations" (1 Sam 8:5, 20) is a yearning to abandon the radical egalitarian social vision of covenantal, tribal Israel (as portrayed in Joshua-Judges) and to embrace the economics and politics of surplus that other cultures practiced and other religions legitimated. The dispute thus is for the heart of Israel, but with a keen awareness that Israel's heart is not far distant from its treasure. (Notice the embodiment of this shift as it is portrayed in Solomon, with reference to his heart from 1 Kings 3:9, 12 to 11:4.) As the narrative now presents the monarchy issue, 1 Samuel 12 is a sober rejection of monarchy by a voice not disinterested, and 1 Sam 13:8–15 and 15:1–35 are strongly critical voices against monarchy. The precise intent of these latter narratives, however, is unclear. It appears in 13:14; 15:10, 35 that what is rejected is not the institution and principle of monarchy, but only Saul as the appointee.

Gunn (1978) and Humphreys (1978) have shown that the Saul narrative is a portrayal of tragedy, marked by ambiguity, darkness, and fate. It may be that the tragic character of Saul in this narrative is a portrayal from the perspective of Davidic interests. That is, Saul's fate is the counter-theme of David's success and so the Saul portrayal is not disinterested. But it is also plausible, as Gunn and Humphreys suggest, that taken on its own terms and without reference to David, the great artistic achievement of the narrative is to see and articulate that Saul's public life was indeed a tragedy, the end of which is not found in sin and judgment, but in a hidden, irrevocable destiny that is beyond understanding. What is offered then, is not an imposed philosophy of history, but simply a discerning study of how the historical process

has worked in this one case. It is indeed true that the sword devours one and now another (2 Sam 11:25). Saul is indeed devoured by the historical process in an inexplicable, inscrutable way.

The analyses of Humphreys and Gunn, contrasted, e.g., with those of Birch (1976) and Campbell (1975), reflect an important shift in scholarly perspective away from technical to artistic sensitivity. The newer scholarship is not so much interested in source analysis and dissection of the material, as it is in an attempt to grasp the artistic construction that is offered when the narrative is taken as a whole. When so viewed, Saul is the character in the drama who is sacrificed around the inescapable public question of faith and power. The narrative does not linger over Saul, but recognizes that the issue of faith and power is on its way to a new resolution at the severe cost of Saul's person, reputation, and destiny.

4. 1 Sam 16–2 Sam 5:10. The central character of the books of Samuel does not appear until 1 Sam 16:1. It is as though the literature has withheld this character as long as possible, in an intentional attempt to enhance the drama. It is generally held that with the appearance of David in 1 Sam 16:1–13, we have a new piece of literature, referred to as "The Narrative of the Rise of David," which extends through 2 Sam 5:10 (though Gunn [1978] divides the material differently).

This material is marked by (1) a narrative quality that allows for playfulness and a kind of naïveté which likely is quite artistically crafted, (2) intense redactional activity so that there is some evidence of traditions which are often repetitious and occasionally contradictory, and (3) an intense fascination with David that is celebrative and uncritical. The combination of narrative mode and the celebrative presentation of David suggests that this material is free from (and perhaps prior to) the disputes concerning monarchy. This material presents the emergence of the institution of monarchy under David as an unmitigated good.

The narrative moves from an idyllic picture of the shepherd boy (1 Sam 16:1–13) to the establishment of the shepherd (king) over Israel (2 Sam 5:3). The central subject of the narrative is the conflict between Saul and David, which of course comes to an end in 1 Samuel 31 with the death of Saul. (It is clear from 2 Sam 9:3 that David and the literature continue to be haunted by the Saul legacy and cannot put its reality and danger to rest.) The break in the narrative between 1 and 2 Samuel is organized around Saul's death and is marked by the exquisite poem of lament in 2 Sam 1:19–27.

Jobling (1978:4–25) and Humphreys (1978; 1980) have shown that notwithstanding all the redactional activity and the fact that old narratives have been secondarily employed, there is indeed an intentional literary design to the construction of the whole. The story line concerns the unhindered advance of David and the corresponding demise of Saul. The intent of the story line and the artistic skill of literary design are matched by the theological intentionality of the story, for it is clear that David's heroic buoyancy is held in close relation to the purposes of Yahweh. This theological affirmation of David is evident in the initial transitional episode of 1 Sam 16:1–13 and is reaffirmed in the concluding formula of 2 Sam 5:10: "And David became greater and greater, for the Lord, the God of hosts, was with him." The formula perhaps appeals to the old slogans of holy war ("I am with you,") and is the basis of the claim of Immanuel ("God with us,"), a programmatic claim of the Davidic dynasty (see also 1 Sam 25:28). The narrative is able to discern and articulate in a seemingly unreflective mode the powerful and resilient purpose of Yahweh, so that the very shape of the narrative makes the assertion of God's will for this dynasty. As the narrative presents it, the person of David overrides the misgivings and disputes of 1 Samuel 7–15. Those issues simply are not present to a Davidic purview of reality.

5. 2 Sam 5:11–8:18. The materials in 2 Sam 5:11–8:18 clearly reflect a very different literary tone, a different set of sociological presuppositions, and a different theological sensitivity. This literature may indeed be a miscellaneous collection of materials lodged between the two great narratives of "The Rise" (1 Sam 16:1–2 Sam 5:10) and "The Succession" (2 Samuel 9–20). Within this section there is surely a different mode of literature, largely lacking the free narrative style of "The Rise" and being much more preoccupied with technical data concerning lists of officers, indices of victories and logs of battles. The material also contains a narrative about the ark (2 Samuel 6) which has been reckoned to be a continuation of 1 Sam 4:1–7:1. Finally, there is the formidable oracle of legitimacy in 2 Samuel 7, which has no parallel elsewhere in this literature.

The entire unit breathes the air of an established, legitimated royal apparatus, having the tone of ideology, propaganda, and justification for the state. In that regard it is clear that the uncritical enthusiasm and amazement of the tale of "The Rise" have been displaced and overcome by a self-assured and seemingly self-serving order. What had been amazing in prospect is self-serving in reality. As the social reality changes, so the literary form changes with it.

The "in between" chapters are conventionally regarded as miscellaneous. However, Flanagan (*WLSGF*, 361–72) has shrewdly observed that there is a possible three-tiered structure of older materials:

	Transfer of Ark (6:1–20)	Dynastic Oracle (7:1–29)
Philistine War (5:17–25)		Battles of the Empire (8:1–14)
Children of David (5:13–16)		Officers of David (8:15–18)

Such an analysis not only suggests a quite intentional arrangement, but Flanagan proposes that the order of materials in this way makes a statement of social and theological transition from tribe to state, from Saul to David, indicating that the "social, political, economic, and religious center of Israel's world had shifted" (*WLSGF*, 369). That shift was the work of David, but the text is uncompromising in its conclusion that the work wrought by David is in fact the work of Yahweh, who wills the change in Israel's life. Such a juxtaposition of David and Yahweh cannot fail to legitimate the entire enterprise.

6. 2 Samuel 9–10. In 2 Samuel 9–20 (1 Kings 1–2), we consider the second major collection, which stands architecturally over against the long narrative of "The Rise." This narrative has been designated by scholarship as "The Succession Narrative" because it seems to concern the crisis of identifying the successor to David on the throne (1 Kgs 1:20). But that designation is at most a scholarly convention. Given the complex nature of the book, a simple structural design of the Samuel material is not feasible. However, 1 Sam 16:1–2 Sam 5:10 can be viewed as the "Rise" to power (ascent), 2 Sam 5:11–8:18 the "Establishment" of power (plateau), and 2 Samuel 8–9 the "Succession" of power (descent). These three literary blocks concerning David are cast in very different modes, make very different theological assertions, and reflect very different sociological realities and experiences.

The Succession Narrative is divided into five episodes: 2 Samuel 9–10, 11–12, 13–14, 15–19 (20), and 1 Kings 1–2. Scholars have recognized that this is a distinctive mode of literature not met elsewhere in Samuel, rarely elsewhere in the OT or in the ANE. It is a self-conscious literature that focuses upon human agents as history-makers and presents God in subdued and indirect ways. This theological perspective, which reflects a new historical self-consciousness, is matched by a literary style especially marked by its artistic style and sensitivity. Various analyses by Gunn (1978), Conroy (1978), Alter (1981), Ridout (1971), and Fokkelman (1981) have illuminated the artistry of the unit.

It is generally recognized that 2 Samuel 11–12 is the key element in the narrative. In this episode David breaks the Torah, violates Uriah and Bathsheba, and is denounced by Nathan the prophet. Although David repents and is rescued from death, the dynasty of David is placed perpetually under the threat of the sword (2 Sam 12:10). With consummate skill, this vague threat works its way through the narrative, until in the concluding episode, Solomon assumes his father's throne through the use of the sword, which works havoc. Note the repeated use of Heb *pāgaʿ*, "strike down" (1 Kgs 2:29, 31, 34, 46; cf. v 9). Thus, it seems plausible that the governing episode of 2 Samuel 11–12 and the concluding events of 1 Kings 1–2 are held together by this common reference to the sword.

What emerges is a very different disclosure of David, a personal account of the interiority, ambiguity, and pathos of the man that is absent in the early narrative sections. This narrative characterizes the struggle of David to hold together personal reality and public office. Gunn has seen how this portrayal of David, without any didactic effort, functions as a mirror and disclosure of the same brokenness that is present in all of human life.

The narrative celebrates and focuses on David in a most remarkable way, as von Rad (*PHOE,* 176–204) has noted. Nonetheless, even here the narrative shows clearly that David is not an independent, free agent. Even David's life is encompassed in the rule of Yahweh, who is both faithful and demanding.

7. 2 Samuel 21–24. Finally, 2 Samuel 21–24 is commonly reckoned as a miscellaneous collection of old materials inserted in the Succession Narrative before the concluding episode of 1 Kings 1–2. This material is much more like the narrative style of "The Rise," but we cannot assign it to any particular corpus of material. Two comments must suffice. First, it is generally recognized that these chapters of miscellaneous notes have a structure of two narratives, two lists, and two poems, a sequence in parallel to what Flanagan has found in 2 Sam 5:11–8:18 (McCarter *2 Samuel* AB, 18). One may at least conclude that this unit is not without some intentionality.

Second, as suggested above, that these materials may function for canonical purposes so that the concluding episode of 2 Samuel 24 may be a counterpart of 1 Samuel 1, even as 2 Samuel 22 is a poem in relation to the Song of Hannah in 1 Samuel 2. These "appendices" evidence a much less sophisticated reading of historical reality. They affirm in more direct fashion that Yahweh's governance is overriding, even of David's capacity. The whole of Samuel in the service of David is to legitimate and enhance the monarchy. Yet it is noteworthy that in 2 Samuel 24 as in 2 Samuel 11–22, the narrative articulates a theological Yahwistic foil to rapacious royal power. Moreover, David as a king is not free from Yahweh and Yahweh's Torah. Thus the ambiguity so painfully articulated in 1 Samuel 7–15 persists here. In the end even the chosen and much-celebrated David stands rebuked and under judgment. The narrative seems not to know how (or chooses not) to resolve this issue, but calls the reader to participate in this ambiguity which characterizes Israel's relation with Yahweh.

D. Some Important Texts

It may be helpful to identify and comment briefly on texts in Samuel which are structurally important for a sense of the whole, both literarily and theologically. Though the identification of such texts requires an interpretive judgment, the judgments made here reflect a general interpretive consensus.

1. 1 Sam 2:1–10. This hymn likely dates to the 10th century, i.e., to the time of David. It asserts some of the governing themes of the Samuel corpus, namely the inversion of the historical process through the activity or governance of Yahweh. The poem is reflective of the hymnic pattern of Israel's liturgy, which sings about the distinctiveness of Yahweh known in Yahweh's powerful transformative interventions.

In its present setting, this poem functions to signal the destiny of Israel as it will be presented in the ensuing narrative of Samuel. At the beginning of the narrative, in the face of the Philistines, the Israelites are the low (v 7), the poor (v 8), but the course of Davidic history is one of exalting, lifting, raising up (vv 7–8). Thus the older independent hymn has been made a fundamental element in the larger account.

2. 1 Sam 8:11–17. This text is bounded in the narrative (vv 5, 20) with a yearning to be "like the nations." It is the urging of the narrative (even in 2 Samuel 11–12, 24) that Israel, even under a king, is not and cannot be like the nations. In these verses the narrative presents a sober and realistic analysis of the way of kings. According to Gottwald's model (1979), Israel in the tribal period is a radical social experiment in organizing social power in egalitarian ways. This text discerningly asserts that to embrace monarchy is to embrace the very exploitative, rapacious power of a legitimated state from which Moses and Joshua had emancipated Israel.

The characterization of monarchy in this text may be reflective of Solomon, but also of neighboring kings of the period before Solomon. This characterization is dominated by the Heb verb *lāqaḥ,* "take." Israel has seen and knows that the primary social function of legitimated central power is "to take," to develop concentrations of wealth and power at the expense of some for the benefit of others. The text is important because it makes clear that Israel's theory of public life is deeply opposed to the conventional systems available, and that for Israel justice issues are paramount religious and social matters.

3. 1 Sam 12:1–25. This valedictory oration by Samuel provides a general theoretical statement about history from the perspective of the old tribal organization and from Israel's old covenantal tradition. As such, it is consistent with 8:11–17. This text is most unambiguous in regarding monarchy as a violation of

the will of Yahweh. While the passage is highly stylized, it no doubt reflects an old and deep conviction in Israel.

In terms of literary structure this passage is important because it marks the culmination of a view and practice of history best known in the book of Judges. Thus some scholars propose that Samuel follows the pattern of the old judges and that 1 Samuel 1–12 is in fact an extension of the literature known in the book of Judges. While 1 Samuel 13–15 provides a transition toward David, in terms of dramatic power the literature moves directly from the verdict of chapter 12 to the appearance of David in 16:1–13. The emergence of David has the literary effect of rendering the old dispute irrelevant. All of that is forgotten in the face of Israel's fascination with David.

4. 1 Sam 16:1–13. This passage may not be as important structurally as others cited. Yet there is no doubt that it marks a decisive shift of the flow of historical power from Saul to David. What is perhaps most interesting and important is the "innocent" quality of the narrative in which Yahweh is a direct, unexplained voice who participates in and governs the events of the narrative. No doubt the purpose of the narrative is to legitimate David by means of presenting David as a direct, divine choice. David is chosen by no human agent or process, only by the voice of God. Yet it is clear that such a narrative would not persuade anyone not already committed to the cause of David. This narrative has a legitimating function and is effective because it claims David's authority, in the most naive and direct way possible, as an act of simple designation by Yahweh, without pleading, justification, or explanation. This is the voice for "true believers."

5. 2 Sam 7:1–17. This is the hinge point between "The Rise" and "The Succession," or as Carlson (1964) has it, between blessing and curse. The chapter begins with a dispute concerning "presence," (vv 1–6), in the form of a discussion of "tent" and "temple." But the heart of the chapter is vv 7–17 which is a decree of Yahweh in the mouth of Nathan, giving divine legitimacy to the Davidic dynasty. This chapter is decisive for all of biblical faith in shifting both the political and theological ground of Israel's life with God.

The most remarkable move made is in vv 14–16, whereby Yahweh is now fully, firmly, unconditionally, and perpetually committed to the Davidic line. Clearly the unconditional terms were not everywhere embraced (cf. Ps 132:12), and it is obvious that in history the promise was not kept in the face of disobedience (cf. Jer 22:18–20). But in this moment the hazards of Israel's disobedience is fully overcome, and for the first time the God of Israel is unreservedly committed to a specific historical arrangement. While we may rightly regard such a claim as ideology or propaganda, the decree was in fact accepted in the Bible as a genuine disclosure. That God should be so committed to an historical arrangement reflects the scandal of particularity in biblical faith. That sort of theological thinking in terms of the historical concreteness of God adumbrated in this text becomes the source for theological messianism in both Judaism and Christianity.

6. 2 Samuel 11–12. This remarkable narrative achievement is one of the most exquisite in the Bible. The narrative does not present a full-bodied theological proposition as most of the other texts we have cited. Rather, with a very different mode of disclosure and a different set of epistemological assumptions, this narrative made its own case for the inscrutable governance of Yahweh. It asserts that David, the embodiment of Israel's new social power and new monarchic history, is not adequately committed to the Torah and perhaps does not fully understand the claims of the massive decree of 2 Sam 7:1–17. The narrative traces in an artistic and well-paced manner the several attempts at cover-up by David, until the voice of the prophet is sounded. The move from artistic delight in chapter 11 to theological clarity in chapter 12 is unmistakable, a move not unlike that from Genesis 2 to Genesis 3. The possibilities facing this powerful, gifted man are resolved in terms of prophetic judgment and covenantal curse.

This text is important because it marks a transition in the portrayal of David and seems to set in motion the destructive events that accompany the transition in power. From this moment on, the monarchy is a scarred social reality in Israel and will continue to be so, until its end.

7. 2 Sam 22:2–51. This poem has already been mentioned in relation to the canonical position of 1 Sam 2:1–10. This Davidic hymn of praise belongs to the general, familiar liturgic corpus of royal songs as

attested by Psalm 18 in the Psalter. The Psalm refers the king's success and well-being completely to the fidelity and power of Yahweh, and claims nothing for the king himself.

The placement of the Psalm in this narrative gives it a quite specific function. While David in both "The Rise" and "The Succession" takes a great deal of initiative and is the key agent, this Psalm acknowledges precisely that the reality of history is found in Yahweh's action. It is as though this Psalm is now used to acknowledge the theonomous cast of life, even of royal life, as it is anticipated in 1 Sam 2:1–10.

If one traces the contours of the entire story of Samuel through this set of texts (1 Sam 2:1–10; 8:11–17; 12:1–25; 16:1–13; 2 Sam 7:1–17; 11–12; 22), one sees that the juxtaposition of human power and divine authority is the pervasive issue.

The books of Samuel are Israel's subtle effort to resolve this question in a theologically sensitive fashion that neither concedes too much nor claims too much. History is known to be an arena of human freedom and responsibility, of divine authority and governance. David in his restlessness and fidelity is the carrier of that troublesome settlement which never stays finally settled.

WALTER BRUEGGEMANN

SANBALLAT (PERSON) [Heb *,sanballaṭ* (סַנְבַלַּט)]. An individual whose name means "Sin (the moon-god) gives life" (cf. Akk *sin-uballiṭ*). He is mentioned in Neh 2:10, 19; 3:33—Eng 4:1; 4:1—Eng 4:7; 6:1, 2, 5, 12, 14; and 13:28 as the leading figure in the opposition which Nehemiah encountered in his rebuilding of the walls of Jerusalem, and in the Aramaic documents from Elephantine as the "governor of Samaria" (*paḥat šmryn;* cf. *CAP,* 30:29). There are also references to a Sanballat in the Samaria Papyri

from Wadi ed-Daliyeh and in Josephus *Ant* 11, though the precise relationship of these to the character in Nehemiah is disputed (see below).

Nothing is known for certain of his origins and background. Because of his foreign name, it is generally believed that he was a descendant of one of the settlers whom the Assyrians deported to Samaria after the fall of the northern kingdom of Israel in 721 B.C. (cf. 2 Kgs 17:24–41; Ezra 4:2, 10; see most recently Zadok 1985:569–70). While this is not at all unlikely, it must nevertheless be remembered that it was by no means unusual for Jews (and therefore presumably descendants of the inhabitants of the old N kingdom also) to adopt Babylonian names at this time (e.g., Zerubbabel). At any rate, he gave his sons Yahwistic names (Delaiah and Shelemiah; *CAP*, 30.29), suggesting that he regarded himself as an adherent of the Israelite cult.

Instead of giving Sanballat a title, Nehemiah regularly calls him "the Horonite," again a designation of uncertain significance. Among the main proposals are (1) that he came from, or was a resident of, either upper or lower Beth-horon (Josh 16:3, 5), some five miles N of Jerusalem. Because of its strategic position, Zadok has maintained that it is not unreasonable to assume that this might have been an administrative center near the SW border of the province of Samaria, and he further points to parallels for designating hostile rulers in this manner. The absence of *bêt* from the designation is no problem in view of the analogy with *happalṭî*, "the Paltite" (2 Sam 23:26), generally assumed to come from *bêt peleṭ*, "the house of Pelet" (Josh 15:27). It has been argued against this view that we expect some term of abuse here to parallel that for "Tobiah the Ammonite," and to explain why Nehemiah preferred this designation to that of "governor of Samaria." Both points carry some weight, but they are not sufficiently conclusive to eliminate this possibility. It remains the most probable explanation, and is certainly the most widely held view; cf. Torrey 1928; Rudolph *Esra und Nehemia* HAT; and Rowley 1963b: 246. (2) In response to the difficulties just mentioned, other scholars (most recently Kellermann 1967:167) link the name with Horonaim in Moab (cf. Isa 15:5; Jer 48:3). This would make Sanballat a Moabite, just as Tobiah was an Ammonite, consequently excluding both from "the assembly of God"; cf. Neh 13:1–3 with Deut 23:4–7—vv 3–6. Nehemiah's action in 13:28 also implies that Sanballat was of foreign origin, although for Nehemiah that might have applied to any non-Judahite and especially to the possible descendant of an originally foreign settler. While this proposal has obvious attractions, it fails to explain why Sanballat was not simply called "the Moabite." Would contemporary readers have readily understood the allusion? In addition, Zadok objects that we should expect retention of the *m* suffix in a gentilic. (3) Other less plausible suggestions include revocalizing to *heḥārānî* and so linking Sanballat with Harran in Mesopotamia, a center for the worship of the god Sin (Feigin 1926–27 and Galling *Chronik, Esra, Nehemia* ATD), associating him with Hawan, E of Galilee (Kraeling *BMAP*, 107–8) or even that he was a devotee of the god Horon (Williamson *Ezra, Nehemiah* WBC, 183).

It would seem from the use of the description "the Horonite" that Sanballat was the first in his family to act as governor of Samaria, it being known now that he was followed in this office by his direct descendants through four generations until the start of the Hellenistic rule (see below). It is possible, therefore, that his appointment reflects part of an administrative "shake-up" in the W of the Persian Empire. This would have been due to an attempt by the Persians to reassert their control of the region after some fifteen years of turbulence, starting with the Egyptian revolt, which lasted for several years from 460 B.C. on, and continuing with the revolt of the W satrapies under the leadership of Megabyzos in ca. 449 B.C. (cf. Williamson fc.) From the Persian point of view, Nehemiah's appointment a few years later (445 B.C.) may reflect part of the same policy.

At any rate, by the time Nehemiah arrived in Jerusalem Sanballat was clearly the dominant partner in a loose federation of neighboring provincial leaders (cf. especially Neh 4:1—Eng v 7). In the light of Nehemiah's highly partisan account of events, we can only speculate as to the motives for Sanballat's determined, but ultimately unsuccessful, opposition to Nehemiah's mission. In an influential article, Alt (1934 = *KlSchr* 2:316–37) argued that until this time Judah was included within the province of Samaria and that his opposition was thus due to pique at the diminution in his sphere of influence. While this theory still has eminent adherents, it has attracted increasing criticism in recent years in view of a

reexamination of the biblical data and fresh epigraphical data (for a survey and evaluation, cf. Williamson 1988) so that it becomes necessary to propose alternative reasons. One attractive speculation is that following the debacle of the Jews' slightly earlier attempt to rebuild the walls of Jerusalem (recounted out of its chronological setting in Ezra 4:8–23, on which cf. Rowley 1963a) Judah was placed temporarily under the supervision of Samaria, with Tobiah (on this view a subordinate of Sanballat) acting as a caretaker administrator in Jerusalem until such time as Artaxerxes could find a reliable replacement. This would at least explain why Tobiah had close ties with some of the population in Jerusalem (Neh 6:17–19; 13:4–9). If this were the case Sanballat may have regarded Nehemiah's appointment as a personal slight.

Broader commercial and political considerations no doubt also played a part and may have been used by Sanballat to justify his opposition to Nehemiah among his associates if not to the imperial court itself. It seems certain that between the landed classes and those who had not returned from exile of both provinces there was a good deal of trade and social interaction (see, for example, Neh 5:8; 6:17–19; 13:4–9, 15–28), while if our earlier speculation about Tobiah is correct there would also have been excellent relations between Judah and the neighboring provinces. All this, Sanballat would have reasonably supposed, would have been very much to the liking of the imperial authorities. Nehemiah's policy of pursuing a rigid isolation of Judah from all outsiders, typified by his rebuilding of the walls of Jerusalem, would have been regarded as detrimental to the stability of the region, and it would not have been difficult even to represent it as treasonable (cf. Neh 2:19; 6:6–7). In such circumstances Sanballat's personal opposition to Nehemiah may readily be understood.

We have little other information about Sanballat the Horonite except that by the year 408 B.C. he was still in office but had delegated effective power to his two sons, Delaiah and Shelemiah, presumably because of his advanced age (cf. *CAP*, 30:29). Finds of papyri and seals from the Wadi ed-Daliyeh, however, have revealed more information about his descendants, who continued to hold the office of governor, and at least one who was also called Sanballat. According to Cross (1966:204), they show that a Sanballat (II) became governor sometime early in the 4th century B.C.E., and that he was therefore probably the son of Delaiah and so the grandson of Sanballat the Horonite. They further refer to a *yšʿyhw* (or *ydʿyhw;* the name is damaged and therefore the precise reconstruction is hypothetical) and a Hananiah, both sons of Sanballat II and both governors after him. Because Josephus refers to a Sanballat at the start of Hellenistic rule, and because the practice of papponymy (naming a child after his paternal grandfather) was not uncommon at this period, Cross further suggests that Hananiah may have been succeeded by a Sanballat III.

While nothing is known of these men, the reconstruction is of considerable significance because of the light it may shed on the account in Josephus *Ant* 11.306–12 concerning the founding of the Samaritan temple. According to this source, Manasseh, a brother of the Jerusalem high priest Jaddua, was married to Nikaso, a daughter of Sanballat. When "the elders of Jerusalem" obliged Manasseh to leave Jerusalem rather than divorce his wife, he found consolation in that his father-in-law had a temple built for him on Mt. Gerizim. All this took place at the time of Darius before the advance of Alexander the Great.

There is a somewhat similar account of this in Neh 13:28, which states, "Now one of the sons of Jehoiada, son of Eliashib, the high priest, was a son-in-law of Sanballat the Horonite, so I (Nehemiah) banished him from my presence." Many earlier scholars thought that the coincidence between these two accounts was too great for them both to be true and therefore concluded that Josephus had fabricated his account from the incident in Nehemiah and dated it a century later. Cross, however, has suggested that the probability that there was a Sanballat III in Samaria puts the issue in a new light and that it is therefore no longer reasonable to doubt the essential accuracy of Josephus' account. We should reckon with the possibility of repeated intermarriage between the leading families of Jerusalem and Samaria (1966:202–5; 1975:5–6).

In assessing this proposal, several points need to be remembered. First, the fact that the Samaria Papyri show that there was a Sanballat II as governor may make plausible the suggestion that there was also a Sanballat III at the end of the Persian period. Nevertheless, this remains conjectural, the only direct evidence for it being the account in Josephus, and concerning the latter many other problems still remain.

Secondly, therefore, with regard to Josephus it must be remembered that he clearly made the impossible identification of the Sanballat of his account with the enemy of Nehemiah (cf. *Ant* 11.302). Thirdly, we also now know that Josephus was confused about the chronology of the last century of Persian rule and so reduced the period by two whole generations (cf. Williamson 1977); it is therefore likely that he regarded his account as an alternative version of Neh 13:28, and this is reinforced by the fact that he omitted a parallel reference at the point where the story should appear in his retelling of the career of Nehemiah (cf. *Ant* 11.182). Finally, there are many internal incoherences in Josephus' story when taken as a whole. These have been frequently rehearsed (e.g., by Rowley 1963b and Mowinckel 1964:104–18), and the recent discoveries and discussions have done nothing to remove them. It is clear that the narrative of Josephus cannot simply be accepted at face value (cf. Grabbe 1987), and the most probable view remains that which sees in Josephus a garbled variant of Neh 13:28, even if he himself derived it from some other source, subsequently lost to us (cf. Williamson *Ezra, Nehemiah* WBC, 401).

SANHEDRIN. The sanhedrin in Jerusalem, as it appears in the gospels, Josephus, and rabbinic literature, has been understood alternately as the high priests' political council, the highest legislative body in Jewish Palestine, the supreme judicial court, the grand jury for important cases, the council of the Pharisaic school, and the final court of appeals in deciding halakic questions. Even the number of assemblies properly called "the sanhedrin" has been debated.

———

A. Introduction

The confusion concerning the number and character of the sanhedrin(s) is related to uncertainty about the structure and leadership of 1st century Jewish society in Palestine. The biblical Hebrew terms for

leadership groups (*sôd; ʿêdâ*), and the later Hebrew term *bêt dîn,* give no clear indication of the composition, jurisdiction, or powers of the assemblies so designated. Likewise, the Greek political terminology adopted as words for Jewish governing bodies, especially *boulē, gerousia, symboulion, synedria,* and *synedrion* (all translated "council" in RSV), is general and imprecisely used.

Most theories of the sanhedrin have been developed with seriously flawed methods or assumptions. Many scholars have made uncritical use of the sources, especially rabbinic literature, treating every statement as historically reliable, with the result that very diverse and often irreconcilable sources have been harmonized to produce hypothetical and improbable legislative and judicial bodies. The various sanhedrins and other bodies mentioned in the texts must be understood as part of the whole political and social structure of Palestinian Judaism, set within a larger Hellenistic or Roman empire.

Jewish leadership underwent many organizational changes in response to the imperatives of outside powers and the changing balance of power within. The membership, leadership, powers, and functions of the Jerusalem Sanhedrin and other councils, regional assemblies, and courts varied with the strength of external rulers, such as the Romans, and with internal leaders, such as Alexander Jannaeus and Herod. Consequently, neither the sanhedrin nor any other institution can be treated as unchanging and continuous.

The theory of two sanhedrins, one political, led by the high priest and concerned with secular matters, and the other religious, dominated by the Pharisees and concerned with halakic matters, is based on a modern and artificial separation of religion and state, on an unhistorical retrojection of the 2d- and 3d-century rabbinic academies and courts on the Second Temple sanhedrin, and on an exaggeration of the Pharisees' role and power in Jewish society. Religion was so thoroughly embedded in political society that any ruling body had to deal with political, religious, legislative, and judicial issues. The laws which governed Jewish society derived from the Bible as interpreted through later laws and custom. Ritual, civil, and criminal law, moral imperative and social mores were inextricably intertwined. The struggle to control or influence this Jewish way of life fills the pages of all the sources. It is likely that there were many assemblies and councils attached to various Jewish groups, but only one supreme council in Jerusalem, made up of the most powerful and influential leaders at any given time.

B. Meanings of "Sanhedrin"

The Greek word *synedrion,* "sanhedrin," literally a "sitting down with," is widely attested in Greek literature, Ptolemaic Egypt, and elsewhere. It is one of a number of general words for meetings and assemblies. It is used of the meetings of city councils, the Areopagus council in Athens, meetings of representatives of allied cities, the assembly of the Roman senate, and meetings of high officials. In later Hellenistic Greek, *synedrion* denotes various kinds of law courts and this is the sense given the term in the NT and Mishnah (*HJP²* 2:205). In the Roman period it was used of provincial assemblies (Kennard 1962), a usage which also fits Josephus and the NT. Finally, it is used for the councils of smaller, less official groups such as private associations and boards of trade (Hoenig 1953:3–11; Mantel *IDBSup,* 784).

C. Josephus

Josephus uses the term "sanhedrin" in its several meanings, but only when writing of the Roman period. The five districts into which the Roman governor Gabinius divided Palestine in 57 B.C.E. are called sanhedrins in the *Antiquities* (14.5.4 §91), but synods in the *Jewish War* (1.8.5 §170), an indication that the terms were not technical and fixed. These sanhedrins were regional assemblies of traditional leaders whose primary responsibility was tax collection and civil order in their districts (Kennard 1962). The many councils of family, friends, and officials summoned by Herod to settle disputes within his family (e.g., *JW* 1.27.1 §537) are called sanhedrins. These ad hoc bodies both advised Herod and rendered judgment concerning his adversaries' culpability (subject to his approval). "Sanhedrin" is used for other ad hoc meetings of advisors, such as Titus' meeting with his officers during the siege of Jerusalem (*JW* 6.4.3 §243) and Josephus' strategy sessions with his friends in Galilee (*Life* §368). It is also used for meetings of permanent bodies, such as the Roman senate (*JW* 2.2.4 §25). It is not certain that the council of leaders in Jerusalem, headed by the high priest Hyrcanus, which put Herod on trial (*Ant* 14.9.3 §167 ff.) and the group of Jerusalem leaders directing the initial stages of the war against Rome (*Life* §62) were

a permanent assembly of Jewish leaders. They may have been ad hoc gatherings for specific purposes. A sanhedrin (nature not specified) was convened in Jerusalem by Agrippa II, at the request of the Levites, to grant them permission to wear linen robes like those of the priests (*Ant* 20.9.6 §216–17).

The evidence from Josephus shows that the term "sanhedrin" did not refer exclusively to a fixed assembly of the highest Jewish leaders in Jerusalem, nor does it reveal the nature of that body unequivocally. "Sanhedrin" was used in a variety of nontechnical senses to refer to legislative, judicial, and advisory bodies assembled by rulers. Josephus may refer to the sanhedrin under Hyrcanus as a permanently organized judicial body, but it is not clear that the sanhedrin which directed the early stages of the war against Rome was that same permanent body. When the Levites wished to wear linen robes, they requested that Agrippa convene *a* sanhedrin, not *the* sanhedrin. It is very probable that the leading citizens of Jerusalem, priests and nonpriests, had a permanent city council which had power or influence over Judea and the rest of Palestine, depending on political circumstances. Josephus does not give the technical name for this body consistently, nor does he describe its membership or powers, perhaps because they varied greatly over time. Most probably the powerful social leaders at any time were members of it. The functions of this council most probably covered whatever was important to society, including legislative, judicial, temple, and civil matters.

The highest council or senate of a Hellenistic-Roman city was often called the *boulē,* and some scholars have tried to separate the Jerusalem political *boulē* from the Pharisaic sanhedrin (or in the case of Rivkin, vice versa). However, Josephus' use of the term *boulē* is as varied as his use of sanhedrin. He uses it often for the Roman senate (*Ant* 18–19) and in its related meanings of "plan, policy." He uses it occasionally for the supreme council of cities and peoples, for example, Tiberias' council of 600 (*JW* 2.21.10 §639–41), Antioch's city council (*JW* 7.5.2 §107) and the Samaritans' supreme council (*Ant* 18.4.8 §88). He also speaks occasionally of a council in Jerusalem: the chief priests and council (*JW* 2.15.6 §331), the priests with the powerful citizens and the council (*JW* 2.16.2 §336), the secretary of the council (*JW* 5.13.1 §532), and leaders, council, and people of Jerusalem (addressed in a letter by Claudius) (*Ant* 20.1.2 §11). Since the council is usually mentioned alongside the leading citizens, such as the chief priests, it seems to refer to a body larger than and advisory to the rulers. However, Josephus does not use the term with a specific technical meaning nor does he relate it to sanhedrin. (The use of *koinon* for city and provincial assemblies is relevant here also.) In general, *boulē* refers to a permanent governing body in a city which meets regularly. Since Jerusalem was not a Hellenistic city in the technical sense (Tcherikover 1964), the Jerusalem *boulē* or sanhedrin was not an independent governing body, but probably a variable assembly (or series of assemblies) of leading citizens, subject to the wishes of those in power and the needs of the society at different periods and called by different names by Josephus and the other sources.

D. New Testament

The Greek term *synedrion* has a general and specific use in the NT. In its general meaning it refers to local courts or councils which keep order and administer punishment (Matt 5:22; 10:17; Mark 13:9). Most often sanhedrin refers to the supreme council in Jerusalem which acts as a judicial court, as the political link to the Roman governor, and as the guardian of public order. The high priest presided over this sanhedrin, and its members included the chief priests, elders, scribes, and other members, presumably leading citizens (Mark 15:1). The Pharisees are not active in Jerusalem in the Synoptic Gospels nor, according to the primitive passion accounts, are they members of the sanhedrin. (John's claim that the Pharisees along with the chief priests summoned the sanhedrin [11:47] is historically unreliable because John turns all Jesus' non-priestly adversaries into Pharisees. Luke puts Pharisees in the sanhedrin in Acts.) In Mark and Matthew the sanhedrin condemns Jesus to death (Mark 14:64; Matt 26:66), but then must approach the Roman governor to have Jesus executed. In Luke no formal condemnation is made before the governor is approached (22:71). John attributes a political role and motive to the sanhedrin, which fears that Jesus will cause unrest and stimulate the Romans to destroy the nation (11:48–50). Luke, a gentile Christian, describes the sanhedrin as if it were a typical Hellenistic-Roman city council: "The elders-council [*presbyterion*] of the people gathered together, both chief priests and scribes, and led him away to their sanhedrin" (22:66). The chief priests and scribes made up the council of elders, and they

plus other citizens made up the sanhedrin or larger assembly. Note that Luke refers to it as "their," not "the" sanhedrin, implying that every city and people had some sort of assembly. In the case of Jesus the sanhedrin is composed of the leaders of the Jews, takes action against Jesus to preserve public order, uses its judicial power to condemn his teaching and activities, and represents the nation before the Roman administration.

In Acts the sanhedrin functions as it does in the gospels, guarding community order against the early Jerusalem community, meting out punishment to them, keeping order in the Temple (chaps. 4–6; 23), and representing the nation to the Roman authorities (22:30). Luke portrays the sanhedrin as composed of Sadducees and Pharisees, including Gamaliel (5:34), and led by the high priest (5:21). It controls temple officials, guards, and a prison, and thus is a typical Hellenistic-Roman regional or city council charged with the deliberative, judicial, and ritual tasks necessary for social order and efficient administration.

Because the condemnation of Jesus by the sanhedrin has been used as an excuse for anti-Semitism, many controversies have arisen concerning the nature of the Jewish judicial process against Jesus and the authority ultimately responsible for his death. Such controversies are misdirected. The regional leaders of the Jewish community, meeting in an assembly (sanhedrin or *boulē*), were held responsible for keeping order in their society by the Romans. In the case of Jesus, and in many other similar cases, they exercised their authority with the assistance of the Roman government in a normal way by neutralizing a troublesome teacher and threat to public order.

E. Origin and Development

Both 1st-century Greek sources (Josephus and the NT), which mention the Jerusalem sanhedrin in a Jewish context, assign it to the Roman period and attribute it to the usual range of legislative, judicial, and executive tasks found in sanhedrins, councils, and assemblies elsewhere. Josephus refers to a supreme council of Jewish authorities in Jerusalem, but does not explain its composition, exact functions, or place within Jewish government, probably because all of these changed frequently according to political circumstances and because the presence of such an aristocratic council was normal and presumed. The NT writers see the sanhedrin as an opponent of Jesus and his movement, and assign it a membership and functions to fit that role. Generally, the NT agrees with Josephus' perceptions of the sanhedrin in Jerusalem as a central council of the highest leaders with broad powers.

The usage of the term "sanhedrin" for Jewish assemblies is attested only in the Roman period and may reflect Roman usage of the term for regional assemblies (Kennard 1962; Schürer *HJP²* 2:205). Another less probable suggestion is that the use of the term "sanhedrin" for the council derived from Ptolemaic Egypt during the 3d century where sanhedrins were high councils and courts (Mantel 1961:786). It is very likely that the presence of such a council, under other names, in varied forms and with shifting functions, goes far back into Jewish history.

F. Rabbinic Literature

Rabbinic literature uses "court" *(bêt dîn)* often and "sanhedrin" relatively infrequently for assemblies which varied in size, composition, location, and function. Because the literature does not provide a coherent and consistent account of Jewish judicial and legal institutions, conflicting theories of the sanhedrins differ in their assessment of the historical reliability of sources and individual texts, in schemes for arranging the fragments of conflicting information into an intelligible whole, in assumptions about the roles and power of the Pharisaic organization in society and in the sanhedrin, and in their understanding of the social and political institutions and relationships which bound Jewish society together. Since the dozens of pertinent rabbinic texts derive from Palestine and Babylon over several centuries, emphasis will be placed on the Mishnah, which is the earliest and most subject to historical control. Special attention will be given to the Great Sanhedrin/Court, made up of seventy-one members, which met in the Chamber of Hewn Stone on the Temple Mount. Parallels from the Bible and Josephus suggest that supreme councils traditionally consisted of seventy to seventy-two members (Schürer *HJP²* 2:210–11).

The Mishnah uses the word "sanhedrin" in a variety of senses. Tractate *Sanhedrin* is concerned with judicial courts, especially those which try capital cases, but for the most part uses the term "court" *(bêt*

dîn), not "sanhedrin." A number of overlapping uses of these two terms suggest that they are used as equivalents in the Mishnah (*Sanh.* 1.5 and *Šebu.* 2.2; *Sanh.* 11.2 and *Mid.* 5.4; cf. Mantel 1961:1). Attempts to show that the two words refer to separate institutions or derive from separate eras (Zeitlin 1942; Rivkin 1975) do not explain either Josephus' or the rabbinic usage. The term "sanhedrin" is used for bodies appointed for the tribes by the courts of seventy-one, for the Great Sanhedrin of seventy-one itself as well as for lesser ones of twenty-three (*m. Sanh.* 1.5–6), for the judicial court (size not stated, but probably the court of seventy-one) which sat in a half-circle (*m. Sanh.* 4.3), for a judicial court which has competence to try capital and other cases (*m. Mak.* 1.9–10), for a council of seventy-one with competence over expanding the temple (*m. Šebu.* 5.4) and finally, for the Great Sanhedrin of Israel, housed in the Chamber of Hewn Stone, which used to judge whether priests had blemishes (*m. Mid.* 5.4). Most theories of the sanhedrin attempt to sort these functions into categories and assign them to one or more legislative, religious, or judicial bodies, including the court of the priests, the kings' council, and the like.

"Court" *(bêt dîn)* is the normal mishnaic word for a judicial court and also for a quasi-legislative body which decides the meaning of the law and issues decrees and laws based on Biblical and traditional law (Mantel 1961:64, 80–85, 227–35). *M. Sanhedrin* (1.1–6; 3.1) defines the competences of courts with three, twenty-three, and seventy-one judges. The rabbis envisioned courts in every city and a sanhedrin (of twenty-three) with power to try capital cases in any city with 120 men. In Jerusalem, according to the mishnaic system, there were three courts at the temple, in the gate to the Temple Mount, the gate to the Temple Court, and the Chamber of Hewn Stone (*m. Sanh.* 11.2). The center of the legal system was the Great Court of seventy-one members which met in the Chamber of Hewn Stone in Jerusalem. It tried tribes, false prophets, and high priests; sent the people forth to voluntary wars; approved additions to Jerusalem and the temple; set up tribal sanhedrins; and declared cities apostate (*m. Sanh.* 1.5–6). It also was the final court of appeals concerning the legitimacy of laws (11.2), and it executed rebellious elders (11.4). It had to be composed of Israelites with pure descent (*m. Qidd.* 4.5) and in the rabbinic ideal all were scholars (*m. Sanh.* 4.4). Most interpretations of rabbinic literature envision a great court or sanhedrin presided over by the rabbinic patriarch *(nāśî),* dominated in the 1st century at least by Pharisees and in control of the laws and activities of the priests.

The legal system set forth in *m. Sanhedrin* and elsewhere is an ideal which does not describe the pre-70 sanhedrin. Many of the competencies of the Great Court in Jerusalem are drawn from the monarchic period of the Bible and do not fit Jewish society in the Hellenistic-Roman period (*m. Sanh.* 1.5–6). An assembly of scholars deciding how Israelite life should be lived (*m. Sanh.* 4.3) fits the 2d- and 3d-century rabbinic assemblies which guided the rabbinic movement and competed for control of Palestinian Jewish life, not the political ferment of the Roman Empire. Texts concerning the Great Sanhedrin in the Tosefta and Talmuds support and expand the mishnaic presentation of the Sanhedrin as an assembly of scholars ruling Israel under the direction of the heads of the Pharisaic schools before 70 and the patriarchs after 70. When the details of the patriarch's office are gathered from the Talmuds, a complex network of roles and powers devolve upon the patriarch and his office emerges as a dominant institution in Jewish society along with the rabbinic assembly (Mantel 1961:174–253). Such an account fits the Talmudic, not the Second Temple period. Traditional accounts of the Sanhedrin, which make uncritical use of the rabbinic sources (e.g., Mantel 1961), accept isolated statements as historical facts and assemble them into an intricate social edifice, harmonizing conflicts in a very subjective way.

G. Leadership Bodies in Palestine

Before treating various theories which seek to reconcile the data on the sanhedrins, they must be put in their Palestinian social context. The city council *(boulē),* the assembly of elders *(gerousia),* the regional assembly of leaders, and the city assembly of all the citizens were common in the Hellenistic-Roman period, as was pointed out above. The bodies served mixed legislative, judicial, and executive functions which varied with time and place. The underlying pattern was common in all periods, though precise terms and powers varied. The notables, traditional leaders, wealthy citizens, hereditary aristocrats, and leading priests in ancient society ruled over the much more numerous lower classes, using a variety of institutional structures and traditional relationships. These leaders existed at every level and were usually

represented by one or more councils like those described as the council *(boulē),* Great Sanhedrin, Great Court, or court of seventy-one. Duties covered anything pertaining to the overall welfare of the state, including political affairs, religious conflicts, disputes over laws and customs, and important judicial cases. For example, in the Maccabean period the council or senate is called a *gerousia* and the members of it are elders (2 Macc 4:44; 1 Macc 12:6; 11:23; 12:35). The term "sanhedrin" comes into use only in the Roman period and probably reflects changing official terminology and distribution of powers. Hoenig's neat division of social functions into the priesthood represented by the court of the priests, the political by the *boulē,* and the interpretation of the law by the Great Sanhedrin is artificial and improbable (Hoenig 1953:163–68), as are two and three sanhedrin theories to be treated below. It seems that there were many city and regional assemblies and courts, controlled by local leaders and guided by traditional law and custom, as well as by the wishes of the political authorities of the day. (See Büchler [1909:21–33] for the presence of lay courts in contrast to the rabbinic vision of scholars as judges.)

The highest assembly and court was in Jerusalem and met on the Temple Mount in the *liškat haggazît,* usually translated as the "Chamber of Hewn Stone." But *gazît* is translated into Greek as *Xystos* and refers to a part of the old western wall of the Temple Mount next to the council chamber *(boulē),* north of the western portico, according to Josephus (*JW* 5.4.2 §144; see Schürer *HJP²* 2:223–24). Thus the high court was not an assembly of scholars meeting inside the inner forecourt (*m. Mid.* 5.4), as imagined by the Mishnah, but the supreme legislative, judicial, and executive body of leading citizens meeting in a council chamber at the center of the city, near the temple.

H. Theories

The disagreements between the Greek and rabbinic sources have produced three streams of interpretation. (See Hoenig 1953 and Mantel 1961 for exhaustive reviews of the many positions on the sanhedrin dating back more than 100 years.) Some favor the Greek sources in which the sanhedrin is the supreme political body. This approach is taken here. It interprets the rabbinic sources as retrojecting Talmudic rabbinic institutions onto the 1st century, a contention which dates back at least to Geiger (1857:114–21). Another approach favors the rabbinic sources and harmonizes them with the Greek sources by hypotheses of joint leadership, separate divisions of the sanhedrin, or committees with special powers. The third approach, initiated by Büchler (1902) and defended by Zeitlin, Mantel, and others, acknowledges the contradictions and differences between the Greek and Hebrew sources and proposes two sanhedrins, one political, reflected in the Greek sources, and the other religious, described in the rabbinic sources.

The sanhedrin theories which accept the rabbinic sources as historically reliable vary greatly in details of how the sanhedrin developed, who led it, how it was constituted, who controlled it, what its functions were and its role in the development of Talmudic law. The following are common variations. The sanhedrin is usually treated as an authoritative, continuous institution dating from the time of Ezra, or, more often, the Hellenistic period. In its early period it was led by the high priest and consisted of priests and other community leaders. In the Hasmonean period conflicts between Sadducees, Pharisees, and high priest caused splits in Jewish leadership. Some hold that the Pharisees gained control of the sanhedrin and others the Sadducees; those who hold the two-sanhedrin theory often argue that the Pharisees withdrew from the unified Sanhedrin to form a religious sanhedrin because it was too political and hellenized or because they lost power under Hyrcanus, Jannaeus, or Herod. Many grant to the Pharisees great political power over domestic affairs, the courts, and the temple ritual, and great influence with the people. Those who hold that there was one sanhedrin often argue for a Pharisaic takeover of the sanhedrin, but also for a separate political council (*boulē* or *gerousia*) which advised the high priest or king. For these scholars the leaders of the Pharisaic movement led the unified sanhedrin, whether they had the title *nāśî*ʾ or not. Some proponents of the two-sanhedrin theory envision the Pharisaic religious sanhedrin as the ruling body of the private Pharisaic association, not as a public body with control over Jewish life, and others picture it as a more publicly active and powerful body. Many scholars nuance their one- and two-sanhedrin theories by distinguishing various governmental and religious functions and assigning them not just to the sanhedrin, but to a *gerousia, boulē,* or various types of *bêt dîn.*

Fundamental to any theory of the sanhedrin is the author's stance on the development of Jewish law during the Second Temple period. Traditional interpretations of the rabbinic evidence have attributed many mishnaic and Talmudic laws and practices to the Hasmonean and Roman periods and have assumed popular acceptance of Pharisaic-rabbinic practice among the people. Such views attribute various mishnaic laws and customs to the Hellenistic and Roman periods and postulate the development and collection of laws at an early date. The Pharisees and later the rabbis are pictured as engaged in the labor of studying and developing the law and applying it with authority to Jewish life, so that the halakic, Talmudic way of life was essentially known and accepted in the Second Temple period, though it was only codified at the end of the 2d century C.E. The history of the sanhedrin, then, becomes entwined with the history of the implementation of Pharisaic law and their quest for power over Jewish society.

I. Synthesis

Both textual and wider historical evidence indicates that there was a central council in Jerusalem, but its membership, structure, and powers are not clear in the sources and probably varied with political circumstances. Typically in the Greco-Roman world, the leading citizens according to heredity, wealth, power, and position met in a body which had legislative, executive, and judicial functions relative to the welfare and control of the whole nation. The sanhedrin in Josephus, the gospels, and some rabbinic texts fits this pattern. In contrast, the rabbinic vision of an assembly of scholars and learned judges, debating points of law and establishing halakic policy for the Jewish community, fits the social and political situation of the Talmudic period; its highly articulated version of Jewish law and life bears the marks of intensive thought and effort in the aftermath of the destruction of the temple. Attribution of such a pattern to the Hellenistic-Roman period is anachronistic.

The theory of two sanhedrins, one political and one religious, during this period is improbable in the extreme because political and religious life were one. However, it is probable that the Pharisees, Sadducees, and many other groups in Jewish society had their own organizations, including executive and legislative and disciplinary assemblies and bodies, and that such groups intermittently exercised influence, and even power, in Jewish political and social life. Whether they called their assemblies by the terms "sanhedrin," *bêt dîn,* or *boulē* is not known. Diversity and change in Palestinian Jewish life must constantly be kept in mind. The forms and structure of government evolved in response to the conflicts among the Hasmoneans, the hegemony of the Romans, and the civil unrest during the Herodian period. The powers of traditional leaders waxed and waned and governmental offices, taxation districts, judicial arrangements, and laws were changed in complex ways only dimly glimpsed in the sources. Traditional laws, local customs, new adaptations, colonial impositions, and sectarian rules vied with one another for control of Jewish society. Only in the relative power vacuum after the two wars with Rome did the rabbinic version of Jewish life take hold and the rabbinic court *(bêt dîn)* become the central and authoritative council of the Jewish community. The mishnaic and Talmudic vision of a community founded on biblical law, understood through the oral Torah, guided by learned scholars and judges, and made holy by fidelity to God and obedience to the sages, only became apparent and accepted after the temple was destroyed and the priesthood failed to retain leadership of the Jewish community. While the temple stood, the traditional priestly and aristocratic leaders met in council to rule, guide, supervise, and judge the Jewish community in its internal and external social relations.

SANSANNAH (PLACE) [Heb *sansannâ* (סַנְסַנָּה)]. The name (literally, "fruit-stalk of date," see also Cant 7:9) suggests that a grove of palm trees was once located in the vicinity of this site. Sansannah has been identified with Kh. esh-Shamsaniyat (M.R. 140083), SW of Kh. Tatrit (Madmannah) in the Negeb plains at the foot of the Hebron hills. This town was in the Negeb administrative district of Judah, according to Josh 15:31, the only place this site is mentioned in the Bible. However, there is some question as to whether the list of Simeonite towns in Josh 19:5 (Hazar-susah) and in 1 Chr 4:31 (Hazar-susim) contain variations of the name Sansannah because their location in these lists appears to be parallel. See discussion in MADMANNAH for a similar problem in interpretation.

SAPARDIANS. See IVVAH.

SAPH (PERSON) [Heb *sap* (סַף)]. Var. SIPPAI. Notorious Philistine warrior, slain by one of David's soldiers in a battle at Gob (2 Sam 21:18 = 1 Chr 20:4). His name is written as Saph in 2 Samuel and Sippai (Heb *sippay*) in the parallel account in 1 Chronicles. In 2 Samuel, he is described as one of the descendants of Rapha *(yĕlīdê hārāpâ),* and the account of his demise is placed alongside that of three of his relatives at the hands of David's men (2 Samuel). Saph was killed by Sibbecai the Hushathite, a member of "the Thirty" (1 Chr 11:29). See DAVID'S CHAMPIONS. The location of the battle, Gob, where the death occurred, is unknown. 1 Chronicles has "Gezer" (M.R. 142140) for Gob, a town near the border of Philistia on the coastal plain, a probable location.

Saph and his relatives have been traditionally understood as the last of the Rephaim, the legendary race of giants which inhabited pre-Israelite Canaan. Note that *yĕlīdê hārāpâ* is written *yĕlīdê hārĕpā᾽îm* in 1 Chronicles and this, in turn, is translated *tōn huiōn tōn gigantōn* in the LXX. Some modern scholars have proposed an alternative explanation of the group to which Saph belonged. It is argued that the translation "descendant" for Heb *yālîd* is inaccurate since the word does not primarily indicate membership in a class due to heredity. For example, Willeson concludes that it refers only to children born to slaves in an Israelite household, and can be extended to include slaves dedicated to a deity who was regarded as the head of their social unit (1958a). Moreover he interprets Heb *hārāpâ* as a Greek word *(harpē)* which means "scimitar." Consequently, Saph was a member of a distinguished guild of Philistine soldiers whose emblem was a scimitar (1958b).

L'Heureux (1974) and McCarter reject Willeson's conclusions regarding Heb *hārāpâ* and explain it in terms of other biblical and extrabiblical evidence in which the Rapha/Rephaim can signify underworld deity/deities. It is concluded that Saph belonged to an elite class of Philistine warriors devoted to a deity named Rapha, whose cult center was in Gath (McCarter *II Samuel* AB, 449–50).

Although these theories are stimulating, they do not adequately explain the biblical data. There is insufficient evidence to make firm conclusions about the meaning of *yālîd* (cf. also Josh 15:14 where *yālîd* is parallel to *bēn*). As far as the biblical text is concerned, Saph and his relatives descended (*yullĕdû,* 2 Sam 21:22) from Raph, probably the eponymous ancestor of the Rephaim. The plain language indicates physical descent. Far more satisfying is the explanation that the account of the defeat of the Rephaim in 2 Samuel 21 demonstrates that David and his warriors finished that which Israel had failed to do under Joshua during the Conquest (Hertzberg *Samuel* OTL, 388).

STEPHEN G. DEMPSTER

SAPPHIRA (PERSON) [Gk *Sapphira* (Σαπφιρα)]. Convert to Christianity who, along with her husband, Ananias, is miraculously killed after lying to the apostles about turning over all their money (Acts 5).

The name is from the Aramaic *šappīrā*, "good" or "beautiful," and both Aramaic and Greek forms of the name are found on ossuaries discovered near Jerusalem (*BAGD*, 742). Although there is no solid proof that Luke knew Aramaic and used the name for its meaning, Lake (1979:140) believes it is almost certainly historical that Ananias, at least, died suddenly, under circumstances which led the Church to see in his death the punishment of some offense. Lüdemann (1987:71) believes that the parallel to 1 Cor 5:1–8 demonstrates an earlier analogous story and thus an historical kernel for Acts 5:1–11. But neither of these positions nor the general tendency to doubt the historicity of Acts 5:1–11 explain the presence of the name "Sapphira."

Sapphira appears along with her husband, Ananias, in this narrative of miraculous divine judgment which results in sudden death and fear (Weiser 1979:156–58). Noorda (1979:480–81) rightly advises us to take Acts 4:32–5:16 as a unit and to see at the level of literary composition by the final author a mixture of summary style and narrative scenes (4:36–37 on Barnabas; 5:1–11 on Ananias and Sapphira; 5:15–16 on Peter's miraculous power which attracts wide attention). On the other hand, a number of scholars feel that the exact nature of the sin of Ananias and Sapphira is not easily determined.

To be sure, there is a lack of realism in the portrayal of Sapphira. She does not even know of her own husband's death and burial, and Peter and the others sit and wait three hours for her arrival. Moreover, Luke in Acts 5:1–11 (cf. v 14) portrays a woman as he portrays a man, thus suggesting an appropriate equality (O'Toole 1984:118–26). Naturally this also allows him to stress his ideas through repetition. Consequently, Sapphira appears much like Ananias. She knew and had agreed to the unjust use of the money. However, handing over of the money was not part of an entrance rite for Christians as it was at Qumran (Klauck 1982:78). Sapphira does go beyond Ananias in that she tells Peter a lie about the price paid for the field, and both she and Ananias, in trying to deceive Peter, have acted against the Spirit. In fact, Mettayer (1978:419) sees a play of opposites in the text between Spirit and Satan, life and death, truth and lies, love and aggression, necessity and freedom, and confidence and fear. Luke 12:10, "… but he who blasphemes against the Holy Spirit will not be forgiven," may well apply here since Ananias and Sapphira were already Christians, and if so, the harshness of the penalty would be explained (Brown 1969:106–8). Peter's prophetic statement is fulfilled when Sapphira falls dead at his feet where Ananias had earlier laid the money. Likewise, the Christians and Barnabas had laid the proceeds from the sale of their properties at the apostles' feet in recognition of their authority (v 10; cf. 4:34, 37; 5:1–2). This irony continues that of Sapphira's ignorance of her husband's fate, despite her previous knowledge of everything else, and of her joining him in the grave (Johnson 1977:204–9). Her miraculous punishment and that of her husband recalls the threatened damnation of Simon (Acts 8:20–23) and the Lord's blinding of Elymas (13:11). Sapphira's death brings great fear on the whole Church and on everyone who hears of the incident. This is the first time Luke uses "church," and that fact, joined with the first verse of the unit (Acts 4:32; "Now the company of those who believed were of one heart and soul, and no one said that any of the things which he possessed were his or her own"), reveals the centrality of community to the pericope. The immediate reference would be to the Jerusalem Church, but more obviously, it would be the whole Christian Church whose very unity was threatened by actions such as that of Sapphira and her husband.

Everyone calls attention to the contrast Barnabas presents by laying the true price of his field at the apostles' feet. But Sapphira would likewise share in the parallel between her husband and Judas; in both cases Satan is the transcendent cause of the sin, the root cause of the sin is "unrighteous mammon," the act is free, somehow property is involved, and the sin is punished with sudden death (Brown 1969:106–9).

Through his story about Sapphira and her husband, Luke reflects on a number of concerns. God and the Spirit work in the community and through Peter (and the apostles), and to sin against the community is to

sin against them and expose oneself to divine judgment. Christians are encouraged to respect this reality: be fearful. Of course, God and the Spirit are opposed to Satan (cf. Acts 26:18). To suggest an appropriate equality, Luke pictures women as he does men, and, finally, he also presents a lesson in the Christian use of wealth.

ROBERT F. O'TOOLE

SARAH (PERSON) [Heb *śārâ* (שָׂרָה)]. Var. SARAI. The name of two women in the Bible.

1. The wife of Abraham and mother of Isaac. In Genesis 11, 12, and 16 Sarah is called Sarai, an older form of the name which in Hebrew means "princess." In Gen 17:15, the Priestly version of God's covenant with Abraham, Sarai's name is changed to Sarah, just as Abram's name becomes Abraham. Name changes signify a new reality. Thus, the barren Sarah is brought into God's covenantal promise as the mother of many nations and kings (17:16). Over and against Hagar and Ishmael, she is the lawful wife who will bear the son through whom God's promises to Abraham will be realized.

The stories of Genesis 12–50 focus on the threefold promise to the patriarch Abraham that he would have land, descendants, and a great name (Gen 12:1–3); how this promise is passed on from father to son becomes the central plot. The narratives about the matriarchs, then, are not primarily about the women themselves as individuals, but rather about their roles as the legitimate or "correct" wife and mother of the male successor. The question of who is the correct wife, mother of the heir, should be seen in the context of marriage and kinship systems of the Israelite society. Marriage alliances here are endogamous, i.e., within one's own tribe or social group. Lines of descent are patrilineal, traced through the father instead of the mother. Sarah and Abraham are closely related endogamously. They are, in fact, siblings, having the same father but different mothers (Gen 20:12). For this reason, Abraham is able to claim that Sarah is his sister as well as his wife in Gen 12:13 and 20:2, 12. See Wander (1981) and Donaldson (1981) regarding the complexities of such endogamous patrilineal relationships, which are used to control women in the self-interests of their men.

Several recent studies show that the biblical stories of the matriarchs follow a literary paradigm whereby the legitimate wife is paired with a rival co-wife who possesses certain characteristics that the other lacks (Brenner 1985; 1986; Cohen 1983). The competition and jealousy between the two are the destructive consequences of the patriarchal and polygamous society where the narratives are played out. Both sides represent incomplete womanhood, shadowy reflections of the other. Because of the asymmetry of both entities, the two women are locked in conflict until one can expel the other. The person of Sarah, therefore, must be discussed in conjunction with her complementary pair, her maid Hagar.

Sarah far outstrips Hagar on several levels. She is Abraham's only beloved wife, a free woman who exerts considerable control over Abraham's household affairs. Her beauty attracts the attention of pharaohs and sheikhs. However, she is barren and her advanced age seems to preclude any hope for a son. Sarah's barrenness is a twofold stigma. On one level, it represents a loss of status in a patriarchal, labor-intensive society with a high mortality rate. Here, a premium is placed on the ability to bear many sons. On another level, it seems to be an impediment to the fulfillment of God's promise of posterity to Abraham.

In contrast to the freeborn Sarah, Hagar is a slave, one with a particularly lower status in the household. Having no immediate relationship to Abraham, she is subject directly to her mistress, Sarah. Even when she is given to Abraham to produce a child, she is accountable to Sarah in the end. Hagar is also a foreigner from Egypt. Her foreignness creates a foreboding tension in the story. If she bears the child of the promise, it will be a product of an exogamous union in conflict with the endogamous practice of the Hebrews. Hagar is also younger than Sarah. Yet, in contrast to Sarah, whose beauty is highlighted, the text is silent about Hagar's appearance. Finally, where Sarah is barren, Hagar is fertile and she ultimately conceives the child that Sarah so desperately wants. The pregnancy and Hagar's disdain toward her mistress evoke in Sarah jealousy and a shocking cruelty. Sarah abuses her subordinate, forcing Hagar to flee, and ultimately engineers her expulsion from the household along with her son, Ishmael.

Both women are victims and victimizers within the patriarchal system in which they live; the narrative structure itself sets limits on the role each character can play (Exum 1985). Sarah is a victim of the patriarchal system which defines her in her capacity to bear sons and of a narrative structure that spotlights the promise of a son. Hagar is a double victim by virtue of her class as well as her sex. She is exploited by a privileged woman for her fertility. Yet she is victimizer in regarding Sarah and her barren condition not with compassion but with contempt. This elicits another round of oppression, whereby Sarah mistreats her servant and ruthlessly cuts her and her son off from the source of their economic well-being. The insinuation of the text is that women cannot collaborate or bond, even when they are engaged in a common goal. They allow their own self-interests to consume them and to compete with and abuse the other. However, the text is silent about the patriarchal society in which this tragic drama is performed, a society which defines for women what is of value and the social role they are to play.

The NT contains several traditions regarding Sarah. In Rom 4:19 her barrenness highlights Abraham's faith in God's promises. Heb 11:11 shifts the focus from Abraham to Sarah's own faith in conceiving in her old age. Nevertheless, Sarah is used to legitimate patriarchy and women's submission to their husbands: 1 Pet 3:6 states that "Sarah obeyed Abraham, calling him lord." Rom 9:6–9 alludes to the conflict between Sarah and Hagar by insisting that not all are children of Abraham because they are his descendants. God chose Isaac over Ishmael to be the heir of God's promises. In Gal 4:21–31, a text with much supersessionist anti-Semitic potential, Hagar allegorically represents those in slavery under the law, "the present Jerusalem." Sarah, on the other hand, is the "Jerusalem above" who is "free," the mother of the Christian community.

2. The daughter of Raguel destined to become the wife of Tobias in the book of Tobit. Her seven husbands were killed by the evil demon Asmodeus on their wedding night. There is an interesting parallel between Sarah of the book of Tobit and Sarah of Genesis that emphasizes the conflict between women in a patriarchally defined society. Just as Sarah in Genesis mistreats her maid Hagar when Hagar becomes pregnant and lords it over her mistress, so does Sarah in Tobit apparently beat her maids for chiding her inability to keep a husband (Tob 2:8–9).

SARAPH (PERSON) [Heb *śārāp* (שָׂרָף)]. An individual of the tribe of Judah, identified as a ruler over Moab. The Vg rendering of 1 Chr 4:22 reflects a rabbinic tradition of a partial or total conquest of Moab by the men of Bethlehem.

DAVID CHANNING SMITH

SARASADAI (PERSON) [Gk *Sarasadai* (Σαρασαδαι)]. See ZURISHADDAI.

SARDIS (PLACE) [Gk *Sardeis* (Σαρδεις)]. A city in Asia Minor located some 100 kms (38°28´N; 28°03´E) inland from Smyrna and Ephesus, most famous in antiquity as the capital of the Lydian empire (ca. 680–ca. 547 B.C.) and for the legendary king Croesus (ca. 560–ca. 547 B.C.). Following the Lydian empire, the city served in turn as the seat of a Persian satrap, as an administrative center for the Seleucids, and as a leading city of the Roman province of Asia. Its only explicit reference in the Bible is in the book of Revelation (Rev 1:11; 3:1, 4).

Obad 20, however, remarks on the exiles of Jerusalem who are in Sepharad (=Sardis: Kraabel 1969:81 n. 2) which introduces the question of the Jewish community in the city. The enlargement of this community may have been encouraged in Seleucid times by Antiochus (Josephus, *Ant* 12.148–49). Josephus also (*Ant* 16.171) records that the Jews in Asia Minor successfully appealed to the Roman emperor Augustus against the decisions of the city administrations, and more specifically relays Caesar's instructions to the proconsul, Gaius Norbanus Flaccus, to the effect that the Jewish community at Sardis is not to be prevented from subscribing funds to be sent to Jerusalem. He also reports (*Ant* 14.235) that the propraetor, Lucius Antonius, informed the Sardians that the Jews were to be allowed to congregate privately in accordance with their own customs. Striking confirmation of the size and influence of the Jewish community in the Roman period may be seen in the large synagogue excavated in the city, now handsomely restored thanks to Turkish and American support.

Originally used as a synagogue in the early 3d century A.D. (though evidently built for a different purpose—perhaps a basilica, since that is the building's shape), this structure underwent several phases of change (Seager in Hanfmann et al. 1983:163), and remained in full operating condition, alongside the burgeoning Christian church, until the devastation wrought by the army of Chosroes II in A.D. 616; at that moment, the city, and the Jewish community with it, vanished. The synagogue is notable for its huge size and its setting. It forms an integral part of a major urban complex in the heart of the city; this complex comprised a gymnasium and a bath building in use in the time of the emperor Lucius Verus (epigraphic evidence), and a *Kaisersaal* (place for the imperial cult: Yegul 1986:6–7). Since synagogues are normally found on or close to the periphery of ancient cities, the location of the Sardis synagogue is unusual, and speaks eloquently of the continuing strength and wealth of the Jewish community.

The building consisted, in its final stage, of a forecourt and a main hall, measuring some 85 m long and 20 m wide. The forecourt was surrounded by a peristyle and adorned by a large central fountain; this fountain was probably open to the general public since there is mention of "the Fountain of the Synagogue" in an epigraphic description of public fountains at Sardis. Three doors gave access to the main, oblong hall (ca. 60 m long) with an apse at the W end, i.e., pointing away from Jerusalem. Two shrines, one of which would have protected the torah, the OT scrolls, were raised on platforms against the E wall of the hall, while a large marble table stood in front of the apse at the W. There was no sign of benches installed along the walls, features thought to be characteristic of synagogues, nor of a staircase or balcony for the separation of the sexes at their devotions. It is thought that the hall could have accommodated up to one thousand people. Inscriptions in Greek from the interior (Robert 1964:37–57) announce dedications made by prominent members and reveal the professions of some (goldsmiths, etc.) and the status of others (city councillors, etc.). Mosaic pavements, some again inscribed as dedications, embellished the floors, while decorative panels of *skoutlosis*, mosaic-like designs made up of shaped fragments of colored marbles and other stones (Robert 1964:40; Seager in Hanfmann et al. 1983: fig. 264, 265), decorated the walls. Several representations of menorahs in or on stone, on brick, metal, and pottery shards, some again with inscriptions, came to light, though there were only a couple of terse inscriptions in Hebrew, among many in Greek. Incorporated in the building are many reused blocks, some whose function had originally been structural, and others of a more religious nature. Notable among these is a rectangular block of the 6th century B.C. sculpted in relief (Hanfmann and Ramage 1978:43–51) with a representation of a temple of Cybele, the goddess herself, and members of her retinue. In the synagogue, this block was used as part of a pier, its imagery invisible. Also of interest are freestanding 6th century

B.C. sculpted stone lions, originally the lions of Cybele, reused in this changed context as the lions of Judah.

The discovery of this building has shed new light on two important topics, the architectural history of the synagogue, and the place of Jewish communities in the Roman cities of Asia. The building is by far the largest example of an ancient synagogue so far discovered, and there are no clear parallels. Inscriptions testify to the existence of other synagogues in W Asia Minor—at Acmonia, Apameia, Aphrodisias, Hierapolis, Laodicea, and Miletus—but only at Priene has another been excavated (Kraabel in Hanfmann et al. 1983:180–82), which is small in size, unobtrusive, and bears no similarity to Sardis. Sardis is unusual for the absence of balcony and benches along walls, and for the presence of the seating in the apse, the marble table opposite the apse, the pair of shrines (where only one is needed), and the *skoutlosis* decoration. In terms of apsidal synagogues, the general arrangement of colonnaded forecourt plus apsidal hall on axis is found sparingly elsewhere (e.g., at Beth Alpha in Israel), but the Sardis evidence suggests that there was no canonical plan either of shape or decoration or placement of features and furnishings, and that flexibility was the main criterion. The size, the setting, and the richness of decoration and paraphernalia bespeak a Jewish community, not only flourishing but entirely at home in the Roman city. The confident statements of the piety of donors reveal the generosity of members of the congregation, while the identification of some as participants in the administration of the city and indeed of the province (one a *procurator,* another a *comes*), speaks to the integration of the Jewish peoples into the Roman populace. The theory of the ghettoization of Jews in Roman cities may now be challenged, at any rate with respect to Sardis; and if the religion of Christ was on the move, at Sardis it prospered alongside of, not in place of, that of the Jews.

Evidence of an early Christian community is found in Rev 1:11 where Sardis is mentioned along with Ephesus, Smyrna, Pergamum, Thyatira, Philadelphia, and Laodicea as one of the seven churches of Asia; while Rev 3:1–6 records, at some length, promises and warnings to Christians in Sardis. A well-known bishop of Sardis in the 2d century is Melito, who substantiates accounts of the persecution of Christians recorded in a letter from Antoninus Pius to the council of Asia in A.D. 161 (Eusebius, *Hist. Eccl.*, 4.13. 1–8). A prolific writer, Melito produced tracts, treatises, and homilies, of which the *Homily on the Passion* is the only one to survive almost in its entirety (Kraabel 1971:76–85; Bonner 1940). Melito was a Quartodeciman, i.e., he celebrated Easter on the same day as Jews celebrated Passover, on whatever day of the week Passover fell. In spite of this "Judaizing" practice, later pronounced a heresy by the Church, Melito attacked the Jews vigorously as being responsible for the death of Christ; almost a third of the text of the *Homily on the Passion* is preoccupied with the condemnation of "Israel." Yet Melito was faced not only with a prosperous and large Jewish community in the city, but also by other Christian sects and pagan survivals; it is in this context of the struggle for adherents that his outbursts may be explained.

Churches began to be constructed as the Christianization of the city gathered pace following the conversion of Constantine. In the middle years of the 4th century, a large basilican complex was built outside the city walls to the W, and a small chapel was constructed against the SE corner of the Temple of Artemis before A.D. 400. The latter was evidently thought of as hallowing the sanctuary of Artemis and providing a chapel for the large cemetery nearby (Hanfmann et al. 1983:195). The remains of a huge domed basilican structure, unexcavated, lie to the E of the gymnasium–synagogue complex; this is thought to be of Justinianic date and to have been the cathedral of the city.

The late Antique city came to an end with the Persian attack of A.D. 616. Even during the period of obscurity which followed, however, it seems that metropolitan bishops continued to be appointed: we hear of Marinus in A.D. 680 and Euthymius from ca. A.D. 787–805 (Foss 1976:135), and these appointments suggest that Christianity was still a force to be reckoned with. The list of bishops of Sardis continues until the 14th century, the last attested being Gregory (ca. A.D. 1315–1343). In the first half of the 13th century, a new church was built on the site of the earlier basilican complex of the 4th century; this new church was smaller than its predecessor, but vaulted, domed, and richly decorated. It may well prove to have been the final confident gesture of Sardis Christians prior to the Turkish onslaughts in the second half of the century.

SAREA (PERSON) [Lat *Sarea*]. One of the five scribes whom Ezra was instructed to take with him in restoring the Scriptures (2 Esdr 14:24). See DABRIA for further discussion.
JIN HEE HAN

SARGON (PERSON) [Heb *sargôn* (סַרְגּוֹן)]. In Assyrian the name is spelled *Šarru-kīn* and means "legitimate king." It is clearly a throne name adopted by the king at the time of his accession. Three kings in Mesopotamian history bore this name—Sargon of Akkad (ca. 2334–2279 B.C.), Sargon I of Assyria, who ruled about 2000 B.C., and Sargon II (721–705 B.C.). Only the last is mentioned in the Bible (Isa 20:1).

Although Sargon is mentioned by name only once in the Bible, in the aforementioned passage he played a more significant role in biblical history than this might suggest. It was probably this king who led the Israelites into exile after the fall of Samaria, a subject which has been discussed under SHALMANESER. In fact, the transportation of the Israelites and the settlement of new peoples in Israel to replace them probably stretched over several years at the beginning of Sargon's reign.

To understand better Sargon's dealings with Samaria and the kingdom of Israel it is necessary to look at Assyrian records and the whole context of Assyrian history during this period. Sargon came to the throne as the result of a rebellion against his predecessor, Shalmaneser V. It is reasonably certain that Sargon was a usurper and not in the direct Assyrian royal line. Thus the fighting was bitter and lasted for some time. The internal confusion in Assyria was an excellent opportunity for a major rebellion by states in Syria and Palestine against Assyrian control. This rebellion was led by the king of Hamath and included among others Samaria, Arpad, and Damascus. Once Sargon had secured his hold over the Assyrian throne he launched a campaign into Syria to put down the rebellion. He met the allied forces at Qarqar in 720 B.C. and defeated them. The Assyrian army then marched south right through Israel and Judah and down to Gaza, and defeated an Egyptian army on the border of Egypt. In the wake of this successful march, Sargon launched a massive campaign against the various rebel states. The offending rulers were punished and large numbers of people transported to Assyria (*ANET,* 284–85). This punitive operation included Samaria.

As remarked above, Sargon is mentioned by name only once in the Bible (in Isa 20:1). In this passage reference is made to the year in which the commander-in-chief of Sargon, the king of Assyria, attacked and captured Ashdod. Once again we must look to Assyrian records for a fuller understanding of this event. Ashdod, a major city in Philistia, was independent of Assyria in the first part of the reign of Sargon II. According to the royal inscriptions of Sargon, however, the king of Ashdod made an anti-Assyrian alliance with his neighboring rulers. Therefore Sargon launched a campaign against Ashdod (ca. 713 B.C.) and replaced the offending ruler, Aziru, with his brother Ahimetu. The moment the Assyrian troops withdrew, the people of Ashdod rebelled against Ahimetu and replaced him with Yamani. Sargon therefore led a second campaign against Ashdod (712 B.C.). Yamani fled to Egypt, but the Egyptians put him into irons and sent him to Assyria as a goodwill gesture. Sargon laid siege to Ashdod and two other

cities in Philistia. All three cities were captured, their populations were carried off into exile, and they were replaced with peoples from the E (*ANET*, 285–87). For more details about the reign of Sargon, see MESOPOTAMIA, HISTORY (ASSYRIA), and also *CAH* 3/2/22.
A. KIRK GRAYSON

SARID (PLACE) [Heb *śārîd* (שָׂרִיד)]. A town in the territory of Zebulun, the starting point for the description of the borders of the territory (Josh 19:10, 12). The town has been identified with Tel Shadud (M.R. 172229), in the N Jezreel Valley. This identification is supported by LXX manuscripts which render *sedoud* for Heb *śārîd* (Aharoni *LBHG*, 117). The site has yielded sherds of the LB and Iron Ages, as well as of later periods (Aharoni *EncMiqr* 8:392).
RAPHAEL GREENBERG

SAROTHIE (PERSON) [Gk *sarōthie* (σαρωθιε)]. Forefather of a family included under the heading the "sons of Solomon's servants," which returned with Zerubbabel (1 Esdr 5:34). However, this family is not included in the parallel lists in Ezra 2 and Nehemiah 7.

CRAIG D. BOWMAN

SARSECHIM (PERSON) [Heb *sarsĕkîm* (סַרְסְכִים)]. A Babylonian official, included in the list of officials in Jer 39:3, who participated in the invasion of Jerusalem in 587 B.C.E. However, the list of names in Jer 39:3 is widely held to be confused (cf. Bright *Jeremiah* AB, 243; Thompson *Jeremiah* NICOT, 644; Carroll *Jeremiah* OTL, 691), and it is not certain that Sarsechim is in fact the name of an official, or even an official title. Ward (*IDB* 4:224) has suggested that Sarsechim may be the title "Chief of the Slaves." However, Ward and most modern interpreters understand the word division of the MT to be confused, and Jer 39:3 needs to be reconstructed on the basis of Jer 39:13. The MT consonantal text reads, *nrgl śr-ʿṣr smgr-nbw śr-skym rb-srys nrgl śr-ʿṣr rb-mg*, "Nergal-sharezer, Samgar-nebo, Sarsechim the Rabsaris, Nergal–sharezer the Rabmag, …" However, Jer 39:13 reads "Nebushazban the Rabsaris, Negal-sharezer the Rabmag …" The proposed solution includes both a revocalization of *smgr* to *simmāgir,* a district governed by Nergal-shar-ezer (Bright AB, 243), and a redivision of the text from *smgr-nbw śr-skym* to *nbw śr-skym.* The latter, according to Bright, is a corruption of *nĕbūšazbān śar sārīs*, with Sar-saris the equivalent of Rab-saris. Therefore the reconstructed part of the verse would read as follows: "Nergal-sharezer, prince of Simmagar, the Rab-mag; Nebushazban, the Rab-saris …" See NEBUSHAZBAN.

SATAN. The purpose of this article is to provide a summary of the occurrences and an objective analysis of the various uses of the term "Satan" throughout the Bible, as well as within deuterocanonical, pseudepigraphical, and early rabbinic literature.

A. In the Old Testament
1. Meaning of Satan
2. Terrestrial Satans
3. Celestial Satans
B. In the Apocrypha and Pseudepigrapha
C. In Rabbinic Sources
D. In the New Testament

A. In the Old Testament

1. Meaning of Satan. There is little doubt that the noun *śāṭān* is related to the verb *śāṭan.* The verb occurs only six times (Ps 38:21—Eng 38:20; 71:13; 109:4, 20, 29; Zech 3:1). The problem arises when one attempts to select the best English equivalent for Heb *śāṭan,* especially since *śāṭan* lacks a cognate in any of the Semitic languages. The choice appears to be between "accuse," "slander," and "be an adversary." Thus Ps 38:21—Eng v 20 may be rendered "those who repay me good with evil accuse/slander me when I seek what is good." (LXX's rendering of *śāṭan* by *endieballon* would suggest slander.) Ps 71:13 reads "may my accusers/adversaries/slanderers perish." Similarly, in Ps 109:3, 20, 29 the writer speaks to God about his accusers/slanderers and the duress they have brought into his life. And last of all, and the only occurrence of the verb outside of a lament Psalm, is Zech 3:1, in which the prophet sees *śāṭān* standing at the right hand of Joshua the high priest to "slander/accuse" him.

There is a good deal of overlap in meaning between "accuse" and "slander," but they are not synonyms. To accuse means to find fault and bring charges, falsely or accurately, against another. Thus, an accusation may be valid or inaccurate. By contrast, slander is always false, a statement of claim that is both inaccurate and damaging to the character and reputation of another.

It is clear from the six passages cited above, and from especially the five from the Psalms, that the enemies of the writer are defaming his character and thus are slanderers. What they are saying about the writer is palpably false, and therefore their mouths must be shut, one way or another. But does the fact that *śāṭan* = "to slander" suggest that the noun *śāṭān* should always be translated as "slanderer"? Not necessarily so. There are some instances where a *śāṭān* engages in activities that are patently slanderous (for example, Job 1 and 2). However, there are other places where a *śāṭān* engages, or is urged to engage himself, in activities that are clearly non-slanderous (e.g., 2 Sam 19:23 = Eng 19:22 [Abishai's charge of blasphemy against Shimei is legitimate]; Ps 109:6). On the basis of the actual uses of *śāṭān* (see A.2 and A.3), we would suggest that *śāṭān* means "accuser," with the added nuance of either "adversary" or "slanderer," depending on context.

2. Terrestrial Satans. The first human called a *śāṭān* in the OT is David. Philistines rulers, observing the presence of David and his supporters in their camp as they prepared for war with Israel, complained that David would in fact become their "adversary" (1 Sam 29:4), and thus win the favor of his own king, Saul.

The second instance involves Shimei, a Benjaminite who had earlier cursed and humiliated David as the king fled Jerusalem (2 Sam 16:5–14). Subsequently a repentant Shimei sought David's forgiveness (2 Sam 19:19b–21—Eng 19:18b–20). Abishai, a member of David's court, pushed for Shimei's execution for blaspheming the king. David, however, opted for leniency, and branded Abishai (and his brothers) as an "adversary" for even suggesting such a thing (2 Sam 19:23—Eng 19:22). Killing Shimei, while legally permissible, would seriously diminish David's chance of effectively ingratiating himself with the Saulide Benjaminites. David will decide who, if anybody, shall die for any crime.

The third instance involves Solomon. He wrote to Hiram, king of Tyre and friend of his late father, stating that David had been unable to build a temple because he was so preoccupied with war in expanding and defending his empire. Now, however, Solomon is free to pursue that project, for his era is one of relative peace, one in which Solomon is without any kind of an "adversary" (1 Kgs 5:18—Eng 5:4). Clearly *śāṭān* here designates military enemies, those who threaten the well-being of others.

Perhaps Solomon, in speaking of the absence of satans on his borders, spoke prematurely. Some years later Yahweh raised up two satans against Solomon, whose relationship with Yahweh was in disarray. The first was Hadad from Edom (1 Kgs 11:14), and the second was Rezon from Syria (1 Kgs 11:23, 25). Here again, the meaning of *śāṭān* is military rival who lives outside one's empire.

The last reference to a human *śāṭān* is Ps 109:6. The writer of this Psalm has been on the receiving end of verbal and physical abuse. His request to God is that God will, in response to such vilification, "appoint a wicked man against him; let an 'accuser' bring him to trial" (RSV) [understanding many enemies as one individual]. Only with the help of such a prosecutor will the culprits be brought to justice. The verb and preposition for "stand at" are *ʿāmad ʿal,* the same words used to describe the activity of a celestial *śāṭān* against Israel (1 Chr 21:1) and against Joshua the high priest (Zech 3:1). In the latter two *ʿāmad ʿal*

conveys sinister work by a *śāṭān* (inciting one to do something illicit, or falsely condemning someone), while the first example speaks of truthful accusation against one who is clearly in the wrong.

We have included Ps 109:6 under the category of terrestrial satans. Among modern Psalm commentators only Dahood (*Psalms III* AB, 101–102) argues for a celestial *śāṭān* in this passage. He translates the verse "Appoint the Evil One *(rāšāʿ)* against him; and let Satan stand at his right hand." So understood, vv 6–7 would refer to the psalmist's wish for judgment on his enemies after death, while vv 8–19 would be his wish for their terrestrial misfortunes. Dahood's translation, if supportable, would challenge the idea, frequently advanced, that Satan as an Evil One is not an OT teaching, but rather a later development of the intertestamental period.

3. Celestial Satans. There are four passages in the OT that talk of a celestial *śāṭān.* These are Num 22:22, 32; Job 1 and 2; Zech 3:1–2; and 1 Chr 21:1. The noun *śāṭān* occurs 26 times in the OT. Seven of these (discussed above) refer to terrestrial satans, thus leaving 19 references to celestial satans. Three of these 19 use *śāṭān* without the definite article (Num 22:22, 32; 1 Chr 21:1). The remaining occurrences in Job 1 and 2 (14 times) and Zech 3:1, 2 employ the noun with the article *(haśśāṭān),* literally "the *satan*." Leaving aside Num 22:22, 32, because there the Angel of Yahweh is a *śāṭān,* we note that 16 of 17 references to the celestial *śāṭān* use the expression "the" *śāṭān.* The lone exception is 1 Chr 21:1. This would seem to indicate that only in 1 Chr 21:1 is *śāṭān* possibly a proper name. In the remaining passages, with the definite article, it is a common noun, to be translated something like "the Accuser." GKC, §126e and Joüon 1923, §137m–o cite this as an instance of the definite article prefixed to a noun when a term normally applying to whole classes is restricted to particular individuals. As such, the definite article could be translated "a certain one of." It is not without significance that consistently the LXX does not transliterate *śāṭān* in Job (or elsewhere) as *ho Satanas* (a term used six times in the *Testament of the Twelve Patriarchs* as a synonym for the diabolical Beliar), but translates with *ho diabolos,* a term used in the LXX for both a celestial being (Zech 3:1–2) and a human adversary (Esth 7:4; 8:1). Even as late as 1 Macc 1:36, around 100–50 B.C., Antiochus IV is referred to as a *diabolon ponēron,* "an evil foe." This shows that *diabolos* needed the adjective *ponēros* to make it clear that the *diabolos* was wicked. Gammie states (1985:18–19), "Instead of having a clear demonic overtone, the choice of translation *ho diabolos* on the contrary probably represents the translator's desire to utilize a term still relatively neutral and not yet associated in the public mind with a leader of forces in opposition to the divine intentions."

The one instance where *śāṭān* describes a celestial figure who is not in any way hostile to God is Num 22:22, 32. The Angel of Yahweh is sent to be a satan to sinning Balaam. The angel performs his task first by blocking the path so that Balaam's ass may not proceed, then by rebuking Balaam. Only when Balaam's eyes are opened does the angel *śāṭān* become visible to Balaam. The angel is both adversary to and accuser of Balaam, and is dispatched on his mission by Yahweh.

It is in the first two chapters of Job that "the satan" *(haśśāṭān)* is most prominent (but that name is not mentioned again after 2:7). The sons of God, i.e., the divine council, present themselves before Yahweh, and the satan is among them. The question arises whether he is with the assembly as a legitimate member or whether he is an intruder. In favor of the latter interpretation is the fact that the satan alone is asked "from where have you come?" But possibly he is a heavenly agent whose responsibilities have taken him to earth, and the question comes not from surprise in the deity at an outsider's presence, but rather from the deity's questioning of the agent's faithful expediting of his chore.

Job 1 and 2 provide the only instance in the OT where God and the *śāṭān* converse with each other, and twice God initiates the dialogue by asking the *śāṭān* a question about his whereabouts (1:7; 2:2). The question answered, God proceeds to bring Job and his impeccable spiritual credentials to the satan's attention (1:8; 2:3). The satan is not impressed. On the contrary, he suggests that Job's motives for serving God are selfish ones; i.e., Job serves God to get what he really wants, which is prosperity. Thus the satan directly impugns Job's motives for service to God and indirectly accuses God of divine patronage (Day 1988:76). The satan's question to God is a thoughtful, legitimate, and profound one: "Does Job fear God for nothing?" To disprove or substantiate that question, God grants to the satan

carefully circumscribed destructive powers (1:12; 2:6). The satan may not act independently, but only with divine permission.

The second reference to an antagonistic celestial *śāṭān* is found in Zech 3:1–2. In the fourth of eight visions the prophet observes Joshua, the high priest, in front of the Angel of Yahweh, and the *śāṭān* standing by his right side to accuse him. It is not clear exactly what the nature of the accusation against Joshua is. Unlike Job's *śāṭān,* Zechariah's *śāṭān* does not talk. But he is rebuked, not by the Angel of Yahweh, but by Yahweh himself. In his rebuke, Yahweh reminds the satan that he has chosen Jerusalem. That Yahweh draws attention to his choice of Jerusalem, and not of Joshua, would seem to indicate that Joshua not only represents himself, but in some way also represents the restored postexilic community. Neither the iniquity of Joshua nor the sins of the Judeans are such that they bar the way to the investiture of the high priest or the forgiveness of the community, much to the dismay of the prosecuting satan.

The third and final appearance of a malevolent celestial *śāṭān* is in the Chronicler's account of David's census of Israel. That version informs the reader that it was *śāṭān* who rose up against Israel and incited David to number his people (1 Chr 21:1). Two items are of special import here. First, this is the only place in the OT where the Hebrew word *śāṭān,* when referring to a celestial diabolical being, is used without the definite article. This has suggested to most commentators that *śāṭān* is here a personal name. GKC §125f. refers to this instance of *śāṭān* (as opposed to *haśśāṭān*) as an illustration of an original appellative that has assumed the character of a real proper name and is therefore used without the article. The passage, however, might as justifiably be translated "and a *śāṭān* stood up against Israel, and provoked David to number Israel."

The second issue focuses on the question of why the account in 2 Samuel 24 attributes the stimulus for David's census to Yahweh (2 Sam 24:1), while the Chronicler attaches blame to a *śāṭān/Satan.* There are three possible explanations for this shift. The first is that the Chronicler was bothered by the attribution of morally questionable activities to Yahweh; i.e., he incited David to take a census, then punished David for doing so. To that end the Chronicler deleted Yahweh's part in the story as a stimulating factor and replaced him with *śāṭān* (Kluger 1967:159). But if the Chronicler was concerned with saving Yahweh's image from tarnish, why did he leave unmolested other stories in which Yahweh was responsible for Rehoboam turning his back on the wise counsel of his advisers (2 Chr 10:15), or in which Yahweh sends a deceiving spirit into the mouths of Ahab's prophets? Closely related to this explanation is the suggestion that the Chronicler downplayed Yahweh's complicity in this event with his substitution of *śāṭān,* primarily because he was concerned to paint as beautiful a picture as possible of the relationship between Yahweh and David, Yahweh's chosen servant (Day 1988:136–37). Accordingly, the Chronicler omitted any reference to Yahweh's arbitrary anger with his people during David's reign and told the story simply as a temptation episode. A third possible explanation is that the contrast between 2 Sam 24:1 and 1 Chr 21:1 (Yahweh/*śāṭān* illustrates a development in how OT thought explains evil. Most of the earlier literature of the OT explained evil in terms of a primary cause (Yahweh). Later OT literature, such as Chronicles, expanded on this by introducing the concept of a secondary cause in its explanation of evil *(śāṭān).*

To summarize, so far we have seen that (the) *śāṭān* is a maligner of character (Job 1 and 2), an accuser of God's servant (Zech 3:1), and a seducer of Israel's royal leader (1 Chr 21:1). Clearly in the OT *śāṭān* (and other demons) is not connected with some primordial realm, but with sin. As Kaufmann (KRI, p. 65) has stated, "Biblical religion was unable to reconcile itself with the idea that there was a power in the universe that defied the authority of God and that could serve as an antigod, the symbol and source of evil. Hence, it strove to transfer evil from the metaphysical realm to the moral realm, to the realm of sin."

B. In the Apocrypha and Pseudepigrapha

Setting aside 1 Chr 21:1 and Ps 109:6, one observes that the earliest evidence for *śāṭān* as a personal name appears in *Jub.* 23:29 and *Assum. Mos.* 10:1, both of which date to the period of the pogroms of Antiochus IV against Jews in Palestine (ca. 168 B.C.). Actually, however, the majority of these deuterocanonical texts refer to other demons by name, but seldom use the name *śāṭān.* For example, in Tobit, one called Asmodeus is the archdemon. He has already slain the seven bridegrooms of Sarah even

before any of those marriages is consummated (Tob 3:8), and only when Asmodeus is exorcized from Sarah by Raphael, the protecting angel, will Sarah be happily married to Tobias (Tob 3:17). Asmodeus may be connected with the Hebrew verb *šāmad,* "to destroy," or possibly even with Aeshma, a demon of violence and wrath in Persian religion. The possible connection of Asmodeus with Hebrew *šāmad* is heightened by the reference to the demon Shimadon in the midrash, *Gen. Rab.* 36. Shimadon is explicable as deriving from *šāmad,* but not from Iranian Aeshma. Additionally there are major philological problems in connecting Asmodeus and Aeshma, as Barr (1985:214–16) has shown. Again, in *1 En.* 6–11 (3d century B.C.), the ringleader of the angels who were punished because of their sexual activity with the daughters of men is called Shemihazah (chap. 6) or Azazel (8:1–2).

In the book of *Jubilees* the name of the devil is primarily Mastema, a Hebrew word *(maśṭēmâ)* that occurs in Hos 9:7, 8 with the meaning "hatred, hostility, enmity." Scattered references to Mastema throughout *Jubilees* (10:1–14; 11:1–5; 19:28) identify him as the chief of evil spirits, who, after the flood, received permission from God for one-tenth of his spirits to expedite his will on humanity. *Jubilees* also tends to attribute to Mastema certain actions of a questionable nature which the OT attributed to Yahweh. For example, *Jub.* 17:16 says it was Mastema who caused Abraham's testing (Gen 22:1), and *Jub.* 4:2 states that it was Mastema who attacked Moses on his way to Egypt (Exod 4:24).

In the Qumran literature *śāṭān* occurs only three times (1QH 4:6; 45:3; 1QSb 1:8), and never as a proper name. Rather, in this literature the leader of the forces of darkness was Belial, i.e., "the Worthless One." This word is also used in the OT in apposition with son (Deut 13:14—Eng 13:13; 1 Sam 2:12), daughter (1 Sam 1:16), man (1 Sam 30:22), witness (Prov 19:28), and counselor (Nah 1:11). In time Belial became a proper name in Qumran and in some other pseudepigraphical writings. In these sources, and even in the NT the name appears mostly as Beliar (2 Cor 6:15). He is the spirit of darkness (*T. Levi* 19:1; 1QM 13:12), who exercises control over the world (1QS 1:18, 24; 2:5, 19; 1QM 14:9; *Mart. Is.* 2:4). He controls evil people (*T. Levi* ul 3:3; *T. Jos.* 7:4; *T. Dan.* 1:7; *T. Benj.* 6:1). Ultimately he will be chained by God's Holy Spirit (*T. Levi* 18:12), and cast into a consuming fire (*T. Jud.* 25:3).

To summarize, it is clear that references to *śāṭān,* either by that name or by a surrogate, are much more extensive in apocryphal/pseudepigraphical literature than in the OT. More than likely, exposure to Persian religion and its Zoroastrian-based dualism provided some of the stimulus for the more pervasive demonology in these Jewish writings. Rather than viewing the world as the canvas on which one God sketched his unique will for his world, the world was now viewed as a battleground fought over by both benevolent and malevolent deities. It is difficult, of course, to trace exactly how this borrowing or influencing worked, or even why such a concept would have appealed to exiled Jews in Mesopotamia. Are there, for example, other Persian religious emphases to which the exiles were attracted besides Iranian dualism, and if so, what were they? The evidence is slim to nonexistent. Books of the OT that would be expected to show most awareness of Persian religion—Nehemiah, for example—are conspicuously silent about it. It is also debatable whether or not the proliferation of demons and the demonizing of the world represents post-biblical Judaism's attempt to come to grips with a world so grim and hostile that not all phenomena could no longer be placed under the umbrella of divine sovereignty. Rather, it may be that the demonizing of the cosmos, as reflected in the Apocrypha and Pseudepigrapha, represents the emergence of Israel's quasi-mythology that was widely embraced throughout the OT period. Such ideas, inimical as they were to orthodox monotheism, would have been repressed by the prophets.

C. In Rabbinic Sources

Although *śāṭān* does not appear in Genesis 3, later rabbinic sources identified satan with the serpent in Eden (*Soṭa.* 9b; *Sanh.* 29a). He is identified in a more impersonal way with the evil inclination which infects humanity (*B. Bat.* 16a). In a more personal way, he is the source behind God's testing of Abraham (*Sanh.* 89b). Additionally, *śāṭān* is responsible for many of the sins mentioned in the OT. For example, it is *śāṭān* who was responsible for the Israelites worshipping the golden calf because of his lie that Moses would not return from Mount Sinai (*Šabb.* 89a). He is the driving force behind David's sin with Bathsheba (*Sanh.* 107a), and it is he who provokes the gentiles to ridicule Jewish laws, thus weakening

the religious loyalties of the Jews (*Yoma* 67b). The sounding of the horn on the New Year is to confuse *śāṭān* (*Roš. Haš.* 166). Only on the Day of Atonement is *śāṭān* without power. This is suggested by the numeral value of *śāṭān,* 364; i.e., there is one day in the year he is powerless (*Yoma* 20a).

D. In the New Testament

The NT also makes frequent references to Satan. He is mentioned by name 35 times. The breakdown of these references is: (a) the Synoptics, 14 times; (b) gospel of John, once; (c) Acts, twice; (d) Epistles (all Pauline and half of which are in the correspondence with Corinth), 10 times; and Revelation, 8 times (5 of which [2:9; 2:13; 2:13; 2:24; 3:9] are in the letters to the churches and not in prophetic portions [chaps. 4–22]). As popular as the designation Satan is, the name *ho diabolos* appears 32 times.

There are additionally a number of titles given to him. For example, while John uses Satan only once (13:27), the preferred Johannine term for Satan is the "prince of this world" (12:31; 14:30; 16:11). This phrase parallels Matthew's "the prince of the demons" and Paul's "the god of this world" (2 Cor 4:4), "the prince of the power of the air" (Eph 2:2), and "rulers of the darkness of this age" (Eph 6:12) (but not "rulers of this age" in 1 Cor 2:6–8, which refers to human rulers [Carr 1976]). A Johannine parallel appears in 1 John 5:19 where the claim is made that the whole world is in the power of the Evil One. These references teach at least a modified dualism which is close to the Qumran picture of a titanic struggle between the Angel of Darkness and the Prince of Light.

John can claim, on the one hand, that Satan has already been judged (John 16:11), and that the prince of the world will be cast out when Jesus is crucified (John 12:31, 32), and on the other hand, that the world is in the power of the Evil One (1 John 5:19). These are not self-contradictory ideas. Rather, they suggest that for John, Jesus' death and resurrection constitute a victory over Satan in principle; yet the implementation of this victory will be gradual, and yet awaits a climactic conclusion.

If there are titles describing Satan's power, there are also a number of titles that describe him pejoratively. He is an enemy (Matt 13:39); the evil one (Matt 13:38); a tempter (Matt 4:3; 1 Thess 3:5); an adversary (1 Pet 5:8); the father of lies (John 8:44); a murderer (John 8:44); a liar (John 8:44); a deceiver (Rev 10:9); an accuser (Rev 10:10); and one disguised as an angel of light (2 Cor 11:14).

Both John 13:27 and Luke 22:3 speak of Satan entering *(eisēlthen ho satanas)* Judas. The same vocabulary is used for the "entering in" of evil spirits in Mark 5:12, 13 and Luke 8:30–32. Compare with this concept the reference in *Mart. Is.* 3:11:"Beliar dwelt in the heart of Manasseh and in the heart of the princes of Judah and Benjamin, and of the eunuchs, and of the king's counselors."

Luke speaks not only of Satan entering Judas, but also of Satan's desire to have Peter, that he may sift him as wheat (Luke 22:31). (Satan's asking permission to "have" Peter is reminiscent of the satan's request to God to remove the protecting hedge around Job.) Jesus, however, is Peter's advocate (Luke 22:32) pleading against Satan the accuser. It is of interest that apart from John 13:27, Satan occurs in the passion narrative only in the Lukan account. Luke speaks of Satan the "enterer" and Satan the "sifter" in his gospel, and speaks of Satan "filling the heart" of Ananias and thus fomenting deception by Ananias in Acts (5:3).

In several ways the NT makes it clear that Satan is not without limitations. First, the intercession of Jesus stalls his designs on Peter (Luke 22:32). Second, he is a fallen being (Luke 10:18). Third, he is judged (John 16:11). Fourth, his power over a person's life may be broken (Acts 26:18). Fifth, God may use Satan to chasten an apostate believer (1 Cor 5:5; 1 Tim 1:20). Sixth, his temptations, however potent, may be overcome and his ruses exposed (Matt 4:1–11, and the only incident in the NT in which any of Satan's words are recorded). Seventh, he may be resisted, just as Jesus resisted him (Eph 4:27; Jas 4:7; 1 Pet 5:8, 9). Eighth, the NT never refers to Satan as simply the prince/ruler (*ho archon*), but as "prince of devils" (Matt 9:34) or "prince of the world" (John 12:31). Ninth, at God's discretion he is bound (Rev 20:2), released (Rev 20:7), and incinerated (Rev 20:10).

VICTOR P. HAMILTON

SATHRABUZANES (PERSON) [Gk *Sathrabouzanēs* (Σαθραβουζανης)]. An official of the Persian bureaucracy governing the province "Beyond the River." He was among those who wrote Darius, king of Persia concerning the rebuilding of the Temple in Jerusalem by the Jews (1 Esdr 6:3, 7, 27; 7:1). The name "Sathrabuzanes" is clearly a linguistic variant for the Aramaic SHETHAR-BOZENAI, the name used for this official in the parallel text of Ezra (5:3, 6; 6:6, 13).

SATRAP. The governor of a province or satrapy of the Achaemenid empire. Herodotus (3.89 ff) informs us that Darius I (521–486 B.C.) reorganized the empire into a total of twenty satrapies and placed a satrap (Old Persian *xsacapaban* = satrap = "protector of the kingdom/kingship") in charge of each province, in order to bring more rigorous method to taxation and control throughout his vast empire.

The satrap, often a close relative of the king, was generally appointed and removed by him. The satrap's court was modeled on that of the great king. Usually a wealthy man in his own right, he regularly spent of his own resources in the service of government while also having command over royal government resources within his satrapy.

Generally the satrap's power of command extended over both civil and military affairs, but in some cases major fortresses and their garrisons were under commanders who reported directly to the Great King. Other means were available to the king for independently monitoring the satrap's activities. The "king's scribes" for example, regularly reported back to the court. There were also officials called "the eyes and ears of the king," who are assumed to have provided the central government with information on events in the provinces.

In the 4th century B.C. some satrapies (most notably in Anatolia) became semi-independent hereditary fiefdoms, with the satrap no longer appointed by the king. Also, as might be expected, from time to time individual satraps or coalitions of satraps rebelled against central authority. In the main, however, the system of provincial organization re-structured under Darius served the empire well for some two centuries. See also PERSIAN EMPIRE.

A. Name and Family Background

The name Saul is a *Qal* passive participle from the Heb root *š·l,* meaning "the one asked for, requested." It perhaps is an abbreviated name form, because Semitic names frequently contained multiple elements, some of which consisted of a verbal element followed by a divine name. This name occurs elsewhere in the Bible as the name of a purported king of Edom (Gen 36:37); a Simeonite (Gen 46:10); and a Levite (1 Chr 6:9—Eng 6:24. See SHAUL (PERSON). In Assyrian texts, *ša-u-la-nu* occurs (Tallquist 1914:219), and an Aramaic honorary inscription from 3d cent. A.D. Palmyra contains the form *š·yl·* (Ša·îla·); Cooke 1903:283).

Saul the son of Kish was a member of the Benjaminite clan of Matri (1 Sam 10:21). 1 Sam 9:1 traces his ancestry back five generations, from his father Kish, through his grandfather Abiel and forebears Zeror and Becorath, to Aphiah. Saul's choice of Abner as Israel's military commander was based on family solidarity, because Abner's father, Ner, was Saul's paternal uncle. As Saul's wife, Ahinoam the daughter of Ahimaaz bore seven children: five sons and two daughters. According to 1 Sam 14:49, the firstborn child was Merab, a daughter; then Jonathan, the eldest male heir; Ishvi, a son who either died as a youth or is to be identified with Eshbaal; Malchishua, a son; and Michal, a second daughter. 1 Chr 8:33 and 9:39 name Abinadab and Eshbaal as two additional sons, although Eshbaal may be named in 1 Sam 14:49 under the variant name form Ishyo. Merab bore five grandsons (2 Sam 21:8) and Jonathan a single grandson, called variantly Merib-baal (1 Chr 8:34; 9:40) and Mephibosheth (2 Sam 4:4; 9:6, 13; 16:1, 4; 19:25, 26, 31; 21:7). The Saulide family line continued through Jonathan's grandson Micah (1 Chr 8:34–40; 9:40–44). No names of possible granddaughters have been preserved. Saul fathered two additional sons with his concubine Rizpah—Armoni and Mephibosheth (2 Sam 21:8).

B. The Saulide Narratives in Literary Perspective

The career of Saul is described in 1 Samuel 8–2 Samuel 1 and is part of the so-called Deuteronomistic History (DH), which includes Deuteronomy–2 Kings. The DH divides its account of Israel's development into five successive periods: the Mosaic period; the occupation of Cisjordan; the period of the Judges; Saul, David, and Solomon (the United Monarchy); and the period of the kings of Israel and Judah *(NDH).* 1 Samuel 9–12 form a concluding subsection to the period of the Judges, which is anticipated by a speech in chap. 8. After narrating Saul's election as king, this section concludes with Samuel's farewell speech in chap. 12. 1 Sam 13:1, with its characteristic Deuteronomistic accession and regnal formula (see below), marks the formal beginning of the new period of the United Monarchy, which ends with the death of Solomon. Thus, Saul's career bridges two of the larger subdivisions within the DH, emphasizing his pivotal position within the ancient scheme.

Various structuring techniques have been used to make the account of Saul's career a coherent, unified narrative. Three main overlapping patterns are discernible. The first is the three-part kingship ritual, consisting of the designation of the candidate as *nāgîd,* "king-elect," through anointing; his testing by performance of a military deed; and his subsequent confirmation as king by coronation upon successful completion of the test. This pattern is used three times within the 1 Samuel narrative: to describe Saul's elevation to kingship (9:1–11:15); to describe the heir-elect Jonathan's rejection as Saul's successor (13:2–14:46); and to describe David's progression to the kingship as Saul's successor (16:13; 30:1–31;

his final coronation is recounted in the succeeding narrative in 2 Sam 2:4; 5:1–6). The repetition of the pattern emphasizes the writer's desire for it to be viewed as normative from the very founding of the monarchy.

The second pattern is the standard regnal account. It consists of an initial accession formula, including the name of the king, his age at accession, and the length of his reign (13:1); an account of some of his accomplishments (13:2–14:46); a summary of his deeds (14:47–48); and a report of his death, burial, and succession (1 Samuel 31; 2 Sam 2:8–11). In the case of Saul's reign, the customary DH reference to the Book of the Chronicles of the Kings of Israel (or Judah) does not appear in the summary of deeds, and the final stage does not immediately follow the summary of deeds, as is the pattern. The deviation from the normal sequence seems to have been done by the writer for two reasons: (1) so that he could use Saul's career to depict the consequences a king would face for disobeying the central principle of the pre-existent Horeb covenant, obedience to Yahweh's revealed command; and (2) so he could prepare the way for David's unusual succession to the throne of Israel in place of a legitimate Saulide.

The third pattern divides Saul's career into two segments: his life under Yahweh's "good spirit," and his life under Yahweh's "evil spirit" (16:14). The pattern is closely associated with the previous regnal pattern and shares with it the same purpose. It emphasizes that the king, as Yahweh's anointed, remains in office and in possession of some form of divine spirit throughout his life, but that disobedience to God will result in the king's divine rejection and his inability to continue to serve his nation adequately as God's earthly vice-regent during the remainder of his reign. His loss of the ability to be guided by God's benevolent spirit will inevitably result in his failure to be able to discern the divine will and act appropriately.

An additional structuring device in the Saulide narrative is the theme of David's covenant with Jonathan, the heir-elect to the throne. It complements the use of the three-part kingship ritual pattern, which establishes a progression from Saul's legitimate coronation to David's "legitimate" coronation, after Jonathan's failure to pass the test for coronation. The theme is developed progressively through scenes that alternately center on Jonathan (18:1–5; 19:1–7; 20:1–21:1—Eng 20:1–42; 23:15b–18) and ones that involve David and Saul (16:14–17:58; 18:6–30; 19:8–24; 21:2–23:15a [with other material]; 23:19 onward [with much other material]) (Jobling 1978). It continues into 2 Samuel, in sections depicting David's dealings with Jonathan's son Merib-baal/Mephibosheth (see MERIB-BAAL). The covenant theme stresses Jonathan's immediate acceptance of David as Saul's divinely chosen successor, and Saul's reluctant but gradual acceptance of David's status.

Two of these covenant theme scenes serve the additional and overlapping function of stressing the king's lifelong inviolability, regardless of his stance vis-à-vis God, by progressively intensifying the message through repetition and alteration. David refuses to harm Saul on two separate occasions because he is Yahweh's anointed, who must die naturally, in battle, or by God's own hand (24:1–15; 26:1–11).

Scholars view the nature and extent of source material underlying 1 Samuel 9–31 in different and conflicting ways (cf. Hertzberg *1–2 Samuel* OTL, 130–34; McCarter *1 Samuel* AB, 18–23; Klein *1 Samuel* WBC, xxx–xxxii). Often, Saul's career is limited to 1 Sam 9:1–15:34. When this is done, the chaps. are generally thought to be based either on the juxtaposition of blocks of material from a pro-monarchic and an anti-monarchic source or to be a collection of individual traditions. In the latter case, the stories are often associated with the sanctuaries of Gilgal, Ramah, and Mizpah, and are generally thought to have already been organized into complexes detailing Saul's career before their incorporation into the DH. In the former case, the two strands are likewise commonly considered to predate the DH. Chaps. 16–31 are frequently thought to be part of a larger, pre-Deuteronomistic narrative called the History of David's Rise, which is thought to span 1 Samuel 15 (or 16)–2 Samuel 5 and to be an early literary attempt to justify David's accession to the Saulide throne (see Grønbaek 1971). The latter understanding is rejected by a small but growing group for varying reasons. One faction attempts to trace within the 27 chapters the so-called Pentateuchal sources "J" and "E" or "J" alone and therefore denies the existence of a separate early literary composition beside these two complexes (i.e. Eissfeldt 1965:271–80; Shulte 1972:105–80; contrast Halpern 1981:149–74, who traces two sources but does not link them to

"J" and "E"). The other faction questions the existence of Israelite historiography at such an early date and sees the themes, structuring patterns, and historical presuppositions within the Saulide narrative to reflect concerns and techniques that are more plausibly associated with the late 7th century (i.e. Van Seters 1983:217; 270; Edelman 1990).

C. Models of Saul's Role in the History of Israel

Four conceptions of Saul's political role within Israel have been proposed. All make use of the same biblical and extrabiblical materials, but each assesses the reliability and relevance of the materials differently, thereby yielding divergent views of Saul and his career. Each theory is summarized below using details taken from the discussion of its main proponent. Subsequent modifications to the seminal study that have gained acceptance are included.

1. The Permanent Judge. In 1930 A. Alt argued that Saul's leadership represents a transitional stage within Israel's political existence, between pre-monarchic tribal league and nationhood (1967:223–309). Due to the constant threat of Philistine dominion and expansion, the tribes are thought to have united and subsequently "institutionalized" the existing charismatic office of "judge." The latter was to have been a temporary office of military commander which lasted only as long as the immediate crisis that necessitated intertribal leadership. Saul's appointment, by contrast, was a permanent one, intended to cope with the ongoing Philistine threat, even though (according to 1 Sam 11:1–11) the Ammonite siege of Jabesh-gilead led to Saul's elevation to office. It is argued that his only role was to have been that of commander of the tribal levies, and that internal affairs continued to be managed by the older tribal groupings. Saul's authority was limited to military concerns; it was not to have been hereditary; unlike his successor David, Saul was not a true "king." His office is seen to have evolved naturally out of Israel's tribal, nomadic heritage, rather than to have been "borrowed" from the Canaanite state system or the Philistine political system. Saul's introduction of a rudimentary professional army in addition to the tribal levies is seen to be the only institution adopted from the latter systems.

Alt's model of permanent judge is based on the presupposition that the Bible provides a reliable witness to the political situation and institutions of the pre-monarchic period. It is the oldest and most widely accepted understanding of Saul's role. Its most commonly disputed points are the proposed non-hereditary nature of Saul's office and subsequent kingship; and the origin and uniqueness of eventual Israelite kingship—whether it was indeed a unique, native development within tribal Israel, or whether it was modeled after Canaanite city-states or the newly formed neighboring "nation states" of purported tribal origin, like Moab and Ammon.

2. The Self-Appointed Protector. The second characterization of Saul is one of a self-proclaimed protector/ruler. It has been developed by M. Miller as the first challenge to the permanent-judge model (1974; *HAIJ* 120–49). According to this view, the Bible's depiction of the pre-monarchic era is not entirely dependable. In this period, Israel was not a unified tribal league or a chiefdom headed by a single, recognized "judge" or "chief." Rather, it was a time when the various autonomous tribal groups were segmented, and when self-styled military leaders who controlled private armies were able to establish themselves through force as protector-rulers over portions of the population in a limited area.

Saul, like the traditional "judges" Jephthah and Abimelech, and David in his early career, is viewed as such a opportunistic leader, who, unlike the first two examples, was able gradually to extend his initial realm of influence in Benjamin to include large portions of the eventual Israelite state. Saul is assigned the title "king" with the caveat that he was not the head of a full-blown state. He is credited with the creation of a rudimentary administration and military bureaucracy, but is denied the establishment of a state religion and the existence of precisely defined state boundaries. His main base of support is seen to have been obligatory "gifts" made by those to whom he offered his protection and military services.

3. The Chieftain. Borrowing terminology used in social anthropology, and assuming the reliability of the biblical depiction of pre-monarchic Israel, this view argues that Saul's political role constituted the transitional, intermediate step of chieftaincy within Israel's natural growth from an "egalitarian" or segmented (i.e., village-based) society to statehood. As a "chief" or "paramount chieftain," Saul was in a political office that fell short of kingship. The model is grounded on E. Service's three-stage model of

"pristine" state evolution (1975), which was developed to describe the predictable path of increasing political complexity that civilizations undergoing their first development would have taken to reach statehood. As presented by J. Flanagan (1981), Saul and David are to be understood as competing chiefs within Israel, on the eve of its move to full-fledged statehood.

4. The State-Builder. The final model, developed by D. Edelman (fc.), proposes that Saul should be viewed as the monarchic founder of the Israelite state. This view assumes that Israel's political development must be viewed from the perspective of secondary rather than primary state formation, within the framework of the disintegration of the LB empire system of Syria-Palestine (see also Ahlström fc.). The position therefore on principle rejects the use of models for the formation of *pristine* states, challenging those interested in applying models from social anthropology to Israelite state formation to employ ones designed to account for the formation of *secondary* states. This final model does not espouse the use of comparative models that use analogy to fill in informational gaps in reconstructing the rise of statehood in Israel. Instead, it seeks to reconstruct to the extent possible the specific events that led to Saul's rise to power, to chart the progress of his political career, and to evaluate the nature of his realm on the basis of critically evaluated textual and artifactual material. As in the "Self-Appointed Protector" model (see above), the reliability of the biblical depiction of the pre-monarchic era as a time of a unified, twelve-tribe league is rejected. A political unit bearing the name Israel is seen to have been associated with groups living in a limited portion of the central Ephraimite hill country, but not to have included all twelve tribes or all of the territory that would be encompassed during its statehood, nor to have been itself structured as a sacred league.

According to this model, Saul was a full-fledged king responsible for uniting the various geographico-political units in the Samarian and Ephraimite hill countries, Benjaminite plain, and central Transjordan to create the territorial state of Israel. He was the founder of Israelite statehood and its first king. The term "territorial state" is used to describe Israel under Saul in contrast to the two other types of statehood commonly applied to the ANE, "city-state" and "nation-state" (Buccellati 1967). By definition, a territorial state includes some non-centralized administrative units. The administration of the centralized portion of the Israelite state is viewed in terms of what M. Weber has called "decentralized patrimonialism" (1947:341–58).

D. History and Saul's Story

1. The Late Iron I Period. On the eve of Saul's political career, the ANE was still recovering from the effects of the decline of the LB political configuration. The traditional powers of Egypt, Hatti, Assyria, and Babylonia were all preoccupied with domestic problems. While they probably were participating in international trade, none was strong enough to attempt to conquer and control Syria-Palestine. The Aegean world was in the midst of a dark age, a period of isolation, and was unable to reestablish its former role as an international maritime trade power. Syria-Palestine was home to a number of polities of limited territory and of varying degrees of centralized power. In S Syria, Aramean groups were coalescing into states. The Golan heights appear to have contained the states of Geshur and Maacah. In Transjordan, the states of Ammon and possibly Moab appear to have arisen. The territory of Edom may have contained some independently governed towns or regional centers, but it does not appear to have reached territorial or national statehood at this time.

In the desert fringe adjoining Judah, another state of Geshur was established, alongside Girzite and Amalekite groups. The Cisjordanian coastal strip was home to the Philistine pentapolis, while a few city-states controlled the Megiddo Plain–Jezreel Valley corridor, inland valleys, and the ghor. Recent archaeological surveys in the hill country regions of both Transjordan and Cisjordan have established that these areas witnessed a significant growth in population during the course of the Iron I period and became dotted with small villages (i.e., Finkelstein *AIS*; Mittmann 1970; Zertal 1986). Settlement in the Judahite hill country was not as pronounced as in the other areas. The new settlements were usually only a few acres in size and often did not have protective walls, although in most cases houses were arranged to form a contiguous encircling belt that would have eliminated the labor-intensive task of building a separate encircling wall but would still have provided some measure of protection from outside attack.

The political constituency within the hill country is extremely difficult to determine. The traditions concerning the so-called judges, once stripped of their idealized, twelve-tribe orientation, tend to indicate that the mountain areas were fragmented into a number of smaller polities which had varying degrees of centralized power, ranging from village-based governments to probable chiefdoms. In theory, *in situ* remains from the past can chronicle the presence or absence of social stratification through varying house size, diet, and material remains, and can document levels of political complexity by the presence or absence of public buildings. Nevertheless, only a small number of hill country sites have been excavated, and of those, no more than 30 percent of the total area has been uncovered, thus it is not possible at present to reconstruct the political configurations of any of them with certainty.

2. Chronology. The accession formula for Saul in 1 Sam 13:1 is corrupt; consequently, Saul's age at the time of his coronation and the length of his reign are unknown. Most LXX manuscripts lack v 1 altogether. A few minor mss that contain the verse give 30 as the age at accession, which is a figure representing responsible adulthood; the Hebrew mss have no number, but read "son of ___ year(s) was Saul when he became king." Both the MT and LXX give 2 years as the regnal length.

General parameters for the length of Saul's reign can be deduced from narrative details. Since it was the standard ancient practice to undertake military campaigns annually in the spring, at least six years of reign are needed to accommodate a single battle against each enemy recorded in 1 Sam 14:47–48. Details of three separate battles involving the Philistines are preserved in the Bible (1 Samuel 13–14; 17; 29–31), so a minimal reign of 8 to 10 years would seem required for Saul. Bearing in mind the successful coronation of Saul's surviving young and inexperienced son Eshbaal as the dynastic successor to the throne—in spite of critical circumstances of the day that would have favored the appointment of a seasoned military commander (see ESHBAAL)—it seems likely that Saul would have enjoyed an even longer and more successful reign than the deduced minimum. Such an acceptance of a weak dynastic successor presumes that Saul had been able to establish among the court and the citizenry at large his respect and authority as head of state.

If one is willing to assume that the number 2 in 1 Sam 13:1 is part of the original regnal figure that was subsequently corrupted, which is a possible but not necessary inference, it would seem most appropriate to restore either 12 or 22 as the length of Saul's reign. The second figure is more probable in light of the succession issue. A figure of 32 seems too great if one bears in mind two factors. First, Saul's youngest son by Ahinoam apparently survived the battle of Gilboa because he was too young to fight in it, and hence he was probably under 20 years of age at the time of Saul's death. Second, Jonathan, Saul's eldest son, is reported to have had only a single son not more than five years of age at the time of his death at Gilboa. By implication, Jonathan was not more than about 30 when he died. Although the Bible provides no firm indication for marriage ages for males and females in ancient Israel, it would be a reasonable guess to posit an age within the 20s for males and within the teens for females, particularly in light of the low life expectancy. With one child older than Jonathan, Saul should have been in his mid to late 50s when he died at Gilboa.

Since Saul probably would not have been able to gain the support and respect of the people as king if he had not been an experienced soldier proven in battle, it is reasonable to suspect that he must have been at least 30 when he became king. In light of Saul's deduced age at death, a reign lasting upwards of 25 years seems indicated.

3. Saul's Coronation. According to 1 Sam 11:1–11, Saul's rescue of the citizens of Jabesh-gilead from Ammonite threats of oppression and disfigurement was the event that prompted Saul's coronation over Israel. The inclusion of Saul's successful execution of a military deed in the account of his elevation to king has been dictated in part by the use of the literary pattern of the tripartite kingship ritual to structure the presentation (Edelman 1984; see C above). A military testing deed was the necessary second step before the king-elect could be confirmed by official coronation (11:14–15). While it is likely that a military feat was the historical stimulus that led to Saul's being made king, the patternistic nature of the present depiction allows room for the possibility that Saul's rescue of Jabesh-gilead may not have been

the actual deed that led to his elevation to kingship. Although its authenticity has been widely accepted, in recent years different military deeds have been connected with Saul's initial coronation.

Saul's ability to have been able to lead his fellow untrained Benjaminite countrymen in a successful rout of the national Ammonite army as currently depicted is historically implausible. Such a battle almost certainly would have had to have taken place after Saul had become an established king who commanded a national and professional militia strong enough to take on the Ammonite state's army with some hope of success. Thus, while 1 Sam 14:47 indicates that the king successfully fought against the Ammonites at some time during his reign, it is likely that the encounter took place in the later part of his reign, not as a prelude, or even in the opening years.

Confirmation of the historical unreliability of the Jabesh-gilead incident as the founding event of Saul's career is found in 2 Sam 2:4b–7. The passage uses the ancient technical treaty language "to do goodness" (Heb *ʿāśâ haṭṭôbâ* to describe Jabesh-gilead's status under Saul. David is reported to have approached the citizens of the town and to have offered to "do goodness" toward them as Saul their former lord had done. The statement indicates that during Saul's reign, the town had not been part of the Israelite state, but instead, had been linked to the state by treaty. David is depicted to have been encouraging the town to revolt against Eshbaal, Saul's successor, and instead to enter into a treaty with him as king of the newly established state of Judah. 2 Sam 2:4b–7 indicates that Jabesh-gilead was not Israelite before or during Saul's reign, so the depiction in 1 Sam 11:1–11 of the town appealing to its fellow Israelite "brethren" for deliverance cannot be historical. When it is further observed that the story exhibits one of the fullest uses of the pattern commonly found in the Judges stories, the historical character of the account becomes even more suspicious (Edelman 1984).

Two alternative military deeds have been associated with Saul's initial coronation: (1) Saul's overthrow of the Philistine prefect at Gibeah and the related capture of Michmash; and (2) Saul's overthrow of the Philistine prefect at Gibeon. According to the first proposal, the natural continuation of the old folktale underlying 1 Sam 9:1–10:16 was an account of Saul's repossession of Gibeah and Michmash from the Philistines, now described in expanded form and associated secondarily with Jonathan in 1 Samuel 13. It is argued that the killing of the Philistine prefect at Gibeah is the military deed that originally was the third part of the sign described in 1 Sam 10:2–7, which was to confirm Saul's anointment by Samuel as king-elect. The original popular account is thought to have been fragmented and rearranged into the present, artificial order by the person responsible for the material's inclusion in the DH (Miller 1974). This proposal has the advantage of having as its basis an attested Saulide battle. A potential drawback is its need to explain why Saul's overthrow of Gibeah has been displaced by the Ammonite incident as the deed that led to his coronation.

The second proposal, like the first, postulates that the old folktale underlying 1 Sam 9:1–10:16 originally included an account of a military deed that served as the third part of the sign in 10:2–7 and was the historical deed that led to Saul's coronation, but that the deed in question has been deliberately excised from the account and replaced with the secondary account of the rescue of Jabesh-gilead. Following the lead of the extant plot in 9:1–10:16 it is suggested that the story went on to tell how Saul returned home to Gibeon (cf. 1 Chr 8:29–40; 9:35–44) and overthrew the resident Philistine prefect by posing as a member of the prophetic train during a religious procession in order to gain access to the official. The abrupt reference to Saul's visit to his "uncle" (Heb *dwd*) is understood to be a vestige of an account of Saul's visit to the resident Philistine *dwd*, "prefect," whom he killed, thereby liberating his hometown from Philistine dominion.

The present arrangement of the text is seen to have resulted from the deliberate "censure" of the Gibeon incident by the creator of the DH. The historian's bias toward Jerusalem as the sole, legitimate place of worship during the monarchic period is seen to have led to his elimination of clear references to Gibeon as Jerusalem's precursor as the first national sanctuary and state capital of the Israelite state (Edelman fc.). A negative attitude toward the Gibeonites has been noted to exist throughout the History (Kearney 1973). This proposal has the advantage of explaining the present arrangement of the text, but it also has the

disadvantage of reconstructing an otherwise unattested and unverifiable incident as the basis for Saul's coronation.

4. Saul's Military Career. One of the few positive evaluations of Saul's accomplishments as first king in the biblical portrayal of his career is that of his military prowess. 1 Sam 14:47–48 summarize his deeds as king in terms of his military victories over his enemies on every side: Moab, the Ammonites; Edom, the kings of Zobah; the Philistines; and the Amalekites. Details of a few of these battles have been preserved in 1 Samuel 11; 13–14; 15; 17; 28–31. Careful literary analysis can help separate fictional embellishment from likely historical fact in many instances, and reveals that Saul was a masterful military tactician.

The battle of the Michmash Pass, currently recounted in 1 Samuel 13–14, is probably the earliest extant Saulide battle. If one follows Miller, it would have been Saul's first battle, which led to his coronation by fellow Benjaminites and his establishment of the site of Gibeah as his capital. If one follows Edelman, it would have taken place within the early years of Saul's kingship, after his establishment of Gibeon as his capital. Saul would have needed to eliminate the two Philistine outposts at Gibeah and Michmash, which together controlled the Michmash Pass through the Wadi Suweinit and an important, internal E-W route from the Philistine Plain to the ghor, to have been able to have created a defensible E flank and to have prevented periodic Philistine traversal of his home base territory to man the garrisons.

Jonathan's reported capture of Gibeah in 1 Sam 13:3 is probably literary fiction; he would have been a child in his early teens at the time, assuming a 22- to 25-year reign for Saul. See JONATHAN SON OF SAUL. The military strategy reportedly used by Saul, which involved the division of the army into two batallions that were to attack both posts simultaneously from the rear and force a retreat into the pass, where escape was impossible (13:2), also seems to be unreliable. It is likely that the hill country on the north side of the Wadi Suweinit, in the vicinity of Michmash and Bethel, was part of the political domain of Saul's rival Samuel (1 Sam 7:15–17; Edelman 1989:57). Saul would not have been free to deploy troops on the north side of the wadi. It seems plausible to suggest that Saul's strategy led him to capture the Philistine fortress at Gibeah, on the Benjaminite side of the wadi, and then to have tricked the Michmash fortress into an unwanted battle before reinforcement troops could arrive from the Philistine homeland. It is possible that the depiction of Jonathan and his weapons bearer pretending to be deserters in order to gain access to the Michmash post (14:1–16) is based on Saul's actual use of a small squadron of men feigning desertion to draw the Michmash post into premature battle. As a result of this two-step offensive, Saul would have eliminated Philistine control to his E, gained control over the E half of the E-W road to the ghor, and gained a foothold among Samuel's constituents, paving the way for his eventual takeover of Samuel's domain as he began to build a territorial state.

The logical goal of the battle against the Philistines in the valley of Elah (1 Samuel 17; 2 Sam 21:19) would have been to secure the S Gibeonite flank and the next most southerly E-W route from the Philistine homeland to the ghor. The latter road ran W from Jerusalem along the Sorek Valley into the Elah Valley before reaching the Philistine Plain. The actual confrontation took place in the form of representative combat in the Elah Valley, the natural point of entry into the hill country. Tradition now names the Israelite champion as the young David, but the actual hero seems to have been a certain Elhanan, son of Jarreoregim, from David's home town of Bethlehem (2 Sam 21:19) (Stoebe 1956).

Saul's battle against the Amalekite stronghold, Ir Amalek, is presently associated with the traditional Amalekite region in the desert S of Judah (1 Samuel 15). Ir Amalek has been identified with the site of Tel Masos in the Beersheba basin (Kochavi 1980:27), which appears from excavations conducted there to have been a regional trade center in the Iron I period (Str. II) (Finkelstein 1988:247–52). Saul's interest in gaining control over such an economic base provides a logical motive for both the proposed identification and the purported battle recorded in 1 Samuel 15.

Although the story contains direct allusions to other S Amalekite traditions in the DH, there are a few hints scattered throughout the Bible that an Amalekite enclave also had once been located in the hill country S of the Jezreel Valley (Exodus 17; Judg 5:14; 6:3–7:20; 12:15; 2 Sam 1:2–2:26), which raises a potential question as to the identity of the Amalekite group with whom Saul fought. The only probable

historical details that can be gleaned from chap. 15 are the name of the city against which Saul launched his offensive (v 5); that it was located near a wadi (v 5); that Saul may have employed an ambush to take the city (v 5); and that he erected a "stele" (Heb *yad*) after his victory in Carmel, probably as a commemorative marker (v 12). The well-known N Carmel promontory had a long history of such monument erections by Mesopotamian rulers, while the S Carmel region did not (Edelman 1986).

Saul's historical campaign against Ir Amalek could have taken place against the N Amalekite enclave, in response to the group's escalating raids against segments of the central Ephraimite hill country population that had become part of Saul's expanding state, rather than against the more well-known S pastoral groups who would have been raiding the few settlements that existed in the S Judahite hills. Saul's control over any portion of the latter region, which was geographically separated from his core territory by the Jerusalemite city-state and a band of no-man's-land, is disputed. This is the region that David raided as a Philistine mercenary and which he subsequently welded into his Hebron-based state of Judah. The editorial attempt to include Judah within the Saulide state in the DH is perhaps best understood to have been motivated by the use of the idealized twelve-tribe scheme for the pre-monarchic era, which then required its continued use into the early monarchic period.

The Saulide rescue of Jabesh-gilead (1 Sam 11:1–11) has been discussed briefly above. What is noteworthy is the report that Saul used the strategy of surprise attack in order to catch the Ammonite forces off guard and gain a military advantage (v 11). The story is presently structured as a judge-style narrative, to depict Saul's successful completion of a military "testing" after his designation as king-elect and prior to his confirmation as king. The actual battle probably took place in the second half of his reign and may have been prompted by Saul's preexisting treaty obligations to supply Jabesh with military support upon request. Although the present account tends to suggest that Jabesh voluntarily sought to enter into a treaty with Saul to avoid the vassalship that Nahash was intending to impose upon them by force, the report of Saul's overnight march to surprise the Ammonite forces and lift a preexisting siege against the city suggests that a treaty may already have been in effect.

The final battle of Saul's career appears to have been an offensive attack against the city-state of Beth-shean, aimed at securing access to an important trade route. Without control of the corridor that descended through the Jezreel and Beth-shean Valleys to the lower end of the Sea of Galilee and then N to Damascus, it was not possible to carry on commerce directly and freely at the international exchange center of the times. The account of the battle spans 1 Samuel 28–31, and is a highly polished, nonchronological, episodic narrative that parallels Saul's final defeat and death with David's successful routing of the remnant of the Amalekites (whom Saul failed to exterminate), confirming Saul's untransmuted divine rejection from the kingship (1 Samuel 15). David's Amalekite battle provides him with an alibi for his whereabouts during the Battle of Gilboa while deliberately depicting him as Yahweh's champion who carries out the commands of his heavenly regent, in contrast to Saul. The historicity of the incident is questionable.

Chap. 28 sets the entire battle within the larger context of a personal crisis facing David, the king-elect. As a Philistine mercenary, he is told he must accompany the Philistine troops into battle against Saul (28:1–2) and muster with them at Aphek. Immediately, the scene jumps forward in time to the eve of the actual battle, to reveal Saul's destined death via the medium of En-dor (28:3–25). The result is to heighten suspense about David's actions and deepen his dilemma: on two previous occasions he has refused to harm Yahweh's anointed agent, even though he had been in a position to do so (1 Sam 24:1–22; 26:1–25); now, he is put in a situation where, as a Philistine servant who cannot control the upcoming conflict with Saul, he may potentially become the unwilling agent of the Israelite king's certain death. Chap. 29 resolves the suspense and dilemma by moving the scene back a few days earlier to the Philistine mustering ground and recounting David's dismissal from the Philistine forces. With the outcome of the impending battle already revealed in chap. 28, chap. 30 recounts David's successful completion of Saul's earlier divinely ordered task of eliminating the Amalekites, so as to make his victory contemporaneous with Saul's death. Chap. 31 briefly portrays the battle sequence outside Beth-shean that leads to Saul's preordained death.

The Bible reports that Saul took the initiative in his final campaign by encamping by the fountain in the Jezreel Valley. In response, the Philistines are said to have mustered their forces at Aphek in the Philistine Plain (29:1) and then marched N to the Megiddo Plain-Jezreel Valley and encamped opposite the Israelites at Shunem (28:4). Their move supposedly resulted in the Israelites' moving camp further E, to the foot of the Gilboa mountains (28:4). The site of the actual battle is not specified, but seems to have been in the Jezreel Valley between the two camps. The Philistines are reported to have routed the Israelites, and pressed them into the Gilboa mountains, where they were able to wound Saul mortally, kill his three sons (Jonathan, Malchishua, and Abinadab), and gain a decisive victory (31:1–7). The next day, the Philistines are said to have gathered booty and to have beheaded Saul's corpse, nailed it to the walls of Beth-shean, along with the bodies of his sons, and to have sent Saul's armor home to Philistia, to be kept in the temple of Ashtaroth (31:8–10). The citizens of Jabesh-gilead are to have retrieved the bodies and to have taken them home and cremated them. Cremation was an established Aegean and Anatolian burial practice that was used especially to honor fallen warriors and royalty.

The report that Saul was the aggressor in the battle of Gilboa is probably historically reliable, as is his reported encampment in the Jezreel Valley, near the local water source, below the Gilboa spur. His apparent target was the city of Beth-shean, which becomes clear from the detail concerning the displaying of the royal family's bodies on the walls of that city, after the Israelite defeat. This was a gesture of victory. Both Saul's position in the Jezreel Valley to the W of Beth-shean and the disposition of his body by the citizens of that city after his defeat confirm that Saul's intended goal was the conquest of the Canaanite city of Beth-shean (Koizumi 1976).

1 Samuel 28–31 portrays the Philistines as Saul's enemies on this occasion. Many scholars have concluded that Beth-shean was a Philistine city at this time to explain its role in the battle. However, excavations at the site have yielded only one sherd of Philistine pottery, in a disturbed locus, after eleven seasons of excavations, while demonstrating that the city was a prosperous and powerful fortified center during Saul's reign. In the LB period, it had been an important Egyptian garrison city, and Egyptian influence appears to have continued as late as ca. 1075 B.C. (James 1966:150–53). In light of the predominance of local Canaanite pottery in the city and the lack of any evidence of partial destruction layers in the course of Lower Level V, which spans the period ca. 1100–1000 B.C., it seems best to conclude that the city became an independent Canaanite center after the disappearance of the Egyptian presence and that it voluntarily entered an alliance with the Philistines at some point in the Late Iron I period. The Philistines would have wanted to have secured access to the same important trade routes that Saul appears to have been interested in. The Philistine presence at the battle almost certainly is to be explained in terms of its status as Beth-shean's ally, and not in terms of its direct control over Beth-shean.

The course of Saul's campaign against Beth-shean remains uncertain. The strong literary shaping of the account leaves its historicity open to challenge. It is possible to conclude from the depiction that Saul planned to attack the city from the E, but perhaps planned to lay squadrons in ambush in the Gilboa hills to the S of the city and to rely on additional Israelite and allied troops from Gilead to join the battle from the east by marching up the ghor. It is not clear if Saul had set a siege against the city or not. In view of the absence of details concerning the actual encounter with the Philistines that led to the rout of the Israelites in the Gilboa hills, it might be possible to suggest that allied Philistine troops arrived unexpectedly from the W, threw the Saulide camp into confusion, and were able successfully to defeat the men as they fled up into the hills in retreat. The current report that the Philistines had encamped opposite the Israelites at Shunem could well be fictional embellishment, created by the author to facilitate his scene of Saul's visit to the witch of En-dor on the eve of the battle.

5. The State of Israel under Saul. Although the Bible devotes some 25 chapters to Saul's career as king, it provides little information about the process of state formation in Israel or about the nature of the early state under Saul. Nevertheless, the list in 2 Sam 2:9 of the areas over which Eshbaal, Saul's son, was crowned provides the historian with crucial data about the nature of the early Saulide state by recording its territorial boundaries and administrative divisions. The list appears to be derived from an old administrative document that could have been included in the Davidic state archives as an enumeration of

the territories to which David gained title as Eshbaal's successor. In view of the latter's troubled reign, it is unlikely that he would have made sweeping administrative innovations, so the list should be seen to reflect both the administrative structure and territorial domain of Saul's state.

Although it is possible that Eshbaal could have lost firm control over some former Saulide areas, the reported prolonged war with David in 2 Sam 3:1a tends to suggest that his experienced general Abner was able to maintain Israel's holdings, to the embarrassment of David and the probable anger of the other surrounding states. This situation has resulted in the literary depiction of Eshbaal as a seasoned veteran of 40 when he became king rather than the inexperienced youth other texts indicate he was, to make him a more formidable enemy capable of fending off David's attacks (2 Sam 10:2). It also seems to have led to his assignment of a brief 2-year reign (2 Sam 2:10) to indicate that in spite of his strength and experience, David was able to overpower him quickly and gain the support of the Israelite state leaders.

The list names five areas that together comprised "all Israel":the Gilead, the Ashurites, Jezreel, Ephraim, and Benjamin. The five are further grouped into two subcategories by the use of two different Heb prepositions, *ʾel,* "to," and *ʿal,* "over." The first three were regions "to" which Eshbaal was made king, while the last two, which included his home territory of Benjamin and the area where the premonarchic entity Israel had been located, were regions "over" which he was made king. It has been suggested that the alternation of the two prepositions is attested elsewhere in the Bible and carries no significance in v 8 (*NHT*, 186). However, the verb "to be made king" in all of its attested conjugations never appears in the Bible outside of this verse or in other extant East or West Semitic writings followed by the preposition *ʾel;* the prepositions *ʿal* and *b* are idiomatic. It is unlikely then that the preposition *ʾel* would have been secondarily introduced into the text, creating an unknown idiom. On the other hand, the deliberate use of the preposition in contrast to the idiomatic *ʿal* would be understandable in the context of an incipient and evolving state administration to create a contrast between two types of districts. The idiomatic *ʿal* category probably can be seen to have designated districts with a centralized administration, while the nonidiomatic *ʾel* category would have designated noncentralized districts. The latter perhaps would have been outlying areas where Saul's sovereignty would have been recognized and in which the people would have paid taxes and performed military duty, but areas that would not have had state-built and state-run fortresses established at strategic crossroads and along borders (Edelman 1985:88–90).

The district of Gilead probably was not identical with the hill country of Gilead. See Fig. SAU.01. The administrative base was Mahanaim (2 Sam 2:8), which apparently was established to gain an Israelite monopoly over the iron ore in the Ajlun region. See MAHANAIM (PLACE). The Manassite settlements in the hill country N of the Wadi ez-Zerqa, as far as the Wadi Yabis, can probably be included within the district of Gilead. Jabesh-gilead's status as an ally tends to limit Saulide holdings to the region S of the Wadi Yabis. The settlements associated with the "judge" Jair, which lay N of the Yabis, appear to have been incorporated into the state by David. 1 Chr 5:10 and 7:8–16 indicate that some portions of the areas of Reuben and Gad were within Saulide control. The W hill country S of the Wadi ez-Zerqa, the adjoining land of Jazer in the Salt region, the hilly territory around Heshbon, and perhaps the Hagrite territory in the desert steppe in the vicinity of the Arnon River (Wadi Mujib) can probably be included within the southern limits of Saulide Gilead.

The Ashurite district seems best associated with the SW Ephraimite hill country, in the area surrounding the Beth-horons. See ASHURITES and Fig. SAU.01. The Jezreel district should probably be confined to the Gilboa hills, with the Wadi Faria perhaps serving as the natural S boundary and the Dothan Valley as the W boundary. It would not have included the Jezreel Valley proper, which would have been controlled by the city-state of Beth-shean. Recent archaeological surveys have determined that there were no settlements on the N side of the Valley, in the traditional tribal allotment of Issachar, at this time (Gal 1982).

The district of Ephraim probably would have included the bulk of the central Ephraimite hill country land mass, which would have included the regions of W Samaria, central Samaria, E Samaria, and the hill country of Ephraim. See Fig. SAU.01. The NW boundary might have been the Dothan Valley; the NE boundary, the Wadi Faria; the E boundary, the ghor; the SE boundary, the Wadi Suweinit; the SW

boundary, the Ashurites; and the W boundary the Sharon Plain. Included within the district of Ephraim would have been Manassite, Ephraimite, and Issacharite clans (i.e., Judg 10:1), and the former political domains of Israel, Samuel, and possibly, the Abiezerites (Judges 6–8).

The district of Benjamin would have included the hills S of the Wadi Suweinit and N of Jerusalem; the plain to their W and the hills to the E of the plain, bordering the Philistine lowland. In the E hills, Israelite settlements would have been confined to the northernmost hills, N of Tell el-Fûl. It seems likely that the latter site, if it indeed housed a fortress at the end of the Iron I period, which is not clear from the archaeological evidence (Finkelstein *AIS*, 56–60), was a Jebusite outpost. From the site one can see Gibeon and Geba, but not Jerusalem, so Saul would not have gained any advantage in fortifying it. However, Tell el-Fûl may have been merely a farmstead, in which case it could have been part of the Saulide district of Benjamin. It is likely that Nob was a Jebusite dependent at this time, given its location on an adjacent hill. The NW boundary would have been the Ashurites, and it is likely that the Sorek Valley and Jerusalem would have served as the S boundary. The Gibeonite enclave, which included the cities of Gibeon, Chephirah, Beeroth, and Kiriath-jearim, appears to have been incorporated into the centralized Benjaminite district at some point during Saul's administration (2 Sam 4:2–4; 21:5).

2 Sam 2:9 indicates that Saul's state did not include the Galilee or Judah. David was responsible for incorporating the former region into the Israelite state. It is possible that Saul had been able to assert control over some segments of Judah, but that he lost these areas to David in the last years of his reign, when David established the rival state of Judah at Hebron (2 Sam 2:10–11). In view of the relatively sparse settlement in the Judahite hills and the lack of additional agricultural commodities that were not already available from other districts, it is possible that Saul chose to control limited portions of Judah by alliance rather than through incorporation, even as a noncentralized district. The Ziphites, for example, may have become associated with Israel by such an alliance arrangement (2 Sam 23:19–24).

In addition to the corporate state land outlined above, Saul appears to have established alliances with various foreign city-states. Besides his treaty with Jabesh-gilead, which may have been struck in order to secure access to the internal N-S hill country road in Gilead, the existence of treaties with Lidebir (var. Lo-debar) and Abel-meholah can be discerned from the extant narratives. The willingness of Machir ben Ammiel, king of Lidebir, to give political asylum to Jonathan's infant son after the Gilboa disaster strongly implies that some form of treaty had existed between Israel and Lidebir. Although the site of Lidebir is uncertain, it seems to have been located N of the Yarmuk River, perhaps at the foot of the Golan heights. Saul's interest in establishing an alliance with the city almost certainly would have been to secure trade access through the upper ghor, en route to Damascus.

A probable treaty with Abel-meholah, located in the W ghor at the S edge of the Beth-shean Valley, is suggested by two pieces of information. The marriage of Saul's eldest daughter Merab to Adriel ben Barzillai the Meholathite (1 Sam 18:19; 2 Sam 21:8) might well have reflected the common ANE practice of sealing a political alliance by marriage. The inclusion of the city in the subsequent fifth Solomonic district strongly indicates that Abel-meholah had remained an independent, Canaanite city-state until the reign of David or Solomon. The district encompasses the former Canaanite domains located in the Megiddo Plain-Jezreel Corridor and the Beth-shean Valley extension, which included the N portion of the W ghor (1 Kgs 4:13). Access to the W ghor road may have motivated this alliance, particularly since Abel-meholah appears to have been located at a commonly used ford of the Jordan (Judg 7:22).

SAYINGS OF JESUS, OXYRHYNCHUS. Dominical sayings that appear in four texts found in rubbish mounds at Oxyrhynchus, a city which flourished in Middle Egypt principally during the Roman period. Now part of the modern town Behnesa, the site stood between the W bank of the Nile and the Baḥr Yusuf (Canal of Joseph) about 125 miles S of Cairo. Along with an extensive number of documents written on papyrus and parchment, which date from the 1st to the 9th century A.D., the texts were recovered by Bernard P. Grenfell and Arthur S. Hunt over a series of archaeological seasons beginning in 1897. Actually, only three of the pieces—Oxyrhynchus papyrus nos. 1, 654, and 655—are cast in the strict form of collections of independent sayings of Jesus. The fourth, papyrus 840, exhibits the character of a continuous gospel account, as this form is known in the four NT gospels. Unfortunately, all four—along with possibly a fifth, poorly preserved text (no. 1224) which may be a gospel account—are brief

and, for the most part, very fragmentary. Since only a few lines can be made out on most of them, this has provided seeming invitations for commentators to attempt restorations of the texts. Significantly, the discovery of the Coptic *Gospel of Thomas* near Nag Hammadi in Upper Egypt has now shown both that numbers 1, 654, and 655 all derive from a Greek version of that text, and that prior attempts at restoring lacunae in the Oxyrhynchus texts were largely misguided. In this connection, it is also important to note that even though all three texts bear an obvious literary connection both with the *Gospel of Thomas* and therefore with one another, they are not from the same scribe, but came from different hands.

1. This papyrus leaf of a codex was found in 1897. Containing seven sayings attributed to Jesus that are reasonably legible, three of which parallel the Synoptic Gospels, the verso of this text as it was first published by Grenfell and Hunt has now been shown to precede the recto; for the proper order can be demonstrated from the Coptic text of the *Gospel of Thomas.* The seven sayings, plus one word from an eighth, which stands in the broken portion at the bottom of the verso, are paralleled by the nine sayings numbered 26–30, 77, and 31–33 in the Thomas document. The reason for the expanded number of sayings in the latter text is because the long fifth saying in the Oxyrhynchus document was split in the Coptic version, becoming saying 30 as well as the latter part of saying 77 in Thomas. Adopting Marcovich's readings (1969), one has the following:

Oxyrhynchus Papyrus 1, lines 24–31 (verso):

[Jesus sa]ys: [Wh]erever there are
[three,] th[ey are] gods; and
[wh]ere there is o[ne] only
[or tw]o, I am with
th[em.] Lift [u]p the rock
and there you will find me;
cleave the wood and I
am there.

These words of Jesus are arranged in the *Gospel of Thomas* as follows:

Jesus said: Where there are three gods, they are gods; where there are two or one, there I am with him (logion 30).

Jesus said: I am the light that is above them all. I am the All. The All came forth from me, and the All has attained to me. Cleave wood, I am there. Lift up the stone and you will find me there (logion 77).

The sense of the first part of the Oxyrhynchus passage and Thomas's logion 30 seems to recall Matthew 18:20 where Jesus says that "where two or three are gathered in my name, there am I in the midst of them." The implication in the two non-canonical sayings is that Jesus makes up the second or third person, in company with one or two disciples, for the purposes of worship. The second part of the Oxyrhynchus piece links to the last segment of logion 77, though the order of lifting the rock and cutting the wood is reversed. As with other readings, it is impossible here to determine which arrangement of the sayings was prior.

654. During the second season at Oxyrhynchus in February 1903, Grenfell and Hunt found a survey list on papyrus whose reverse side preserved a text of 42 lines, broken off on the right side, which consisted of a series of sayings, all apparently attributed to Jesus. Because of lacunae, it is only in sayings 3, 5 and 6 that we find the introductory phrase "Jesus says." The similarities between lines 1–39 of text 654 and the prologue and first six logia of the *Gospel of Thomas* are unmistakable. In the last three damaged lines of the Oxyrhynchus piece, enough can be made out to connect the saying lost here to logion 7 of Thomas. Even so, one significant difference is to be found in the second saying of these two texts. Recalling Matthew 7:7–8 (= Luke 11:9–10), one reads:

Oxyrhynchus Papyrus 654, lines 5–9:

[Jesus says:]
Let not him who see[ks] cease [seeking until]
he finds. And when he fin[ds he will be amazed, and being]
amazed he will reign; and [reigning he will]

rest.

Logion 2, *Gospel of Thomas:*

Let him who seeks not cease seeking until he finds; and when he finds he will be troubled; and when he has been troubled, he will marvel and will reign over the All.

The version that appears in 654 is also attributed by Clement of Alexandria to the *Gospel of the Hebrews* (*Stromateis* 5.14.96), and the two doubtless preserve the original version of this saying as well as the original order of the chain (seek-find-marvel-reign-rest). The principal difference between 654 and logion 2 lies in the final outcome of the person's spiritual quest: to reign or to rest. Since both are well-attested motifs in scripture and elsewhere (see Marcovich 1969:56f.), it is impossible to determine which was the prior reading in the texts quoted above, that is, whether one or the other was "corrected" by a copyist to its current reading.

655. Eight fragments of two columns of a text dated no later than A.D. 250 by Grenfell and Hunt were found in 1903. Written in a small, skilled hand in uncial letters, the document comes from a papyrus roll whose fibers and sense of the text have allowed an accurate placement of the fragments. As in the case of nos. 1 and 654, the discovery of the *Gospel of Thomas* has demonstrated that 655 is from a copy of a Greek version of this collection of individual sayings. Indeed, it is possible to determine that logia 36–39 and possibly 24b were written in the two columns.

The freedom felt by a copyist to alter a reading in a text can be seen from a comparison between the first saying and logion 36, its parallel in Thomas.

Oxyrhynchus Papyrus 655, lines 1–17:

[Take no thought] from early un[til late or]
from even[ing until] morning, neither [for your food] what you may ea[t, nor] for [your
clot]hing what you should put on. [You are]
much better than the [li]lies which [nei]ther
card nor spi[n. But] since you have one
[gar]ment, what in fact do you la[ck]? Who can
add to your stature? He himself shall give to
(each of) you your garment.

In an apparent effort to minimize the seeming contradiction between this saying, in which one's special garment was to be supplied by the Lord, and the following one, in which a person is expected to take one's garment off and trample it in the dust before being able to associate with "the Son of the Living One," the redactor [?] of the Coptic text purposely dropped most of the saying, leaving only the following.

Gospel of Thomas, logion 36:

Jesus said: Take no thought from morning to evening and from evening to morning for what you should put on.

840. Found in December 1905, this partial text consists of a small vellum leaf (8.8 × 7.4 cm.) written on both sides in a tiny, rather regular hand. The writing is dated by its discoverers to the 4th century, and the copyist exhibits an inclination for using red ink in specific instances such as the first letters of sentences, dots of punctuation and—twice—accent marks.

The opening seven lines of the text introduce the reader to the end of an address by Jesus—consistently referred to as "the Savior"—in which he warns his hearers against the sort of overconfidence which leads to punishment both in this life and in the next. He then leads his disciples into the temple, apparently going within the "court of Israel," where they meet a Pharisaic high priest, possibly named Levi. The priest reproaches them for entering without properly purifying themselves and for not changing into white clothing, hence desecrating the sacred precinct. In response, Jesus inquires about the state of cleanness of the priest, who in turn affirms that he has performed the necessary purificatory rites. Against this Jesus delivers a sharp criticism, which recalls Jesus' harsh condemnation of the "tradition of the elders" in Matt 15:1–20 and Mark 7:1–23, contrasting the shallow character of external purity with the deeper inward cleansing in which he and his disciples had been immersed from above at "the waters of life" (line 43).

The absence of connections in this piece to special interests within the early Christian community as well as the presence of both numerous Semitisms and an informed view on temple matters lead naturally to a high estimate of this text as a virtual companion piece to the Synoptic Gospel accounts. Further, it is likely that the original document was composed at least by the early 2d century, since it shares none of the uncontrolled fantasies about Jesus and the disciples that 2d and 3d century apocryphal accounts typically exhibit.

SCANDINAVIAN SCHOOL. The designation "Scandinavian school," regardless of whether it is used to refer to OT or NT studies (or both), should be used cautiously, since those normally designated by this term have not thought of themselves as belonging to a "school." The fact that several Scandinavian scholars in both OT and NT studies have held views explicitly different from German exegetes in particular may explain why English-speaking colleagues, mainly in North America, have come to regard them as a "school."

OT STUDIES

It is fair to say that, without constituting a "school" in the strict sense of the word, certain trends especially since the 1920s have put a distinctive stamp on OT scholarship in Scandinavian countries. The point of departure was the work of the Danish historian of religions Vilhelm Grønbech, who between 1909 and 1912 published the Danish original of his *The Culture of the Teutons* (1931) and in 1915 a brief introduction to "primitive religion." In the former he tried to reconstruct the thought-world of the ancient Teutons, using their own expressions and trying to understand them on their own conditions; in the latter he explained primitive cult as a creative drama with the aim of renewing the conditions that were the result of the myth reproduced in the ceremonies.

The former approach was applied by Johannes Pedersen to ancient Israel (1926). He analyzed the thought-world of the OT, letting the texts speak for themselves without the introduction of modern categories. Especially important was his explanation of *nepeš,* "soul," as the vital principle in man, and his interpretation of *berākâ,* "blessing," as a concept very much like the *mana* of primitive peoples. This volume was followed in 1934 (Eng 1940) by a second one in which the institutions of the OT were dealt with in terms of holiness, holy persons, holy places, and holy actions. At the same time, Pedersen was a heavy opponent of literary source criticism; some of his ideas in this respect were set forth when he argued that the exodus story was the cult legend of Passover (1934).

On the other hand, Grønbech's theory of the cult as creative drama became decisive for the Norwegian Siegmund Mowinckel in the 2d volume of his work on the Psalms (1921–24). Following up Gunkel's idea of the cult as the *Sitz im Leben* of the OT psalms, he launched the theory that certain psalms (47, 93, 95–99) were connected with an Israelite festival in which Yahweh's enthronement as the king of the world was celebrated (*YHWH mālak,* "Yahweh has become king"). Other elements of this festival were Yahweh's defeat of the powers of chaos, the creation of the world, and his "judging" the enemies. The aim of the festival was to convey supernatural blessing to the worshippers. Other volumes of this study dealt with cultic prophecy and with the "evildoers" who were explained as sorcerers causing the suffering of the psalmists.

These ideas gained wide acceptance in the Scandinavian countries. A new slant was given to this approach by Ivan Engnell of Uppsala with additional inspiration from the English "myth-and-ritual"

school. Hooke, in collaboration with other British scholars, had published a collection of essays under the title *Myth and Ritual.* His original intention was to contribute to the discussion between evolutionism and diffusionism in comparative religion. In favor of the latter theory, Hooke and his followers introduced the idea of a common myth and ritual pattern in the ANE. Since this pattern appears in its purest form in Mesopotamia, Hooke concluded that it originated there and spread to the W Semites (including Israel) and Egypt but at the same time disintegrated. Among the elements of this pattern was the New Year Festival, in which the defeat of the powers of chaos and the death and resurrection of the god were reenacted, the king being the main actor of the cultic drama. Engnell accepted this theory and developed it further in 1943 in his dissertation, which was meant to be a preliminary study to be followed by a treatment of divine kingship in the OT (Engnell 1960).

Engnell combined the idea of the myth-and-ritual pattern with the theory that most of the OT texts had for a long time been transmitted orally, which meant, first, that the documentary hypothesis in Pentateuchal research was wrong, and second, that literary criticism in the prophetic writings was impossible and that the *ipsissima verba* of the prophets could not be retrieved. In this emphasis on oral tradition Engnell developed a suggestion made by another Uppsala scholar, H. S. Nyberg, whose study of the book of Hosea (1935) was devoted primarily to proving the reliability of the Masoretic text. This latter point became another cornerstone in Engnell's so-called traditio-historical method.

Engnell's opposition to source criticism was also combined with criticism of Wellhausen's view of the development of Israelite religion, which was deemed evolutionistic. Here Engnell joined hands with his colleague G. Widengren, who was fighting the evolutionistic theory in comparative religion (note his treatment of sacral kingship); this again related to Hooke's position in the question of diffusionism versus evolutionism. Engnell devoted much of his time to a Swedish biblical encyclopedia, in which he set forth his ideas in numerous articles (some of them were translated into English as *A Rigid Scrutiny* [1969], and so he never had the opportunity to develop his ideas in detail on a scholarly level. Some of his suggestions were followed up by Ahlström (1959), focusing on sacral kingship, and Carlson (1964), who intended to present a traditio-historical analysis of 2 Samuel but dealt more with questions of the composition of the final text. Also to be mentioned is Haldar, a student of Widengren's, who directed much of his work to the study of the prophets (1945; 1947). These were sometimes referred to as the "Uppsala School."

Engnell's views were partly accepted, partly opposed by other Scandinavian scholars. The theory of oral transmission was opposed by Widengren, who on the basis of Arabic material stressed the importance of written tradition; this led to a modification by Engnell, who in the prophetic literature introduced the differentiation between the *diwan* type, which was oral, and the liturgy type, which was written (e.g., Deutero-Isaiah). Mowinckel took a compromise stand, arguing that in spite of oral transmission, literary criticism was possible. The idea of "divine" or sacral kingship was taken up and modified by Mowinckel (1956) and by A. Bentzen (Copenhagen) in several minor works. Mowinckel continued his works on the Psalms and published a comprehensive work (1962), partly in discussion with Engnell and also with his compatriot Birkeland, who had argued that the enemies of the Psalms were primarily political (1955). Bentzen also published commentaries on the Psalms and Isaiah in which he utilized the results of Pedersen and Mowinckel.

A number of other scholars should be mentioned. Kapelrud, Mowinckel's successor on the chair of Oslo, studied the book of Joel (1948), a study which reveals strong influence by Engnell. His works on Ugaritic religion are independent studies of the texts within the framework of a myth-and-ritual view. Another noteworthy scholar is F. F. Hvidberg, whose *Weeping and Laughter* (1938) was a source of inspiration for Engnell's treatment of Ugaritic texts in his dissertation. Nielsen was initially interested in oral tradition (1954) but later (1959) developed Engnell's ideas in an independent way. Mettinger's work (1976) tries in new ways to interpret the central theme of the Uppsala school. Finally, Lindblom, for many years professor of Lund, took a positive stand to Pedersen and Mowinckel, but represented in many respects a more traditional approach. Ringgren, in his study of Israelite religion (1966), confesses his debt to the Uppsala school but also endeavors to pay due attention to new findings.

In summary, it can be said that the main importance of the "Scandinavian school" in OT studies seems to be its history-of-religion, or comparative religion, approach to the religion of Israel, including the emphasis on the cult and on the central role of sacral kingship.

HELMER RINGGREN

NT STUDIES

In NT studies, the contours of the so-called "Scandinavian school" are much less vague, with considerable differences among its various members even in what could be regarded as principal matters.

Two Scandinavian NT scholars exerted a particular influence on their doctoral students and thus decisively inspired the scholarly work and outlooks which characterized the school. They were Anton Fridrichsen (Uppsala University, Sweden, [1928–1953]) and Hugo Odeberg (Lund University, Sweden, [1933–1964]). Of these, Odeberg published relatively little during his tenure as professor, but had a decisive influence on his students through his lectures.

Of Norwegian birth, Fridrichsen received most of his postgraduate education in Germany and France. As a scholar he was constantly on the move and open to new impulses. In his dealings with doctoral students, his openness meant that he never acted as a teacher to whose program the students should conform in order to gain his acceptance. Rather, he encouraged work on topics which were new to him or approaches which differed from his own. Behind most of his work, however, lay a particular understanding of history and of historical research. For him, scholars were to dismiss the sort of "historicism" which "above all wants to find 'authentic' material, reliable biographical data that make it possible to draw a picture of the persons' lives, characters and ideas, … their milieu and the creative factors therein" (Fridrichsen 1953:54). One should rather regard the gospels in the same way as other oriental texts, which have a divine man as their main character, i.e., a figure surrounded by adherents who are inspired by him and in whom he continues to live after his death. This does not preclude the possibility of differentiating between older and younger layers of tradition, but "to him who has liberated himself from historicism's narrow view and meagre experience of reality, precisely the tradition in all its abundance, diversity and multiplicity becomes the mirror in which historical reality is reflected" (1953:56). There was a fundamental unity of the NT, indeed of the whole Bible; one could "discern history, the continuity of events, reality working and being transformed—in short, eschatological fulfillment in preparation under the old Israel, in realization through Jesus Christ, and in interpretation in

his Church" (1953:59–60). Similar ideas are also encountered among some of Fridrichsen's students, while among others only faint echoes of them are heard.

Naturally, an outlook of this kind signaled a serious departure from radical form-criticism. It may also explain why the demythologization program had little success among people influenced by Fridrichsen. On the other hand, the study of NT texts or of their motifs was often made from a history of religions perspective; approaches like "myth-and-ritual" and "patternism" or complexes like "sacral kingship" or "corporate personality," which were important to the neighboring OT scholars, could be brought in (see above). Much more than "Hellenism," one stressed the relevance of Judaism for the understanding of the NT, and often, in many ways, one underlined the importance of the OT both for the preaching of Jesus and for the thinking of the early Church. Thus it was common that the Messiah concept was central to the manner in which one understood Jesus and his self-consciousness, as well as his eschatological preaching. The Son-of-Man idea was taken as containing the thought of a heavenly Messiah, incorporating God's people. A kingly Messiah was easily connected with his people, and so not only the Church found a natural place in the study of some members of the school, but the ministry and the sacraments did as well.

Largely independent of Fridrichsen and his seminar, Hugo Odeberg promoted a NT study with abundant recourse to Judaism, himself a specialist in the area with special linguistic competence and a deep acquaintance with Jewish mysticism. He did not publish programmatic or wide-embracing articles, as Fridrichsen did, but he had an outstanding ability in, so to speak, taking his students with him into the Jewish texts. Thus exegetes who have worked with Odeberg very often go deeply into Jewish, not least Rabbinic material, in order so to shed light on NT texts.

Obviously much of what was done in the school during the 1950s agreed with general tendencies in the world of theology, such as "Heilsgeschichte" and "neo-orthodoxy." But the perspectives intimated above give the school, insofar as one can talk of a "school" at all, a profile of its own.

The successors of Fridrichsen (Riesenfeld) and Odeberg (Gerhardsson) became involved in a development at Swedish universities which meant that "theology" became "science of religion." This cooled down some of the earlier readiness among the exegetes to pursue biblical theology. However, features from the preceding decades still were there, e.g., the suspicion of "uncritical" criticism, the interest in the historical Jesus, and the study of Judaism as a natural frame of reference for Jesus and the early Church. This was also the background against which Riesenfeld (1957) and Gerhardsson (1961) suggested that the gospel tradition and its transmittance were comparable with Rabbinic tradition and its transmission.

One reason behind the discernment of a school may have been that, relatively seen, so many of its members held university teaching positions in Scandinavia and abroad. The following men had all studied under Fridrichsen: C.-M. Edsman (History of Religion, Uppsala), B. Gärtner (NT, Princeton Seminary), G. Lindeskog (NT, Turku/Åbo), B. Reicke (NT, Basel), H. Riesenfeld (NT, Uppsala), K. Stendahl (NT, Harvard), Å. V. Ström (History of Religion, Lund), and B. Sundkler (Missiology, Uppsala); O. Linton (NT, Copenhagen) only finished his thesis under Fridrichsen. Others were not long-time members of his seminar, but spent some time with him and are sometimes regarded as representing the School, e.g., P. Nepper-Christensen (NT, Aarhus) and B. Noack (NT, Copenhagen). N. A. Dahl also studied with Odeberg for a period of time and, after his dissertation in Oslo, spent a couple of years with Fridrichsen. He then returned to teach in Oslo, moving later to Yale. E. Lövestam (NT, Lund) also studied under Odeberg, as did S. Aalen (NT, Oslo). Among other Odeberg students, sometimes mentioned as School-representatives, are E. Percy and E. Sjöberg. A younger generation began their BD studies under Fridrichsen, but completed their doctorates under Riesenfeld, e.g., B. Gerhardsson (NT, Lund) and E. Larsson (NT, Oslo).

One may doubt whether there still is a "school." Some of its original features are still found in Scandinavian NT scholarship, such as a marked readiness to study the NT in the light of the OT and of Judaism (P. Borgen, L. Hartman), but, at the same time, research has moved in new directions, and generally, the tendency to group people into clearly demarcated "schools" has diminished. Consequently, the contours of the "school," already blurred, may be said to have faded away.

SCARAB. See JEWELRY.

SCEVA (PERSON) [Gk *Skeyas* (Σκευας)]. A man identified as "a Jewish chief priest" (Acts 19:14), whose seven "sons" (possibly disciples) were itinerant exorcists. In response to the fame achieved by Paul's miracles during his time in Ephesus, other Jewish exorcists began to use the name of Jesus as a magic spell in the hopes of having the same effects (cf. also Simon Magus, Acts 8:18–24). But when Sceva's seven sons (disciples?) attempted the feat, "like an unfamiliar weapon wrongly handled it exploded in their hands" (Bruce *Acts* NICNT, 368). The demon-possessed man reacted so violently to their attempted exorcism that they ran for their lives. According to Acts, the impact of this event had a profound influence in the city whose fame for its magical practices was widely celebrated (Bruce *Acts* NICNT, 269–70, with refs. and bibliog.; Hemer 1989:121):soon many of those who practiced the magic arts were confessing their errors and burning the scrolls with their magic incantations. The author of Acts uses the event to underline the unrivaled power of God working through the life of his servant Paul and also the fact that Jesus' name should not be used as a magic formula (cf. the words of a Jewish magical papyrus in the Bibliothèque Nationale in Paris: "I adjure you by Jesus, the God of the Hebrews;" and the forbidding of the use of Jesus' name in magic by some rabbis [Bruce *Acts* NICNT, 368n]).

The origin and meaning of the name "Sceva" is uncertain. It may be a Greek rendering of the Latin cognomen *Scaeva* rather than a Jewish name, but this would not necessarily mean that the bearer was a Roman citizen (Hemer 1989:234). There is an inscriptional reference to a slave by this name (*CIG* 2889) and also to a gladiator by the same name (*IGRR* 1.701). If Latin in origin it would mean "left-handed," perhaps literally, or possibly used in a metaphorical sense of the word as "favorable omen" (so Hemer).

The suggestion has been made (Bruce 1952:358, but not *Acts* NICNT, 368) that the name is derived from the Hebrew *šeba*ʿ ("seven"), but this is unlikely.

It is not even certain that Sceva was, strictly speaking, Jewish; and it is quite certain that he was never a "high priest" *(archiereus)* in Jerusalem, since that name is never found on the existing lists. It seems likely that he had simply adopted the title as a public relations gimmick—who in Ephesus could disprove the claim?—and what was the role of the Jewish high priest but to enter into "the holy of holies" and to utter the sacred name (Lake and Cadbury [quoting F. C. Burkitt] 1933:241)? Maston suggests that the title was used to authenticate the activity of the "sons" as "*bona fide* exorcists" (1976:405). It is unlikely also that he was a member of a family with Jewish high priestly connections or a former head of the courses of temple priests, of which the term was more broadly applied (Jeremias 1969:175–81; BAGD). As far as the use of the term itself is concerned, Sceva may have been "an apostate and a high priest of the imperial or some other cult" (Williams *Acts* GNC, 327), but it is just as possible that the Greek prefix *archi* ("high" or "chief") is merely a typical example of the Koine tendency to compound words with *archi* (*NDIEC* 2:18). However, it seems more likely that he was simply a professional exorcist with entrepreneurial skills, and that his sons or associates—the text does not actually say that Sceva himself lived in Ephesus—plied their trade in the congenial setting. As Bruce comments: "Luke might have placed the words between quotation marks, had these been invented in his day" (*Acts* NICNT, 368). In spite of its strangeness to modern ears, the story has the earmarks of historicity.

SCHOOLS, HELLENISTIC. The Hellenistic schools are important for the understanding of the NT in two respects: it has long been recognized that their social structures provide a partial analog to the early Christian groups; and they produced a large body of literature (much of it still extant) which needs to be taken into account in any study of the literary background of the NT. But in order to utilize this material properly, it is essential to examine the Hellenistic schools as institutions in the widest possible sense: an integrated picture must include not only the better-known areas of philosophy and rhetoric, but also training for the professions and crafts.

A. The Nature of the Schools

1. The Individual Level. The fundamental relationship lying behind any "school" is that between a teacher and an individual student, normally a non-symmetrical relationship between leader and led, between age and youth. It is important to remember that most teaching in antiquity operated on just this individual basis; teachers were specialists (Clarke 1971:7), and a father who wished his son to achieve the full *enkuklios paideia* or "all-around education" could not enroll him in a school where this curriculum was centrally administered but had to find him a different teacher for each subject. (Women participated in the higher levels of Greek and Roman education, but only to a very limited extent.) This basic pattern may be extended beyond the one-to-one teaching relationship in two ways. First, loyalty to the teacher, and imitation of the teacher as a model, might well extend into adult life, and thus by extension teacher-disciple language may be used metaphorically of any individual following the precepts of a particular teacher (or belonging to a particular "school"), even where there has been no physical contact between the two. Adherence to Stoicism tended to work in this way, and Philo's references to the "school of Moses" (see below) may also be understood in this sense. Second, the basic teacher-student relationship in itself can be sufficient to set up an institutionalization of tradition, if the student in his/her turn becomes the teacher of the next generation and passes on what s/he has learnt from the teacher. It seems thus perfectly proper to use the term "school" in any context where we have a "chain of tradition" (Bickerman 1952), even though we have no evidence of any social structures beyond the basic "one teacher plus one student."

2. The Secondary Level. A social relationship can come into being between fellow students at a secondary level, especially where (as often happened in antiquity) one teacher could have a number of students or apprentices living in his house in a modified "family" atmosphere. In these conditions, where the natural camaraderie of the young was often intensified by feelings of loyalty to one teacher and rivalry with the students of other teachers, the development of a lateral, peer-group community spirit was almost inevitable. Such a development, with its attendant language of friendship *(philoi, hetairoi),* is often seen as particularly characteristic of the philosophical schools, but in fact it is just as common in rhetoric or medicine.

3. The Tertiary Level. Less common in antiquity is the development at a tertiary level of groups of teachers and/or researchers engaged in a common enterprise. A wide degree of variation is possible here, from the high-powered research organizations of the Theophrastus or the Alexandrian Museum to the religiously committed brotherhood of Pythagoras or Epicurus; both could rightly be called "schools." Generally speaking, however, the combination of a number of teachers into a single administrative unit (as in a modern "high school") seems to have been rare in antiquity (Marrou 1956:264–65):the great teachers, like the lesser ones, operated as individuals, and where we speak of a "university atmosphere" this was simply a function of the large number of individual teachers working in major centers such as Athens, Alexandria, or Tarsus. It is only under the later Roman Empire that we find anything like the modern university system, resulting from increasing state intervention in the organization of education (Clarke 1971:130). Where we do hear of teachers operating as a group in the earlier period, it is where a flourishing teacher has co-opted a number of subordinates (sometimes slaves, though this was frowned on) to act as his assistants (Clarke 1971:27, 33).

4. The Movement. Finally, the most complex kind of school structure in antiquity comes into being where a number of small groups in different localities are conscious of belonging to the same sect or movement: the "school" here means an agglomeration of geographically scattered groups professing adherence to the same ideals and teaching tradition. This kind of grouping is mainly associated with certain philosophical schools, particularly that of Epicurus; but a similar phenomenon at a less self-conscious level may be observed wherever a number of individual teachers in different places profess to follow a particular teaching tradition, such as the "dogmatist" and "empiricist" schools in medicine.

B. The Functions of the Schools

Most of the functions of the Hellenistic schools can be plotted on a grid summarizing four major consumer needs:

I: professional training in a particular skill or "art" (Gk: *technē*)

II: liberal education of a gentleman (Gk: *paideia*)

III: intellectul inquiry as end in itself

IV: Moral training and the quest of a lifestyle

Of these, I and II are the most obviously "educational," and on this side our subject forms part of the tertiary or "higher" level of the ancient educational system. Schools serving either of these functions were ministering to a need which was at the same time *recurrent*, in that society provided a constant stream of the young requiring one or the other, and *transient*, in that they belong to a certain stage in the life of the individual student. Typically, the student would engage in his or her chosen course of study as a preparation for adult life and would therefore pass out of the school when the training or education was complete.

However, the 5th century B.C. also saw the emergence of two other subsidiary demands which could persist into adult life and therefore provide a greater degree of permanency, III and IV. On this side we have to see the Hellenistic schools not just as something pertaining to youth, but as an integral part of Greek (and later Roman) cultural life. The Ionian appetite for intellectual inquiry (Gk *theoria*) for its own sake flourished in Pericles' Athens and persisted right through the Hellenistic age; it saw a notable renaissance in the 2d century A.D., but had never ceased to be a feature of the public life of the Greek cities. This phenomenon created the conditions for two classic features of Hellenistic culture, both (interestingly) described with the same group of *philo*-compounds *(philomathēs, philiatros, philotechnos).* On the one hand, there is a constant market for public lectures attended by leisured adults as well as by the young; given the semi-public conditions in which many teachers operated, in fact, it is often difficult to determine whether a discourse is given primarily for the benefit of the disciples who cluster round the master or for the interested passers-by who pause to listen and question (Clarke 1971:33; Bonner 1977:116–17). On the other hand, the patronage of the Hellenistic courts was vital to the financial survival of many scholars and teachers; such a *chorēgia* was often by tradition coupled with some sort of educational duties towards the monarch's children, but antiquity's most famous example of royal patronage, the Museum of Alexandria, was apparently founded solely to support research and did not carry any teaching obligations (Marrou 1956:261; Fraser 1972:1.318). In the Roman period this kind of intellectual patronage could be found in the households of wealthy Romans (including, but not exclusively, that of the imperial family).

Moral training and the search for a lifestyle, finally, in Greco-Roman culture fall under the province of philosophy rather than religion (Clarke 1971:85–99). Many fathers sent their children to a philosopher for a basic moral education (Clarke compares the atmosphere of a philosopher's school to that of a catechism or confirmation class, 1971:96), but it was the philosophical schools above all which demanded, and often got, a lifelong commitment which has been likened to the effect of a religious conversion (Nock 1933).

C. Training in the Crafts

Training for any of the multitudinous craft or technical skills falls under the first of these four categories. This kind of professional training is the oldest and also the least documented area in Greek education. Plato, writing in the 4th century B.C., sees it as the norm that professional skills are passed down within families from father to son (*Protagoras* 328a1–6), and there is no lack of evidence that this was in fact the case (Burford 1972:82–87). But Plato also speaks of students attaching themselves, for a fee, to teachers of such crafts as medicine or sculpture (*Prt.* 311b2–c8), and he implies that this was a well-established and widely-known phenomenon, as presumably it was. It is evident that some sort of apprenticeship system developed: we know little of its detailed working (Burford 1972:87–91), but the dominance of the general pattern is clear. In order to learn how to be a sculptor, or a nail maker, or a flute player, you had either to be born into a family which possessed those skills or to attach yourself to a practitioner who could pass them on to you. A famous teacher might have had more than one such

apprentice at any given time, but the fundamental pattern remains that of individual tuition, achieved largely through the age-old method of watching the expert at work and performing any tasks he might entrust to you.

When we use the word "school" in this context, we may mean either the group of pupils attached to any practitioner at one time or the continuity of the teaching tradition passed down in this way, as pupils eventually became practitioners and teachers, passing on to the next generation the accumulation of theoretical knowledge and practical experience which made up their particular *technē.* This teaching was fundamentally oral and practical in character, placing a high premium on personal contact with the teacher and on immersion in the living tradition of the craft (Burford 1972:69):"learning out of a book" came a poor second to the "living voice" of the teacher (Galen *De comp med. sec loc.* VI pref.).

D. Rhetoric

The rhetorical schools, by contrast, fall largely under the second category: although a few in any school might go on to become professional rhetors, the vast majority of students would have enlisted solely because they were persuaded that a training in rhetoric was indispensable to a liberal education. In a suggestive discussion on the nature of the education offered by the sophist Protagoras, Plato explicitly contrasts the *paideia* of a gentleman with the professional training of the craft: "Why may you not learn of him in the same way that you learned the arts of the grammarian, or musician, or trainer, not with the view of making any of them a profession *(epi technē),* but only as a part of education *(epi paideia),* and because a private gentleman or a free man ought to know them?" (*Prt.* 312a1–b6, Jowett's translation). The idea of a non-professional "higher education" for the sons of the wealthy appears quite suddenly in Athens at the end of the 5th century B.C. Up to that time a general education (involving literacy skills, music, gymnastics, and mathematics) was seen as part of childhood, which finished at 14 with puberty and the passing into adulthood. The next stage was the (all-male) *ephebia,* essentially a kind of military service concentrating on physical education. Encouraged by Pericles, the Sophists came to Athens offering a new kind of teaching aimed not at those who needed a professional skill in order to earn a living, but at citizens of independent means. Their arrival and immediate success sparked an intense debate which in turn was responsible for the major 4th-century developments in the fields of rhetoric and philosophy. The distinction between this liberal education and the professional training already described was always carefully maintained. Thus music, a traditional part of a gentleman's education, gradually declined in importance amid fears that it was becoming a professional skill (Clarke 1971:52–54). The debate between Socrates and the Sophists was partly over the issue of fees and the need to maintain the "amateur" status of rhetoric surfaces at intervals throughout antiquity (Clarke 1971:28–32).

Following the success of the Sophists, rhetoric quickly emerged as the central component in the higher education of the free-born, and was to keep its place right through antiquity and on into the Middle Ages. The details of ancient rhetoric and its role in education are well documented: cf. Marrou 1956:Pt. 2 chap. 10 and Pt. 3 chap. 6; Clarke 1971:28–45, 130–51. The content and systematization of rhetoric teaching grew rapidly in complexity, but in terms of school structures, rhetoric seems to have maintained the relatively archaic pattern seen in the activities of the Sophists. These were non-citizens, dependent on patronage for a welcome into the city and for introductions to potential clients (Kerferd 1981:18–19). Protagoras, in Plato's dialogue of that name, is shown as using the house of his patron to make his initial contacts and to hold semi-public debates and instructional sessions (*Prt.* 314b6–316b6; see further Kerferd 1981:17–23). Right through antiquity the sophist traveled from place to place, attracting attention first of all as a "star performer" of display rhetoric on his first arrival in a city (Philostr. *VS* 2.8). In this sense the "apprenticeship" model of the crafts is still basic here, in that the teacher first and foremost offers himself as a model to his pupils and claims to teach skills of which he himself is a practitioner. Clearly the most successful performer could expect to attract the most students (and charge the highest fees); it appears that a core of students would attach themselves to the sophist and move from place to place with him, while others would simply attend a course while he was in residence in a given city (Plato, *Prt.* 314e3–315b2).

Fourth-century rhetoric sees a huge explosion in the numbers seeking this kind of teaching, but fundamentally the same pattern continues of the individual teacher attracting a group of fee-paying pupils. The sources speak of phenomenonally large numbers attending the classes of some 4th-century rhetorical teachers (Isocrates is said to have had 100 pupils, though scholars debate whether this was a career total or the number attending at any one time [Marrou 1956:494 n.11; Clarke 1971:29 + n.128]). Either way, this may be a peculiarity of the period when Athens was the educational mecca for the whole Mediterranean world; as rhetoric established itself invincibly at the core of the educational system, what we see is not so much a growth in the size and complexity of rhetorical schools as a proliferation of small schools coupled with a gradual expansion of the "higher" forms of rhetorical training down the educational ladder to successively younger and younger children (Marrou 1956:223–24). The tradition of mobility continues, but as time goes on we see a strong tendency for teachers to congregate in certain cultural centers, notably Athens, Alexandria, and Tarsus (Strab. 14.5.13 / C673–74):mobility thus became characteristic of students as much as of teachers (Bonner 1977:90–96). This tendency may well have contributed to a "university" atmosphere for the young men involved without implying any collegiate structure, or even any concerted action, by their teachers, who operated essentially as private individuals conducting a commercial enterprise and competing for clients. Students lived in lodgings and could move from one teacher to another, listening to their display speeches or to semipublic teaching sessions, before making their choice of teacher or even when enrolled with one particular teacher.

E. Philosophy

The position of the philosophical schools on the grid is more complicated, ranging at different times and in differing degrees over categories II, III, and IV. Plato's portrayal of Socrates' dispute with the Sophists reflects his own struggle to establish philosophy, not rhetoric, as the central element in higher education (Marrou 1956 Pt 1, chaps. 6 and 7). The time when this ideal most nearly achieved success was the period of the flourishing of the Academy at the end of the 4th century, when a wide variety of subjects were taught to the thousands of wealthy young men who came to Athens from all over the Mediterranean world to finish their education there (we may compare the social appeal of "Oxbridge" or the "Ivy League" schools in England or the USA). Although philosophy eventually lost out to rhetoric on this front, it was not before the subject had achieved a lasting influence on the ancient ideal of a liberal education, to the extent that many would expect to spend some time with a philosopher during their studies. But philosophy had come into existence as an adult intellectual pursuit in Ionia and in the Greek colonies of the western Mediterranean, and even though its popularity in education waned in time, and the political upheavals of the Hellenistic age curtailed Athens' position as the major "university" city of the civilized world, the philosophical schools survived as communities of adults dedicated to the maintenance of the philosophic lifestyle and to the preservation and elaboration of the teachings of the founder.

The flowering of Ionian science and philosophy in the 6th and 5th centuries B.C. has left us the names of many famous teachers and their followers or companions *(hetairoi)*—e.g. Plato, *Soph.* 216a3. It has thus become customary to speak of the "schools" of Democritus or Parmenides; but virtually nothing is known of the organization of these "schools." The major exception is Pythagoras, who according to the traditional account "founded at Kroton in southern Italy a society which was at once a religious community and a scientific school" at the end of the 6th century B.C. (Burnet 1962:39). This school had many of the characteristics later associated with monasticism (though it was open to women as well as to men):members lived in "lodges" and followed a strict dietary and mental discipline (*D.L.* 8.22). Even though the school did not last beyond the 4th century B.C., the community ideal it stood for exercised a profound influence on Greek thought about the nature of the philosophic life, reemerging as a conscious ideal in the 1st century B.C.; this can be seen most clearly in Iamblichus' treatise *On the Pythagorean Life,* which dates from the 4th century A.D. Nevertheless the very fame of this "Pythagorean" lifestyle suggests that it was not the normal pattern for the early philosophical schools.

A clearer picture emerges when we turn to the philosophers of Athens in the 5th and 4th centuries B.C. Socrates is portrayed in the dialogues of Plato as conducting purely informal instruction sessions in the streets of Athens and in the private houses of friends, as in *Resp.* 327a–c, 328b–c (although if we were to

take seriously Aristophanes' description of Socrates'"*Phrontisterion*" or "Thinking-shop" [*Nub.* 94] we should have to assume with Burnet [1962:147] that he actually had a school of the Ionian type). This apparent lack of social structure actually presupposes the restricted social world of the leisured youth of the Athenian upper classes. Unlike the Sophists, whom he castigates for charging fees for teaching "virtue" (Plato, *Prt.* 311–14, 318–20; *Soph.* 223–32), the Platonic Socrates refuses to regard the teaching of philosophy as a profession or trade on a par with the teaching of medicine or flute playing. This stance was only possible, however, in so far as both teacher and taught had independent means: Socrates' personal asceticism was famous, but he was not, like the later Cynics, a beggar.

The situation is very different when we come to the Academy of Socrates' most famous pupil, Plato. Possibly influenced by his knowledge of the Pythagorean communities, Plato created an institution which was to outlast its founder by almost a thousand years. The "Academy" proper was a gymnasium in a public park on the outskirts of Athens, where Plato bought land (*D.L.* 3.7) for a house and garden. Here he set up his school, constituting it legally as a *thiasos* or cultic community dedicated to Apollo and the Muses. Like the Pythagoreans, students at the Academy were expected to embrace a frugal lifestyle, and in later years the founder's birthday was celebrated as a festival with offerings, a festal meal, and a public disputation. The philosophical education which Plato offered was thus no longer conducted amidst the public life of the streets of Athens: the Academy is said to have had an inscription over the entrance reading "Let no-one enter who is not a geometer" (Elias in *Arist. Cat.* 118.18). There was a later tradition that Plato had charged no fees for his instruction, and that the financial strength of the Academy rested either on Plato's own wealth or on the accruing of legacies (Clarke 1971:101). For the later Academy, see especially Dillon (1977).

This closed, institutionalized structure had certain clear advantages in the Hellenistic world that emerged after Alexander and was copied by the schools of Aristotle and Epicurus and, ultimately, by the great Museum of Alexandria. Thus when Aristotle came to Athens in 335 B.C. with the express purpose of setting up a second school to rival the Academy (and with the backing of Alexander), he too set about acquiring land as a permanent base for the school. As a non-Athenian he could not own land, and the Athenian authorities assigned him the "*Lyceum*," a grove already sacred to Apollo and the Muses where a complex of buildings (including the famous covered walk or *peripatos* from which the school takes its name) soon grew up to house the growing numbers of students who flocked to the Lyceum (Grayeff 1974:38). Like the Academy, the Peripatetic school bore a strong resemblance to a "society possessing a cult-center with buildings" (Fraser 1972:I.314), but legally speaking, the house, grounds, and other buildings were the property of the head of the school and his legal heirs: hence the importance of establishing the "succession" of heads (Theophrastus, Straton, Lykon), each of whom left a will detailing the property to be passed on to the next in line (*D.L.* 5.11–16, 51–57, 61–64, 70–74). By the time of Straton this includes such "collegiate" details as the dinner plates and glass for the common table (Fraser 1972:2.314).

Stoicism has the name of being "the only philosophical school which taught in a public building" (*KlPauly* 5:377–78). In one sense this is not entirely accurate (both the Academy and the Lyceum were public places), but it does convey accurately one important difference between the Stoics and the other philosophical schools. Stoicism never became a closed institution. To be a Stoic was to profess adherence to a set of doctrines and a body of wisdom passed down from Zeno and the great masters, perhaps to have studied with a teacher who made the same profession, but not necessarily to join—or ever to have joined—a body or group with a communal existence. Despite this, Stoics had a great feeling of "fellowship" with other Stoics and a profound loyalty to the accumulated body of wisdom associated with the school. Significantly, Seneca, one of the school's most influential adherents, still shows the traditional school preference for "personal converse and daily intimacy with someone" over the reading of philosophical books (Sen. *Ep.* 6.4). Arrian's *Discourses of Epictetus* provide us with a valuable picture of the operation of one Stoic school (in Nicopolis, Bithynia) at the end of the 1st century A.D. (Culpepper 1975:135–40).

Epicurus, by contrast, seems to have set out deliberately to create a community withdrawn from the world: unlike Plato and Isocrates, he did not encourage his pupils to prepare themselves for public life, and even participation in the earlier stages of encyclic education was derided as unnecessary. Epicurus bought himself a house and a garden in Athens to serve as a base for the school, and his followers lived a communal life there in the pursuit of moral excellence, encouraged (perhaps by means of some sort of hierarchical system: cf. De Witt 1936) to correct and discipline each other in striving toward the ethical ideal. Devotion to the founder and his words was an integral part of this process; communal meals, the celebration of the founder's birthday, and other modes for reinforcing a communal identity were known in other philosophical schools, but this aspect of the life of the school was particularly marked among the Epicureans, who even had the founder's image on their rings and cups (Cic. *Fin.* 5.3). Since the school professed no interest in the training of its students for public life, women could be and were accepted as members (Culpepper 1975:110–11). The house and garden survived as the center for an Epicurean community for many centuries, but Epicurus had also, unusually, assured the survival of his school by missionary activity in the eastern Aegean, which was enthusiastically taken up by his followers. The school of Epicurus was thus conscious almost from its inception of being a "sect" or "movement" broader than the individual group: each group of *philoi,* "friends," was part of a network which by Cicero's day was regarded as worldwide (Fin. 2.15.49). See further Clarke 1971:69–82; Culpepper 1975:101–21.

The Cynics in many ways represent a return to a "Socratic" anti-structure. Financial independence was achieved by begging: many Cynics were known as poor men of little education (Lucian, *Bis. Acc.* 6; Dio Chrys. *Or.* 32.9), but the Cynic's begging-bowl and staff were also an expression of a philosophic ideology which preached indifference to the goods of the cultured life. Like Socrates, the Cynics taught in the streets, engaging in debate with anyone, rich or poor, who would listen; hospitality also played a part in their teaching activity, since an invitation to join a rich man at dinner could mean an opportunity for further discussion and further spiritual therapy for the host (Diog. *Ep.* 38.3–5; Malherbe 1977:163). Most Cynic teaching activity seems to have been of this casual variety, though we do hear of long-standing associations with Cynic teachers, such as that between the 1st-century Roman senator Thrasea Paetus and Demetrius the Cynic (Tac. *Ann.* 16.34). Nevertheless Cynicism was recognized in antiquity as one of the philosophical schools with its own distinctive teaching tradition and means of operation, and it is probable that, because of their non-elitist teaching methods, the Cynics would have been among the best-known philosophers in the Empire at large. See further Malherbe 1977; Clarke 1971:84–85.

F. Medicine

Medical studies could be pursued in a wide variety of ways. On the grid suggested above, medicine belongs principally in categories I and III; but there was a (largely unsuccessful) lobby which would have liked to have seen medicine taught also under II, and when Galen argues that the best doctor is really a philosopher (Temkin 1953:224; Galen 1.53–63/*Scripta Minora* 2.1–8), we are reaching into IV as well. Despite the abundance of Greek medical literature, however, it is not easy to draw up a clear picture of school structures in this area. The evidence we have points to a wide diversity (Drabkin 1944:333), but overall it seems clear that the main medium of instruction was attachment to an individual teacher, sometimes at parental choice (e.g., Galen *Libr. Propr.* 4), so that essentially there was no structural difference between medicine, rhetoric, and other subjects.

Medicine in Greece was an ancient and revered craft or *technē,* passed down traditionally from father to son. The doctor "carried his skill from town to town, establishing in each a workshop or surgery *(iatreion)*" (Singer *OCD*: 549–50; Sigerist 1961:306–307). Doctors, like other craftsmen, operated as individuals, but "what united them and gave them standing was that they belonged to a guild based on the fictitious assumption that physicians were descendants of Asclepius the hero: they were Asclepiads just as minstrels were Homerids" (Sigerist 1961:57). See ASCLEPIUS, CULT OF. Whatever the mythic origins of this pattern, however, doctors, like other craftsmen, began at an early date to take pupils or apprentices into the "family" to learn the craft; Hippocrates, according to Plato, took fees for this instruction (*Prt.* 311b5–c2). It is interesting, however, that the so-called "Hippocratic oath," dating possibly from as late as the 1st century A.D., still places great stress on the archaic "family" pattern of instruction: the swearer

promises "to hold him who has taught me this art as equal to my parents and to live my life in partnership with him, and if he is in need of money to give him a share of mine, and to regard his offspring as equal to my brothers in male lineage and to teach them this art—if they desire to learn it—without fee and covenant; to give a share of precepts and oral instruction and all the other learning to my sons and to the sons of him who has instructed me and to my pupils who have signed the covenant and have taken an oath according to the medical law, but to no one else" (Sigerist 1961:301–4).

The classic pattern of medical instruction in antiquity was thus a matter of apprenticeship to an individual doctor who would train students while using their services as assistants in the sickroom and workshop. Numbers could be large: Marital's epigram (5.9) speaks of "a hundred" students accompanying the doctor on his rounds (Drabkin 1944:335–36). It seems clear that this craft-based system of instruction remained the basic staple of medical training right through antiquity (Drabkin 1944:333–38; Temkin 1953); even in Alexandria, where some of the most eminent physicians of the period had "research fellowships" at the Museum, students are described as being "of the house of" a master, which suggests that the old apprenticeship pattern survived alongside the more rarefied intellectual activity of the Museum (Fraser 1972:1.357–58). As in rhetoric and philosophy, certain centers (like Cos, Cnidus and, later, Alexandria and Ephesus) came to be especially famous for medical teaching. Even so, Marrou (1956:264–65) believes we have no warrant for speaking of "schools" in these places in the sense of a modern teaching "faculty":the individual teacher-pupil relationship was still the primary one, intensified by the "family" fiction and externalized through the passing down of oral and written tradition from one generation to the next.

But the inclusion of medical authorities among the beneficiaries of the Museum at Alexandria is a reminder that there was always a lively interest in the study of medicine among "amateurs," i.e., those who wished to pursue it not as a profession but as a matter of intellectual interest. There were a few lone voices who argued that some medical teaching should be included in the adolescent studies of every *pepaideumenos* (Drabkin 1944:343), but generally speaking, lay interest in medicine was pursued at an adult level. Much of what we call "science" was included under "philosophy" by the Greeks, and the physical basis of medicine was among the subjects discussed by the philosophical schools of Ionia (Drabkin 1944:342–43). The Hippocratic corpus contains polemic against such "philosophical" medicine (Temkin 1953:217), and both Plato and Aristotle imply a distinction between the medical craft as craft and the more "scientific" investigation of the subject (Plato, *Leg.* 720d–e; Arist. *Pol.* 1282a3; Temkin 1953). Third-century B.C. Alexandria saw the birth of two major medical schools whose debates on the theoretical basis of medicine became well known outside professional circles (Deichgräber 1930); Galen in the 2d century A.D. bears witness to public interest in these "sects" *(haireseis),* e.g., in *Libr. Propr.* 1–2. There is in fact ample evidence for a lively intellectual interest in the theory of medicine, catered for by public lectures and debates, not only among the "iatrosophists" of the 4th century A.D. (Drabkin 1944:344–45), but by the activities of earlier lecturers like Galen (Bowersock 1969:chap. 5).

G. Mathematics and Technical Subjects

Information about schools in mathematics, architecture, engineering and other technical subjects is even harder to come by than in medicine. For most of these subjects, we possess a substantial amount of technical literature but virtually no information about its production. Mathematics had been securely established as an element in *paideia* since classical times, and the individual geometer, like the rhetor or grammarian, earned his living from the pupils who were sent to him to complete this part of their "encyclic" education (Marrou 1956:243–55; 378–79; Clarke 1971:45–54). Mathematics had also been regarded since Pythagoras as a component in philosophy. But for the major mathematical achievements of the Hellenistic world, either patronage or financial independence seem to have been a prerequisite: the correspondence of the great names of the 3d century B.C., Archimedes, Eratosthenes, and Apollonius of Perga, breathes the atmosphere of the leisured intellectual rather than that of the schoolroom, and their writings are individual compositions rather than school texts. Eratosthenes certainly felt the benefit of Ptolemaic patronage as head of the Library in Alexandria; Archimedes had a close (but undefined) relationship with King Hiero of Syracuse, to whose son he dedicated one of his books; the Attalus to

whom Apollonius dedicated some of his books may have been (but is not certainly) the king of Pergamum. Unlike these three, Euclid is known as the head of a school (also in Alexandria), but little is known of its structure (Fraser 1972 1.376–425).

Architecture, like medicine, was regarded as a "liberal" profession, i.e., one that could be practiced without loss of social status (Cic. *off.* 1.150), and Vitruvius in the 1st century B.C. did his best to argue that the subject should form part of the *enkuklios paideia.* Nevertheless most of the pupils of the *architectus magister* were probably destined for the profession, and it appears that the teacher would rely as much on the exercise of his profession for financial survival as on the fees he received from teaching (Clarke 1971:113–14). Essentially, we have here the same pattern as we have observed in medicine, where instruction is gained by a form of apprenticeship to a practicing master.

As Marrou points out (1956:263), "the same absence of documentary evidence forces us to the same conclusion in the case of all the other technical experts—the engineers (civil and military), surveyors and sailors who are so familiar in Hellenistic society and yet so strangely absent from its education … The technician, like the scientist, learned his job in a very simple, archaic way, the way of personal relationship between master and pupil, craftsman and apprentice." It is significant that we have a number of texts in this area which must derive from a teaching situation, without any ancient evidence as to their social context: papyrus exercises in practical calculation and mensuration (Marrou 1956:263) and textbooks like those of Hero of Alexandria, which contain a kind of practical mathematics derived ultimately from Babylonian tradition and distinct from the philosophical mathematics of Euclid (Neugebauer 1969:80; 157–58). We do know, however, that patronage played some role in the development of Hellenistic technology, particularly in the field of siege warfare (Philo of Byzantium, *Belopoeica pref.* Th50.24–26). One of the few names in the field of technology to achieve fame is that of Ctesibius, who is connected with Alexandria and appears to have founded a school there (Fraser 1972:1.431–32).

H. Philo

Any survey of the Hellenistic schools must also ask questions about the social milieu of the Philonic corpus. Was Philo's vast exegetical output simply the expression of an individual literary whim? (And if so, who preserved it?) Bousset's hypothesis of an "exegetical academy" in Alexandria has now been "either rejected or carefully qualified by most Philonists" (Culpepper 1975:197, 204–205). Nevertheless, it is now clear that Philo's exegetical activity must be placed within a "scholastic tradition" (Culpepper 1975:205–206) and equally clear that Philo himself located the bulk of this scholastic activity within the sabbath-day teaching of the synagogues, which he describes (in an intentional comparison with the Greek philosophical schools) as "schools of Moses" (*Vita Mos* II 215–16; *Spec Leg* II 62; *Hypothetica* 7.12–14). It is less clear whether the whole of Philo's expository work can be satisfactorily accounted for in the context of normal synagogue teaching and preaching; Culpepper suggests that "his writings were probably used in a synagogue-school where Philo taught the higher vision of scripture to a select group of initiates whose ears were purified" (1975:211–12). Whatever the merits of this suggestion, it is worth noting in this context the structural importance of the dominant "individual tuition" pattern which we have already observed in the Hellenistic schools. This pattern explains why we often have "school" texts surviving where nothing is known of any school structures beyond the basic presumption of a teacher and a succession of students. As we suggested above, this in itself is sufficient to create the conditions for a "school" tradition which may be concretized in written form: there is no need to postulate "school" structures where we do not know of their existence. Galen provides a useful parallel to Philo in this respect: despite the enormous volume of his writings, and despite his vigorous activity as a teacher and public lecturer, Galen's name is not associated with the founding of any "school."

SCORPION. See ZOOLOGY.

SCREEN [Heb *māsāk* (מָסָךְ)]. A word that denotes three items used in the construction of the Tabernacle according to the priestly accounts in Exodus. The Hebrew noun is derived from the root *skk*, which means "to screen, cover." All three screens are used at entrances to various parts of the Tabernacle and its compound.

The innermost screen, also called the *pārōket,* or "veil," was used to divide the innermost sacred space from the outer sanctum (Exod 35:12; 39:34; Num 3:31; 4:5). This screen, supported by four pillars, thus shielded the ark from the view of priests ministering to the items in the outer sanctum (Exod 40:3, 21). The splendid features of this screen are presented in the description of the veil (Exod 26:31–35; 36:35–36):it used the best textiles (colored wools mixed with twined linen) and the most elaborate workmanship, which included decorations of cherubim. But see TABERNACLE for another view of the nature of the "veil."

The next important passageway, dividing the Tabernacle itself from the surrounding court, was covered with a screen that used the same fine textiles, but was not decorated with cherubim, as was the inner screen (Exod 26:36–37; 35:15; 36:37–38; 39:38; 40:5, 28; Num 3:25). This screen was supported on five pillars made of acacia and covered with gold.

The third screen was placed at the gate to the courtyard (Exod 27:16; 35:17; 38:18; 39:40; 40:8, 33; Num 3:26; 4:26). This screen was twenty cubits long and was hung on four pillars with silver fittings. Its workmanship and fabric were the same as for the screen at the door to the Tabernacle.

These fabric dividers are not mentioned in the descriptions of the Jerusalem Temple, where wooden doors marked the divisions between the various chambers of the Temple and courtyard, that is, between zones of holiness. The mention of the *pārōket* veil by the Chronicler (2 Chr 3:4) may be the result of the influence of P materials. It is also possible that, unlike the First Temple, the Second Temple may have used such a veil, a fact perhaps known to the Chronicler. Herod's Temple almost certainly had the inner veil, but the presence of the two other screens is less likely (see Matt 27:51; Heb 6:19; 9:3). See also VEIL.
CAROL MEYERS

SCRIBAL EMENDATIONS. This title refers to a tradition that the Hebrew text of the Bible has been changed in a number of passages. The two earliest sources (ca. 400 C.E.), both midrashic, are the *Mek.* of R. Ishmael, which lists eleven cases, and *Sipre*, which lists seven. Later midrashic and masoretic sources list more cases. The masorah states that such change has occurred in eighteen cases, but the lists vary somewhat in composition, so that altogether some two dozen cases are mentioned. In many manuscripts the *masorah parva* marks each case as "one of the eighteen cases of emendation," but this is not done in the Aleppo or the Leningrad Codex.

The terminology describing the change is *tiqqûn sōpĕrîm,* "emendation of the scribes" (some lists replace "scribes" with "Ezra" or "The men of the Great Synagogue") or *kinnâ hakkātûb* "the text has substituted (one wording for another)." The changes are said to have been made to avoid language which might seem disrespectful to God.

In most cases, the change suggested involves only a single letter representing a pronoun, as in Ps 106:20, where "They exchanged their glory *(kbwdm)* for the likeness of an ox that eats grass" is said to have read originally "my glory" *(kbwdy).* A similar change is suggested in Jer 2:11. In a few cases, a more extensive change is suggested, as in Gen 18:22, where "Abraham was still standing before God" is said to have read originally "God was still standing before Abraham." In the majority of cases (as in these two), the Greek translation does not reflect the text said to have been original. This also appears to be the case with the Habbakkuk commentary from Qumran (1QpHab) for the case in Hab 1:12.

In a few cases the Greek translation may reflect the original text, as in 1 Sam 3:13, where the received Hebrew texts reads "His sons brought a curse on themselves" *(mqllym lhm),* and the Greek reads "His sons spoke evil of God." This passage, however, exemplifies the considerable problem of evaluating this tradition. The standard Hebrew text is considered problematic, because the verb in the case is elsewhere used with a direct object (not the preposition *l-,* as here), and means simply to "curse." The same problem occurs with the text which the tradition gives as the original: "cursed him" *(mqllym lw).* Moreover, in the context, the pronoun "him" must refer to Eli, so no disrespect to God would have been involved. There is also a problem if, as many modern critics argue, the original text read "cursed God" *(mqllym ʾlhm),* as is suggested by the LXX. The cursing of God, which is forbidden in Exod 22:27 and Lev 24:15, would be excellent justification for the punishment of the house of Eli with which the passage is concerned. However, if the original text did have this reading, the received text is much more likely to have arisen through the accidental omission of *ʾalep* from *ʾlhm* than from a deliberate change. Such considerations lead some scholars to argue that the tradition of "emendation" is merely a form of midrashic interpretation, intended to supply a reason for an apparent illogicality in the text.

On the other hand, there is no good reason to suggest that such changes could not have been made, especially if they were made at an early period, as the evidence of the Greek translation suggests. Only 3 verses in the Torah are affected: Gen 18:22 is not included in the early lists, whereas Num 11:15 and 12:12 are included (in Num 12:12 4 *mw* and *bśrw* are counted separately). Even here changes would be justified, according to some Talmudic sages, who argued that a change in one letter of the text was justified to avoid profanation of the name of God. Most modern scholars would agree that the inclusion of a passage in this list of emendations may well show that the text was changed in ancient times to avoid some problem, but they would not necessarily accept as authentic the wording identified by the tradition to be original. No doubt the best approach is to treat each case on its own merits.

The Talmud uses the term *ʿiṭṭûr sōpĕrîm,* "omission by the scribes," of five passages, in most of which the conjunction is expected but does not occur, as in Gen 18:5, where *ʾḥr* appears, but *wʾḥr* is expected. The term *miqrāʾ sōpĕrîm,* "reading of the scribes," is the title given to a list composed of the words *ʾrṣ, šmym, mṣrym* (earth, heaven, Egypt). The significance of the title and list is wholly uncertain. In the case of the "omissions," it is difficult to see why the conjunction should have been omitted in the instances named. It is equally difficult to see why the term should not have been used in the many other cases in which the conjunction is expected but does not occur, if the term is just a means of explaining its absence.

It is quite possible that these traditions of "emendation," "omission," or "reading" reflect a partially forgotten period of editorial activity. During this time, some biblical passages may have been modified, with no support from earlier tradition, in accordance with some view held at that time. However, the available evidence suggests that any such activity was sporadic, and antedated the Greek translation. The many anomalies in wording, spelling, and vowel pointing which have been carefully preserved in the text show that any suggestion that "the scribes" ever made a systematic attempt to "normalize" some feature of the text is untenable. See also BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

SCRIBES. The Hebrew word for scribe *(sôpēr)* comes from the Semitic root *spr,* originally meaning a written message which was sent, then meaning "writing," and finally meaning "writer." The Greek word for scribe *(grammateus)* comes from the word *gramma,* which means something drawn and, most commonly, written letters. In various combinations this root in Greek refers to all aspects of writing and education. The word "scribe" in Hebrew, Greek, and other languages had a wide range of meaning that changed over time and could denote several social roles. The closest English equivalent is the term "secretary," which refers to roles from that of a typist to a cabinet officer at the highest level of government. In both Semitic and Greek usage, the scribe was commonly a middle-level government official, for example, a "secretary" in charge of the town council (Acts 19:35). Major political bodies in Athens each had a scribe as one of their officers (see Kraeling 1958:94–102).

A. The Near East

Egypt and Mesopotamia provide detailed information on the social position, roles, and education of scribes. From the 3d millennium on scribes were situated in the royal court and in the temples. Their duties included administrating and keeping records of tax collection, forced labor, military activities, commodities, and building projects. For example, in Egypt they supervised land measurement after the annual Nile flood; drafted correspondence, contracts, and treaties; and at the highest level kept the royal annals, collected laws, preserved scared traditions, and were experts in astronomy, omens, and other religious rites and activities. Scribes occupied high posts as royal secretaries in charge of royal correspondence and as such functioned as counselors and high officials.

In Egypt boys were brought to the court or temple and trained to read and write. Practice ostraca found behind one temple testify to an open-air school, and one text suggests that initial training took four years (Williams 1972:216). After training in a school, a young man was apprenticed to a scribe; more advanced young scribes were sometimes apprenticed to high officials as potential replacements. Training seems to have consisted of copying, reciting, and memorizing various traditional materials. Advanced students had access to grammatical treatises, lists of idioms, catalogs of natural phenomena, and didactic treatises which taught them how to write, speak, and behave in a correct way. It is likely that scribes in high office had to know more than one language. Students were exhorted to learn their difficult lessons both by corporal punishment and the threat that they would be transferred to a more arduous and less pleasant manual occupation (see Williams 1975:238–41).

B. Old Testament

The first scribe in the OT appears in the Song of Deborah as a muster officer (Judg 5:14). The chief scribe at the Jerusalem court was a high cabinet officer concerned with finance, policy, and administration (2 Kgs 22; Jer 36:10), and Baruch, who recorded Jeremiah's words, was a scribe (Jer 36:32) who moved among the highest government officials. Though there is little direct evidence for scribal schools in Israel, their presence is very probable, especially in major cities (LeMaire 1981). In addition, the Wisdom literature reflects scribal and school activity similar to that found in Egypt and Mesopotamia.

In the postexilic period the most well-known scribe in the Bible is Ezra, a priest and a "scribe skilled in the Law of Moses" (Ezra 7:6), who asked the Persian king Artaxerxes for permission to lead a party of exiled Jews back to Jerusalem. The king ordered various officials to give Ezra the resources he needed for the return and the resumption of worship (7:21–22). The king commissioned Ezra to appoint magistrates and judges who knew the law of God and the king (7:25–26). In Ezra 8–10, Ezra the scribe functions as the leader of the returnees in conjunction with leading priests, Levites, and families. Though Ezra is of high priestly stock, he does not officiate at the cult but is a religious leader, while Nehemiah is governor (Nehemiah 8–9). As such he exercised the office of teacher and priest by reading from the Law to the people while a group of Levites helped the people understand the law and led the people in prayer and sacrifice (Ezra 8).

Because of confusion in the chronology and sources of Ezra and Nehemiah, Ezra's exact office and power is a matter of dispute. Schaeder argued that "scribe" was the title of a Persian official appointed to govern Judea and that Ezra was the governor. Galling disputed him and understood "scribe" as an office in the Jewish Diaspora community, but this view depends on a number of controversial textual interpretations. Some recent archaeological evidence suggests that Ahzai was governor when Ezra arrived in 458, and this leads Talmon (*IDBSup,* 317–28) to deny that Ezra was a Persian official. It is very questionable, therefore, whether Ezra was governor. He was certainly a recognized authority in the Jewish community because he was of high priestly descent and also learned in the law. He had enough access to the Persian court to obtain a favor from the king and enough community standing to lead a group to Jerusalem and establish himself there. The continuing problems with intermarriage and the opposition to Ezra indicate that he was one of a number of influential and powerful forces in the Jerusalem community but that his views did not immediately predominate.

One other scribe appears in Ezra and Nehemiah—Zadok, who was appointed with a priest and Levite to be a treasurer of the storehouses where the tithes were brought (Neh 12:12–13). This text suggests that scribes were part of society and its leadership in Jerusalem. In the postexilic Jewish community the roles of priests, Levites, scribes, and other Jewish leaders overlapped. Ezra was a priest, scribe, and community leader, and possibly a government-appointed leader (Ezra 7). The Levites taught (Nehemiah 8), and in the view of the Chronicler, which probably reflects the postexilic situation, some Levites served as scribes (1 Chr 24:6; 2 Chr 34:13). Even though the Chronicler is promoting the rights of the Levites, his advocacy shows that scribal activity was consistent with priestly and levitical activities (see *IDBSup,* 317–28).

Scribal activity by a variety of groups (priests, prophets, visionaries, scribes, and other community leaders) must be postulated in order to account for the composition and editing of the biblical collection during the exilic and postexilic periods. Fishbane (1985:78–84) has isolated the activities of scribes who copied the biblical text and engaged in unsystematic interpretation by making comments and clarifications, some of which have been incorporated into the text. It is not clear whether the scribes also belonged to the circles which produced the biblical traditions, but certainly they had responsibility for its transmission. Scribes or people with scribal skills must have been part of priestly, prophetic, and leadership circles at all times. While it is difficult to prove historical continuity, the nature of the biblical materials in their Near Eastern cultural setting makes the hypothesis of a continuous and diverse scribal tradition very likely.

C. Greco-Roman Period

The Greeks had a lively scribal tradition and often appointed learned individuals, scribes, sophists, and teachers to government offices and councils. The first evidence for scribal officials in Hellenistic Palestine is contained in a letter of Antiochus III to his governor of Coele-Syria, Ptolemy, in which he exempted the senate *(gerousia),* priests, temple scribes, and temple singers from several taxes (Josephus *Ant* 12.3.3 §§138–44). Scribes appear once in 1 Maccabees and are somehow associated with the Hasideans. During the Maccabean revolt (167–164 B.C.E.) a group of "pious ones" or "Hasideans" *(ḥasîdîm)* joined the Maccabees in their struggle against Antiochus IV: "Then there united with them [Mattathias and his friends] a company of Hasideans, mighty warriors of Israel, everyone who offered himself for the law" (1 Macc 2:42). After the death of Antiochus and the accession of Demetrius I "a

group of scribes appeared in a body before Alcimus [the new high priest, appointed by the king] and Bacchides [the king's governor] to ask for just terms. The Hasideans were the first among the sons of Israel to seek peace from them, for they said, 'A priest of the line of Aaron has come with the army, and he will not harm us' " (1 Macc 7:12–14). Eventually Alcimus killed sixty of those who made peace (1 Macc 7:16). The two sentences mentioning the scribes and Hasideans follow one another awkwardly and the relationship between the two is not clear. The scribes may have been a part of the Hasideans or the Hasideans part of the scribal class. The motive for the pietists' actions, that a priest of the line of Aaron would not harm them, bespeaks a great confidence in the traditional institutions and laws of Israel and perhaps a certain interpretation of Israel's history which stressed confidence in God and the sanctity of the priesthood. It is clear that the scribes are associated with the pietists and with defense of the Jewish way of life. Because they could come to Alcimus as a group and were the object of an assassination plot, they probably had some influence or power and were perceived as a threat by the government. They were part of the political leadership of Judaism but in a subordinate position where they were open to the kind of oppression they suffered at the hands of Alcimus. In 2 Maccabees, Eleazar, a leading scribe (6:18), dies for the law and as an example to younger Jews. The author conceived of scribes as prominent leaders in Jewish Palestinian society, notable for their nobility, virtue, and community responsibility.

Josephus uses "scribe" in the usual Greco-Roman way for officials at all levels from village to royal court. He does not use the term for an organized social group, nor does he use it for groups especially devoted to the law, like the Pharisees. In the first half of the *Antiquities,* when Josephus is summarizing the Bible, he retains scribes where they appear as royal officials or as individuals (Baruch, Ezra) and occasionally adds them to the biblical account as mid-level officials serving the king. For example, when the Israelites defeated the Philistines in battle (1 Sam 14:31–35), they began to kill animals and eat them without observing the laws for slaughter of animals. The Hebrew says someone ("they") told Saul about it; Josephus says that the scribes told him (*Ant* 6.6.4 §120). Scribes are community officials with access to the king and responsibility for supervising observance of the law. According to 1 Chr 23:1–6, just before his death David organized the Levites according to tasks with six thousand assigned to be officers *(šoṭerîm)* and judges. Josephus translates "officers" as "scribes" (*Ant* 7.14.7 §364), since he understood scribes to be government officials. Scribes are also government record keepers. When David took a census of the people (2 Sam 24:1) he sent Joab and the commanders of the army to take the census. Josephus understood census-taking as a scribal and not a military activity, so in his account Joab takes the chiefs of the tribes and the scribes with him (*Ant* 7.13.1 §319). In the story of Esther, scribes are twice added to the story by Josephus as keepers of records (Esth 6:1; *Ant* 11.6.10 §§248, 250; Esth 9:3; *Ant* 11.6.13 §287). Josephus refers to temple scribes in the letter of Antiochus III above and in his version of Ezra 7:24, where the Persian king exempts from "tribute, custom or toll" the following groups: priests, Levites, singers, doorkeepers, temple servants, and other servants of the house of God. The last two repetitious and vague terms are translated by 1 Esdras (8:22), Josephus' source, as temple servants *(hierodouloi)* and temple functionaries *(pragmatikoi).* Josephus replaces 1 Esdras' unclear category *pragmatikoi* with "scribes of the Temple" (*Ant* 11.5.1 §128).

While writing of the Herodian period, Josephus refers to village scribes of very low status (*JW* 1.24.3 §479), Diophantes a scribe and high official of Herod (*JW* 1.26.3 §529), and Aristeas, priest and scribe of the council *(boulē),* killed during the siege of Jerusalem (*JW* 5.13.1 §532). Josephus understands scribes to be both high and low officials associated with king, temple, and village.

D. Jewish Literature

The presence of scribes in the Hellenistic period is witnessed by Jewish literature whose very abundance testifies to scribal traditions and efforts. The Enoch tradition, with its early interest in calendar and astronomical matters (*1 Enoch* 72–82), the Wisdom books and stories (Qoheleth, Daniel 1–6, Ecclesiasticus), and the variety of literary products of this period testify to intense authorial activity and educational support for such activity. The scribal activity and separatist tendencies in the Enoch traditions were intensified later in the Qumran community's traditions and in those of many other nameless groups of the Greco-Roman period. During the Hellenistic period Judaism produced a vast amount of literature,

and this authorial activity argues for a strong core of educated Jews and an educational establishment, including scribes fulfilling their normal range of duties.

The most famous description of the scribe in Jewish literature is given by Ben Sira in the early 2d century (38:24–39:11). He attributes to the ideal scribe all areas of knowledge, high government station, and lasting fame. The wisdom of the scribe is closely linked with and dependent on God because his main source of knowledge is the "law of the Most High," the study of which leads him "to seek out the wisdom of the ancients" and "be concerned with prophecies." He will also "preserve the discourse of notable men and penetrate the subtleties of parables; he will seek out the hidden meanings of proverbs and be at home with the obscurities of parables" (39:1–3). Ben Sira conceived of the scribe as an expert in what had by then become the three parts of the Hebrew Bible, the law (Torah), prophets, and writings. The scribe is not simply a scholar or teacher in the modern mold, but a high official, advisor to the governing class, and international ambassador and traveler (39:4; 38:32–33). The foundation for the scribes' social leadership is not birth or wealth but knowledge of discipline (*paideia,* education, culture), judgment, and proverbs (*parabolais,* parables, similitudes). In Ben Sira the understanding of scribe has been widened so that it is almost equivalent to that of the wiseman. Ben Sira also seems to have conceived of himself as a scribe (39:9–10) and he may have been a teacher with a school in Jerusalem (51:23; if the hymn in chap. 51 is original to Ben Sira and the description of his situation correct, and if *bet midraš* is correctly translated as "school").

Scribes are also mentioned in other Jewish literature. In the first section of *1 Enoch* (1–36), which dates from before the Maccabean revolt, Enoch is twice referred to as a scribe of righteousness (12:3–4; 15:1) and sent as a messenger to the Watchers, a group of angels who have sinned against God. At the beginning of the *Epistle of Enoch* (92:1), which dates from the latter part of the 2d century or earlier, Enoch appears as the scribe who has written this part of the book: "Written by Enoch the scribe—this complete wisdom teaching." In *2 Baruch,* an apocalypse written after the destruction of the temple in 70 C.E., the scribe Baruch appears as a community leader whose authority now exceeds that of the prophet Jeremiah (2:1; 9:1–10:4) contrary to the biblical text. He carries out traditional scribal tasks of writing to the exiles and also prophetic tasks of receiving revelation. The community looks to him for guidance and for knowledge of God's will in a time of crisis. It seems that the author and his community understand scribes as heirs to the prophets, interpreters of the Bible, and visionaries. Such an understanding of the scribal office fits well an apocalyptic group because apocalyptic literature has strong links with traditional and mantic wisdom. For example, Daniel, an archetypical apocalyptic seer, is a wise man and an official in Babylon.

E. Diaspora

The Palestinian use of "scribe" for an official, wise man, and religious leader may have differed from that in the Diaspora. In the *Letter of Aristeas to Philocrates* the translators of the Hebrew Bible into Greek are presented as highborn Jews distinguished by education or scholarship *(paideia)* and knowledge of the literature of the Jews and Greeks. They have some specifically Greek accomplishments, including a talent for talking about the law (the ability to speak well was an essential Greek virtue for the educated person). They seek the "mean," an Aristotelian ideal of virtue, they are not uncouth, nor conceited in dealing with others and they can listen and comment appropriately. In addition, they are also qualified for embassies. While in Egypt on an embassy they discuss kingship with the king, a typical concern of both wisdom literature and Greek philosophy. The description of this group fits the wisdom ideal of the scribe attached to the highest levels of the ruler's court and has much in common with the scribe as depicted in Ben Sira. The translators and the scribe are wise men who know the whole tradition, can function in international situations, and have the talent to be leaders, judges, and scholars. In the Hellenistic age the international ideal of the wise man endured in the Near East and Israel, both in Palestine and in the Diaspora, and continued to adapt and evolve to meet changing circumstances and the development of the Jewish tradition. The use of the term "scribe" in Ben Sira and its absence in *Aristeas* may reflect Palestinian and Diaspora usage. The Alexandrian Jewish community was led by educated, wealthy, highborn people of the type depicted in *Aristeas.* Since the Jewish community had very limited independence and Jews were

not Alexandrian citizens, the community may not have had an official class of scribes, in contrast to Jerusalem. Similarly the Greek prologue to Ben Sira, written by his grandson in Alexandria, does not refer to Ben Sira as a scribe, even though Ben Sira implies that he is a scribe in the book. The Greek term scribe *(grammateus)* does not seem to have been used for a learned wiseman or teacher or translator but for a government official or copiest. Further evidence for this view is found in Josephus who refers to teachers of the law as *sophistai* (*JW* 1.33.2 §648) and characterizes them by descriptive expressions such as most learned (*Ant* 17.6.2 §149) but not as scribes. Josephus is probably following the Greek usage of his audience rather than Palestinian usage. One other indication of this usage can be found in *4 Macc.* 5:4, a Diaspora work where Eleazar, called a scribe in 2 Macc (above), is identified as a priest, presumably because the leadership role attributed to him is more proper for priests than scribes in the Greek world.

F. New Testament

More than in any other source the scribes are seen as a unified group in the NT, but this view may not be historically accurate. The Synoptic Gospel writers see the scribes as a group opposed to Jesus but say very little about their other characteristics. In Mark the scribes are associated with Jerusalem and the chief priests as part of the government of Judaism. Though their roles are not specified, their close association with the chief priests means they functioned as high officials and advisors. Some scribes who appeared in Galilee were identified as coming from Jerusalem (3:22; 7:1). Their teachings are referred to in an offhand way, which suggests that they were recognized as authoritative teachers of Jewish law and custom (1:22; 9:11). Mark presents them as a unified political group because for him their salient unifying characteristic is opposition to Jesus. Actually, the scribes probably stand for a plethora of Jewish community officials, many of them actual scribes, who opposed Jesus' claim to authority and his growing popularity.

For Matthew both the scribes and Pharisees had many interests in common and were the learned groups par excellence in Judaism. The scribes were connected both with village life and the leaders in Jerusalem and were part of the middle leadership of Judaism. Matthew approves of scribes because he recognizes the scribal role in the new Christian community (13:52; 23:34). His quarrel is not with the role of scribes as learned guides of the community and guardians of the tradition, but with the Jewish scribes' opposition to Jesus. It is very likely that Matthew's view of scribes as community leaders in the Galilean villages reflects more the situation of his church, in which he himself was a scribe (13:52; cf. 23:34), than conditions in Palestine before the war.

In Luke-Acts the scribes are less distinct as a group and more like an appendage of the Pharisees, united to them by belief in resurrection. At the time of Jesus' death the scribes are associated with the chief priests in Jerusalem as they are in Mark and Matthew. In Acts the scribes continue to appear as learned leaders in Jerusalem who are active in protecting Judaism. Luke also inserts a new category of leader, the lawyer. "Lawyer" replaces "scribe" in one instance (10:25; cf. Mk 12:28), and lawyers are similar to scribes and Pharisees (7:30; 11:45; 14:3). Luke adds no new evidence for 1st century Palestine. His understanding of the scribes is either vague (he conflates them with the Pharisees) or guided by the general functions of scribes in the Greco-Roman world.

The scribes presented in the Synoptic Gospels are best understood as bureaucrats and experts on Jewish life. They could have been low-level officials and judges both in Jerusalem and in the towns and villages of the country. Mark, possibly the most reliable of the gospels, which may reflect conditions in Palestine just before or after the war and which most probably has traditions from the middle of the 1st century, places scribes mainly in or from Jerusalem and only twice simply in Galilee (2:6; 9:14). The presence of scribes in Jerusalem as officials and in Galilean villages as copyists and low-level officials is very probable. The gospels testify most reliably to scribes connected to the government in Jerusalem, and their role there seems to be as associates of the priests, both in judicial proceeding and enforcement of Jewish custom and law, and ongoing business in the Sanhedrin. It is likely that the scribes did not constitute a unified social organization or class, as the NT claims, but rather fulfilled a number of roles in different parts of society. The gospel traditions about scribes may reflect the opposition of many scattered local officials to early Christian communities before and after the war and perhaps opposition to Jesus also.

"Scribe" is used once in Paul's letters, where he contrasts the wisdom of the world with the foolishness of the cross and claims that the cross is true wisdom. In the course of his attack he cites scripture and then asks rhetorically, "Where is the wise man *(sophos),* where is the scribe *(grammateus),* where is the debater *(suzētētēs)* of this age?" (1 Cor 1:20). Paul seems to be referring to well-known terms for educated intellectual leaders in the Greco-Roman world.

G. Rabbinic Literature

The Mishnah and other rabbinic collections refer sporadically to the scribes *(sôperîm)* as early authoritative teachers to whom a number of rulings and legal interpretations are attributed. Modern historical reconstructions of the development of Jewish law have usually identified the scribes as the Jewish scholars who had great influence on Judaism from the time of Ezra down to the time of the pairs (*m.* ʾ*Abot* 1:5–11) in the 2d century (Lauterbach 1973:27–29; 163–94). The scribes are often identified as members of the Great Assembly, the legendary ruling body of Judaism during this period. See SANHEDRIN. Scholars have differed concerning whether or not they were priests, when their influence ceased, and the scope of their teachings. Some attribute certain anonymous teachings of the Mishnah to them, but no clear critical method has been constructed for isolating these traditions. Lauterbach holds that they first commented on Scripture in midrash and then developed the Mishnaic form of teaching, but this view has been challenged. All these interpretations of the scribes have treated them as a cohesive body with a well-defined agenda and independent power, but the evidence for this position is very weak.

That the scribes were not an organized group with its own teaching can be seen in the rulings explicitly attributed to the scribes in rabbinic literature. Rules which are designated the "words of the scribes" *(dibrê sôperîm)* are scattered in the sources and so form no coherent body of teaching. In the Mishnah the scribes are used as the source for teachings which are thought to be ancient or for rulings which are not fully accepted or are of less authority than Scripture. For example, the restrictions concerning eating the fruit of young trees are said to apply outside the land of Israel as well as inside as a matter of halaka, that is, biblical law which is generally accepted as such in rabbinic teaching (*m.* ʿ*Or.* 3:9). On the other hand, the restrictions concerning growing diverse crops together are also binding outside the land of Israel, but only by authority of the "words of the scribes," which may mean a supposed ancient enactment or simply rabbinic teaching. In view of the fact that other passages which refer to the words of the scribes seem to imply that the traditions derive from older and reliable authorities, this passage probably invokes their authority, which is less than Scripture but greater than any recent rabbinic teacher.

The rabbis' desire to circumscribe the authority of the teachings of the scribes is most clear where the authority of the laws in Scripture is sharply distinguished from the teachings of the scribes (*m. Yad.* 3:2). Though the Mishnah circumscribes the authority of the teachings of the scribes, it does not contemn or annul it. *M. Sanh.* 11:3 decrees that those who deny that one must observe some part of the words of the scribes are to be treated with greater stringency than those who deny that one must observe some point of scriptural law, probably because a direct challenge to scriptural law is unthinkable.

Many of the passages in Mishnah which mention the words of the scribes are concerned with purity. Certain rules which seem to defy the general principles of uncleanness are attributed to the scribes (*m. Kelim* 13:7) in an effort to ground them on early authority. Secondary rules concerning marriages between relatives are also attributed to the scribes (*m. Yebam.* 2:3–4. The words or teachings of the scribes can function as a general category for classifying different types of rules. Reference is made to a class of unclean persons, those who require immersion according to "the words of the scribes" (*m. Para* 11:5–6). Elsewhere the words of the scribes and the teaching of the sages are distinguished (*m. Ṭohor.* 4:7).

The authority of the scribes is less obvious and well established than that of the Bible as can be seen in the preceding Mishnaic passages. The references to the scribes in the Tosefta are similar to those in Mishnah where they are used as a source for certain teachings. Later Talmudic literature also mentions the scribes from time to time and sometimes in a way congruent with the passages cited above and sometimes with other meanings. In the Talmudic lexicon, "scribe" can refer to a copyist who produced Torah scrolls, to a literate person who writes letters and documents, and to a teacher and interpreter of scripture. In

addition, the teachings of the scribes function as they do in the Mishnah, as an ancient source of authority for Jewish traditions.

The figure of the scribe in rabbinic literature is consistent with scribes in other literature. However, the historical role assigned the *sôperîm* in passing on part of the legal tradition and the implication that they were a cohesive "rabbinic-like" group fits the later rabbinic view of its own origins rather than the known historical facts.

H. Inscriptions

Some of the Diaspora literature reviewed earlier suggested that "scribe" was not used for the Jew learned in the law. One other body of evidence from the Diaspora needs to be assessed. The Greek title "scribe" *(grammateus)* appears over twenty times in the inscriptions from the Jewish community in Rome (Leon 1960). The Roman community had at least eleven separate congregations from the 1st century B.C.E. to the 4th C.E. "Scribe" or "Secretary of the Congregation" is the second most common title, after "*Archōn* ""leader," "president"; Leon 1960:183). The limited evidence of the inscriptions shows that the scribe was not the leader of the congregation but a subordinate official, probably the keeper of records and writer of marriage contracts or similar documents. Misspellings in an inscription by a scribe suggest that the average scribe was not greatly learned (Leon 1960:184–85). Since there probably would not have been enough work as a maker of scrolls and contracts to keep a scribe busy full time, the role of community scribe would have been a part-time occupation often filled by a person with minimal training. The slim evidence gathered by Leon fits the Greco-Roman pattern which was alive in some Jewish communities of the Roman Empire. The scribe was a literate person who might not be greatly educated and who fulfilled limited but essential functions in the community.

SCRIPT, ARAMAIC. See ARAMAIC SCRIPT.

SCRIPTURAL AUTHORITY. This entry consists of eight separate articles, all of which address some aspect of the history of biblical authority. However, each focuses on one particular aspect of this subject. The first three provide general overviews of how this notion developed within the particular confessional contexts of Judaism, Eastern Orthodoxy, and Roman Catholicism. Two other articles focus on the idea of scriptural authority in the formative period of the early Church and in the Middle Ages. An article on the authority of the Bible in the Reformation and Post-Reformation periods provides an introductory overview of the notion in the context of early Protestantism. The two final articles survey how the authority of Scripture was affected by Enlightenment and Post-Enlightenment developments, and how it is now being articulated by religious communities in a modern, "post-critical" environment.

BIBLICAL AUTHORITY IN JUDAISM

The issue of biblical authority has never been a question which bothered Jews. The issue of authority indeed has bothered non-Jews, especially since the period of the Reformation. Judaism ceased relying on the written scriptural law as the ultimate source of authority in tannaitic times (about the 1st century C.E.), and ever after the oral law—*verba divina non scripta*—became decisive. This does not mean that the written law was relinquished or ignored. In theory all authority flows from the word of written Scripture, but that only in the way interpreted by the rabbis or "sages."

Hence we must ask, What actually is regarded as "biblical" in Judaism? Who fixed the borderlines, and who was bound by the definition? It is at this first juncture that Judaism stands apart from Christianity. The problem here is the biblical canon. Again this leads us to the era of the Tannaites: what did make that time so special? Apparently there were various reasons. On the one hand, the central legal authority had collapsed following the destruction of the Temple in Jerusalem and the subsequent cessation of sacrifices. Thus the need for fixing rules binding every Jew had become imperative, and those rules were the ordinances as laid down in the Torah.

On the other hand, although "officially" prophecy had ceased after the time of the return from the Babylonian exile (see HOLY SPIRIT), certain texts circulated in Jewish circles which were taken by some to be inspired. We learn specifically from Josephus that men acknowledged as prophets arose towards the end of the Second Temple period, and some attracted followers. See JOHN THE BAPTIST. We cannot know in what precise sense Josephus used the term "prophet."

Our generation has learned how the Qumran covenanters were particular in expounding Scripture. No one can say for sure whether they were more or less extreme in expounding Scripture than their opponents—whether Pharisees, Sadducees, or another group. The fact that this was a Jewish sect which we know about does not mean that this sect was the only one which felt that its interpretations of the Bible were the correct ones. Different sects had "sacred" literature in their possession, books such as Jubilees, Enoch, and Ecclesiasticus. Hence authoritative steps had to be taken to decide which writings should be considered "sacred" or inspired. After the First Jewish War, in mainstream Judaism the authority was in the hands of the Tannaim or "Sages." As far as we can tell, for Judaism there never was an official act of introducing certain writings *into* the canon. The issue was rather which of the various writings which groups had regarded as "inspired" should be left *inside* the canon. See also CANON (HEBREW BIBLE).

Each term we use may lead to misconceptions. "Inspired" means conceived under the influence of *rûaḥ haqqôdeš,* "holy spirit." The expression used in rabbinic literature in discussions regarding canonical status is "books that defile the hands." The writings regarded as inspired are among those things which "defile the hands." That very discussion in rabbinical literature is extremely complicated, but one may be sure that the canonical Scriptures were those which "defiled the hands" in contrast to "profane" literature. (The prolonged discussions as to how that term came to signify what it did cannot be gone into here.)

Since many writings were considered inspired by the common crowd—who were not particular in regard of keeping their hands "undefiled"—it can be understood how this equation of sacredness and defilement could become a token of canonical status in speaking of sacred writings. To be sure, the books of the Torah were regarded as the core of the canon at least since the time of the return from the Babylonian Exile. The books known as prophetic as well as the Psalms had a somewhat lesser degree of sacredness, although we cannot state at which point in history the Psalms (and other writings) were already part of the sacred corpus.

Certain verses of writings which are not considered part of the Hebrew canon are quoted in rabbinic literature by the same introductory formula—"as it is said"—normally reserved for canonical writings. Also, there were traces in rabbinic literature of tannaitic disputes as to whether certain books should indeed be considered inspired. Such discussions may reflect uncertainty about the authoritative status of the book in question. Specifically the character of three books of Scripture was questioned: (a) Ezekiel, because it included legal ordinances contrary to those of the Torah (which in the end were clarified through rabbinic ingenuity; (b) Ecclesiastes, because it expresses doubts regarding the divine order—yet finally the author retracts his doubts; (c) "Song of Songs," the most questionable of all because of the lewd associations it arouses. Even the fact that this book too was attributed to Solomon could not assuage all doubts. Only after a leading tannaite of the 2d century found a way to declare that the catchy superscription should be interpreted symbolically as referring to the relationship between God and Israel as "holiest of poems" was it so recognized.

All this is mentioned to show that not only the legal parts of the Torah—which were the body prescribing practical observation—served as the major authority of biblical writings, but that each book

had to pass the test for canonicity. The choice of the books for possible invalidation may help us answer the question why other books were never regarded as authoritative. The criterion seems not to have been the alleged authorship but rather certain parts of the contents which raised doubts.

On the other hand we cannot say for sure whether assumed time of authorship played any role. Contrary to what modern critics may state, there is no book in the Hebrew Bible canon fixed at a time much later than the return from the Babylonian exile. This is not meant as a statement regarding the time of the redaction of the so-called P source, a problem which has raised many disputes. But it means that no part of the prophets or Psalms can for instance be pushed down to the Maccabean era. Jewish tradition holds that no later prophecies from other sources were admitted into the canon.

Concerning the book of Daniel, the issue of its provenance from Hellenistic times, as claimed by many scholars, does not concern us here. Daniel is not reckoned as part of the prophetic literature in the Hebrew canon, contrary to the Greek. Its content did not raise theological problems and thus its position was never queried.

On the other hand, the book of Esther might have caused difficulties because of its contents, which can hardly be said to be edifying literature. Yet our moral considerations have nothing to do with the question of biblical authority. Questions may be raised why a book which lacks any explicit mention of the divine name altogether should have entered the canon and why no scroll containing Esther was recovered at Qumran. But these are different issues.

The last question brings us to the twilight period between biblical and post-biblical literature. The attitude of the Qumran covenanters toward Scripture is of special importance for our subject. First, their life was totally Bible-centered. Their way of understanding the Bible may seem to us somewhat distorted, just as their very attitude to life did. They felt that they understood the Bible better than other groups of Jewry. The group claimed that it was they who knew the exact historical meaning of a given prophetic text. Their self-understanding as "sons of light" in contrast to the "sons of darkness" may raise the impression that this group felt itself driven to the brink. But none of that can belittle their absolute loyalty to the biblical authority.

If "inspiration" is a criterion for judging a group, it can be stated for sure that the leaders of that sect drew a clear dividing line between the prophetic text and themselves as authoritative interpreters. Just as rabbinic Judaism coined the phrase "a sage (Heb *ḥakām*) is superior to a prophet" so the authors of a Qumran *pešer* (interpretation of prophecy) felt that the prophecy was a dead letter without their authoritative interpretation. Speaking of the term *pešer* used by the Qumran interpreters, that term is easily understood, though previously unknown. We do not know whether it was coined especially for the Qumran type of exegesis. But one point is clear: that sect spent such an effort to achieve correct interpretation that for them the Bible must have played an outstanding role.

However, we should not ignore an argument from silence. While the Qumran writings deal with the correct interpretations of various passages of the Torah, no Torah-*pešer* has been found. What could that mean? Is it purely an accident, or does it mean that regarding the Torah the *pešer*-technique of interpretation was inapplicable, especially for passages with legal implications?

Having talked about Torah and prophets, let us now look at the Psalms. Also here issues of text-type and redaction are intertwined. In this case there is no dearth of texts. Some are practically identical with the MT, while others include odes previously known only from non-Hebrew sources.

A further example of overlap between MT and non-masoretic rephrasing is the so-called Temple Scroll. That text retells the laws of the Torah mainly regarding sacrifices and festivals. But it rephrases ordinances, mainly from Deuteronomy. To us this may seem like an infraction of biblical authority. But this might be the way the covenantors acted out the way they understood the Torah.

Before the discovery of the Dead Sea Scrolls, rewritings of biblical stories in Aramaic were known. Since every translation amounts to a retelling of the original, all Aramaic Targums amount to so many retellings.

It is one of the old prejudices of biblical studies that only the Onqelos-type of targum is usually reckoned as a proper targum. However, if one studies the Palestinian targums, one realizes that their literary technique in retelling and embellishing the story is much richer. See also TARGUM.

In this case of viewing the power of biblical authority it becomes clear that the *meturgeman*—similar to the midrashist—does not allow any biblical text to stand without embellishment of details. Such facts show the importance of biblical authority in post-biblical Judaism. There hardly exists a biblical text without midrashic elaboration, mainly amoraic. However, midrashic elaborations occur atomistically, not in verse-by-verse fashion, as in medieval commentaries.

The part of the Bible which is the most authoritative is the ordinances of the Torah. Regulations as worked out by oral law have achieved an autonomous status, even if they are theoretically only "fences" erected by the sages. A simple example of legal regulations might help. Deuteronomy 25:2 specifies the procedure of punishment by lashes by order of the court. The Torah is quite explicit regarding the number of lashes: i.e., forty, no more. However, rabbinic law reduces that number, based on the fact that "forty" is preceded in the text by the construct "in number," which is construed as "coming near in number." We may assume that the real justification for the rabbinic reduction was the injunction of Deuteronomy "lest your brother be humiliated."

While it may seem that rabbinic law has overruled biblical law arbitarily, in fact no legal statement is made without a basis in the biblical text. Let us now look at the typical run of a legal argument in midrash halakhah or a Talmudic statement. All rulings regarding halakhah must be deduced from an explicit biblical ordinance in the Torah. If the halakhah is a prohibition, two proof-texts are usually required. For this purpose generally a verse from Deuteronomy serves as additional proof. The execution of the law needed two proof-texts to be declared based on the Torah, and sometimes rather crooked exegemes had to be used. To be sure, the rabbis had power to enact "fences," and those laws are based on the consensus of rabbinic opinion.

Another category which shows the need for a basis in the Bible was termed "halakhah revealed to Moses at Sinai." For post-biblical legislation these were ordinances of two different degrees. In some instances the rabbis realized themselves that the proof from the Torah-text was rather feeble, and might regard it as a "legal prop."

All this is mentioned here to show how carefully the rabbis had to proceed to regulate practical obervance, and they took special pains to stress that "it is the statements of the Sages that need enforcement" (e.g., *Roš Haš.* 19a; *Yebam.* 36b). The general ruling is that any condition appended contrary to an express ordinance in the Torah is not binding (e.g., *Ketub.* 84a). Prophets had no authority to lay down the law (*Šabb.* 104a).

We intentionally stressed the issue of the absolute authority of the Torah. No ruling could be based on pronouncements by prophets if they ran counter to the Torah. Only if a prophet decided in a special emergency—such as Elijah's sacrificing outside the Jerusalem Temple—could their action be regarded as valid. To be sure, prophets had to exhort the people to act justly and morally. But this was not legal enactment. The prophets had to get across a message which became part of the theological heritage of subsequent generations. Issues of ethics and morals are not part of the enacted law.

To finish with a rather extreme statement we may mention the saying "The words from prophets and writings will be abolished in the future, but those of the Torah will not" (*j. Meg.* 1:9). On the other hand the Talmud states (*Taʿan.* 17b), "This point we do not know from the Torah but by prophetic tradition."

Traditional interpretation also had to account for linguistic change. Biblical law was phrased in prose, and most of the Hebrew Bible is written in Classical Hebrew or Late Biblical Hebrew. There are various theories concerning how biblical Hebrew gave way in literary use to rabbinic Hebrew. In general the rabbis had no doubts concerning the sense of words in biblical Hebrew. But sometimes the exact sense of a biblical word was queried. Such discussions are not transmitted for the benefit of the historical linguist, but they originated from practical need. In deciding the sense of a biblical law no linguistic uncertainty was permissible. On the one hand, the Torah uses normal language of humans. On the other, the language of the Torah is one thing and the language of the sages another. Since the understanding of biblical law

depended on the exact interpretation of all key words, this issue comes up rather often in the period of post-biblical and Aramaic diglossia.

Up to now we have dealt only with Hebrew and Aramaic. But there also was Greek. Rabbinic sources contain some snide remarks on renderings of the Bible into those languages. Nowhere do we find a remark that the Bible rendered into another language was as authoritative as the Hebrew original. But we see what contortions in Greek Aquila had to make so as to render the slightest nuance of the Hebrew sentence in proper Greek garb.

We can draw conclusions with regard to the authority of the Bible not only from the pseudepigrapha composed in the period of the Second Temple—most of which can be understood only if one assumes the Bible as authoritative—but even more from two contemporary authors, neither of whom specialized in biblical law. One was Philo—the first Jewish philosopher, the predecessor of medieval Jewish and European philosophy. Philo left us a long list of what he felt his readers should know regarding the teaching of the Bible. The list is included in his *Hypothetica,* which are in fact an apology for Judaism. It was meant for Hellenistic pagans who, as is well known, started many pogroms against Alexandrian Jewry. In this treatise Philo tells how the Bible describes the creation of the world—contrary to Greek mythology—then continues with the laws and their allegorical meaning *(De legum allegoria),* then with the fate of the first representatives of the human race, summing up with a theological essay how "the worse attacks the better" and the unchanging nature of God, then the story of Noah and the confusion of tongues, then to Abraham and who the proper heir of divine matters is *(Quis rerum divinarum heres),* then to "flight and findings," on to the decalogue and certain specific laws and virtues, on "reward and punishment," and in the very end *De vita contemplativa* and *De aeternitate mundi.*

This is not mentioned as an exhaustive index but as an indication of what this early philosopher thought important for his non-Jewish compatriots to know about the contents of the Bible.

Since we can judge the treatise only from what we have of it, it could well be that Philo tried to convey to his readers some points on why and how biblical teaching is authoritative for Jews. But since he was a Hellenistic philosopher writing for other Hellenistic Egyptians, we can only deduce his ideas on the authority of the Bible from these pronouncements.

While Philo, as a philosopher, never let his feelings get the better of him, his slightly younger contemporary Flavius Josephus dealt with the important issue of biblical authority in this polemical treatise *contra Apion* (1.7). This treatise is the first Jewish counter-polemic treatise written by a descendant of Jerusalem priests who was a military leader as well as a historian. It deals specifically with the reverence with which the Bible is regarded by all Jews and thus teaches us something about its authority. Josephus sums this up thus: "We have given proof of our reverence for our scriptures." This statement is based expressly on the interpretation of Deut 4:2 "do not add or subtract anything," which was a standard proof-text from early tannaitic writings till today. Josephus adds "No one has ventured to either add or subtract a syllable. It is an instinct (!) with every Jew to regard them as decrees of God, to abide by them and—if need be—cheerfully to die for them" (*AgAp* 1.42). To be sure, Josephus made his statements in a polemical framework, but we cannot doubt that he tried to present the attitude of mainstream Jewry at his time.

All testimonies from the tannaitic era indicate that the Bible was regarded as absolute authority not only by mainstream Jewry but also in a sect such as the Qumran covenanters. But we cannot gauge the actual type of differences and possible idealizations.

Scholars ask, why the laws of the Torah were regarded so highly when, in fact, they were mainly the background for daily life regulations by the sages or sectarian leaders. Was there perhaps a polemic undercurrent against disparagers? What really is the meaning of the strong interpretation of the phrase "he has despised the word of the Lord" (Num 15:31) and the rabbinic interpretation "This refers to someone who claims that the Tora was not given from heaven" (*Sanh.* 99a).

We have already learned of doubts uttered by some of the sages regarding the canonical status of certain books of what finally became the canon. But some statements were even stronger: "There are many verses which actually should be burned, but these may be the very texts on which the Torah is based (*Ḥul.* 60b).

To be sure, the modern scholar often feels that the rabbis in their statements must have left their critical acumen at home; therefore such statements should be viewed with double attention. On the other hand, we should not minimize the feelings expressed by the rabbis. They held that often laws of the Torah should not be adhered to literally, basing themselves on their interpretation of Ps 119:126, "there is a time to act for God even if one sets aside your Torah." The authority of the Torah is not diminished even if necessity forces one to break its ordinances.

Biblical authority could also be tackled on esoteric bases. We do not know who the first group was to produce in ancient time the *hekālôt* (lit. "[divine] chariot") esoteric literature or whether there was a direct connection between them and the medieval Kabbalists. To be sure, tradition has it that the leading talmudic sages were also masters of esoteric teaching and practice. But since there is more than a trace of suspicion that there was also a group which held on to some kind of Jewish Gnosticism, one should be careful in trying to identify the different expressions of esoteric knowledge and action. But one point should be stressed: whatever the exact shade of reliance on the Torah, its authority was uppermost even if the exegetical approach was esoteric. The Torah had hidden meanings, and the expositor had to search for them.

Up to now we have dealt mainly with what can be called mainstream Judaism, this is to say the heritage of ancient pharisaic ideology. But at the time when normative Judaism gained ascendance there was at least one non-mainstream group apart from the Qumran sect: the Sadducees. Since rabbinic literature developed from Pharisaic sources, it presents a slanted picture. Sadducees differed from Pharisees at certain points of theology, such as bodily resurrection, in regard to the status of oral law, and in practical observance. The Sadducees were stricter in observing biblical law to the letter. Whether the Essenes mentioned in ancient sources were indeed identical with the Qumran covenanters remains an open question.

Mainstream Judaism developed from the Pharisees; no known remnants of the Sadducees survived in Judaism. But because there was no persecution of Sadducees, their disappearance from the scene remains a riddle. The question has been raised what relationship there is between the Sadducees and the splinter group called the Karaites, which developed in Babylonia around the 8th century C.E. as a clear alternative to rabbinic Judaism. That group or sect denied the validity of rabbinic hermeneutics and maintained that the rabbis had strayed from the correct meaning of the biblical law by substituting their legal understanding for that found in the Bible.

The likeliest group that may have kept—or revived—Sadduceean teaching indeed seems to be the 7th–8th century Karaites, which arose as a splinter group of dissatisfied followers of rabbinic Judaism in Babylonia. But the main point of that group is rather stricter adherence to the biblical text according to the slogan of its founder, "search very exactly in the Torah." Since the time the Samaritans had split away from developing Judaism during the period of the Second Temple, there had not been a schism of such magnitude as the Karaitic denial of rabbinic authority. Karaites were enjoined to learn every part of the law by searching the details of the biblical text; and because soon after their schism the vowel and accent signs came into use in writing Torah manuscripts, scholars claimed for some time that the invention of these graphemes was due to Karaite influence, and only afterward was taken over by Rabbanites. See MASORETIC TEXT.

Without going into more details we can only say that if mainstream Judaism had the highest regard for the Bible, the Karaites outdid them. One may possibly compare the relationship to that between normative Catholicism and the claims of the 16th-century Reformers who fought under the banner of *sola scriptura.* Whatever the suitability of that comparison, the fact that Catholicism followed the tradition of the Church Fathers does not at all imply their disregard for the authority of the Bible.

We have spent the major part of this discussion on the early post-biblical period because that was the decisive time when attitudes to the Bible took shape. By the time the Talmud was finally redacted, attitudes had already become frozen. All later Jewish activity regarding the Bible involved exegetical differentiations of philological or philosophical or esoterical character. Esoteric (Kabbalistic) attitudes towards the Bible may seem rather odd to modern scholars, but the Kabbalists were also part of the main

body of Jewry and felt that their dealing with the Bible text actually was the most correct, since they tried to uncover the hidden meaning.

Biblical authority was first called into question by European Jewish thinkers in early modern times. Through the new spirit which arose in Europe after the Middle Ages, the authority of the Bible was challenged. It was first challenged by Benedict (Baruch) de Spinoza (1632–1677), who was no longer a member in good standing of the Jewish community of Amsterdam when he wrote his *Tractatus.* Spinoza attacked the authority of the Torah, giving explicit expression to the hesitant doubts of his medieval predecessor Abraham ibn Ezra. As a matter of fact his compatriot and contemporary Manasse ben Israel composed at that very time his treatise concerning the internal contradictions in the Bible. Neither of those two dealt habitually with the Bible, and in the long run Spinoza's attack was more powerful than Manasse's apology. See further SCRIPTURAL AUTHORITY (IN THE WAKE OF THE ENLIGHTENMENT). One might suggest that the previous sharp division regarding the authority of the Bible between Jews and non-Jews came to an end in the first generation of Enlightenment.

All this happened as part of Western European intellectual development. Jews in other parts of the world took no part in this development, and their attitude did not change from earlier tradition. The first western Jew who lived as a conscious "modern" Jew in the evolving twilight world was Moses Mendelssohn (1729–1786). Mendelssohn tried to bring his German coreligionists nearer to an aesthetic appreciation of the Bible but did not dare to get involved with the rabbinic authorities on issues of its authority. None of this changed until the political and intellectual life of German Jews underwent changes. English Jewry had little to contribute, and American Jewry did not yet exist as an intellectual force. Only once German Jewry had digested the impact of Mendelssohn's program and had come into intellectual contact with the surrounding non-Jewish world did the issue of biblical authority become a problem.

By the middle of the 19th century the religious life of European Jewry had undergone major changes, and the nascent *Science of Judaism* had begun to revolutionize Jewish thinking. Whereas previously traditional orthodox attitudes were the only recognized forms of Jewish worship, now a new type of schism had divided the Jewish world. To be sure the main issues in daily life were the way rabbinic regulations were kept and how religious services were conducted. But, as we have already stressed, such issues were never divorced from the issues of biblical authority, even if the actual biblical laws only stood in the background.

Starting from the second half of the 19th century, western Jewry was split into three streams regarding halakhic observance and custom. The old stream strictly adhered to "orthodox" traditional halakha, which automatically entailed recognition of biblical authority, which then was taken as identical with rabbinic interpretation. The contrasting stream was that of liberal or "Reform" Judaism, which did not adhere any longer to the teachings as they had developed from tannaitic times through the Middle Ages. By its own logic, that "liberal" attitude also affected practical expressions of biblical authority. Since those "modernists" also followed trends of liberal views in general, all this worked in the same direction of despoiling Judaism from its age-old heritage. Some of the ideologies of the liberal wing saw their task in justifying their anti-rabbinic program.

Between these two groups stood the "conservative" or traditional wing, which tried to steer a middle course, claiming that present-day Judaism must be viewed as the product of its historical development. In theory, biblical authority was recognized as in earlier times, and nobody dreamt of denying it. But for daily life the issue remained the degree of observing rabbinic halakha rather than worrying about the biblical statements without their rabbinic elaboration.

These three streams today form the major subdivisions common to all parts of Jewry (leaving aside the ultra-orthodox wing, which often calls forth comparisons to the opinions expressed by Protestant or Islamic "fundamentalists"). While all such differences inside Judaism address pragmatic concerns over the degree of observance of rabbinic regulations, they cannot evade reflection on attitudes toward biblical authority.

This picture was correct until a generation ago, before the American scene found its own new expression for its Judaism. At present the so-called "reconstructionist" group officially still is a subdivision of traditional conservative Judaism. This group has tried to sever connections to biblical authority in its attempt to understand Judaism as a matter of "peoplehood," civilization, and common custom. For the first time since the Karaite schism all validity of rabbinic observance is regarded only as a matter of custom and convenient expression of one's feeling of belonging.

In Judaism biblical authority was never absent from the minds of believers. But in daily life the important factor was the way the sages did interpret the law of the Bible. In practical terms, the Bible dwindled to those parts of biblical ordinances which were applicable after the destruction of the Temple. What the prophets had admonished also played a part, but since they could not lay down the law, they remained rather unimportant regarding the issue of biblical authority. Therefore our subject should be approached not as the reading of clear writing, but rather as a palimpsest, which is there for those who spend the effort of studying it, but which otherwise fades practically into the background.

MOSHE GOSHEN-GOTTSTEIN

BIBLICAL AUTHORITY IN EASTERN ORTHODOXY

Biblical authority connotes a broad concept embracing revelation, inspiration, canonization, and interpretation as well as the ongoing work of the Spirit. The authority of the Bible is concretely engaged, whether consciously or not, in the actual uses of Scripture, e.g., liturgical, homiletical, catechetical, apologetic, doctrinal, devotional, and academic. In Eastern Orthodoxy a historical review of biblical authority may be presented under three periods: classical, traditionalist, and modern.

A. The Classical Period (1st–5th Centuries)

Extending roughly up to John Chrysostom and Theodore of Mopsuestia, the classical period (1st–5th centuries) marked not only the gradual formation of the Christian Bible as the norm of Christian life and thought but also the accompanying development of a hard-won and theologically coherent exegetical tradition guided by fundamental credal insights of the Catholic Church. This double achievement established a classic unity among Scripture, tradition, and church, while allowing significant variety and creativity, and thus raised a normative claim on all subsequent Christian generations.

The first struggle over biblical authority involved the Church's christological appropriation of the Hebrew Scriptures whose authority as the revealed oracles of God (Rom 3:2) embodied in sacred writings (Luke 24:44) was assumed by early Christians. However, in the early Church, "though the Old Testament was God's word, it was not in fact God's final word" (Lamb *CHB* 1:585). The direct revelation of Christ and the Spirit decisively qualified the authority of the Hebrew Bible, and also gave impetus to a whole new process in which Christian writings bearing the authority of Christ, the apostles, and the prophetic Spirit began to gain authoritative status. Jesus himself exemplified interpretive freedom in the Spirit and set the new dynamics in motion by proclaiming the immediacy of the reign of God (Mark 1:15), challenging the authority of the Mosaic Law (Matt 5:21–48), and seeing in his own ministry the end time fulfillment of prophecy (Luke 5:21). It was no longer the Mosaic Law but Christ who formed the salvific center of divine revelation, and consequently Christ became the new hermeneutical key of God's saving activity in history. Diverse Christian writers such as Paul, Matthew, the author of Hebrews, and the author of the *Epistle of Barnabas* all shared the christological hermeutical principle but gave various unsystematic answers to the question of how the new revelation was related to the traditional Scriptures (see, e.g., Gal 3:19–26; 1 Cor 10:11; Matt 5:17–18; 23:1–3, 23; Heb 7:18–19; 10:1–5; *Ep. Barn.* ix.4).

A sharper struggle over biblical authority was occasioned by the confrontation with various 2nd-century gnostic teachers who severely compromised and at times rejected the authority of the OT. While interpretive freedom in the Spirit led the Church to seek its own rightful christological integrity and mission over against the Jewish biblical tradition, the radical interpretive freedom claimed by Marcion, Valentinus, Ptolemaeus, and others now risked a dissolution of both the church's moorings in salvation history and its distinctive identity amidst the syncretistic sea of Hellenistic religions and sects. In part against them, Justin developed the first signs of a conscious doctrine of Scripture (von Campenhausen 1972:88–102). He simultaneously held to the authority of the OT, while he qualified its unity by

discerning it in a tripartite stratification of prophecy, ethics, and historical legislation for the Jews, which was no longer valid in view of a Christocentric hermeneutic (Stylianopoulos 1974:51–53). Irenaeus is a richer witness, not only for the advanced stage of the canonization of the NT along with the OT, but also for the new awareness of the hermeneutical function of credal insights (rule of faith) of the living tradition of a now worldwide Great Church (Greer 1986:109). Armed with these teachings, the ongoing church reasonably refuted various claims about secret doctrines, apocryphal books, and new revelations by gnostics and later by Montanists.

The crucial questions in the 3d and 4th centuries focused not on biblical authority as such, now reinforced through the completion of the canon (A.D. 367 by Athanasius), but rather on exegetical methodology. A tremendous exegetical output based on allegory, typology, and grammatical exegesis was produced by Alexandrian and Antiochene interpreters whose approaches, despite some sharp differences, should be viewed as complementary rather than antithetical (Froehlich 1984:20, 22; Trigg 1988:31, 34). Regarding biblical authority, however, it was the Arian controversy of the 4th century, fought extensively on exegetical grounds and necessitating ecumenical councils for resolution, that yielded additional profound implications. The unbiblical Athanasian term Gk *homoousios* ("of one essence,"), adopted by the First Council (A.D. 325) under protest, was meant to safeguard what was in fact considered biblical truth regarding the Son's relation to the Father. The adoption of this term was official vindication of the exegetical tradition's insight that a contextual search for the *skopos* ("central aim" or "unifying purpose") of Scripture, rather than a literalist approach to the canonical text, was decisive for the correct interpretation of its meaning. The Second Council's (A.D. 381) promulgation of the Spirit as the Third Person of the Trinity, despite recognized exegetical ambiguity on the matter, yet following Basil's and Gregory the Theologian's liturgical and pneumatological arguments (Pelikan 1981:339, 345, 359–60), underlined the hermeneutical role of the conciliar authority of the Church. It could go beyond mere exegetical deductions and could rely on the inspired integrated insights of the living tradition (Santer 1975:110) for final decision on crucial, universally disputed matters of faith.

B. The Traditionalist Period (6th–18th Centuries)

The traditionalist period (6th–18th centuries) emerged organically from the previous one, but also developed new features and emphases which distinguish it. Biblical authority continued to have an impact especially on worship where a phenomenal development of biblical lectionaries and liturgical hymnology occurred by the end of the 1st millennium. Although not of the same quality, commentaries also continued to be written by Oecoumenios (6th century), Euthymios Zigabenos (11th century), Nicodemos of the Holy Mountain (17th century), and others. The devotional reading of Scripture especially in monastic circles continued to influence Orthodox spirituality and much later Russian piety. The authority of the biblical canon remained formally supreme and yet did not totally eliminate a certain freedom for Nicephoros of Constantinople (9th century) to list the books of Revelation, 1–3 Maccabees, Wisdom of Solomon, and many others outside the narrower canon (*NTApocr*, 50).

What particularly distinguished this period, however, was an archaizing loyalty to the Church Fathers and a maximalist devotion to tradition placed on a level of authority formally equal to but virtually higher than Scripture. Already the 5th century christological controversies marked a shift from direct argument from Scripture to appeal to the witness of the fathers (Santer 1975:100), an appeal compromised by a plethora of forgeries between the 5th and 7th centuries (Grant 1960:23). Maximos the Confessor (6th century), despite his own creative mind, held that an exegete depended on the God-inspired fathers more than on one's very breath (Pelikan 1974:18–19). The Council of Trullo (A.D. 692), while enjoining biblical teaching to lay people and clergy alike by church leaders, prohibited new interpretations apart from the patristic ones. Significant examples of direct use of the Bible, accompanied by powerful calls for evangelical renewal, such as in the case of Symeon the New Theologian (10th century) and Kosmas Aitolos (18th century), were exceptions swallowed up by the massive authority of tradition.

The traditionalist features reached their sharpest formulation in the 17th century when Eastern Christianity became more conscious of the proselytizing threat of Protestantism. Against Patriarch Cyril Lucaris, who was influenced by Calvinism and advocated the authority of Scripture over the Church as

well as the narrower OT canon, the local councils of Constantinople (A.D. 1638) and Jerusalem (A.D. 1672), as well as doctrinal statements by Peter Mogila and Dositheos of Jerusalem, wedded biblical authority to the authority of the Church with new precision (Pelikan 1974:284–87). The inseparability of Scripture from patristic exegesis, the validity of liturgical additions to the biblical text, and the absolute authority of conciliar decrees were all ultimately grounded by the Orthodox on notions of Church "infallibility" and of Scripture and tradition as "two sources" of revelation, echoing Latin theology (Pelikan 1974:288–89). In this context, not only was the wider biblical canon (including the "readable" or "deuterocanonical" books) affirmed, but the reading of Scripture by the ordinary faithful was on one occasion prohibited in imitation of Latin measures against Protestant influence.

C. The Modern Period (19th–20th Centuries)

The modern period (19th–20th centuries), too, has unfolded in organic continuity with the past, and basic traditionalist positions have been maintained to the present. However, the birth of an independent Greek State (1830) as well as the establishment of Athens University as a state academic institution (1837) created conditions in which the "new learning" of Western liberal ideas and critical methodologies began to exercise greater impact on traditional thinking.

A major case in point was the heated controversy over the translation of Scripture into modern Greek. No Orthodox theological principle militates against the translation of Scripture into the vernacular of any people. Sporadic attempts at such translations had in fact been made among Greeks since the early 16th century and seemed to be welcome except when explicitly associated with Protestant proselytizing interests in the Near East. But the complete translation of the Bible during the first half of the 19th century, sponsored by the British Bible Society and supported by a liberal and influential Greek minority, generated traditionalist furor and official disapproval. Preference for the MT over the authoritative LXX version of the OT was rejected. A translated Bible, and one without patristic commentary, could in no way be thought of as part of the tradition, and it was thus stigmatized as Protestant (Vaporis 1970:235). But official condemnations did not necessarily impede use of the translation until very recent times when new ones superceded it. Reaction to the new translations, especially from official circles, has remained mixed.

A deeper creative tension pertaining to biblical authority was introduced through academic critical and historical studies which have raised the problem of history for Orthodox theology (Stylianopoulos 1967:394–400). For one thing, the new approach has put into historical relief the old problem of the wider OT canon, which for many Orthodox has yet to be resolved by the church as a whole. For another and far greater thing, historical studies have opened up the possibility of rediscovering the witness of Scripture as a means of valid critique and renewal in the Church, while at the same time risking an historical relativization of biblical authority. This new problem regarding the authority of the Bible has not been faced directly by Orthodox theologians (Agourides 1976:8). Some continue to hold that Scripture derives its validity from the church and that tradition contains nothing contrary to the Bible (Bratsiotis 1951:21–22). Others stress the ecclesiastical context of Scripture but also advocate the corollary principle that everything in the Church should be judged by Scripture (Hopko 1970:66–67). Still others favor the development of biblical studies as a field in its own right (Stylianopoulos 1972:83–85). The challenge is to define an appropriate balance among Bible, tradition, and Church, a challenge that can possibly be met by a "neo-patristic synthesis" (Florovsky 1960:45), including a hermeneutical model derived from the classical period which would avoid both stifling traditionalism and barren historicism (Trigg 1988:55).

THEODORE STYLIANOPOULOS

BIBLICAL AUTHORITY IN ROMAN CATHOLICISM

Roman Catholicism is a Church of sacraments as well as of the Scripture, of the living experience of Christ preserved in a visible hierarchical structure. As the Second Vatican Council expressed it in 1964, "the Church, in Christ, is in the nature of a sacrament" (Flannery 1975:350). Roman Catholicism, therefore, places the authority of Scripture within the broader context of the Church. In 1546, the Council of Trent defined that the gospel which Christ promulgated and ordered to be preached was "the source of all saving truth and rule of conduct" and "that this truth and rule are contained in the written books and unwritten traditions which have come down to us, having been received by the apostles from the mouth of Christ Himself or from the apostles by the dictation of the Holy Spirit, and have been transmitted as it were from hand to hand" (Neuner and Dupuis 1982:73). Trent was formulating Catholic doctrine against the Reformers, but it was reflecting an ancient Catholic and Orthodox belief in the relationship between Scripture and traditions, between inspired writings and the Church's experience.

Scripture for the apostolic Church meant the OT as it was now fulfilled in Jesus Christ. The Church and its preaching of Christ was the norm for interpreting the Scripture. With Paul, the apostolic Church began to produce its own writings. One of the earliest problems was to determine what writings were suitable for usage in the Church—the issue of the canon of Scripture that was not definitively settled for Roman Catholicism until Trent (Kelly 1960:52–60). Irenaeus (fl. 190) repudiated the claims of the gnostics that they were the heirs to teaching communicated by Jesus only to his most intimate disciples. Instead, he appealed to the teaching of the apostles, Jesus' closest followers, and preserved through their successors. Even if the apostles had left nothing in writing, he asserted, the Church would have been able to follow "the structure of the tradition which they handed on to those to whom they committed the churches." The gnostic writings were therefore unsuitable for liturgical use. Origen (ca. 185–ca. 254), too, argued that the norm of faith was more than Scripture—it was "the doctrine of the church, transmitted in orderly succession from the apostles and remaining in the churches to the present day" (Pelikan 1971:115–6).

Only gradually did the Church determine the canon of the NT books, but there still remained the problem of the proper interpretation of Scripture. Arius interpreted the gospel of John to mean that the Word (Gk *logos*) was subordinate to the Father—"there was when he was not," to use his famous dictum. Nicaea, the first ecumenical council, condemned Arius' heresy. It believed itself divinely assisted to preserve the Church from heretical interpretation of Scripture and to determine the correct one. In the process, it adopted the language current in the day but not found in Scripture to formulate its creed—the Son was consubstantial (Gk *homoousios*) with the Father (Kelly 1960:226–37). By itself, then Scripture was not an infallible guide to the total Gospel of Christ. It needed some other authority not only to recognize its inspiration but also to preserve its interpretation from error. Like Nicaea's, the creeds and

definitions of subsequent councils took on an authority parallel to Scripture, not in proclaiming new revelations, but in preserving the revelation that had been handed down. The theologians who had helped shape the great conciliar definitions, the Fathers, came to be seen as the principal commentators on Scripture.

In the early Middle Ages, the "sense of the Fathers" provided the key to understanding the Scripture. Their exegesis became almost synonymous with tradition, whose distinguishing characteristics were antiquity, universality, and consensus. Tradition was static, and the medieval commentator was to hand on what he received or, in the words of Pope Stephen I, "*nihil innovetur nisi quod tranditum est*" ("nothing is to be introduced except that which has been received") (McNally 1959:31). But in the West, the Fathers meant primarily Augustine, and few commentators even sought to refer to the Greek Fathers except in translation. Few scholars were even familiar with the Greek NT or Hebrew OT. The Latin Vulgate, originally translated by Jerome, replaced the study of Scripture in the original languages. Commentators appealed beyond the literal to the threefold spiritual sense of Scripture: tropological, anagogical, and allegorical. The Scripture became more of a guide for scriptural life than a source of dogmatic theology (McNally 1959:54–63). In the later Middle Ages, many of the great scholastics, notably Albert the Great and Thomas Aquinas, wrote commentaries on Scripture, but still they were unfamiliar with the original texts. Moreover, the development of the papal office now added a source of doctrinal authority complementary to that of councils.

The Renaissance return to original sources paved the way for the Reformation which challenged the Catholic understanding of revelation and the rule of faith. Trent's decree, cited above, was purposely vague about what "traditions" meant, since many of the bishops present were themselves divided on the question, but it also avoided making Scripture and tradition separate sources (Jedin 1961:2.86–94). The council, moreover, formally defined the canon of Scripture—the same books listed at the Council of Florence in 1442. Trent attached an anathema to "anyone [who] does not accept all these books in their entirety, with all their parts, as they are being read in the Catholic Church and are contained in the ancient Latin Vulgate edition, as sacred and canonical, and knowingly and deliberately rejects the aforesaid traditions." Trent, therefore, contrary to the Reformers, accepted as canonical those books contained in the LXX that Jerome had translated in the Vulgate, the so-called "deuterocanonical" books. The council, furthermore, declared that "the ancient Vulgate version … is to be regarded as the authentic translation in public readings, disputations and expositions." This decree, intended only for the Western Church, did not affirm that the Vulgate was inspired, but only that it did not contain errors in matters of faith and morals and was to be used in the Western Church. Finally, the council decreed that no one was to interpret the Scripture "contrary to the meaning that holy mother the Church was held and holds—since it belongs to her to judge the true meaning and interpretation of Holy Scripture—and that no one dare to interpret the Scripture in a way contrary to the unanimous consensus of the Fathers, even though such interpretations be not intended for publication" (Neuner and Dupuis 1982:74–75). Contrary to some popular misconceptions, the council did not prohibit private reading of Scripture, but only a private interpretation different from that of the Church.

Trent thus rejected the Protestant tenet *sola scriptura*, "Scripture alone," and reasserted the Church's role in preserving apostolic teaching. Yet, its formulation about Scripture and traditions would undergo several developments. During the Counter-Reformation debates, some Catholic theologians began arguing that tradition was a source of revelation, separate from Scripture, but their position was not universal. In the late 18th century, John Carroll (1735–1815), who became the first Catholic bishop in the United States in 1789, considered tradition to be the "living doctrine" of the Church. Writing against a former Catholic priest, he stated "that we have always asserted, that the *whole* word of God, unwritten, as well as written, is the christian's rule of faith." For Carroll, the whole authority of Scripture depended on the testimony of the Church throughout the ages, "for if the catholic rule of faith could be proved unsafe, what security have we for the authenticity, the genuineness, the incorruptibility of Scripture itself: How do we know, but by the tradition that is, by the living doctrine of the catholic church, which are the true and genuine gospels?" (Hanley 1976:111). "Tradition," he concluded, was "*the word of God* delivered

down to us by the testimony of the fathers, and in the public doctrine of the catholic church" (Hanley 1976:137–38). He thus saw Scripture and tradition closely related.

A generation later, Carroll's fifth successor as Archbishop of Baltimore, Francis P. Kenrick (1793–1863), also argued for the inadequacy of Scripture alone being the rule of faith. In 1838, he wrote that "a full and adequate rule of faith within the Christian economy must necessarily be referred to the time of Christ and the Apostles, and then suit the condition of men through all ages." The NT, however, could not "be referred to the age of Christ, nor to the beginning of the apostolic preaching: for it is evident that many years elapsed before anything was consigned to writing," and only gradually were the apostolic writings collected and recognized by the churches (Kenrick 1858:1.282–83). Recommending Johann Adam Möhler's *Symbolik,* he concluded that tradition was essentially the preservation of Christian teaching from apostolic times. The "*tradition,* which is the rule for our faith," he declared, "is contained in the greatest part in Scripture, and celebrated back through the ages in the monuments and documents of Christian antiquity, and the custom and public worship of the Christian faithful throughout the world" (Kenrick 1858:289). Kenrick relied heavily for his treatment on the Fathers of the Church, with only a rare citation from St. Thomas or the other scholastics. In this, he was similar to Carroll before him and to John Henry Newman, his own contemporary.

But other theological schools soon overshadowed this close association of Scripture and tradition. The First Vatican Council (1869–1870) issued a constitution on faith. Seriously truncating Trent's decree on Scripture and traditions, Vatican I now stated that "supernatural revelation" was "contained in the written books and unwritten traditions" (Neuner and Dupuis 1982:75). The council further declared that "all those things are to be believed with divine and Catholic faith which are contained in the word of God, written or handed down *(verbo Dei scripto vel tradito),* and which the Church, either by a solemn judgment, or by her ordinary and universal magisterium, proposes for belief as having been divinely revealed" (Neuner and Dupuis 1982:43). The "doctrine of faith," the council continued, "is like a divine deposit handed on *(tradita)* to the Spouse of Christ, to be faithfully guarded and infallibly declared" (Denzinger-Schönmetzer 1976:3020). The conciliar statement, reflecting the theology of Johann Baptist Franzelin, S.J., shifted tradition from the dynamic preservation of apostolic preaching to a static deposit and implied that it was a source of revelation separate from Scripture. Moreover, by "Spouse of Christ," as Yves Congar, O.P., noted, "the council understands here above all the magisterium, especially that of the Roman Pontiff" (Congar 1966:196–98).

The council also addressed the relatively new question of inspiration, then surfacing as Catholics began entering the arena of biblical criticism. It declared that the books of Scripture were "canonical and sacred" not because they were "composed by mere human industry" and "were afterwards approved by her [the Church's] authority," "but because, having been written by the inspiration of the Holy Spirit, they have God for their author and have been delivered as such to the Church herself" (Neuner and Dupuis 1982:75–76). For certain theologians, this statement precluded multiple authors or redactors of a sacred book in its present form—the precise point that historical criticism was making. The theological viewpoint, flowing from the council, rendered the Church incapable of grappling with some of the issues arising from biblical criticism. It was ironic and tragic that the Church, which so adhered to tradition, would founder on the crisis of Modernism. The older, more dynamic understanding of tradition would have opened the Church to some of the new developments. One American Catholic theologian, John B. Hogan, S.S. (1829–1901), put it succinctly when he stated that Protestants might regard the findings of historical criticism with "dismay," but Catholics could "contemplate it with perfect equanimity. Their faith is based, not on the Bible, but on the Church" (Hogan 1898:480–81). Unfortunately, the form of neo-Thomism, then rising, could not grapple with some of these issues.

Catholic theologians took two general approaches to the new challenge of historical criticism. Some equated inspiration with revelation and attributed to God as the author of Scripture everything known of a human author. Hence, despite the findings of historical critics, there could be no error in Scripture, for this would be incompatible with divine authorship. Others, notably M.-J. Lagrange, O.P., sought to distinguish between inspiration and revelation—while everything in the Scripture was inspired, not everything was

revealed; what appeared to be error was the divine accommodation to the human mode of expression proper to the age of the particular human author of Scripture. According to their critical method, they admitted that some books of the OT, especially the Pentateuch, had multiple authors and that the gospels had undergone several redactions. The opposing theologians, however, appealed not only to their theory of inspiration but also to their understanding of tradition. Some interpreted Trent's reference to the "five books of Moses" in the canonical list, for example, as meaning that the council had pronounced on the Mosaic authorship of the Pentateuch (Fogarty 1989:99–100, 122). This interpretation contributed to the Pontifical Biblical Commission's assertion in 1906 that Catholic scholars had to hold that Moses was substantially the author of the Pentateuch (Denzinger-Schönmetzer 1976:3394).

In the Church's combat against Modernism in the 20th century, it came close to adopting biblical fundamentalism. Although the Church never formally condemned evolution, for example, the Biblical Commission did declare in 1909 that the Catholic exegete had to uphold the historical character of the first three chapters of Genesis in what pertained to Christian doctrine, the special creation of man by God, and the formation of woman from man (Denzinger-Schönmetzer 1976:3513–4). These decisions, however, were intended not so much to adhere to a literal interpretation of Scripture as to preserve the doctrine of original sin.

Catholics were isolated from the world of biblical scholarship until 1943, when Pope Pius XII issued his encyclical *Divino Afflante Spiritu,* calling for Catholic scholars to apply the historical method held so suspect at the beginning of the century. Yet only seven years later, the same pope published *Humani Generis* warning scholars not to go beyond the magisterium, particularly in regard to the interpretation of the creation of Adam to mean a "plurality of ancestors." While Pius did not condemn such a theory outright, he did state that "it is not all apparent how such a view can be reconciled with the data which the sources of revealed truth and the documents of the Church propose concerning original sin, namely that it originates from a sin truly committed by one Adam" (Neuner and Dupuis 1982:126). Dogmatic considerations flowing from the traditional interpretation of Scripture, then, were still to be the guiding norms for Catholic scholars.

On the eve of the Second Vatican Council, and through the first session in 1962, some biblical scholars were accused of denying official teaching or the magisterium and were on the defensive. The council's first draft of the constitution on revelation was entitled "Sources of Revelation"—Scripture and tradition were separate. Although the bishops failed to muster enough votes to reject the document, John XXIII withdrew it. In 1964, biblical scholars received further encouragement from an instruction of the Biblical Commission on the historicity of the gospels. Scholars were to investigate the development of the gospel traditions from the sayings and events in the life of Jesus through the apostolic preaching to the formation of the gospel traditions themselves (Fitzmyer 1964:134–36). The way was now paved for a fuller appreciation of Scripture and of Scripture scholarship within the Church.

The council's final constitution, promulgated in 1965, declared that "sacred tradition and sacred Scripture make up a single sacred deposit of the Word of God, which is entrusted to the Church." It belonged to "the living teaching office of the Church alone," however, to give "an authentic interpretation of the Word of God, whether in its written form or in the form of tradition." But the constitution made it clear that "this magisterium is not superior to the Word of God, but is its servant. It teaches only what has been handed on to it" (Flannery 1975:755–56). While to many Catholics, Vatican II's treatment of Scripture and its relation to tradition was revolutionary, it was in fact a return to an older theology and one quite compatible with the teaching of Trent.

In the post-conciliar Catholic Church, Scripture has assumed a larger role in the lives of the people. Prior to the council, for example, there were only four major liturgical feasts that had readings from the OT. The council provided for a three-year cycle of readings for Sundays, with the first reading, except for the Easter season, taken from the OT. The homily was made an essential part of the liturgy or Mass and was usually to address the meaning of the biblical texts. Of equal significance, Catholic biblical scholarship came to be accepted in most circles not as a threat to traditional teaching, but as a means of uncovering the richness of the original Scripture message.

BIBLICAL AUTHORITY IN THE EARLY CHURCH

In speaking of scriptural authority in the early Church we may focus attention upon the gradual emergence of an ecumenical Church out of the diversity of earliest Christianity. This development marks the formative period of the early Church, and its completion is reflected in the writings of Irenaeus (fl. 180). While all the many different forms of earliest Christianity assumed the importance and authority of sacred writings, the mainline development was obliged to wrestle with the question which writings were to be regarded as sacred and authoritative. Initially, then, the problem of scriptural authority coincided with the emergence of a Christian Bible and with the arguments for the canonical status of the writings included in it. As a result, the question was not so much how to understand the character and function of scriptural authority as which writings were to be accepted as authoritative.

If by "early Church" we mean the mainline development during the formative period and the ecumenical Church from Irenaeus to the collapse of the Roman Empire in the West (5th century), two general points can act as rubrics for discussion. First, the early Church did not think of the authority of Scripture apart from its relation to the theological tradition expressed in the rule of faith or apart from the use of Scripture in Christian worship. The authority of Scripture was bound to the life of the Church. Scripture, the theological tradition, and the worship of the Church were not treated as alternative points of departure for articulating the meaning of the faith, nor were they regarded as alternative authorities to be played off against one another. Second, the authoritative meaning of these norms of belief and practice was designed to establish unity for the Church, but not a unity involving uniformity. The development of the liturgy preserved regional and even local variations that by no means presented themselves as obstacles to unity. No uniform text of the rule of faith or even of the creeds appears in the Church before the latter part of the patristic period. With respect to Scripture we find not only no uniformity of interpretation, but also no uniform canonical list. To be sure, the rule of faith, the creeds, and Scripture ruled out certain opinions and practices as incorrect. But it did not follow that ruling out error implied the establishment of a single correct view. Instead, the Church remained content with diversity; and we may speak of valid interpretations of Scripture. Only when differing interpretations became contradictory did conflict arise, and the resolution of conflict by no means pretended to eliminate diversity.

A. Scripture, Theology, and the Church

It is obvious from the NT that Christians initially understood Scripture to mean what only later was called the OT. When Paul repeated the tradition about Christ's death and resurrection, the "Scriptures" by which the Christian preaching was demonstrated were the sacred books of Israel (1 Corinthians 15). Scripture in this sense demonstrated the truth of the Christian claim in a number of different ways: by prophecy, by type and foreshadowing, by testimony lists, by allegory, and by simple proof-texting. No one method prevailed for employing the authority of the OT. Moreover, it began to be clear that final authority rested in the Christian preaching and not in the sacred writings thought to demonstrate it. The authority of the OT was neither rejected nor accepted in simple and absolute terms. Instead, it was only a Christianized OT that remained authoritative in the mainline development, which eliminated Judaizing

forms of Christianity and excluded gnostic and Marcionite forms of Christianity that rejected the OT and its God.

The authority of the OT, then, was made subservient to the authority of the Christian preaching. The next step was the transition from an oral form of that preaching to a written one. In other words, we must speak of the rise of a NT canon. The writings that eventually constituted the NT canon are, of course, older than the canon itself. And even at a time when the four gospels and a collection of Pauline epistles were regarded as authoritative, the oral form of the Christian preaching still functioned. Papias, for example, in the early 2d century tells us that he prefers a "living voice" to writings. It is also clear from the writings of Justin Martyr in the middle of the 2d century that the Synoptic tradition was still living apart from its incorporation in the written gospels. In the long run, however, the written form of the Christian preaching prevailed; and by the time of Irenaeus at the end of the 2d century we can speak confidently of a Christian Bible. For further discussion, see CANON.

The sort of authority vested in this Christian Bible can best be understood by speaking of the motives for regarding Christian writings as canonical. While the Church Fathers were agreed that canonical books are inspired, inspiration alone did not in their view constitute sufficient grounds for their inclusion in Scripture. The reason for this is quite simply that inspiration was thought to attach to other writings and was also required for the correct reading of Scripture. Instead, the chief criterion for canonical status was apostolicity. The Christian preaching was identified with the apostolic faith and came to be embodied in the writings of the NT. There were, of course, difficulties. Mark's apostolic credentials were vindicated by arguing that he preserved the preaching of Peter; Luke's, that of Paul. And writings purporting to be those of apostles but not widely accepted and demonstrably to one side of the theology of the greater Church had to be regarded as spurious.

What this means is that two further criteria for the authority of canonical books came into play. First, wide currency and acceptance in the churches played a role. Second, the Church's rule of faith increasingly determined the acceptability of the NT writings. Thus, apostolicity was required; acceptability was a factor; but orthodoxy became the central issue. The development that led to Irenaeus' definition of a Christian Bible at the end of the 2d century and Eusebius' list at the beginning of the 3d depends upon these three criteria. We must also reckon with the impact of the struggle with heresy that forced the greater Church to make the decisions that led to a biblical canon and to a rule of faith. The gnostics and Marcion forced the Church to decide which writings were apostolic and orthodox, and to widen the list of authoritative writings. The Montanists, who treated their inspired writings as authorities taking precedence over those of the apostles, forced the Church to develop the idea of a limited canon. The final step was to decide upon the details of the canon.

What is remarkable about this development is the role played in it by the theological tradition. While the rule of faith was identified with the message of Scripture and was authoritative because it cohered with the message of the Christian Bible, from another point of view it was the developing rule of faith that actually created a Christian Bible and that was posited as an authoritative norm for interpretation. Just as the authority of the OT had been available to earliest Christianity only when properly interpreted by the Christian preaching, so the Christian Bible had authority only when rightly read in accordance with the rule of faith. Scripture and tradition went together. There were, however, different views of what this meant in practice. For Tertullian (fl. 200) the rule set limits to the interpretation of Scripture and no meaning could be given Scripture that took one beyond the confines of the rule. On the other hand, for Origen (d. 254) the rule merely established the authoritative beliefs required of simple Christians, while it supplied both a point of departure for and a limit upon the flights of speculation appropriate for the "more perfect" Christians. In both cases Scripture, understood in accordance with the rule of faith, was authoritative. But its authority functioned for Tertullian to establish a doctrinal standard and for Origen to encourage speculations that moved toward the truth without pretending to have arrived at it.

The authority of Scripture was united not only with the developing theological tradition, but also with the liturgical life of the Church. From the earliest times Christians followed the practice of the Jewish synagogue in reading and commenting upon Scripture in their worship (Luke 4, Acts 13). Lectionary

systems began to develop in relation to the development of the liturgical year. And we gain the clear impression that preaching was based upon the lessons used in the liturgy. Melito of Sardis' *Paschal Homily* (late 2d century) explained the narrative of the Exodus in a Christian fashion. John Chrysostom (late 4th century) asked his flock to read ahead of time the lessons that were to be read and explained. The liturgical rites themselves, as they began to be fixed and organized, appropriated Scriptural language and themes. It is here that we should probably speak most confidently of the authority of Scripture in the early Church. Scripture in the liturgy did not so much decide theological and moral questions as shape the minds and hearts of worshippers. Such authority is persuasive, subtle, and hard to define. But it was central to the authority of Scripture in the early Church.

B. Authority and Validity

Implicit in arguing that the authority of Scripture in the early Church was always associated with the theological tradition and with the liturgical life of the Church is the conclusion that diversity obtained at every level. It is not going too far to say that no uniform canon of Scripture ever obtained during the first 600 years of the Church's history. A synod at Carthage in 419 established the canon of the NT as we have received it, but there are much later manuscripts that sometimes omit Hebrews and sometimes include the *Epistle to the Laodiceans.* In the East there long remained a tendency to reject Revelation. And the Syrian church's Bible at the beginning of the 5th century omitted not only Revelation but also 2 Peter, 2 and 3 John, and Jude. A second sign of diversity has to do with differing translations of the OT and with problems of textual variants in the whole of the Bible. The LXX took pride of place, but writers like Theodore of Mopsuestia (ca. 350–428) and Augustine (354–430) took seriously other Greek translations and the Hebrew original. Jerome (ca. 342–420), of course, turned to what he called the "Hebrew truth." Neither the absence of a uniform canonical list nor the existence of differing texts and translations seems really to have troubled the fathers of the Church. For them diversity did not prevent the recognition of a Christian Bible and of a unity of faith found in it.

The same recognition of diversity as no obstacle to unity characterized the way Scripture was interpreted. Even the decisions of the ecumenical councils should be understood this way. For example, at Chalcedon in 451 the Church arrived at an interpretation of Christ that would be true to Scripture and to the Nicene Creed. The Definition of Chalcedon, however, more clearly ruled out error than it defined truth. The views of Arius, Apollinaris, Nestorius, and Eutyches were excluded from orthodoxy; but the council in one way or another ratified the three strikingly different Christologies of Cyril, Theodoret, and Leo. We can only conclude that Chalcedon imposed no correct reading of the Scriptural account of Christ, but instead accepted three valid interpretations of Scriptural authority.

One particular problem revolved around the kind of interpretation that had authority. In general, the early Church assumed the authority of Scripture both at the level of the "letter" (the *historia,* or narrative meaning) and at that of the "spirit" (the *theoria,* or spiritual meaning). Nevertheless, after Origen's time we find an increasing emphasis upon retaining the narrative meaning not only in the Antiochene school but also in the exegetical work of figures like Augustine and Jerome. We also find a tendency to codify the various sorts of spiritual meanings that have authority. It is John Cassian, writing in the early 5th century, who first established the fourfold distinction of the narrative, tropological, allegorical, and anagogical meanings which became standard in the West during the Middle Ages. Despite certain tendencies towards standard and uniform views of Scripture and its authority, the early Church understood the authority of Scripture both as one that functioned within the theological and liturgical life of the Church and as one that allowed for considerable diversity. Scriptural authority was not so much a matter of propositions or of the application of principles to cases as a question of the way in which the lore of the church's past persuasively shaped the corporate life of Christians. (See further, *CHB* vol. 1.)

ROWAN A. GREER

BIBLICAL AUTHORITY IN THE MEDIEVAL CHURCH

The Church in the Middle Ages lived in and by the Bible (Congar 1967:86, Schüssler 1977:1). As the ultimate source of divine truth, Scripture set norms for society through nearly a thousand years (600–1517) of European history (Kropatschek 1904; Rost 1939). As the standard of literacy, it shaped Latin letters and intellectual life, and gave rise to one of medieval Europe's dominant groups, clerics who could read Scripture and who ordinarily learned their letters by way of the Psalms. As "the book," the Bible became paradigmatic for the handwritten codex and for early print, and as "the holy book," its sacred character attracted to it rich ornamentation and illustration, together with sacral functions in processions, oaths, and the like.

The conviction that Scripture formed both the source and the content of divine revelation underlay the whole of medieval European civilization. The ordinary function and influence of this authority require at least cursory attention before turning to questions of biblical authority in a narrower theological sense. Scriptural texts were invoked at almost every point in medieval civilization. Kings, princes, and prelates were understood to rule by the grace of God; subjects were expected to submit to authorities ordained by God (Rom 13:1) and to honor kings and governors (1 Pet 2:13–14, 17). These principles were combined with OT stories and prophetic oracles to produce a full range of teaching on the political and social order (Ullmann 1963; Schramm 1963; see Riché 1984b: 399–400 for a list of the most commonly cited texts). Institutions fundamental to medieval social and economic life, such as a tithe on all people, the anointing of kings, and the proscription of usury, derived their authority as well from OT texts (Chydenius 1965; Kottje 1965; Little 1984). Canon law, which governed the church and included such social matters as marriage and wills, drew equally upon principles enunciated in Scripture (Gaudemet 1984, with a tabulation of preferred texts; Izbicki 1984; Tierney 1967). Professed members of religious orders, the first order of medieval society and the chief exemplars of the Christian life, pledged themselves to observe the way of life set out in their respective rules and customs, documents understood to implement concretely the teachings of the gospel and the apostles, almost literally so in the case of Saint Francis (Chartier 1984; Leff 1985). Public conflict, whether it concerned church and state in the Investiture Struggle (Leclercq *CHB* 2:183–97; Robinson 1985) or religious poverty in the later medieval religious orders (Leff 1985), invariably drove all participants to seek out the support of biblical texts.

In two areas the text of Scripture dominated entirely. Public worship, the prayers said every day all across medieval Christendom by monks and clerics, were comprised largely of scriptural materials. Priests read through and preached from the gospels and epistles appointed for all the ordinary and special days of the church year, making the language of the Latin Scriptures second nature to most of them. Canons in cathedrals and collegiate churches were to sing the psalms and canticles of Scripture at appointed hours. Benedictine monks prayed the entire psalter each week and read through the entire Bible at least once a year in an evening cycle. Monastic life in particular came to be defined largely in terms of reading and meditating upon Scripture (Gy 1984, Leclercq *CHB* 2:183–97; Dubois 1984). In the later Middle Ages, the laity increasingly emulated these forms of public prayer by way of private "books of hours." Whether for show or for devotion, these books, which thousands of later medieval laypersons thought it fitting to own and sometimes to use, contained an accepted set of prayers derived directly from Scripture (for instance, the seven penitential psalms), or indirectly in the form of petitions and meditations that borrowed heavily from the language of the Bible.

Outside public and private worship, Scripture represented the endpoint of a clerical education, and from the 12th century onward the set textbook for what became the faculty of theology. In late antiquity, Augustine's *On Christian Learning* and Cassiodorus' *Introduction to Divine and Human Readings (Institutiones)* established the understanding and preaching of Scripture as the goal of a Christian education; by the 8th century, churchmen were nearly the only educators left in Europe, and the programs of Augustine and Cassiodorus therefore became paradigmatic for all of learning. The cultural revivals associated with Carolingian Europe (750–900) aimed, in the first instance, at acquiring a better text and a better understanding of Scripture. This goal was enunciated already in Charlemagne's *Admonitio generalis,* as well as in his document on letters *(De litteris colendis),* and restated throughout the 9th

century. Patronage from the court and from important churchmen promoted biblical scholarship in the 9th century, though most of it remained centered still around compiling commentaries based upon the fathers (Contreni 1983; Riché 1984a).

It was the revival of learning in the 12th century that conferred upon Scripture an authoritative role beyond that of sourcebook for divine revelation and public worship. Scripture now emerged as the textbook for an academic discipline, the *raison d'être* for a separate faculty of theology (Smalley 1983; Châtillon 1984; Verger 1984). Masters of theology were to teach the "sacred page." This way of designating the Bible, rooted in usage going back to the fathers, came to dominate in university circles, distinguishing the "sacred textbook" used by theologians from the texts in grammar, logic, and law taught by artists and lawyers (de Ghellinck 1947). Masters of theology were expected to teach "ordinarily" the text of some book of the Bible, often choosing one from the OT and another from the NT in the same year, after bachelors of theology (modern–day graduate assistants) had first led students through a "cursory" reading of the entire text of Scripture (Glorieux 1968). Masters commonly focused their attention on the Psalms and the Pauline epistles as those books richest in doctrinal content, though the Wisdom books and the Gospels likewise drew attention as fruitful for elucidating the moral dimensions of the Christian way of life (Smalley 1985; Smalley 1986). To facilitate understanding of the "sacred page," 12th-century masters, first in Laon and then in Paris, prepared an "ordinary gloss," an abbreviated standard commentary written in margins and between lines, which armed masters and students with the essential interpretations laid down by the fathers and earlier masters. To facilitate the use of the "sacred page," another master (usually said to be Stephen Langton, d. 1228) divided the text into chapters for ease of reference, while still others organized alphabetized glossaries and concordances to access key terms. Basic to this entire scholastic enterprise was the persistent conviction that all of "theology" (or "God-talk"), however philosophical or speculative in character, was only introductory to and derived from the study of the "sacred page." Every medieval master of theology, be it Thomas Aquinas or Martin Luther, took these convictions and methods for granted.

All the foregoing examples of Scripture's authoritative place in medieval society beg a prior question: the accessibility of its text. Throughout the Middle Ages in the west, the accepted text was Jerome's translation of the Bible into Latin, widely known therefore as the *Vulgate* (Vg), though readings from older Latin translations (the *Vetus Latina* [VL]) circulated by way of earlier commentaries. Despite notions about three sacred languages, occasional forays into Greek by a few extraordinary intellectuals, conversations and disputes with Jews from time to time about the Hebrew original, and a mandate at the Council of Vienne in 1311 that schools appoint language instructors, the Latin Bible remained the norm for both religious and intellectual life. Humanists in the late Middle Ages (Lorenzo Valla, Erasmus of Rotterdam, and Reuchlin), who generally found themselves at odds with the Latinate masters of theology, first promoted a return to the Greek and Hebrew originals and a philological approach to the text. It was the protestant reformers who successfully imported these humanist aims and approaches into faculties of theology.

The Bible is a large book and the reproduction of it by hand costly and time consuming. It was only in the 9th century that the whole of it was commonly contained in a single great codex, in a corrected and legible script. This revision in format was accompanied by an attempt (usually associated with the names of Alcuin and Theodulf) to establish an accurate text (Loewe *CHB* 2:102–54). Twelfth century schoolmen produced the glossed Bible, a format preserved in early modern printed editions, but whose origins remain unclear and poorly investigated. Theologians at Paris in the early 13th century oversaw the production of Bibles more uniform in format, with divisions into chapters and aids such as glossaries of Hebrew terms. It was the second third of the 13th century that witnessed the production at Paris of complete Bibles in formats small enough to be called "pocket editions" (Light 1984)—possibly products indirectly of the new university (this still disputed), certainly indicators of a new emphasis upon pastoral education and preaching.

Translations into the vernacular languages were numerous and proceeded apace from the 12th century. This was a matter of cultural importance for the Middle Ages, not a product solely of the reformation; but

its history belongs properly to the study of the individual vernaculars (useful orientation in *CHB* 2:338–491; *Lexikon des Mittelalters* 2:88–106). For the question of authority, the issue of vernacular translations is confusing and often misrepresented. The Church insisted throughout that the Latin text employed in public worship and in the schools represented the only authoritative version, a point made strongly over against Slavic missionary inquiries already by Pope Nicholas I (858–67). But vernacular versions were permitted for private devotional purposes, an attitude presumed by Pope Innocent III in 1198 (Boyle 1985) and defended on later occasions, for instance, by Gerard Zerbolt of Zutphen in behalf of the Brothers of the Common Life around 1400 (Jellouschek 1935). This became problematic only when certain groups (Waldensians, Lollards) claimed the right to preach from vernacular versions without ordination, or used them to defend doctrinal positions contrary to receive orthodoxy (Lollards, Hussites, see Hurley 1960). For the great majority of medieval people, access to Scripture was not a matter of vernacular translation—they remained largely illiterate—but of vernacular preaching and still more of illuminated, sculpted, and painted representations of the biblical stories. Toward the end of the Middle Ages, a kind of structured "picture Bible" *(Biblia pauperum)* became very popular in manuscript and early print.

The more focused question of biblical authority came to discussion, and increasingly to debate, in the context of a European-wide church where the divinely conferred primacy of Scripture was taken altogether for granted. Throughout the Middle Ages churchmen said, with Isidore of Seville (d. 637) or Henry of Ghent (d. 1297), that the Holy Spirit (Beumer 1968:33) or God himself (Schmaus 1960) was the author of Holy Scripture. Despite a small dispute in the 9th century over how "error-free" Scripture had been transmitted and some ambiguous remarks in the prologue to Peter Abelard's *Sic et Non,* the question of how this worked, how inspiration took place and to what effect, was rarely raised (Beumer 1968:33, 35). While Thomas Aquinas apparently saw and explored some of the potential difficulties, it was Henry of Ghent who first tried to account for the process by distinguishing primary (divine) and secondary (human) agents in the writing (Beumer 1968:39–40). But this problem was little explored: most churchmen and masters contented themselves with general, and usually forceful, declarations on the divine authorship of Scripture.

Yet that same Spirit of God they also saw at work in the interpretation of Scripture offered by the fathers, the councils, and the prelates of the Church (Congar 1967:125–37). Writers would place the four gospels in parallel to four fathers of the church, and treat the latter as an extension of the former (de Lubac 1959:1.56–57 and passim). Duns Scotus could explain that the same Spirit responsible for the recorded words of institution at the Lord's Supper inspired the prelates at Lateran Council IV to settle on the difficult term "transubstantiantion" as their proper meaning (Congar 1967:131). Theologians generally understood the difference between a divinely authored "canon" and inspired Church Fathers, a distinction found prominently in Rupert of Deutz (d. 1129) and very commonly in the later Middle Ages (Oberman 1963). But it came to expression more often in polemical circumstances, where a master was attempting to defend from Scripture a position contrary to another affirmed elsewhere by fathers or doctors of the Church. The reigning assumption was that one God and one Spirit worked continuously both in Scripture and in the subsequent interpretative traditions of the Church.

Medieval churchmen, in sum, rarely or never imagined Scripture coming to them "alone"; Scripture came by way of the explanations of the fathers (hence the gloss), the teachings of prelates and masters, and the practices of the church. It was possible therefore to affirm the divine authority of Scripture while assuming the framework through which it was transmitted. Canonists did this when they alluded to the singular authority of Scripture, but focused primarily on the Church's laws: Gratian (the textbook for medieval canon law), for instance, conceded Scripture this primary position but never included a Scriptural text as a "canon" in its own right, though he cited it fifty times in explanatory passages. So too, all the masters of theology (Thomas Aquinas, for instance, in the opening arguments of his *Summa*) did the same when they described theology as a "science" (a coherent body of knowledge, or scholarly discipline) derived from and built upon Scripture. Bonaventure, among 13th-century masters, was particularly insistent upon the authority and fullness of Scripture (de Voogt 1954:17–22).

Questions pertinent to Scripture's "primacy" and scope arose in different ways in the later Middle Ages. The first concerned its rank in a series of authoritative sources. All medieval thinkers, including jurists and philosophical theologians from the time of Abelard (Tierney 1967; Schüssler 1977) consistently placed it first. Bonaventure, Thomas Aquinas, and numerous other theologians declared at times that nothing was truly binding if not authorized by Scripture. But at the end of the 13th century, theologians began to separate out the different strands that went into the making of Christian revelation. This raised two questions common to 14th and 15th century writers. First, was Scripture a "sufficient" source of divine revelation? Nearly all masters held that it was "materially sufficient," meaning all that was required for divine truth and human salvation was contained in some sense in Scripture (de Voogt 1954:148ff and passim; Schüssler 1977:73–75). Canonists in particular, such as Panormitanus (d. 1445), held to the traditional declarations of Scripture's primacy and sufficiency, and Luther was later to draw specifically from him for his early apologetic (Schüssler 1977:172ff).

The essential question in later medieval discussion concerned the relations between "Scripture" and "Church" (meaning tradition, authority, and practice). Henry of Ghent raised the question explicitly (Schmaus 1960), as did Gerard of Bologna (d. 1317), Ockham, and nearly all subsequent theologians (de Voogt 1954:356–60; Schüssler 1977:92–130). All sought in some way to underscore their mutuality: Scripture came to humankind by way of the Church, even was authorized by the Church; yet Scripture alone was the source of the divine truths taught by the Church. Some, like Ockham, emphasized the primacy and infallibility of Scripture over against fallible prelates; others, like Jean Gerson (d. 1429), declared Scripture binding as the Church interpreted and transmitted it. A greater sense of distinction between the "canon of the Bible" and the "teachings of the fathers or the church" emerged, thus in Gabriel Biel (Oberman 1963), even when no tension was presumed. In the late Middle Ages, tensions between the two surfaced more often. Wycliff and Hus set the authority of Scripture over against Church and tradition (de Voogt 1954:168–99, 218–232); conciliarists deployed an infallible Scripture against fallible popes (Schüssler 1977:184–224); and certain churchmen (especially Franciscans) isolated more clearly "apostolic" or "oral" traditions to authorize non-Scriptural teachings, especially on Mary (Oakley 1979:148–57; Beumer 1962:62–73). But the assumption that Scripture was divinely authored, uniquely authoritative, and transmitted by way of the Church and her traditions prevailed, despite inherent tensions, to the time of Luther and the Reformation.

JOHN VAN ENGEN

BIBLICAL AUTHORITY AND THE PROTESTANT REFORMATION

The doctrine of Scripture was a significant theological issue in the Reformation and post-Reformation periods. The polemical writings of Protestants and Roman Catholics make it clear that disagreement over the nature of Scripture's authority in the Church was at the root of many other theological conflicts. The authoritative status of Scripture, its relation to the tradition of the Church, to human reason, Christian experience, and the proper means of Scripture's interpretation formed a cluster of concerns that fostered intense debates in these periods. The ongoing implications of these disagreements have continued to affect the Christian Church through the subsequent centuries.

———

A. Luther
B. Calvin
C. Post-Reformation Protestant Theologians

———

A. Luther

The first generation of Protestant Reformers did not write systematic treatises on their views of Scripture. Martin Luther (1483–1546), who broke decisively from the Roman Catholic Church and its medieval theological formulations did, however, stand in continuity with Catholicism in recognizing the Bible's divine authority and inspiration. Yet Luther did not share the Roman Catholic view of the nature and purpose of Scripture and its appropriate interpretation.

Luther looked to the early church theologians and agreed with them that the Bible is inspired by God for the purpose of proclaiming the gospel of salvation in Jesus Christ. It further serves as the Christian's normative guide for living a life of faith. For Luther, salvation is found in the message of Scripture itself rather than, as with the Roman view, through the teachings of the Church and the pronouncements of the church hierarchy, includ- ing the Pope. As Luther stated in his 1519 Leipzig debate with the Catholic

theologian Johann Eck: "By divine law we are forbidden to believe anything which is not established by divine Scripture or manifest revelation." The authority of Scripture was primary for Luther since "the Scripture is the womb from which are born theological truth and the Church." It is "the Word of God" that "preserves the Church of God" (WA 3.454; 259). The Bible is the "touchstone," "ruler," and "plumb line" or "Lydian stone by which I can tell black from white and evil from good" (See Rogers and McKim 1979:76). For Luther, all authorities—including the early church theologians and the apostles themselves—must be tested according to their fidelity to Scripture. For "their authority is worth most when it has clear scriptural support."

Luther found Scripture authoritative because of its content: Jesus Christ. In Jesus Christ, God had graciously condescended to be revealed to humankind as a human being. The Christian Gospel as found in Scripture presents Jesus Christ to the world. Luther's view of Scripture rested on the analogy he drew between the Bible and the person of Christ. He wrote that "the Holy Scripture is God's Word, written, and so to say 'in-lettered,' just as Christ is the eternal Word of God incarnate in the garment of his humanity. And just as it is with Christ in the world, as he is viewed and dealt with, so it is also with the written Word of God" (WA 48.31).

Luther's christological focus in his theology took on special importance as he made this connection between the two natures of Christ and Scripture. For as "the divinity and power of God are embedded in the vessel of Christ's incarnate body, so the same divinity and power of God are embedded in Scripture, a vessel made of letters, composed of paper and printer's ink. In order to grasp the biblical revelation in its fullness it is necessary to conceive of Scripture in terms of the divine-human nature of Christ" (WA 3.515; 403–4).

This meant for Luther that the limitations and "humanity" of Scripture were no barriers to its conveying God's divine Word of salvation. By adopting an incarnational means of communicating with humanity, God used human beings to speak to other human beings. Luther could exercise scholarly criticism in dealing with apparent discrepancies and even "errors" in Scripture. His stress was on the central articles of the Christian faith conveyed by Scripture—centering in the message of the Gospel.

B. Calvin

John Calvin (1509–1564) shared with Luther the emphasis on Scripture as the Word of God and the supremely authoritative source for Christian guidance on what to believe and how to live. Calvin's understanding of God's revelation in Scripture was enhanced by his training as a Christian humanist and the insights he gained into the nature of communication and how to study ancient documents (Rogers and McKim 1979:89–96; McKim 1984:44–50).

Calvin's views on the need for Scripture are intimately connected with his views on the knowledge of God. Scripture is needed to reveal God's will since human sin has smothered *(suffocari)* and corrupted *(corrumpi)* the true knowledge of God that is implanted within all persons as a "seed of religion" or "sense of divinity" (Calvin 1536:1.3–4). The will and mind reject the true knowledge of God and become "puffed up and swollen with all the more pride" so the mind is "like a labyrinth." No natural theology or human reasoning can cause the sinner to come to a true knowledge of God.

God has provided "another and better help" to direct humans "aright to the very Creator of the universe" (1.6.1). God has given the Bible to bring people to a true knowledge of God. Scripture functions as "spectacles" by "gathering up the otherwise confused knowledge of God in our minds, having dispersed our dullness" so it "clearly shows us the true God," according to Calvin. Thus the Scriptural revelation is necessary to communicate what God's revelation in nature cannot communicate because of human sin. Scripture is a gift of God's grace to fallen humanity.

Calvin's background training as a Christian humanist affected his way of studying the ancient biblical texts. He understood Scripture as "the Word of God" (1.7.1) that has "flowed to us from the very mouth of God" by the ministry of the biblical writers (1.7.5). Scripture is superior to all human wisdom. In it, "the sublime mysteries of the Kingdom of Heaven came to be expressed largely in mean and lowly words" (*contemptibili; humilitate* 1.8.1).

Calvin recognized that Scripture communicated a true knowledge of God and that this divine message came through human words. Of help for his understanding of these two dimensions was the concept of "accommodation" *(accommodare),* a term drawn from the Latin rhetoricians and jurists which Calvin learned through his humanist studies. Ancient rhetoricians "accommodated" the content of their speeches to the "capacities" *(captus)* of their hearers. So, in Scripture—God's divine speech to humanity—God has accommodated God's self to human capacity by communicating with humans in a way (through words) adapted to their limited understandings. The divinely appointed human authors of Scripture express God's divine message in human words and thought forms. Thus the infinite distance between God and humanity has been overcome. The "uncultivated and almost rude simplicity" of Scripture was not a barrier to God's revelation. The simple, human style was the very *means* of God's revelational communication. For Calvin, Scripture's content and function was more decisive than the form of its language. God's condescension and accommodation to human capacity in Scripture is an expression of God's love for humanity. The supreme example of God's accommodation is God's incarnation in Jesus Christ.

The authority of Scripture for Calvin flowed from this understanding of Scripture's nature. He rejected the Roman Catholic view that the authority of Scripture is conferred by the Church (1.7.1). For Calvin, "the church is 'built upon the foundation of the prophets and apostles' (Eph. 2:20)." Thus, "if the teaching of the prophets and apostles is the foundation, this must have had authority before the church began to exist" (1.7.2). The Scriptures have authority when humans "regard them as having sprung from heaven, as if there the living words of God were heard" (1.7.1). Scripture is "God's Sacred Word" (1.7.4), "set down and sealed in writing" (4.8.6).

Scripture's authority is recognized only through the work of the Holy Spirit. The internal testimony of the Holy Spirit *(testimonium Spiritus sancti internum)* is the means by which the origin and authority of Scripture become certainties. Calvin wrote: "We ought to seek our conviction in a higher place than human reasons, judgments, or conjectures, that is, in the secret testimony of the Spirit" (1.7.4). For the "highest proof of Scripture derives in general from the fact that God in person speaks in it." The prophets and apostles did not "dwell upon rational proofs" as they spoke. Instead, "the testimony of the Spirit is more excellent than all reason" and "the same Spirit, therefore, who has spoken through the mouths of the prophets must penetrate into our hearts to persuade us that they faithfully proclaimed what had been divinely commanded."

While Calvin recognized there are "human testimonies" that point to Scripture as coming from God (miracles, prophecy, etc.; 1.8), but he believed these "arguments" for the credibility of Scripture were insufficient or "vain" in themselves. External arguments are only "secondary aids to our feebleness" (1.8.13) and are useful to believers who had already accepted Scripture's authority. But "Scripture will ultimately suffice for a saving knowledge of God only when its certainty is founded upon the inward persuasion of the Holy Spirit." This faith in Scripture's authority is intimately related with faith in Jesus Christ since it is only through Scripture that we know of Christ. Faith for Calvin was personal and relational, "a firm and certain knowledge of God's benevolence toward us, founded upon the truth of the freely given promise in Christ, both revealed to our minds and sealed upon our hearts through the Holy Spirit" (3.2.7). Believers are "more strengthened by the persuasion of divine truth than instructed by rational proof." So "the knowledge of faith consists in assurance rather than in comprehension" (3.2.14). Thus for Calvin, Word and Spirit belong inseparably together. The Holy Spirit does not witness apart from the Word; and the Word has no power or effect apart from the work of the Holy Spirit.

Calvin's emphasis on the divine origin of Scripture's message led him to stress Scripture's inspiration. He wrote of "the mouth of the Lord" and "God speaking in Scripture," and in some commentaries he used the term "dictation" to describe this action. Most interpreters agree that Calvin rejected the idea of mechanical dictation since he much more frequently stressed the involvement of the biblical writer's whole personality in the composition of Scripture. His predominant emphasis in using the term "inspiration" is on the divine doctrine or gospel message that humans have expressed in their own words, thought forms, and contexts (see 1.6.2).

In sum, for Calvin, the authority of Scripture lies in its power as God's Word, centered on God's promise and revelation in Jesus Christ, and made known fully through the work of the Holy Spirit.

C. Post-Reformation Protestant Theologians

The followers of Luther and Calvin developed more fully the thought of their mentors on many theological topics. Faced with the Counter-Reformation of Roman Catholicism and later in the 17th-century with new developments in science and philosophy, post-Reformation Protestant theologians were concerned to secure the foundations of their doctrinal views. This concern led to an increased emphasis on establishing the authority of the Bible.

Insofar as the second-generation Reformers sought to use the approaches of the Aristotelian philosophy developed in the medieval universities, they have been termed "Protestant scholastics." These theologians were drawn to the resources of Aristotelianism in order to counter the arguments of their opponents by using the same methods. Of importance here was a heavy reliance on the use of reason as a means of establishing proof. Eventually, Protestants attempted to prove the authority of the Bible by using the same type of Aristotelian arguments put forth by Roman Catholics who sought to prove the authority of the church.

A key dimension of the post-Reformation Protestant theologians' approach to biblical authority was the doctrine of inspiration. The Bible gained its authority because it was divinely inspired by God. Scripture is God's Word, and as God's self-communication, Scripture can be expected to share in God's own characteristics. Chief among these for the scholastic theologians were attributes of Scripture such as its complete truthfulness or inerrancy. In particular, these theologians wished to affirm that Scripture's inspiration was completely under God's control and that biblical writers wrote under God's specific, definite command and impulse; that the complete contents of Scripture were the product of God's "breath" or "inspiration" *(theopneustos),* so there is a "plenary inspiration" of Scripture; and therefore, the words of Scripture themselves are directly inspired by God (verbal inspiration). If the inspiration of Scripture is established in this way, these theologians believed Scripture then carried with it God's own truthfulness, power, and authority (Preus 1970:263–65).

For these dogmaticians, the Holy Spirit suggested to the authors of Scripture what they were to write and how it should be written so that as the Lutheran theologian Abraham Calov (1612–1686) wrote: "There is no word of Scripture, not even a jot, that does not occur by divine inspiration" (*Biblia Novi Tesatmenti Illustrata,* II, 1034 in Preus 1970:281). Both the content and "the words also, which are placed in their mouth and dictated to their pen by the Holy Spirit, were communicated to the individual amanuenses, or men of God" (*Biblia* II, 1547). At the same time, these theologians wished to say that the differing temperaments *(ingenia),* feelings *(studia),* and differences in background *(nationes)* of the biblical writers are reflected in Scripture as well (Preus 1970:290–91). The heavy emphasis on verbal inspiration has led a number of scholars to view the post-Reformation theologians as teaching in essence a "dictation" theory of inspiration in which there is no real room for the human personalities of the biblical authors to hold a significant place (Preus 1970:291–92).

Post-Reformation Reformed theologians also grounded Scripture's authority in its inspiration. Francis Turretin (1632–1687) stressed the necessity of establishing Scripture's authority, which he saw as "the primary foundation of faith" (*Institutio* 2.12.1 in Rogers and McKim 1979:176). Amandus Polanus (1561–1610) wrote that "The authority of Holy Scripture is the dignity and excellence pertaining to Holy Scripture alone, above all other writings, by which it is and is held to be *authentic,* i.e., infallibly *certain,* so that by absolute necessity it must be believed and obeyed by all because of God its Author" (*Particiones theologicae* 1:16; Heppe 1950:21).

Since Scripture is God's Word and is inspired directly by God, it gains its authority solely from God and not, as in the Roman Catholic view, from the church's acknowledgment of the canon of Scripture. Yet for Turretin and other Reformed theologians of this period, the function of the Holy Spirit in regard to the composition of Scripture was to lead the Apostles "into all truth so that they might not err" (Turretin, *Inst.* 2.4.24 in Rogers & McKim 1979:176). Turretin argued that "unless unimpaired integrity characterize the Scripture, they could not be regarded as the sole rule of faith and practice" (*Inst.* 2.5.7). This approach led

Reformed scholastics to a great concern with establishing rational proofs for Scripture's inspiration and inerrancy. For Turretin, "Before faith can believe, it must have the divinity of the witness, to whom faith is to be given, clearly established, from certain marks which are apprehended in it, otherwise it cannot believe" (*Inst.* 2.4.13). Turretin proposed a number of "external marks" such as Scripture's "antiquity" and "duration" to testify to Scripture's inspiration and inerrancy.

This in turn led to a strong concern to establish the purity of the biblical texts and the original autographic texts of Scripture. Turretin argued that God had providentially preserved the books of the canon so that they accurately reflected the original manuscripts of Scripture. He acknowledged that errors in biblical manuscripts "crept into the books of particular editions through the negligence of copyists or printers." Yet, these "corruptions and errors" could be "restored and corrected by any collation of various copies, or of Scripture itself and of parallel passages" (*Inst.* 2.5.4).

The implication of this approach for Turretin was to insist on the divine character of even the vowel points of the Hebrew OT (which Turretin believed had been part of the original autographs of Scripture). This view was given confessional status in the Helvetic Consensus Formula (1675) which in answer to the rising tide of textual criticism of the Old Testament, asserted that the inspiration of the "Hebrew Original of the Old Testament" is found "not only in its consonants, but in its vowels—either the vowel points themselves, or at least the power of the points." The Bible was described as inspired "not only in its matter, but in its words" (see Rogers and McKim 1979:184).

In the Protestant scholastic doctrine of Scripture, the perfection of Scripture was the most crucial dimension of Scripture's authority. The doctrine of the "inerrancy" of Scripture was a way of asserting Scripture's authority on the basis of its complete truthfulness and accuracy in all details. As Calov wrote, "Inasmuch as Scripture has been written by a direct and divine impulse and all the Scriptures recognize as their author Him who cannot err or be mistaken in any way (Heb. 6:18), no untruth or error or lapse can be ascribed to the God-breathed Scripture, lest God Himself be accused" (*Systema,* I, 462; Preus 1970:341). The Lutheran Johann Quenstedt (1617–1688) spelled it out fully:

> The holy canonical Scriptures in their original text are the infallible truth and are free from every error. That is to say, in the sacred canonical Scriptures there is no untruth, no deceit, no error, not even a minor one, either in content or words, but each and everything presented to us in Scripture is absolutely true whether it pertains to doctrine, ethics, history, chronology, topography, or onomastics, and no ignorance, no lack of understanding, no forgetfulness or lapse of memory can or should be ascribed to the amanuenses of the Holy Spirit in their writing of the Holy Scriptures (*System,* P.I, C.4, S.2, q.5; Preus 1970:346).

Some scholars have seen the precision and systematization of the post-Reformation doctrine of Biblical authority as an elaboration and clarification of directions initially spelled out by the first generation Reformers, Luther and Calvin. Other have argued that Protestant scholasticism with its emphasis on the place of reason in theology and stress on verbal inspiration and the inerrancy of Scripture as the basis of biblical authority deviated significantly from the views of the early Reformers and set the basis of Biblical authority on a footing that was not consistent with the contents of Reformation theology. This was to lead to increasing difficulties as the further impacts of 17th-century revolutions in science and philosophy coupled with the later development of biblical criticism raised new questions about the nature and authority of the Bible.

_____

A. The Period of Orthodoxy

1. Protestant Orthodoxy. In continental Protestantism of the post-Reformation period the orthodox theologians developed systems of a scholastic type in which the loci (dogmatic themes) were arranged in analytical manner, starting from the causes and progressing to the effects. Already in J. Gerhard's *Loci theologici* (1610–25) the system is fully developed (Hägglund 1951). Holy Scripture occupies in it a prominent place. Of the two sorts of revelation, natural and supernatural, the last mentioned is the decisive. And "divine revelation, as it is handed down in the revealed word, is the effecting cause of supernatural theology" (*Loci theologici*, Prooemium §18). Scripture itself is the instrumental cause. The principle of the Reformation that "Scripture alone" is the source of faith in this way is brought into an (Aristotelian) system. The equation "Scripture = Word of God" is also preserved. Gerhard maintains that "between the word of God and holy Scripture as such there is no real difference" (*Loci theologici,* 1.1, §7). Therefore the Bible is inerrant in matters of faith. In all this, however, an important shift from Luther's understanding of Scripture has happened: whereas for Luther the Bible becomes the living word of God in being preached and heard, in the orthodox systems (see also Hutter 1961) Scripture in its written form is identified with revelation (Ratschow 1964–66). Against the spiritualists, the orthodox theologians defended the efficiency of the written word. Against the Catholic propaganda which claimed that the Bible cannot be understood without the authority of tradition, the Protestants maintained that it is perspicuous to everybody and unequivocal in itself (Ratschow 1964–66:1.123ff). The inner testimony of the Holy Spirit insures its effectiveness (Kirste 1976). The analogy of faith (cf. Rom 12:6) is the guiding principle for understanding the sense of a biblical sentence in the light of the whole canon. In its late phase, orthodoxy defended the integrity of the Bible by the dogma of verbal inspiration (e.g., J. B. Carpzow: every word is directly dictated to the biblical writers by the Holy Spirit) against the rising criticism. Even the vowel points of the Masoretes were taken for inspired (J. Buxtorf). Orthodoxy lost its predominance on the continent by the end of the 17th century, though it still found its defenders in the 18th. But one may not undervalue orthodox Lutheran piety even in the late phase. An example is J. S. Bach, who in his music shows himself as a believing interpreter of the Bible in the way of Luther (Besch 1950; Petzold 1985; Voigt 1986).

2. Reformed Positions. The reformed wing of orthodoxy shared the principles regarding the authority of the Bible with the Lutherans. The Consensus Helveticus (1675) is the most rigid defense of the inerrancy of Scripture. But the reformed dogmatic tradition also knew some special doctrines which had a far-reaching influence on the understanding of the Bible and its authority in England, the Netherlands, Scotland, and (later) the United States. One of the most important was *federal* (or covenant) theology, which originated in Switzerland with the reformers Zwingli and Calvin but was dogmatically developed by dogmatists like P. Melanchthon, H. Bullinger (Baker 1980), Zwingli's successor in Zürich, and C. Olevian in Heidelberg. Later it spread over all reformed territories and was shared by the Puritan W. Perkins and the Dutch theologians F. Gomarus and, above all, J. Coccejus. The Westminster Confession (1647), art. 7, made innerancy a part of the official doctrine of the church (Schrenck 1923; Harinck 1986). The federal theology distinguished two covenants: the general or natural covenant between God and Adam/Noah (which is destroyed by the Fall), and the covenant of grace (which God renewed with Abraham and fulfilled in Christ). Important for its understanding is Melanchthon's theory of mutual obligation: the believer who by baptism belongs to the covenant is obliged to fulfill its commandments. Another reformed doctrine, the theory of double predestination (the greater part of mankind is predestined for doom, the smaller one is elected to be saved by grace), aggravated the problem for the believer how he might know that he would be saved. A legalistic understanding of the Bible crept in—against the intentions of both Luther and Calvin. Legalism was partially reinforced by the continuance of pre-Reformation attitudes to the Bible which took it as a book containing rules of conduct. There was also a deep-rooted conviction—which originated with Zwingli and Calvin—that the whole life of the church, starting with the liturgy and ecclesiastical organization, but including the daily behavior of every believer, had to be molded on the model of Scripture.

3. Puritanism. Puritanism, as it originated in England in the 16th century, reached its largest political influence during the period of the Commonwealth (1649–60), was repressed under the Restoration, and found a late working field in America far into the 18th century. It was the most rigid movement impressing the reformed rules of life upon church, state, and people. It became the more vigorous as it encountered a strong opposition and repression from the Anglican state church and its hierarchy under Queen Elizabeth I, King James I, and King Charles I's archbishop Laud.

At its best, the Puritan movement was a party of clergymen and laypeople in the Church of England striving to carry into effect the reformation program of "scripture alone" (Ryken 1986:137–54) and to live a spiritual life according to the Bible (Watkins 1972). In the Westminster Confession, art.1, the reformed doctrine of Scripture is preserved (Rogers 1966–67:257–455). At its worst, it was strictly legalistic, as can be seen in the narrow rules for Sabbath observance (Solberg 1977; Wagner 1982). The Puritans were inclined to use the Bible (especially the OT; Selbie 1953) as a book of laws, culminating in the decalogue. For the separatist groups, the NT delivered the direct model of church organization. But Puritanism did much for spreading knowledge of the Bible in England. The famous Geneva Bible (a work of the Marian exiles in Geneva, 1560; Wilson 1976:122–25), which strongly influenced the officially competing KJV (1614; Wilson 1976:145–48), was a Puritan work (*CHB* 3:141ff). That every layman—even the soldier in Cromwell's army with his pocket Bible—could read the Bible himself and became, at least partially, independent from the sermons in which his parson explained it to him, was a Puritan achievement.

Since 1630, the date of the Puritan-sponsored migration to the Massachusetts Bay, the Bible played a decisive role as the basic authority for developing an ideology of the New World. Whereas the spiritualist Quakers failed to build up durable theologico-social structures in their settlement in Philadelphia, the Puritans in Boston developed the concept of the New England people as the people of the covenant and God's chosen nation (Miller 1933, 1937). Millennial expectation, which was impressed in everybody's mind by reading the Bible, helped to form the conscience of a messianic nation (Bercovitch 1978; Stout 1982). The OT supplied the figure in ancient Israel of the New Israel, to be identified with the American Puritans. For the individual was reserved a personal salvation by grace which could be "prepared" for by listening to the preached Word and being a loyal citizen.

4. Spiritualism. From the beginnings of the Reformation, orthodox Protestant theology fought a continuing struggle against spiritualism. Whereas for the reformers the Word itself, as contained in the letter of the Bible, was the bearer of the Holy Ghost and capable of effecting belief in the heart of the hearer, for the followers of the mystic-spiritualist tradition, the "dead letter" lacked any force; the Spirit was kindled like a candle in the heart of the believer. Such spiritualism was to be met with in different degrees: from the mild, Lutheran type of a K. von Schwenckfeld or H. Rahtmann to the radical form of a S. Franck or G. Fox, the founder of Quakerism, who denied to the Scripture any independent authority and relied on the "inner light" as the only saving power in man. The mild spiritualism—to which the Lutheran type of mysticism such as J. Boehme's is related (Pältz 1965)—did not devalue the Bible, but maintained that the utter word cannot be efficient unless the Holy Spirit is opening the heart of the hearer (cf. Grützmacher 1902). Radical spiritualism could sometimes slip into secular revolutionary activity, as with T. Müntzer in the time of the Reformation, or the Ranters and Diggers in England during the Commonwealth. In the main, spiritualism did not win very many followers in the 17th century, and its radical wing had not the power to endanger the high authority of the Bible in the Protestant countries.

5. Millenniarism. A phenomenon that for a long time escaped notice in modern scholarship is the apocalyptic trend in the 17th century which can be observed in different countries. On the continent theologians like J. V. Andreae (1586–1654) J. H. Alsted (1588–1638) and J. A. Comenius (1592–1670) had millenarian ideas (Firth 1979:204–13). Later in the century the mystic spiritualists (A. von Franckenberg, P. Felgenhauer, C. Hoburg, F. Breckling, J. G. Gichtel, Q. Kuhlmann, E. and J. W. Petersen) spread their visions of a coming millennium (eschatological reign of Christ of a thousand years) according to Revelation 20 (Wallmann 1986:338ff). Paracelsus, V. Weigel, and J. Böhme had had the same expectations. In England (Ball 1975) during the civil war eschatologically oriented sects like the Fifth Monarchy Men and the Muggletonians (Hill 1972; Hill, Reay and Lamont 1983; Hill 1986:253–300) searched the book of Daniel and feverishly expected the imminent coming of the glorious reign of Christ. But still an Anglican theologian like J. Mede could write an influential chiliastically oriented commentary on Revelation (Firth 1979:213–28; Oberdieck 1985:138ff), the Puritan R. Baxter was likewise a millenarist (Lamont 1979), and even Isaac Newton took a lively interest in the topic in his private religious studies (Manuel 1974; Jacob 1976:100–142; Westfall 1981:309–30, 815–30). The contemporary "scientific" endeavors for a universal chronology relied totally upon the OT. J. Ussher's *Annales Veteris Testamenti* (1650) is the best known example (Barr, 1984–85), but W. Ralegh in his *History of the World* (1614; Fussner 1962:191–210) also relied completely on biblical chronology. Joseph Scaliger in his *Opus novum de emendatione temporum* (1583) and later Newton used astronomical calculations to support the biblical data.

6. Roman Catholic Exegesis. For Roman Catholic exegesis the decisions of the Council of Trent (1545–48) remained obligatory. The Vulgate was declared the official version for dogmatic purposes in the church; it included the apocryphal books of the OT as contained in the LXX. In contrast to the reformed churches, the Bible was not the only authority; the oral ecclesiastical ("apostolical") tradition gained the same, if not a higher doctrinal importance (F. J. Crehan in *CHB* 3:199ff). The reading of the Bible among laypeople was in no way furthered by the official church; during the Counter-Reformation it was even suspected as indicating a hidden Protestantism. But the dissemination of Protestant translations in the vernacular languages gave impetus to the production of dogmatically inoffensive Catholic translations in different countries. Only part of them received official recognition (because Pope Paul V in 1559 had forbidden publication of a vernacular edition without formal allowance of the Holy Office). In contrast to the Protestant stress on the literal sense of Scripture, the Roman Catholic tradition preserved the fourfold sense. Patristic exegesis was held in high esteem. In the Jesuit universities founded in the period of the Counter-Reformation, biblical exegesis had a certain, if not prominent, place. The most influential commentator in the Baroque age of nearly the whole Bible was C. a Lapide (van den Steyn). In the wake of L. Molina, Catholic exegetes were inclined to a less strict theory about verbal inspiration. Textual criticism gained a certain place in the work of J. Morin, who held (in defense of the LXX) that the Hebrew text of the OT is corrupt. In other ways, the standpoint of Catholic apologetics was similar to

protestant orthodoxy. A good example is D. Huet's *Demonstratio evangelica* (1679), in which the OT was defended as prophecy upon Christ. Critical outsiders, such as R. Simon, were relentlessly persecuted by censorship. The popularizing of the Bible took place in Germany (Valentin 1983–84), in France (Sayce 1955; Rougemont 1986) and in other countries in the Jesuit drama, mostly on OT stories. Besides, several long poems on biblical topics were produced. But all in all, the role of the Bible in Catholic countries was restricted.

B. Humanism and Early Enlightenment

1. Humanistic Anglicans. In the Church of England, different currents struggled against one another. A thoroughgoing reformation like that in the Protestant countries had never taken place. Henry VIII's anticlerical measures were exclusively motivated by personal and political interests. Nevertheless, first Lutheran, then reformed theological influences altered the situation. Broadly speaking, the Anglican church can therefore be reckoned among the churches of the Reformation. Whereas the Puritan party followed a narrowly biblicistic program, the Anglicans (this is a 19th-century term, but it adequately describes the majority trend in the Church of that time) steered a middle course *(via media).* They also held the Bible in high esteem (Reedy 1985), but gave reason its place. The rationalism of the Enlightenment was not yet dominant, but the mildly rational temper of humanism used reason for establishing a moral way of life and for apologetic purposes. R. Hooker, in his *Laws of Ecclesiastical Polity* (1594–97), ascribed to natural reason an important role as a basis for positive law, arguing that it is sufficient for reaching moral perfection. Supernatural revelation as codified in the Scripture is needed to lead man by redemption to the goals of faith, love, and hope (for Hooker, Hillerdale 1962; Marshall 1963). Reason and Scripture in that way supplement one another in a dualism, the impact of which was important for the whole following development.

In the Church of England in the late 16th and early 17th centuries, biblical typology was used as well by Puritans as by Anglicans for establishing royal prerogatives and duties in church and state. OT kings such as David and Hezekiah became the models for English monarchs (*ABRMW,* 135ff). The divine right of kings was defended from OT hereditary rights in the patriarchalism of R. Filmer, whose *Patriarcha* was published posthumously in 1680 by the Jacobites in support of the legitimate succession of King James II.

In Anglicanism, the high-church ceremonialism of Archbishop Laud could go hand in hand with broad mindedness in doctrinal matters. The representative work on the Bible from the perspective of liberal Anglicanism was W. Chillingworth's *Religion of Protestants* (first published in 1638). Against Roman claims to infallibility, Chillingworth set the principle that the Bible alone is the complete rule for faith and action (Orr 1967; *ABRMW,* 147–52). Chillingworth also employs the Erasmian distinction between fundamental and non-fundamental doctrines; he is ready to reduce doctrinal obligations to a minimum—that Christians should believe on Christ. The central content of Scripture (especially the NT and in it the moral teaching of Jesus) is the will of God that is visible in it and can be understood by everybody with the help of reason. The Bible is just a means of conveying this will; alongside Scripture, natural reason can help to judge right from wrong.

One of the most famous liberal Anglicans was Thomas Hobbes (1588–1679). Often falsely stamped as an atheist, Hobbes, a lay philosopher, developed his political theory from a liberal Anglican standpoint. He combined anti–Roman polemics, a moral understanding of the Bible, and dogmatic minimalism (it is enough to believe "that Jesus is the Christ") with a royalist state-church idea, which induced him to give in his theory of an ideal government (Hobbes 1839a; 1839b) the sovereign the right to decide on all outward ceremonies in the church and the public creed, including also which books of the Bible should be canonical. Scriptural proof by typological arguments for these comprehensive rights on one side and historical criticism of the Bible (especially against Moses' authorship of the Pentateuch) on the other show the ambivalence of an old-fashioned thinker who also tries to use new methods for a political theory developed *more geometrico*: according to the rules of modern natural science.

2. Latitudinarians. The Latitudinarians were the successors of the liberal Anglicans in the last decades of the 17th century. Their attitude was the same: no objections against the basic contents of the Christian creed, but with some of them a tendency to minimalism, the whole energy directed to improving the

moral behavior of believers. The most famous latitudinarian was archbishop J. Tillotson (1630–94) who in innumerable catechizing sermons was extremely influential in that direction. The Bible again was taken mainly as a book of moral rules. In a similar vein John Locke (1632–1704), who had refuted Filmer's patriarchalism on its own basis, the OT (*Two Treatises of Government* [1690]) in his *Reasonableness of Christianity* (1695) took the NT as the basis for his two closely connected goals: to demonstrate that the minimal confession that Jesus is the Messiah is enough for salvation and that Holy Scripture provides the only reliable authoritative morality. Locke distinguishes between a law of works (including the law of nature and the law of Moses), which has to be done by everybody, and the law of faith (Rom 3:27), which compensates for the gaps in fulfilling the law. The teaching of Jesus was needed, not because reason is principally unable to attain a natural knowledge of God and human duties, but because in practice, humankind did not use it. The gospel, therefore, has above all a pedagogical purpose. The Bible is held in high esteem, but Locke's rationalism prepared the way for the deistic criticism.

3. Arminianism. The followers of Jacob Arminius (1560–1609) opposed the strict Calvinist dogma of predestination. They were also called Remonstrants (after the Remonstratio they had presented to the General States of Holland in 1610). To the Remonstrant community belonged the famous Bible exegetes Hugo Grotius and Johannes Clericus (Jean Leclerc). Grotius, humanist, lawyer, and politician (*TRE* 4:277–80), was also an able exegete (Reventlow 1988a). He wrote *Annotations* to both Testaments (1679). Besides philological exegesis and text-critical research, Grotius offers the first historical explanation of the whole Bible. But he does not criticize the Scriptures. In his apologetic work *De veritate religionis Christianae* he even defends the truth of Christianity by the truthfulness of the Bible. Biblical authority is not yet called in question. Leclerc (Barnes 1938; Reventlow 1988b) goes a step further: he formulates a basic hermeneutical rule requiring that to understand a biblical book one has to detect the intention of the author in writing it, the circumstances of its having been written, and the meanings and events mentioned in it (*Sentiments de quelques théologiens de Hollande* [1685]). Dogmatically Leclerc is a minimalist: he stresses (against R. Simon) that the Bible contains all that is essential for a right religion. Leclerc also wrote several mainly philological and historical OT and NT commentaries (Pitassi 1987).

4. Outsiders. Benedict de Spinoza (1632–1677), a Jewish philosopher who was excommunicated by his community, consequently separated the realms of reason (on which he founded his holistic philosophical system) and religion (Strauss 1965; Zac 1965 and 1979; Malet 1966; Heimbrock 1981; di Luca 1982). For his philosophy he demanded complete freedom from any external authority, including the Bible. Faith and philosophy are to be severed (Spinoza 1670 chap. 14). Truth belongs to the realm of philosophy, subjective piety and obedience to the realm of faith and theology (cf. Sandys-Wunsch 1981). Faith is defined (according to Jas 2:17) as obedience. In his *Tractatus theologico-politicus* (1670), which he also wrote for the political purpose of vindicating typologically from the Bible the rule of the regent J. de Witt's party in Holland (Meinsma 1896; Frances 1937; Breton 1973; Greschat 1980), he gave a definition of the historic-critical method (Spinoza 1670 chap. 7): (1) the aim is to give a history of Scripture, which must not be seen on one level; (2) the intention of the biblical writers is decisive; (3) everything is to be drawn out of Scripture itself and must not be taken from dogmatics. He refuses the allegorical method of the Aristotelian Jewish interpreter Maimonides and restricts exegesis to the verbal sense. From his historical standpoint Spinoza is able to detect many mistakes in the orthodox opinions about, e.g., the authorship of the Pentateuch and the historical books (which are not from Moses and the other authors mentioned in their headings, but presumably from Ezra), about the biblical text and the OT canon, and about contradictions between the four gospels and other passages in the NT (Spinoza 1670 chaps. 8–10). All this is no problem for faith, because the Bible has reached us unfalsified as far as the Word of God is concerned (chap. 12). Spinoza's immediate influence was not large, as he was everywhere proscribed as an atheist. But his works were read secretly in opposition circles.

In 1655, the French reformed thinker Isaac de la Peyrère (McKee 1944; Klempt 1960:89–96; Popkin 1979:214–28) anonymously published his book on the Pre-Adamites (Peyrère 1655). In a way this book was revolutionary, as de la Peyrère put in doubt the hitherto commonly accepted biblical picture of the world and of a history of humanity which started with Adam as the first man. He could no longer

reconcile the increase of knowledge about the development of early cultures, such as the Babylonians and the Egyptians, or the ancient and still flowering civilization of China, with the outmoded biblical theory. Therefore he postulated the existence of a pre-Adamite humanity; Adam was the father of the Jews only. The new cosmology was a greater danger to the authority of the Bible (see Popkin 1987).

Catholic orthodoxy regarding Scripture was in principle monolithic, especially because the Inquisition suppressed any independent utterance. But there were some who went their own ways.

Best known is Richard Simon (1638–1712), a French Oratorian who was ousted by his order and prosecuted by the ecclesiastical censorship because of his heterodox opinions, but died as a Catholic priest (Bernus 1869; Margival 1900; Stummer 1912; Steinmann 1960; Auvray 1974; Reventlow 1980). His main work, the *Histoire critique du Vieux Testament* (1678, 2d ed. 1685), intended according to his own declaration (Preface, fol. 3c) to shake the foundations of the Protestant Scripture principle by showing the unreliability of the Bible. Therewith he also invoked a Catholic principle in questioning the correctness of the Hebrew text, which he showed to be corrupted in the long process of textual transmission. Only the originals were inspired (see Le Brun 1982). Simon makes clear that the biblical chronology is not trustworthy (Simon 1685:5.38.204–11)—a very important step for the time—and that profane sources have to be taken into consideration. In these respects he is one of the founders of modern historical scholarship. Whereas his statement that Moses cannot be the author of the Pentateuch is not new, a new method can be observed in his hypothesis that Moses installed "public scribes" who had to write down the minutes of the most important public affairs, which in abbreviated form served as a pattern for the historical books of the OT (Simon 1685:3–5.15–21). In this way tradition attains a position prior to Scripture (though Simon, who sees in the hypothetical scribes inspired prophets, ascribes inspiration to these minutes as well). Simon also wrote several works on NT textual criticism (Simon 1689 a–b; 1695) and on the history of NT exegesis (Simon 1693), in which he also referred to such already acceptable critical observations as the spuriousness of the last section in Mark (Simon 1689a: 77–85), the presumably non-pauline origin of Hebrews (Simon 1689a: 120–30), and the pseudonymous authorship of the so-called Catholic Epistles, especially James (Simon 1689a: 130–42). Though Jean Leclerc strongly opposed Simon's theses (1685) and the supposed scribes were nowhere accepted, Simon was later acknowledged by Protestant Bible criticism as an important precursor.

5. English Deists. Deism (see especially Lechler 1841; Gawlick 1972, 1973) is a widespread phenomenon of diffuse appearance. Under the common denomination of believers in God it comprised adherents of Epicureanism (who knew only a remote, motionless God and who disputed revelation) and followers of the Stoic tradition (who were prepared to acknowledge natural revelation). In calling themselves Christians they were quite sincere, because they were even ready to accept a biblical revelation, though revelation adapted to their ideas.

The deists as a movement carrying this name are first mentioned in France in the second half of the 16th century (Betts 1984). But the repression in that reactionary Catholic country forced them into the underground. An open (though still restricted) discussion about deistic principles was only possible in England after the Glorious Revolution of 1689. The first name to be mentioned is that of Edward Herbert of Cherbury (1582–1648), who is commonly regarded as the founder of English deism (Rossi 1947; Bedford 1979; *ABRMW,* 185–93), though that characterization has been disputed (Pailin 1983). Cherbury in his *De Veritate* was proud to have detected five "common notions" or "catholic truths" concerning religion which are innate ideas and everywhere the same in all mankind: (1) there is a God; (2) to him worship is due; (3) virtue combined with piety is the most important part of the service owed to God; (4) sins have to be expiated by penance; (5) there will be reward or punishment after this life (Cherbury 1645a = 1966:1.210–222). The same "catholic truths" he also had detected in the Bible insofar it contains God's Word (*Religio Laici,* Cherbury 1645b = 1966:135). But the Bible also hands down the words of criminals, women, beasts, even the Devil (ibid.)! This utterance shows Herbert to be a moralist influenced by stoic thought who is prepared to acknowledge the Bible insofar it conforms with his system, but also measuring it with the yardstick of preconceived ideas to which he ascribes universal validity. This is fundamentally taken by the same position later "Christian" deists.

After a long interval the works of Charles Blount (1654–93) appeared. (Bonante 1972; Walber 1988). Though Blount referred to Cherbury, he was in fact opposed to natural religion. It is debated how far he was completely against religion, but in the main he was a skeptic. In his work *Great is Diana of the Ephesians* (1695) Blount criticizes the whole cult (rites, ceremonies and sacrifices) as an invention of the priests. His translation of Philostratus' life of the ancient miracle worker Apollonius of Tyana (1680) contains many concealed opinions about the miracles of Christ and other biblical matters. In the letter of a correspondent of Blount whose initials are given as "A. W." (*Oracles of Reason* [1695]) Deism is for the first time defined as faith in the adequacy of natural religion without the need of an additional revelation. *A Summary Account of the Deists' Religion* (1695), also an anonymous pamphlet (Walber 1988:41f) and the first Deist manifesto, proclaims the same creed as Cherbury's without mentioning revelation. J. Toland (Sullivan 1982; Daniel 1984) in his early career—later he became a pantheist—wrote the famous book *Christianity not Mysterious* (1696) in which he used the epistemology of Locke to show that Christian religion and all of its fundamental doctrines as revealed in the Bible are not contrary to or above reason. As human knowledge is gradually progressive it may be that we do not understand everything at the present, but in religion we know all that is useful and necessary to know. These are the "concepts and doctrines of the Gospel" (Toland 1696:xiv). The "plain convincing instructions of Christ" (XXI). Toland's concept is apologetic—he takes "the Divinity of the New Testament for granted" (XXVI)—and near to Anglican moral rationalism. But his step to making reason the measure for deciding about the contents of the Bible is important for the following development of criticism.

The third Earl of Shaftesbury, Anthony Ashley Cooper (1671–1713), is important for having formulated a theory of ethics independent of any outward authority, including the Bible (for Shaftesbury, see esp. Aldridge 1951; Zani 1954; Grean 1967; *ABRMW*, 308–21). In his *Inquiry Concerning Virtue or Merit*, first published in 1699, he asserted that in every person, even the most primitive, has a natural feeling of good and evil and a friendly attitude, or a "moral sense." As virtues are "natural," "instinctive," or "innate," they are independent from revelation, even in the form of natural law, and all the more of a divine will communicated in the bible. Because moral action has its rewards in itself, the promise of future rewards and punishments in the beyond is superfluous. On the other hand, if there exists a god, he must be just, righteous, and true; he is bound by the pre-existing moral order. The God of the Bible is partly in contradiction to this, as he sometimes acts cruelly, revenges himself, is friendly to only a minority of humanity.

With Shaftesbury we also encounter a moral criticism of the OT figures Moses, Joshua, and the Patriarchs, as well as the people of Israel as a whole. Any critically thinking Christian must be sceptical about the biblical tradition: Shaftesbury is the first to develop this principle as a methodological postulate. Reason can reflect only about things which are perceived by the senses. Shaftsbury also rejects miracles as a proof for the divinity of Jesus' mission, because they are reported by merely human tradition. His personal religion is "enthusiasm":the love of the good and the beautiful; in outward forms he is willing to subject himself to the official church.

In his *Christianity as Old as the Creation* (1730), usually said to be a key work of Deism, M. Tindal (1657–1733) sets natural religion, which is based on the law of nature and adequate for everyone, because it is rational and moral, as the scale on which the doctrines of revelation are to be measured. Basically Christianity is identical with natural religion as pure morality; therefore it can be called its "republication" (for Tindal, see Lechler 1841:326–42; *ABRMW*, 374–83).

A special topic is the debate about the role of prophecy. In orthodox apologetics, OT prophecies (according to 2 Pet 1:19) were one of the most important proofs for Jesus' Messiahship. W. Whiston, mathematician and (eccentric) theologian (Farrell 1981; Force 1985) had postulated that all prophecies apply to Jesus in their literal sense. As that is not everywhere the case, both the MT and LXX texts of the OT are regarded as corrupted (allegedly altered by the Jews in the 2d century) and in need of restoration (Whiston 1722). A. Collins, who had already demanded the right of free-thinking in all religious matters, including the Bible (Collins 1713; Redwood 1976:209–11; Horstmann 1980), answered Whiston (Collins 1724). Asserting that in fact the fulfillment of OT prophecies in Jesus is the only touchstone for the truth

of Christianity, and that Whiston's hypothesis is fantastic and easy to refute, Collins concludes that there is really no other proof for Christianity than the usual typological and allegorical one. But OT prophecies (for instance Isa 7:14) were fulfilled literally in OT times. Collins leaves it open what conclusions follow from that (Lechler 1841:269–75; O'Higgins 1970:155–99; Frei 1974:66–85; *ABRMW,* 362–69).

There is also wholesale rejection of the OT: T. Morgan (1738–40=1969) acknowledged neither the ceremonial nor the moral law of Moses as divine. The instructions of Jesus, which are identical with natural law, are binding. The prophets also find favor as proclaimers of morality. For Morgan, a pure primal religion stands at the beginning, which the patriarchs to some degree represent. The priests, who introduced the cult, are the main corrupters of OT religion. David, Samuel, and the kings are sharply critized for their immorality (Lechler 1841:370–87; Gawlick, in Morgan 1969:5*—36*; *ABRMW,* 396–404).

Another chapter in the history of biblical authority is the debate about the miracles in the NT (for the whole discussion see Burns 1981, Brown 1984). For the moderate Anglicans, including the empirical scientists as J. Glanville and R. Boyle, and also Locke, it was no problem that the miracles had really happened. There was a realm of the supernatural above the empirical world. Even some of the Deists were prepared to accept the possibility of miracles. A critical discussion between the apologist T. Sherlock (1729) and the radical deist P. Annet (1744) focused on the central miracle, the resurrection of Jesus (Lechler 1841:312–14; Craig 1985). Sherlock tries to demonstrate by "eye-witness testimony" that the resurrection has in fact happened. Annet acknowledges reason as the sole criterion, if fact cannot be demonstrated. As proofs cannot be given that the witnesses were not deceived—and a detailed examination of the decrepancies in the gospels, etc., shows the contrary—the evidence is not sufficient to convince anybody but believers. Annet's conclusion goes further: he asserts "that an historical faith is no part of true and pure religion, which is founded only on truth and purity. That it does not consist in the belief of any history, which … makes no man wiser nor better" (Annet 1744:72). This is the basic weakness of the enlightenment.

The discussion on miracles culminated in David Hume's "Essay on Miracles" (chap. 10 of *An Enquiry Concerning Human Understanding,* 1748) According to Hume miracles are extraordinary events which infringe the laws of nature and are contrary to daily empirical experience. Belief in miracles means to consider them more probable than the laws of nature. The moderate empiricists criticized Hume's arguments because they were not prepared to subsume the whole of reality under the laws of nature (Burns 1981:176–246).

The apologists of the period attempted to defeat the Deists on their own territory and thereby furthered the development of Deism against their will. In the wake of Newton, the Physico-Theologians tried to demonstrate the existence of God and his freedom to act from the origin of matter and the perfection of creation. S. Clarke in his Boyle Lectures of 1704 and 1705 wanted to develop his ethics from his natural philosophy and his doctrine of God. But the notion of the freedom of God and the theory that the present order of the world is created by his arbitrary decrees is contradicted by the principle that God must be infinitely good, and that all his actions must be determined by this goodness. In correspondence to God, all subordinate rational beings must act for the good of the whole. The biblical revelation in principle becomes superfluous. Clarke proves its necessity on pedagogical grounds: humankind was in such a corrupted state that it needed special instruction by divine revelation. Personally Clarke believed firmly in the Bible: in his book on the Trinity (1712) he showed that the doctrine of the Church is contradicted by NT evidence. The seeming contradictions are caused by diverging traditions (natural-right theory, aversion against "mysteries") in Anglican rationalism.

Also very popular was J. Butler's *Analogy of Religion* (1736). His method (Mossner 1936; Jeffner 1966; Ramsay 1969) is a double one: (1) he shows the analogy between natural and revealed religion—natural religion taken in the usual understanding of Anglican ethical rationalism; (2) he owns that certainty is not to be gained in both areas—but if not certainty, at least probability (in the scheme of Locke's epistemology). Revealed religion is a "republication of natural religion," but it also contains supernatural truths. As those are above reason, miracles and prophecies serve as proofs. Butler demonstrates their

reliability by showing that they are a "matter of fact," historical events which can be demonstrated as such. Though Butler's arguments made a great impression and seemed to stop the deistic debate, he actually opened the way for historical criticism of the Bible to sap the foundations of scriptural belief which took the Bible as a report of historical facts and would collapse when they were disproved as such.

C. The Age of Pietism

1. German Pietism. In 1675 P. J. Spener published his *Pia Desideria*, the famous program for a renovation of the Church. The Bible stands in the center of his proposals (M. Schmidt 1970):the deplorable state of spiritual life in the communities could only be bettered, if "the word of God would be brought more abundantly among us." Toward reaching this aim, some concrete advice is uttered: above all that the Bible (mainly the NT) should be read in every household and therefore be distributed in cheap copies everywhere, that meetings (*collegia pietatis;* the first in Frankfurt in 1670) should be arranged for reading biblical texts and meditating together about them in order to edify one another, and that the syllabus of theological studies for ministers should be altered from scholastic to biblical topics (Brecht 1986).

Spener's program found an unexpectedly broad echo among the youth and part of the clergy. In Leipzig, a collegium philobiblicum of young masters of theology studied the Bible in the original languages, among them A. H. Francke; biblical lectures *(collegia biblica)* were held at the university with great concourse of students. Later the center of Pietism moved to Halle (Aland 1960), where Francke became pastor and professor in the newly founded university (opened 1694). The intensive study of the Bible, based on the literal sense read in the original languages, but leading to Christ in the scriptures, was the basis of this study; dogmatics and philosophy were pushed to the background. Historical criticism was not involved. Spener had no interest in critical exegesis (though he inquired into the historical situation of a text); as a former student of the younger J. Buxtorf (1599–1664; see Wallmann 1986:134–39) he even defended verbal inspiration (for his method, M. Schmidt 1970:27–54). Francke's position was similarly orthodox (see Peschke 1970). The pietists deemed the assistence of the Holy Spirit central to understanding the Scripture. Spiritual experience, leading to rebirth, was regarded as most important (Stroh 1977). The spiritualistic and mystic heritage (Tauler) played an important role. Also, eschatological expectations were nourished (Spener; Francke). The Orphanage (founded 1695) became the place of education for many young Prussian gentlemen, but also a locus of world mission and international connections. The v. Canstein Bibelwerk (founded 1710) printed and distributed Bibles and NTs in many languages in large numbers (Aland 1960:30–39; 1970a: 90–92; Köster 1984:100–135; Köster also on other pietist Bible editions). Pietism spread in all German-speaking territories. A special group was the Brüdergemeine (Moravian Church), founded by Count N. L. von Zinzendorf and still in existence in many countries. Zinzendorf (on his Bible knowledge, see Dose 1977) in 1728 invented the "Losungen" (watchwords), which contain for each day a verse of the OT and the NT and are the best-known German books of devotion to this day.

All in all, Pietism promoted an individualistic or group-oriented piety, above all in laypeople. An example is the Reformed pietistic poet G. Tersteegen, who found in the Bible an everflowing spring of spiritual life (Zeller 1970). The NT especially was read and understood as a book of instruction for pious life. Basic is the demand of a spiritual rebirth of every Christian which has to bear visible fruit.

The best known representative of Wurttemberg pietism was J. A. Bengel (1687–1752). His work on the Bible (Brecht 1967; 1970; Aland 1970a) was divided between philological and historical research on the text of the NT (he was author of a critical edition of the NT, 1734, and a commentary of the whole NT, the *Gnomon*, published in 1742) and his theological interest. Theologically he was orthodox (he believed in verbal inspiration), spiritualist (for understanding the Bible, one needs the help of the Holy Spirit) and apocalyptist (he wrote several works about the calculation of the approaching end of the world on the base of biblical chronologies; Sauter 1966).

Radical pietism (Schneider 1983–4) showed a growing tendency toward spiritualism, mysticism, and eschatological expectations, combined with a separatist criticism of all outer forms in the church. For the Berleburger Bible (1726–42) the "inner word" (Christ indwelling in the soul) is decisive; it is the key for

understanding the threefold sense of Scripture: the verbal, spiritual-moral, and secret-mystical senses. The aim is to gather the dispersed communities of the elected ones who are living at the end of the times and serve God in the Spirit, not in the letter. So the outer word loses its normative character (cf. Hofmann 1937; Urlinger 1969; Brecht 1982). From this position it was just one step to the equation of spirit with reason and the rationalistic rejection of Scriptural authority, which we find in the work of J. C. Edelmann. Edelmann equated the living God, reason, and conscience (see Grossmann 1976), and found reason in the Logos of John 1:1. Both before and after having read Spinoza's *Tractatus*, Edelmann opposed the orthodox doctrine of verbal inspiration and separated God's word (which is spirit and reason) from the Scriptures, which as a human product he found to be full of errors.

2. Awakening in Britain and America. Awakening in England is a child of German pietism. Spener's pupil A. Horneck, who in 1660 emigrated to England and from 1670 worked as a parson in London, effected ca. 1678 the founding of the "religious societies" which struggled for a spiritual renovation of the church. The Society for Promoting Christian Knowledge (founded in 1698) accrued from this movement. Its main endeavor was the printing and distribution of Bibles, Bible excerpts, and devotional literature. There were also relations to Halle and A. H. Francke. But most influential for the outbreak of the awakening (for the movement, see Watts 1978:394–490) were the brothers John and Charles Wesley (on John, Cannon 1946; Outler 1964; M. Schmidt 1953–66; Tuttle 1978; Ayling 1979; on Charles, Tyson 1986). Both happened to meet German Moravians and were introduced by them to Luther's doctrine of justification, but with the pietists' emphases on conversion, spiritual rebirth, and above all, sanctification (which they also found in their zealous reading of Eastern theology and with the Church Fathers, but above all understood as "imitation of Christ"; see Källstad 1974:57–81). These themes gained the most important place (Lindström 1980) in their sermons and hymns (Rattenbury 1941). Like the Puritans, they lived by the Bible and built their theological system out of its verses (see Watson 1984), placing stress on the NT. This biblical orientation was born in their studies at Oxford, where close examination of the Bible was part of the program of the "methodist" group (Resembling the *Collegium philobiblicum* at Halle). Another independent revivalist movement arose in Wales.

Methodism separated from the Anglican church late in the century, and related varieties of revivalism were also to be found among the Anglicans (Balleine 1951; Davies 1961:210–40; Walsh 1966). In the New England colonies the Calvanist Puritan Jonathan Edwards (1703–1758) was one of the centers of the "First Great Awakening" (1734–44). His own preaching, and that of George Whitefield (1714–1770), initiated and invigorated the movements of revival which were formative for American Protestantism (see Carse 1967; Miller 1949; on his theology of God's self-communication, Elwood 1960; on Whitefield, Dallimore 1970. On the awakening, Sweet 1944; Gaustad 1957; Weisberger 1958; Hudson 1973:59–82; Rutman 1970 is a sourcebook).

Revivalism was a phenomenon that crossed denominational borders. A personal Bible-oriented piety is characteristic of the whole movement. Everywhere the Bible was taken at face value. Historical criticism is lacking or was explicitly rejected. There was also revivalism in other countries (for the Netherlands cf. van den Berg and van Dooren 1978), but mostly later (*TRE* 10:205–20); later movements showed similar characteristics. Edwards also renewed the Puritan millenarian typology for the spiritual awakening in New England: his followers were more inclined to equate the beginning of millennium with the New World political and social reality (Bercovitch 1978:92–118; Noll 1982:46–48; Heimert 1968:59–94). When later the black population of the American South found its religious folk identity (Genovese 1972:161–284), it was the same topos of the chosen people, now that of the Exodus with Moses as leader, together with the eschatological expectations of Revelation that formed the black consciousness (see Levine 1977:33–55).

D. The Period of the Enlightenment

The English Deists, beginning with Herbert of Cherbury, are the forerunners of theological enlightenment, so the period overlaps with the age of pietism, and even late orthodoxy. The impact of the deistic works which became known to foreigners by travel or from reviews in scientific periodicals (for S. J. Baumgarten, see Schloemann 1974) was an important factor in the development of enlightenment theology and Bible criticism in other countries. But also rational apologetics, natural theology, empiricism

(Locke), and rational philosophy played a significant role. Its development in the various countries was different according to the political and confessional circumstances; the role of the Bible was more central in Protestant countries, and therefore the interest in critical exegesis more basic. In Catholic territories the Inquisition forced the opposition into the underground.

1. French Enlightenment. This was obviously the case in 17th- and early 18th-century France. Several pamphlets containing sharp criticism of the official church and the Bible circulated as clandestine manuscripts (Wade 1938; Bloch 1982; Betts 1984:157–183). Moral criticism of the habits of OT heroes in the manner of Bayle (see below), and even of God's behavior in the stories of the OT, was frequent. A. Calmet's apologetic commentaries on the literal sense of both OT and NT (1707–1716) in refuting the objections against the Bible even gathered a storage for the later adversaries. Such orthodox defenders of the Bible as Bossuet, who declared in the wake of Cartesian rationalism that the Bible must be infallible in every detail, inadvertently prepared the way for the critics. The objections against the Bible were summarized by Voltaire in his *La Bible enfin expliquée* (1776; see Schwarzbach 1971; Cotoni 1986:780–88) and for the NT in his *Histoire de l'etablissement du christianisme* (1777:407–526). Voltaire was anti-Christian but believed in God (Mailhos 1983). Denis Diderot (1713–1784), a psychomaterialist and sceptic, rejected the divinity of the Bible completely. Only Rousseau, who was educated as a Protestant and knew the Bible very well, avoided a wholesale rejection of Christianity. In his *Confession of a Savoyard Vicar* (1762), which relied primarily on natural religion, Rousseau managed to preserve a high esteem for what he found elevating in the life and teaching of Jesus in spite of his skepticism toward the authority of the Bible (Grimsley 1968; Jacquet 1985; Cotoni 1986:788–95). The anti-Catholic intellectual climate in enlightened France hindered a positive evaluation of the Bible, although positive approaches can be observed among the French Catholic moralists of the first half of the century (Vauvenargues; Duclos; Toussaint; cf. Mydlarski 1986).

2. German Neology. A decisive step in the evaluation of the bible was the transition to a historical exegesis which slowly developed in the 18th century in Germany and neighboring Protestant countries. Already in the late "rational" orthodoxy a trend toward a philological and historical exegesis of the Bible can be observed (for Budde and Pfaff, see Stolzenburg 1926). It was P. Bayle, a reformed fideist opposed to taking reason as the measure for ethics and faith (Labrousse 1963–64; Rex 1965), who first liberated historical research from dogmatical and philosophical premises. Faith accepts God's word in the Bible, but in its historical form it is a human book and its heroes can be morally criticized (cf. the famous article on David in Bayle's *Dictionnaire historique et critique* (1738; 13; Rex 1965:197–255). J. A. Turretini in Geneva (Merk 1988) formulated the basic principle that the biblical scriptures have to be interpreted in the same way as other human books (1728). The philological work in Pietism (for instance, the Institutum Judaicum in Halle, founded 1728, for instruction in Hebrew and oriental languages) partially prepared the way. The textual criticism of the NT showed that innumerable variants exist, thereby shaking belief in the integrity of the known manuscripts and dealing a deadly blow to the doctrine of verbal inspiration. R. Simon (1689), J. Mill (1710; see Fox 1954), J. A. Bengel, K. F. Houbigant (1746), J. J. Wettstein (1751–52; see Hulbert-Powell 1938; Merk 1988) worked on this field. Their critical editions of the NT provided the basis for further research.

In Germany, the effects of the Enlightenment on theology increased as the 18th century progressed. Neology (as the theological thought of this period is referred to; see Bianco 1983, Sparn 1985) was subject to a number of influences. An infusion of natural theology and philosophy of religion came from the writings of C. Wolff, who in his *Theologia naturalis* (1736) developed rational rules for differentiating genuine from spurious revelation. (Genuine revelation cannot contradict the nature of God, must have a moral character, cannot contradict itself, and must contain no mysteries which are against reason.) The process of "enlightenment" was viewed as a spiritual power capable of forming the human heart for philanthropic "love."

For Spalding, who wrote a very popular anti-materialist manual entitled *Bestimmung des Menschen* (1748), the feeling of harmony and beauty and the striving for knowledge, virtue, religion (the tasting of God's infinity and benevolence), and immortality are natural gifts in man (Bourel 1978:137–46). The

optimistic anthropology of humanism gains preponderance. G. W. Leibniz's cosmology of a "prestabilized harmony" which leads back to the creator of a well-ordered universe stands in the background. The theologians of neology try to reconcile reason and revelation. For J. J. W. Jerusalem the Bible is authentic as a source of morality and the basic truths of religion (Müller 1984:50–66). His position allows doubts about the historicity of biblical stories. The theory of accommodation (Müller 1984:66–76) explains why the contents of biblical revelation are not yet on the level of a higher development of human reason only reached later. But the religion of Jesus is on the highest level of simplicity and thereby understandable by everyone (Müller 1984:76–88). On the other side, reason in the field of natural theology is able to arrive at knowledge of God out of the order and existence of the world (Müller 1984:88–104). In the realm of ethics the biblical teachings (original revelation; Moses; Jesus' teaching to love one's neighbor) are stages in the moral progress of humans (Müller 1984:104–109).

In the period of neology, basic steps in historical criticism of the Bible were taken. Two names are especially important: J. D. Michaelis (1717–1791) and J. S. Semler (1725–1791). Michaelis (Smend 1987; 1989:13–24; Löwenbrück 1986), who was a prolific writer on many fields, worked on Hebrew and Semitic philology, lexicography, and grammar (he gave up the doctrine of the inspiration of the Masoretic vowel points) and on the environment of the Bible. His famous work on the Mosaic Law (Michaelis 1770–75; studied by Smend 1983) intended to explain the circumstances of its origins and to defend it against the deists and atheists. Michaelis intended to show that the Mosaic law becomes understandable as wise and of divine authority for its immediate addressees if one sees it before the background of the time of "childhood" of the Israelite people. Childhood having passed, it is no longer obligatory for Christians. The orthodox opinion of the authority of the Bible is abandoned, the idea of a religious development born. J. S. Semler's best-known work on the canon (1771–73) refuted the doctrine of the inspiration of the canon as a whole, demanded a historical-critical exegesis of the biblical scriptures, but emphasized that the word of God is contained in the Bible (Hornig 1961; Hess 1974; Kaiser 1984a; H. Schulz 1988). He distinguished between theology and religion and stressed the importance of historical knowledge for theology. The distinction between official (Dogmatic) and private (practical-moral) Christian religion resembles latitudinarism. J. A. Ernesti in his *Institutio* (1761) restricted his hermeneutics to the NT; he demanded a grammatical (literal) exegesis of the human sense free of dogmatic interests, but did not doubt the authorship of the inspired authors of the NT books (*NTHIP*, 68–70).

The most radical criticism of the Bible came from the pen of H. S. Reimarus (see Stemmer 1983; Gawlick 1983; Walravens 1986; Reventlow 1988c). Reimarus, who as an orthodox Lutheran initially defended the traditional understanding of the OT as prophecy upon Christ (1731), changed his standpoint under the influence of J. L. Schmidt's "Wertheimer Bibel" (1735; cf. Hirsch 1951:2.417–31; Stemmer 1983:102–112). Schmidt was an adherent of C. Wolff's rationalism and followed in his translation of the Pentateuch (the other parts of the OT translation are preserved in manuscript form) his maxim that nothing in revelation can be contrary to reason. He also knew the English deists and like them rejected miracles and predictions (typology) as proof for the truth of revelation. He therefore translated the respective sentences "for themselves," "according to the intentions of the authors." But his goal (like Wolff's) was apologetic: the natural world is a closed system following the rules of reason. In it nothing that is against reason can be accepted. But revelation, like any historical event, is "above reason":that it happened cannot be disproved unless it is against reason. Therefore Christian religion needs no proof.

Reimarus followed Wolff as an adherent of natural religion (physico-theology), which he defended in a series of systematic works (1754, 1756, 1760). He never published the critical parts of his *Apology* of which Lessing printed fragments in 1734 and again in 1777. Reimarus brought the biblical criticism of the Enlightenment to the summit of radicalism: the messianic predictions of the NT do not mean Jesus; OT and NT are to be divided. The receivers of revelation in the OT lack an adequate moral qualification. The narrations about wonders (for instance, about the exodus in Exodus 14) are contradictory. The OT does not teach saving revelation, because it does not know the immortality of the soul. In the NT the doctrine of the apostles, which taught a supernatural religion, is to be separated from Jesus' teaching of a "natural, rational, and practical religion." But Jesus also announced the approaching realm of God and himself as

its political messiah. Only part of Jesus' teaching is acceptable; the other contents of the NT are falsifiable.

For Immanuel Kant, the moral religion of reason, which can be defined as "knowledge of all our duties as divine commands" (*Religion within the Bounds of Pure Reason* [1793]), is in principle something other than the "faith of revelation" (on Kant, see Bohatec 1938; Bruch 1968; Lötzsch 1976; Kaiser 1984b; Bayer 1988:33–36). In the famous formulation: "the starry sky above me and moral law within me" (*Critique of Practical Reason* [1788]) Kant describes this moral faith as founded in a transcendent-immanent certainty in man himself. This religion in principle does not need revelation, for anyone can verify it by reason. Moral reason is also the scale on which to measure the Bible (*Conflict of the Faculties* [1798]); for instance the command to Abraham to offer Isaac (Genesis 22) cannot come from God. But as in practice the empirical abilities of men are insufficient, the existence of a church, which is an assembly for teaching moral sensibility, is unavoidable. Such a church needs a holy Scripture which can ground moral teaching in revelation and provide the rules for its statutory faith. For Kant it is the NT, which, however, has to be interpreted according to the rules of a pure religion of reason. As such he holds the NT in high esteem. He remarks that the Bible has proved its divinity by the homiletical and catechetical influence it has on the heart *(Conflict of the Faculties).*

With G. E. Lessing (1729–1781) the Bible criticism of the Enlightenment reaches its climax. His much-debated position (as rationalist: Aner 1929:343–361; as believing in revelation: Thielicke 1957) is to be seen in the context and in opposition to dominant opinions of his time. Against the orthodox apologetic endeavor to prove the truth of Christian religion by messianic prophecies and wonders he formulates the famous sentence "casual truths of history can never become the proof of necessary truths of reason" (Lessing 1886–1907:8.12). He does not deny that Jesus performed wonders, but they could impress only persons then present. Secondhand reports do not lead to faith. The historical Jesus himself was not more than human (8.538f). Between historic certainty and actual truth there is the "nasty broad ditch," which he cannot get over (8.14). But there is another certainty for belief: "the proof of spirit and power" (8.9f). Lessing means an immediate personal experience of revelation (standing in the tradition of spiritualism; cf. Schultze 1969:110–116; Gericke 1985:13–35; 49–51). In his "Axiomata" (8.164) he differentiates between letter and spirit, Bible and religion, and declares that Christian religion is not totally dependent on the Bible. In the time of the apostles the Christian message was proclaimed without a letter (7.813; 8.176f). "The letter is not the spirit, and the Bible is not religion (= revelation)" (7.173; 8.813). That makes Bible criticism possible: "Therefore objections against the letter, and against the Bible, are not in the same way objections against the spirit and against religion" (7.813; 8.174). But there is an "inner truth" (7.813; 8.189) which furnishes the authority of revelation. It means spirit, reason, love.

But the Bible (OT and NT) has also a positive purpose. In the pamphlet "The Education of Mankind," Lessing understands the Bible as a book of education which conducted its readers to the highest steps of enlightenment. Education does not give more than humans could have reached by unassisted reason, but advances humanity faster (§4). At first God chose a single "rough" people for special education (§8) with the OT as "elementary book" (§§26–53). Later, when a part of mankind had reached a greater capacity for reason and morality (§55), Jesus Christ came as a teacher (§53) who taught the immortality of the soul (§57f). Lessing is original in applying the idea of education (which was a common motif in the enlightenment period) to history (on his theology of history, Schilson 1974), but of course this is not yet historical understanding. Morality and reason remain abstract ideas. Lessing saw that the doctrines of the apostles (§63) contain certain supernatural truths (Trinity, §73; hereditary sin, §74; atonement through Christ, §75), which are also useful to know (§§76–80). Lessing preserves elements of orthodox doctrine. But the expected completion, when people will "do the good, because it is good" (§85), will make even the NT superfluous. This reminds one of Shaftesbury and Kant. The Bible has no independent continuing authority.

3. New Developments. In 1753 R. Lowth published his lectures on Hebrew poetics in which he treated the poetic style of the OT from a purely aesthetic viewpoint, but also regarded it as parabolic expression of its contents (see Hartlich and Sachs 1952:6–10; F. Meinecke 1965:243–52 saw in Lowth a prominent

representative of "English pre-romanticism"). In Göttingen, the classical philologist C. G. Heyne explained Greek mythology as the manner of thinking and speaking characteristic of the childhood of humanity. Because primitive thinkers do not know the real causes of things, they understand everything extraordinary in nature, history, or the human soul as immediate intervention of gods. There are two sorts of myths: historical myths founded on real occurrences, and philosophical myths containing cosmogonical and theological speculations. Myth research has the task of finding but the historical facts behind the myths (Hartlich and Sachs 1952:11–19). Heyne's pupil (Sehmsdorf 1971:125–28) J. G. Eichhorn adapted his method to the explanation of Genesis 1–3 (1779); the re-edition by J. P. Gabler (1790–93) set the new method of understanding the Bible on the basis of its historical circumstances and modes of expression on a theoretical foundation and applied it also to the NT (Merk 1972:52–54). Myth research observed that the primeval history of Genesis 1–3 does not contain historical facts (Hartlich and Sachs 1952:20–38). Here and in other places the aim is also rationalistic-apologetic: to explain away the supernatural element in the OT. G. L. Bauer developed the theory of the "mythical school" in the direction of a historical-critical exegesis (1799):the verbal sense as intended by the author is the only object of interpretation. Eichhorn (see Smend 1989:25–37) was also the author of a famous introduction to the OT (1780–83), in which he defended the thesis of two narrative sources in Genesis and detected the late date of Is 40–52 (see Sehmsdorf 1971:52–54). Eichhorn also wrote introductions to the apocryphical books of the OT (1795), and to the NT (1811–35). An important step was taken by Gabler in 1787 by his separation of Biblical theology, as an historical enterprise, from dogmatics (*NTHIP,* 115–18; Merk 1972:31–45.81–113.273–84; Smend 1962).

Against the ideology of Enlightenment, J. G. Hamann, the "magus from the north," fought with zeal (O'Flaherty 1979; *TRE* 14:395–403). He went through a conversion, was influenced by the awakened J. Hervey (Gründer 1958:51f; Jørgensen 1988), and gained a personal relation to the Bible, which he read in a *sensus plenior* meaning as typologically relating to his own existence (Gründer 1958:116–58; Jorgensen 1980). Against the optimism of the Enlightenment he stressed the Lutheran standpoint of sin and redemption. Against Kant (Bayer 1988) he showed (using Hume's epistomological skepticism) that reason is history-bound and not absolute as a criterion for evaluating the Bible. In the Bible, according to Hamann, are united the word of God, who in humility has bound himself into human history, and the traditions of human weakness. In reading the Bible correctly—that is, with attention to its symbols—as "the language of God," the pious interpreter is able to communicate with God as well as with other people (German 1981) and to detect God as "author of his life-story" (Bayer 1980).

The idea of humanity *(Humanität)* is leading in the work of J. G. Herder (biography: Haym 1880–85; survey of work and bibliography: *TRE* 15:70–95). In history, in which mankind is moving step by step—though not without retrogressions—to an ever greater perfection in its destiny as humanity, it is aided by revelation, which for Herder is already given in the existence of human beings as created by God. In their ability to become acquainted with the world and with history by feeling, understanding, experience, "spirit," conscience, language, but also in the testimony of those who report their own experience of revelation in nature and history, such as patriarchs, prophets, Jesus, humans encounter biblical tradition and the Christian church as institutional bearers of such revelation. But the revelation in nature and in conscience is only understandable in the light of tradition (Herder 1877–1913:10.295). The content of the "documents" of tradition is nothing other than the human, human origins and human destiny as the image of God. Revelation is the "education of humankind" (13.345) to ward the goal of humanity. The Scripture gains its authority by being a testimony of true humanity, reaching its summit in the life of Jesus (20.165–80). Jesus' humanness as a model of conduct, not his divinity, is the object of belief.

The understanding of the Bible as a human document makes historical exegesis possible and necessary. "One has to read the Bible in a human way, for it is a book written by men for men" (10.7). Characteristic for Herder's exegesis of the OT (on which see Willi 1971; Kraus 1973) is the approach from language and "Hebrew poetics" (*Songs of Love* 8.845–588.589–656; *Spirit of Hebrew Poetry* 11.213–466); the authority of the OT as a historical document rests on its antiquity and poetic power (*The Most Ancient Document of Mankind* 6.193–511; 7.1–172). In the NT (see *NTHIP,* 94–98; Bunge 1988) he treated the

Synoptic Gospels (19.135–252) and the gospel of John (19) separately and developed the theory of a protogospel standing behind both.

Herder's exegesis of the Bible represents a transitional stage to the historical view as developed in the 19th century. For him, revelation is the precondition of human existence and understanding as such, but by making human beings the genuine subject of his world view and also of the Bible, and by declaring humanity to be the goal of history, he opened the way for more thoroughly secular types of biblical criticism and a diminishment of biblical authority. It was the Second Great Awakening in the first half of the following century that opened again another way, where the Bible regained its former value.

HENNING GRAF REVENTLOW

BIBLICAL AUTHORITY IN THE POST-CRITICAL PERIOD

Each generation of believers and scholars must answer its own particular form of the question of the authority of scripture, for the question is posed differently for different communities in different intellectual and cultural circumstances. The Jewish and Christian religious communities have characteristically accepted the scriptures as revelatory, but have been mostly unclear and largely uninterested in stating precisely in what ways this literature is authoritative. It has been enough to affirm that this literature provides norms and permits for the abundant life intended by God for the creation. Specificity beyond that affirmation has been only hard and tenuously won. The problem is that the articulation of any formal criteria concerning authority or revelation turn out to be in tension with the actual concrete practice of the communities affirming the authority (Kelsey 1975). In most circumstances, the actual concrete practice is to be taken more seriously than is the formal statement which tries to objectify and intellectualize that practice.

A. The Modern Discussion

The governing categories for the questions that have dominated the modern discussion of biblical authority for the last two centuries need to be assessed and appreciated in their own cultural context. The question of the authority of scripture as understood in the Euro-American context has been framed in response to the rise of science, the emergence of scientific method, and the dominance of historical-critical modes of handling literature (Richardson *IDB* 4:248–51; Barr *IDBSup*, 794–97). Prior to this development in the 17th and 18th centuries, there was in the West a sufficient cultural consensus concerning the nature of Scripture. Thus, even critical questions were set within the secure framework of well-established and widely held convictions about the religious authority of the Bible. Prior to the rise of scientific consciousness, questions of authority were indeed an enterprise of "faith seeking understanding" (Barth 1985; Cushman 1981).

The above changed, however, with the introduction of new thought patterns that shattered the theological consensus and paved the way for the study of the Bible as an autonomous piece of literature—a literature that was increasingly understood in relativizing ways. This suggestion of relativity concerning the Bible in turn evoked an urgency with respect to its certitude and absoluteness, a phenomenon new to biblical studies. Thus the "Battle for the Bible" (Lindsell 1976) forced extreme positions, radical and reactionary, concerning such matters as inspiration, revelation, inerrancy, and infallibility. It must be recognized that the very posing of the question in terms of revelation and scientific criticism is reflective of a cultural crisis which challenged every settled authority and which defined the debate in terms of relativity and absoluteness. The above categories of discussion unfortunately skewed the matter in a number of ways. The controversial discussion from the 18th century until now (which is roughly coterminous with the practice of Enlightenment criticism) has a strange quality to it, in that the categories of the conversation have been more or less imposed from external sources such as scientific accuracy or historical precision—categories essentially alien to the material itself. This is just as true of radical views which jeopardized the authority of Scripture as it is of reactionary views which submitted the claims of Scripture to the canon of modern scientific certitude. On the one hand, radical criticism provided a sense of autonomy and freedom within the literature, i.e., now the Bible need not be taken with such heavy authoritarianism when understood to be historically conditioned in all its parts. On the other hand, reactionary scholasticism provided a sense of intellectual control and technical assurance; the Bible was understood as a lone champion of unbending reality in a situation marked by "change and decay." "Change and decay" is one important perception of the rise of science, technology, secularization, and individual freedom, and its corollary, the demise of the old hegemony in its intellectual, moral, economic, and political dimension. "Change and decay" is one experience of the emergence of modernism. But neither such autonomy and freedom, nor such control and assurance, seems particularly germane to the biblical literature itself; nor are they finally satisfying as responses to the religious thirst for truth as mediated by the Bible. The Bible does not mediate the *kind* of certitude sought in these categories.

In retrospect, the recent controversial discussion which opposed criticism and scholasticism now appears to have been misguided. Since the controversy failed to mediate the faith-claims of the text itself, it proceeded on both sides in alien, inappropriate categories. That particular conversation has now become somewhat obsolete because our present-day culture no longer excessively trusts nor fears such scientific

methods. These scientific-critical methods, whether willingly embraced or vigorously resisted, really do not touch the issue of the authority of scripture as a theological problem.

The modern polemical conversation concerning faith and criticism, now so well documented in the handbooks (e.g., Rogers and McKim 1979), has distorted the character of the Bible. On the side of literalism, the truth of God's power was cast in Enlightenment categories of script, document, authorship, and historical accuracy of written reports. In response to this, on the side of liberalism, resistance was offered to such scribalism, which was viewed as authoritarian. Scholars distanced themselves from the religious claims of the text through an appeal to (1) personal experience which judged the text, (2) cultural values held over against the text, and (3) events which happened outside and behind the text. Neither literalism nor liberalism faced the theologically dangerous character of the text, i.e., both articulations of authority became defenses against yielding to the potentially dangerous, upsetting, and subversive power of the text that speaks characteristically against our settled, constructed worlds on behalf of a world yet to come.

B. The Cultural Context for the Question of Authority

Ours is a religious and cultural situation in which the question of authority must be posed anew, because the categories of the conversation have shifted. Ours is a post-modern, post-scientific, post-Enlightenment, post-positivistic situation (Gilkey 1981; Harrington 1983). It will not do to frame the question of authority as a scholastic one of proof, or as a romantic one of experience, or as a probe into scientific categories. The question now becomes one of what it means to be a community of interpretation and action called into existence by a text that remains distant and of less utility in the pursuit of certitude. Thus it appears that the question has been wrongly cast as one of *authorship,* a question we might expect from a book-oriented society preoccupied with questions of copyrights, sources, documentation, and scientific facts. The Bible itself has almost no interest in such modern questions of authorship which result in hopeless and misguided investigations of claims of inspiration and revelation.

Rather, authority has to do with *issues of authorization,* i.e., how, in a pluralistic world like ours, concrete communities can be authorized to live, act, and hope in a manner which may at times oppose the accepted norm, a manner which can be justified neither scientifically nor experientially. It is this authorization of a community's obedience and praise that is the real issue in the question of the authority of Scripture. In order to answer this question of authorization, we must attempt to free ourselves of the immobilizing influence of the Enlightenment categories of certitude. An increasing number of people draw the conclusion that communities created and authorized by these texts are summoned and permitted to live, act, and hope in different and dangerous ways, and authorized by a different "voice" which is heard in the text, even if that voice cannot easily be accommodated in the conventional categories of academic investigation. The "authorizing voice" of scripture "heard" in the community needs to be understood as a theological reality mediated through the biblical literature. That is, the authorizing voice heard in the text, albeit mediated through social institutions and more immediate experiences, is indeed the voice of the Holy God. That is the voice communities of faith heard in the text, a voice which authorizes in odd and unsettling ways.

Communities of faith around the world, and especially in the West, where the old "Battle for the Bible" has been largely conducted, are now in deep crisis. Questions of authority cannot be considered apart from this crisis which concerns believers and nonbelievers alike.

The overarching crisis of Western culture (within which the authority of Scripture must be articulated) is that the values and institutions of society are mostly organized against the "prospect of humanness" (Heilbroner 1980). Two articulations of this crisis may be cited. Robert Bellah (1982) has characterized the mood of conventional modern life (largely shaped by the social sciences) by the terms "positivism, reductionism, relativism, and determinism." Bellah further observes that such values are inherently anti-human. Moreover, the live alternative to this practice of society lies only with the religious community which is authorized to preserve values and practices of humanness:

> To the extent, however, that real religious communities can retain or recover a sense of being in but not of this world, can live, at least to some extent, in patterns of voluntary simplicity and mutual concern,

> then they may act as genuine alternatives to the prevailing current … it is more than ever necessary that there be demonstration communities where elementary decencies can be maintained and handed down, humanizing a bad situation as long as it exists, and providing seedbeds for larger amelioration when that becomes possible (pp. 21–22).

In a more recent, extended treatment, Bellah and his colleagues have concluded that American society has lost or neglected those acts and gestures that make sustained human community possible (Bellah et al. 1985). They propose that the religious community has a responsibility and an opportunity to foster and encourage more fully human possibilities.

In a much more abrasive analysis, Richard Rubenstein (1983) has proposed a reading of the economic history of the West as a history of triage. Legitimated practices of land management and use of money and power have as their social result the devaluation and elimination of marginal and useless people. Rubenstein proposes that only the biblical-based religious community can hope to terminate such destructive values and practices, i.e., the social vision of the Bible is the only effective alternative to this triage:

> Only a religious faith radically polemic to magic and to belief in earth's indwelling spirits could have brought about the cultural revolution in which an entire civilization came to reject what men and women had revered as sacred from time immemorial … Perhaps the most influential example of a congery of strangers forming a community by adopting a common faith is that of the Hebrews of Sinai … Neither unending growth nor unending movement offers a solution … That is why a religious transformation is crucial … The call for religious transformation is in reality a call to conversion, a call to change ourselves. Our preachers have rightly told us that we must be converted, that we must be born again. Unfortunately, what has been understood as conversion has all too often been devoid of the inclusive social component our times demand. In truth, we must be born again as men and women blessed with the capacity to care for each other here and now (pp. 230–40).

The question of biblical authority is too urgent to be reduced to a parlor game of conventional scholastic categories. It is not a mechanistic question of proof and certitude for intramural debate within the religious community. It is now a public question of energy, courage, and freedom to act. The larger question is, what will provide energy, courage, and legitimacy for action against the destructive tendencies embedded within our civilization?

C. Originary Power and Practice

Against such settlements which reflect the intellectual climate and needs of the modern world, it must be recognized that the biblical text is in an odd way "originary," i.e., it has the capacity to generate real newness. This text contains the power to work a newness that is indeed an act *creatio ex nihilo,* to call into being that which does not exist until brought to speech (Rom 4:17). This "originary" character of the texts means that the text cannot be shackled by theories of inspiration, cannot be domesticated by archaeological proofs, and cannot be assessed by religious antecedents drawn from surrounding cultures. This power to articulate newness shatters all our cherished presuppositions and in turn pushes the question of authority outside the realm of explanation, leading into the world of testimony.

It is necessary, for that reason, to find new modes of articulation of the matter of authority. It is clear that an Enlightenment notion of technical-scientific explanation (either of literalism or of critical scholarship) is irrelevant to this question. One recent attempt with much to commend it is a literary approach that draws attention to the artistic power of the text, that is, authority is located in the speech of the text itself and not in something behind the speech of the text. Such an artistic approach, however, fails to face the ethical demands imposed by the text. It tends, instead, to remain preoccupied with the aesthetic dimensions of the literature.

The authority of scripture must ultimately be articulated in confessional terms by communities which assert that they have discerned the truth of power and the power of truth precisely in this text. (In his shrewd analysis Chilton [1984] has argued that this is true for individuals in their experience as well as for communities.)

This confessional claim is what is meant by the "self-authenticating authority of Scripture" (Raschke 1985). It is the readiness to act that keeps a confessional claim honest. This way of putting the matter is honest in not claiming that this authority can be objectively demonstrated, even though authority is claimed to be objectively grounded in the character of the classic. This way of making a claim is honest in asserting that there is a compelling power we have discerned and upon which we are prepared to act Such a statement of authority will not claim less. But it will not claim more, as though the claim were objectively provable. It is finally the readiness of a confessing community to stake its life on the summons of the text which is its only credible authentication. Both the Church, with its excessive penchant for dogmatic certitude, and the academy, with its fascination with objective rationality, characteristically stop short of the evidence of communal obedience. The question of authority is and must be shaped around the issue of obedient practice at the end of the Enlightenment period.

D. Authority as "Classic"

David Tracy (1981) has offered a fresh perspective on scriptural authority centered around the theme of "classic." In that term he proposes a category of authority that is not the special pleading of a partisan community, but a claim submitted to the criterion of public conversation. Tracy understands a text as a "classic" when:

> its "excess of meaning" both demands constant interpretation and bears a certain kind of timelessness—namely the timeliness of a classic expression radically rooted in its own historical time and calling to my own historicity … The classic text's real disclosure is its claim to attention on the ground that an event of understanding proper to finite human beings has here found expression … Every classic lives as a classic only if it finds readers willing to be provoked by its claim to attention (p. 102). If, even once, a person has experienced a text, a gesture, an image, an event, a person with the force of the recognition, "This is important! This does make and will demand a difference!" then one has experienced a candidate for classic status (pp. 115–16).

It is the text and not the community of the text which has authority. Tracy nonetheless understands that the response of the community of the text is important in determining the classic character of a text.

> At the very least, we will be willing to listen to that wider community of enquirers and readers who have found and find this text a classic. We will listen to them and then return to our dialogue with the subject matter of this "formed" text. After that second exposure, we may still decide that the community of enquiry in this instance has been mistaken … At that point, tentativeness must cease. For in those instances where a matter of importance is at stake—and the assignment of the status "classic" to any text is a matter of singular importance—then we must insist. But where tentativeness ceases, listening never does. The wider community of readers, living and dead, must continue to be heard as all return to the struggle of finding some appropriate response (from some initial sense of import to a formed judgment) to this possibly classic text (p. 116).

For Jews and Christians this tentativeness has ceased concerning the Bible. The decision that the Bible is a classic which mediates power and truth is a settled question for those communities. The church and the synagogue have found here "a certain kind of timelessness" which "demands constant interpretation."

With this characterization, Tracy hopes to avoid the circular argument of establishing the authority of the text by quoting the document itself. This practice satisfies only those who are already predisposed to accept the internal testimony of the text. Tracy also avoids the claim to authority which appeals to inspiration, revelation, or the work of the Spirit. Claims of this type may be valid, and are not here denied, but they bear the marks of special pleading as traditionally formulated. Moreover, Tracy eschews any notion of authority imposed externally through declaration, promulgation, or canonization. Circular argument, special pleading, and external imposition are not finally persuasive in such an urgent matter. Rather, authority is recognized (not given) by a public judgment that this text bears authority in its powerful offer of truth which has been recognized over time as having an inescapable claim upon us. The other dimension of tracy's characterization is that, since the text is distant in time, it requires interpretation which both discloses and conceals, so that the affirmation of authority requires and invites

interpretation rather than resisting it. Understood in this way, interpretation is not a threat to the initial claim of the text, but is appropriate to its character and intention.

E. Spheres of the Question of Authority

The power of the Bible as a classic as norm and authorizer is operative in three realms. In each of these we may observe the way in which the Bible authorizes.

1. Church and Synagogue. The classic is peculiarly linked to the synagogue and church out of whose memory the text has come. There is no doubt that text and community are dialectically related, i.e., that community forms text and text evokes community. The formal claim of canon asserts that this literature is normative, functioning as a norm for life and faith. It functions in the church (in the language of Ricoeur) to permit an imaginative rereading of reality, so that the believing communities can discern and respond to the world in ways different from those dominant responses described by Bellah and Rubenstein. Indeed this text mediates "truth" to these communities, truth about God, truth about self, truth about human history, and truth about the world as God's creation. Gilkey has summarized this "rereading of reality" in ways that show the distinctiveness of this mediation:

> … in the Old Testament understanding of history there are three distinct moments or stages characterizing historical passage … First of all, there was the divine constitution or "creation" of the people and their cultural life … The second moment … is the appearance of estrangement or alienation, of the fallen character of even the life of a chosen people … The final moment is also prophetic … This is the promise of a new covenant beyond the destruction of the old … the promise of new possibilities in historical life … [In the New Testament] divine constitution, divine judgment, and new creative acts become incarnation, atonement and resurrection/*parousia,* aspects of history, to be sure, but not of *ordinary* history (1984:12–13).

The problem with this classic in the religious communities is its possible subjugation to the "tyranny of the church," i.e., it is made to conform to ideological claims of the religious community. Traditionally this tyranny has been especially evident when the Bible has been interpreted only as a reinforcement for patterns of dogmatic formulation. For a very long period the Bible was used in the Christian tradition primarily to support such creedal formulations and it was precisely the rise of historical-critical methods that rescued the Bible, so that it could have its own liberated way, apart from these dogmatic categories. Thus the truth of the Bible cannot in good faith be accommodated to such tyranny, nor can it legitimately be made to serve ideological, partisan, or sectarian ends. Moreover, the truth given in this classic does not concern every kind of question that might be asked—scientific, astronomical, psychological, biological—but it is truth of a theological kind having to do with God's sovereign graciousness and gracious sovereignty.

The urgency of the Bible as authorization for the community of faith is its potential to release from false notions of absoluteness and certitude, and to unite a community currently beset by partisan and divisive pluralism. In the latter regard, the classic would gather disparate communities of faith together around a truth that is larger and more majestic than any similar partisan "truth" claimed by a particular community.

2. The Academy. This classic is also historically and culturally linked to the academy. Ebeling (1980) has shown how the Bible has played a key role in the origin of the Western intellectual and educational tradition. In the United States, the Bible has been crucial in forming the school tradition now so much taken for granted (Lynn 1980; Westerhoff 1978). However, the posture of the academy toward the text differs greatly from that of the Church (Childs 1982). Whereas the community of faith has characteristically bowed before the authority of the text, the academy has sought to analyze and understand the text, believing that clear understanding according to the best canon of reason poses no threat to biblical authority, but is a practice natural and congenial to the nature of the texts.

We can, however, speak of the "tyranny of the academy" over the voice of the Bible. The rise of historical criticism which freed the Bible from tyranny of the Church has led in turn to an autonomous reason which fundamentally resists the claims of the text. In contrast to the older discussion of reason and revelation, the academy has taken up a form of reason not only in tension with revelation, but deeply hostile to the claims of the text. Analytic methods have been joined to rationalistic categories of

interpretation so that dimensions of mystery, awe, and inscrutability have been denied the text. Scientific or pseudoscientific norms of knowledge have been imposed on the Bible which have reduced it to an archaic book emptied of its power to transform or to authorize.

An example of the above tyranny is found in the well-articulated article of Smith (1969), who candidly observes that the perceptual field of scholars is in contradiction to the claims of the text. Smith fails to notice, however, that the problem does not lie with the claims of the classic, i.e., the text, but with the methods and questions of the scholarly guild. This type of tyranny of reason has been dramatically identified by Wink (1973) and more programmatically articulated by Childs (1979). The issue has yet to be connected, however, with the larger crisis of technical reason which largely dominates the conversation of the academy (Horkheimer and Adorno 1972).

The function of the classic, i.e., the Bible, in the academy concerns epistemological questions and the nature of knowledge. The academy in the modern world practices a form of knowledge aimed at control and which characteristically tends to domination. Lamentably, too many discussions about biblical authority have assumed such theories of knowledge and technique. Against that, however, the Bible is concerned with modes of knowledge that are relational, convenantal, and interactional, believing that knowledge should not dominate, but should serve to liberate and transform communication (Palmer). Modes of knowledge which tend toward domination cannot offer genuinely "new truth," i.e., they cannot be revelatory, but can only rearrange old patterns of power. "New truth" comes where imagination challenges, where spirit blows against letter (2 Cor 3:6), and where yielding replaces control.

3. The Public Arena. Lastly, the classic is culturally available in the public arena. It is a remarkable and enduring fact that the Bible has authority in the Western world far beyond the limits of its proper confessing communities. Indeed the dominant images and metaphors still governing public life are largely and powerfully shaped by the Bible (Frye). Bellah has shown that while civil religion in America may be distorted ideology, it nonetheless still partakes of echoes and sentiments derived from the Bible (Bellah 1975; see also Marty 1982).

To be sure, the Bible in our society has been utilized in coercive, oppressive, and ideological ways, e.g., as a law to keep minorities and women in their respective places, and as a lever against all sorts of "objectionable" people in the public arena (e.g., homosexuals). Nonetheless, it has been the Bible and its derivative traditions that have provided impetus and power for restorative notions of personal health and social humanness. Characteristically, liberation movements in our time have found their central images in the Bible (Walzer 1985). A striking example is Martin Luther King, Jr., a child of this text, who had the imagination and the ability eloquently to articulate the issues of racial discrimination through biblical metaphors that mobilized both public and secular responses (Smylie 1970).

The key to public issues in our society, as in every society, concerns access to power and the processes of decision making. It is obvious that a monopoly of access exists and that many are voiceless and excluded from decision making. Access is characteristically arranged in the interest of certain notions of order and merit. In the public conversation, against such a destructive commitment to an order which opposes egalitarianism in politics and economics, the Bible powerfully insists that questions of justice, questions of abundant life for the marginal, and questions of social access, social goods, and social power cannot be silenced.

The issue of biblical authority in our time, then, may be understood as an issue of the juxtaposition of *the crisis of inhumaneness* (Bellah 1982; Rubenstein 1983) and *the classic* (Tracy 1981) which has enduring authority. Without this classic, it is probable that the church and synagogue would settle for distortions of truth in partisan forms of absolutism or divisive forms of pluralism. The classic, however, summons the church to a *truth that liberates* us from our certitudes and *frees* us from our private and partisan commitments. Without this classic, it is probable that the academy would settle for distorted modes of knowledge, aiming at control and eventually leading to domination. This classic, however, invites the academy to practice *knowledge which heals, reconciles, and mobilizes power* in the service of human dignity, while simultaneously it provides a broad definition of what constitutes human dignity. Without this classic, it is probable the public domain would distort justice, pursue an oppressive order,

and practice economic and political inequality. This classic urges those public practices of power to be *concerned with questions of justice,* so that marginal and powerless persons can be included in the formation of public policy. Thus the classic invites the church and synagogue to consider a truth that liberates, invites the academy to consider a knowledge that reconciles and heals, and invites the public arena to practice a form of justice which provides equal access to all, irrespective of privilege, power, or accomplishment.

The fact does, however, remain that some wield the authority of Scripture as a sponsor of sectarian truth, of ideological knowledge, and of a social order indifferent to issues of justice. To such an alternative and distorted reading of the Bible, one may respond in two ways: first, that it is on the issues of truth, knowledge, and justice (in the ways here characterized) that the Bible has established its claim as a classic. The Bible would not anywhere, at any time, have arrived at the status of classic, if it had been a text characteristically in the service of oppressive truth, technical knowledge, of partisan injustice. It is the largeness of its vision and its promise of a viable alternative that determines its functional power. The Bible is recognized in its classic proportion because it attempts to mediate and make available that which we judge most definitional for human life.

Second, we insist that the question of authority should not concern authorship, but authorization. As soon as the question of authorization is posed, one must ask, authorization to what? To what are the church and synagogue, the academy, and those in public life authorized? Within the scope of the biblical texts, the inescapable answer is the substantive disclosure of the Bible on all three counts, namely, there are (1) a God committed to liberation, unity, healing, knowledge, and justice; (2) an ongoing conflict within the course of public history precisely over these matters; and (3) a vision of the eventual triumph of these commitments of God.

F. Authorization and Communities of Praxis

The test of the authorizing power of the Bible is not, however, to be settled according to intellectual formulation. The test in this time of need for human possibility is in praxis, i.e., in the emergence of communities which embody and implement the rereading of the world that is voiced in the text. These communities of obedience bear witness to the authorizing power of the book as well as to the spirit which blows through that book. The text gives them not only advice and guidance but also the energy and courage for a life of obedience. It is staggering evidence of the authority of Scripture that even in the face of harsh, systemic brutality there have been and still are communities of faith who have demonstrated this alternative vision in the public arena. We may identify these communities under the rubric of those authorized by *biblical requirement* and those authorized by *biblical permit.*

1. Biblical Authority as Requirement. The Bible gives authorization to *communities of requirement* in its voice as the norm of commandment. The Bible, as the classic in which tentativeness is ended, is heard as the voice of summons and command which can be answered only with obedience. There is a stringent insistence in the Bible concerning expectations and demand for the community which it authorizes. Such communities ask in the face of this text, "What is required?" (cf. Deut 10:12; Mic 6:8). The answer, given in a variety of ways, is justice and mercy (Sider 1977).

This authorization *as requirement* is evident especially in communities of radical obedience in contexts of affluence, satiation, and accommodation. This has been true through the history of the church and the synagogue. In such contexts, the biblical text authorizes communities of the faithful who, in obedience to the text, order their lives in ways distinct from the dominant value system so as to disengage from those practices of power and well-being advocated by the society in which they find themselves placed. Such communities of obedience are given over to acts of mercy, strategies of justice, and visions of peace peculiarly authorized by this text.

2. Biblical Authority as Permit. The Bible reciprocally gives authorization to *communities of permit* in its voice as the norm of deliverance (Schreiter 1985). In quite parallel fashion, we may speak of "communities of permission." These communities are located not in contexts of affluence but in contexts of oppression and marginality where people hear the voice of liberation and acceptance, a voice which can be answered only in energy, freedom, and trust.

These are communities of faithful individuals who are authorized and permitted by this text to stand against oppression and to refuse marginality in the name of justice and liberation. Such communities are characteristically found in Third World situations where the dominant value structures preclude justice, legitimize marginality, and invite docility and passive acceptance of the status quo. Within such contexts, this text acts as an impetus to new life through the assertion of one's dignity, rights, worth, and power (Walzer 1985).

These communities of requirement and permission clearly concern public values of justice and dignity. But these same communities also have an intense pastoral concern in that individual persons are called to be obedient and are invited to assert and enact their own dignity, worth, and self-respect.

The authority of Scripture can be understood only in relation to and in terms of the communities it authorizes. The authorizing power of the text is evident through both its demand for obedience and its grant of permission to act in new ways against both accommodation and oppression (Levinas 1969). The force of such authorization implies that the book and its authorized communities cannot wait for the resolution of scholastic arguments concerning inspiration or revelation, nor can they wait upon the academy to formulate properly its own intellectual stance on the matter. The authorizing power of the text is of another order.

In communities of requirement and permission, the Bible does not offer strategies or advice. What it does offer is energy, courage, vision, and hope. Historically, we have spoken of these matters in the text as "the inspiration of the Holy Spirit," and that is indeed what they are. But "Holy Spirit" needs to be understood apart from literary questions of authorship. Rather, the spirit has to do with faith questions of authorization, imagination, and life. The power of the spirit functions to permit communities to discern, imagine, and appropriate life differently, as it is mediated, remembered, and hoped in this text. The work of the spirit is the liberation of the community's imagination mediated through the text. These communities of requirement and permission find such liberation mediated in these texts in ways that permit a new life in the world. The text is "in-spirited" in the sense that it is "peopled" with the force of God's power to permit new communities to emerge in the world. It is "infallible" in the sense that it authorizes a way of living and believing that without fail leads to the fruits of the spirit (Gal 5:22–24). It is "revelatory" in the sense that it discloses a new way of living in the world that was not previously known and that seemed heretofore prohibited by the structures of coercion and domination.

The central thrust of this classic which mediates new life is its offer of an alternative reality of governance which is sure but not dominating, producing new modes of certitude, power, and knowledge. The "otherness" of the text is the disclosure of a "secret" (cf. Luke 10:23–24). In the scripture of Israel, that "secret" is about a transcendent governance rendering all other imperial power inoperational (Exod 8:18), confounding spear and sword with a power name (1 Sam 17:45), and opening the world against might and power by the spirit (Zech 4:6). In the NT that same secret concerns "the impossible" being made possible (Mark 10:27), weakness in obedience which turns out to be triumphant strength (cf. 2 Cor 11:30; 12:5, 9).

G. Strange Authorization for Newness.

Martin Buber, in a voice of faithful Judaism, and Karl Barth, in a voice of faithful Christianity, both understood that the Bible is a strange voice and a strange book which gives life. Buber writes:

> The modern person must read the Jewish Bible as though it were something entirely unfamiliar, as though it had not been set before him ready-made, as though he has not been confronted all his life with sham concepts and sham statements that cited the Bible as their authority. He must face the Book with a new attitude as something new. He must yield to it, withhold nothing of his being, and let whatever will occur between himself and it. He does not know which of its sayings and images will overwhelm him and mold him, from where the spirit will ferment and enter into him, to incorporate itself anew in his body. But he holds himself open. He does not believe anything a priori; he does not disbelieve anything a priori. He reads aloud the words written in the book in front of him; he hears the word he utters and it reaches him. Nothing is pre-judged. The current of time flows on, and the contemporary character of this man becomes itself a receiving vessel.

In order to understand the situation fully, we must picture to ourselves the complete chasm between the Scriptures and the man of today (1968:5).

Barth (1957) asserts in parallel fashion:

> Within the Bible there is a strange, new world, the world of God. This answer is the same as that which came to the first martyr, Stephen: Behold, I see the heavens opened and the Son of man standing on the right hand of God … We must openly confess that we are reaching beyond ourselves. But that is just the point: if we wish to come to grips with the contents of the Bible, we must dare to reach far beyond ourselves. The Book admists of nothing less … A new world, the world of God (pp. 33–34).
>
> Once more we stand before this "other" new world which begins in the Bible. In it the chief consideration is not the doings of man but the doings of God-not the various ways which we may take if we are men of good will, but the power out of which good will must first be created (pp. 39–40).
>
> It is not the right human thoughts about God which form the content of the Bible, but the right divine thoughts about men. The Bible tells us not how we should talk with God, but what he says to us; not how we find the way to him, but how he has sought and found the way to us; not the right relation in which we must place ourselves to him, but the covenant which he has made with all who are Abraham's spiritual children and which he has sealed once and for all in Jesus Christ. It is this which is within the Bible. The word of God is within the Bible (p. 43).

The Bible is fundamentally alien to modernity, even as it is fundamentally alien to every dominating mode of rationality in every age of the synagogue and the church. It is for this reason that the Bible and its authority can never be articulated or summarized in dominant modes of rationality. The book can be received and its authority evidenced only in communities of obedience and praise which, with marvelous indifference to categories of explanation, act with power, courage, freedom, and energy toward a new world envisioned, imagined, and promised in this text. To try to reduce such liberated imagination either to the categories of literalism or to the more respectable but equally problematic categories of liberalism is a sorry, mistaken assessment of this book. The practice of literalism is to hope for a kind of control that this in-spirited book will never countenance. To practice liberalism is to hope for a kind of benign distancing that this restless book will never tolerate. In the face of such ill-conceived control or distance, genuinely authorized communities regularly find the book more terrifying than that, and more dangerously healing. Any formulation of authority which alleviates the terror or domesticates the healing is inadequate for the book. Such a reduction in either direction is an attempt at domination, whereas the book insists upon yielding as the point of access to its truth and power. This yielding means that truth and power, with all their terror and healing, are yet to be granted in new forms. That is what the theories of *"Sensus Plenior*" (Brown 1955), "The New Hermeneutic" (Fuchs 1964; Ebeling 1964), and "world-making speech" (Wilder 1983) have attempted to articulate. The authorized communities will continue in obedient interpretation, in obedience which in itself is an act of interpretation. In the midst of interpretation and obedience, there is a waiting (Hab 2:3) and a watching (Mark 13:37) for what will soon be given by God through this text.

SCULPTURED STONES. See IDOL, IDOLATRY.

SCURVY. See SICKNESS AND DISEASE.

SCYTHE. See WEAPONS AND IMPLEMENTS OF WARFARE.

SCYTHIANS [Gk *Skythēs* (Σκυθης)]. The term "Scythians" is used both to describe specific tribes which inhabited the area N and E of the Black Sea beginning in the 7th century B.C. and as a generic word for horse-riding pastoralists who lived during the mid-1st millennium B.C. on the steppes which extend from the Black Sea to S Siberia (Jettmar 1967:21–23). Biblical scholars sometimes associate the Scythians with ASHKENAZ and with the bringers of destruction in the prophecies of Jeremiah (4:29; 5:15–17; 6:22–26; 50:41–42) and Zephaniah (Malamat 1950/51:154–59). Outside the Hebrew Bible their reputation for savagery is alluded to in 2 Macc 4:47; *3 Macc.* 7:5; *4 Macc.* 10:7; and Col 3:11.

The Scythians, called "Ashguzai" by the Assyrians (cf. Heb *ʾaškĕnaz*), apparently first appear in written history in the annals of Esarhaddon (681–668 B.C.), and seem to be centered at that time in what is today NW Iran. According to Herodotus (1.103–6) the Scythians ruled over all of the Near East for 28 years after entering the area from the N; traditionally this period of rule is assigned to the 7th or 6th century B.C. The Scythians continue to be mentioned in texts of the Babylonians, Persians, and Greeks as allies and as enemies through the 4th century B.C. By the 3d century B.C., Scythian presence in the Near East is restricted to the Crimea and the shores of the Black Sea. Ovid records Scythian life in the 1st century A.D., by which time their power is spent; the Scythians shortly after fade from history (Piotrovsky et al. 1987:12–15).

The Scythians did not have a writing system; what textual references we have for them are recorded by outsiders. The principal discussion of Scythian life is by Herodotus (book 4), many details of which have been confirmed by archaeological finds from across the Eurasian steppe.

The Scythian economy was based on their herds of sheep and goat and on their horses. On horseback and in carts, they moved from one seasonal pasture to another, ranging over a wide area. Trade with settled peoples provided grain, metalwork, and luxury goods to the nomads. The Scythians were famed for their military prowess and served as mercenaries for the Babylonians and other Near Eastern kingdoms, and as policemen for the Athenians.

The Scythians mastered fighting on horseback, as Herodotus records, and it is their special military skills which recommended them as mercenaries. This reputation may be why the Scythians are associated with Jeremiah's and Zephaniah's prophecies. Whether the Scythians were meant to be invoked as "the enemy from the north" in these writings is a matter of some debate (Yamauchi 1982:87–97). The precise chronology of Scythian presence in the Levant is based on spotty documentary evidence, primarily Herodotus' (1.105). If in fact the Scythians reached that far W, then it would have been sometime in the second half of the 7th century B.C. (Malamat 1950/51:155). Yamauchi's suggestion that the Scythians were mercenaries in the Chaldean army (1982:99) is based on the excavation in Jerusalem of a few specimens of an arrowhead type called "Scythian." However, this kind of arrowhead was used by many different peoples in this period (Muscarella 1988:107–108), and Yamauchi's argument is not conclusive. Whether Beth-shan was called Scythopolis because the Scythians were once present in the area cannot be determined (Smith 1897:362–64).

In the Black Sea area, the so-called Royal Scythians were buried in grave pits under large mounds of earth and stone, often accompanied by sacrificed horses and people. Grave chambers were at first constructed of timber, though by the 4th century B.C. some were made of stone. The grave goods demonstrate economic interaction with the local settled populations, in the 7th and 6th centuries with Urartians and other Near Eastern groups and in the 5th and 4th centuries with Greeks. Large amounts of gold preserved in some tombs testify to the great wealth of Scythian rulers.

Scientific excavations of Scythian tombs began in the 18th century and continue today. The graves in the Black Sea region had often been robbed in antiquity, but nevertheless contained many objects when they were excavated, and some burials have been found intact (Piotrovsky in Metropolitan Museum of Art n.d.:26–31).

The objects display art styles of the Near East, Greeks, and Scythians. Scythian art is often called "animal style," since the principle motifs are animals, often in characteristic curled up poses or with folded legs. Felines, stags, and griffins are favored motifs, and animal combat scenes are often depicted. The role of Near Eastern art in the development of the Scythian "animal style" is problematic, though the roots clearly lie earlier in the Caucasus, Central Asia and S Siberia (Bunker, Chatwin, and Farkas 1970:24).

Greek-made objects in the Black Sea tombs, dating primarily to the 4th century B.C., depict scenes of Scythian life. From these objects we can learn more about Scythian clothing, customs, warfare practices, and pastoral life. Details include the typical Scythian costume of tunic, trousers, and boots, often covered with small gold plaques; Scythian weaponry, including the bow and arrow case known as *gorytus*, the

shield, spear, and battle ax; and activities of animal husbandry, including the breaking of horses and the milking of sheep (Artamonov 1969:pls. 147–50, 162–76; Metropolitan Museum of Art n.d.:pls. 31, 33).

Although the Scythians primarily lived in tents, there is some evidence in the N steppe of settlements dating to the 7th or 6th century B.C. which may have been occupied only seasonally. By the end of the 5th century B.C., some of the Scythians in the Black Sea region had become permanently settled, although nomadism continued among the Scythians in the Black Sea area until at least the 3d century B.C. (Rolle 1980:124–38).

SCYTHOPOLIS (PLACE) [Gk *Skythōn polis* (Σκυθων πολις)]. A name applied to the town of Beth-shan during the Maccabean period and later (Jdt 3:10; 2 Macc 12:29, 30). See BETH-SHAN.

SEA [Heb *yām* (יָם)*;* Gk *thalassa* (θαλασσα)]. The Hebrew noun *yām* occurs 390 times in the OT and refers to bodies of water of various sizes, whether lakes or oceans. While Greek aquatic vocabulary is far more diversified, the standard Greek noun for sea, *thalassa,* is usually used in both the LXX and the NT in the same general manner as the more limited Hebrew noun.

A. Sea as a Natural Phenomenon

Biblical authors applied the word "sea" to specific bodies of water known today as the Mediterranean Sea, the Sea of Galilee, and the Dead Sea. In addition, they often spoke about the Reed Sea (Red Sea, KJV and RSV), identification of which is not certain. See also RED SEA. With but few exceptions, during the reigns of Solomon (1 Kgs 9:26–28; 10:22) and Jehoshaphat (1 Kgs 22:49—Eng 22:48), the Hebrews were not navigators of the Mediterranean, which they often called the "great sea" or the "western sea." The coastline of Palestine is remarkably straight, with no natural harbors, and from the 11th century B.C. the Philistines controlled it. (Hence the land was named Palestine, the land of the Philistines.) These two facts explain the Hebrews' lack of maritime activity. Their Phoenician and Canaanite neighbors to the N, however, were active traders. Hiram I, king of the Phoenician city of Tyre, was a major ally of Solomon and was responsible for outfitting the ships that every third year (1 Kgs 10:22) sailed the Mediterranean, and ventured as far as Ophir (Somalia?) on trading expeditions.

The Sea of Galilee, also referred to in the OT as the Sea of Chinnereth (Num 34:11; Josh 13:27) or Chinneroth (Josh 12:3), and in the NT as the Lake *(limēn)* of Gennesaret (Luke 5:1) or the Sea of Tiberias (John 6:1; 21:1), is actually a large freshwater lake in N central Palestine. It was frequently navigated, especially by fishermen. Because of its size and situation it is subject to sudden, violent storms similar to those associated with the ocean itself. See also GALILEE, SEA OF.

The Dead Sea is located in the Arabah region of S Palestine and has no outlet. Its waters, fed by the Jordan river, have a high concentration of salt and other minerals; hence it is often called the Salt Sea (Gen 14:3; Num 34:12; Deut 3:17; Josh 3:16, etc.). Alternatively, it is known as the "Sea of the Plain" (Deut 3:17; 4:49; Josh 3:16) or the "Eastern Sea" (Ezek 47:18; Joel 2:20; Zech 14:8). See also EASTERN SEA; SALT SEA.

The Red Sea *(yām sûp)* figures prominently in the story of the Exodus (Exod 10:19; 15:4, etc.). Its precise location is uncertain, but it is generally considered unlikely that the term refers to what is today

known as the Red Sea, despite the fact the Hebrew is so translated by KJV, RSV, and others. Many scholars therefore prefer to translate it "Reed Sea." There is also reference to the "sea of Egypt" in Isa 11:15.

B. Sea as a Cosmic Element

Like other peoples in the ancient Mediterranean community, the Hebrews thought of water as one of the basic elements from which the universe was formed. In the Priestly account of creation (Gen 1:9–10), God separates the waters from land, and calls the former "seas."

More specifically, the Hebrews conceptualized the universe as constructed of three storeys: the earth; heaven above the earth; and waters beneath the earth (e.g., Exod 20:4). The last, which included the oceans of the world and everything underground, was sometimes called *těhôm,* the abyss or the deep (e.g., Ps 135:6). Gunkel defines it as *Urmeer,* "primordial ocean." The "deep" was considered the cosmic ocean, whose waters completely surrounded the universe. It was the source of the waters of every ocean, lake, river, and spring on the earth's surface, and also of precipitation from heaven. Rain or snow would fall to earth when the "windows of heaven," apertures in the firmament dome which enclosed the atmosphere and separated it from the heavenly ocean, were opened (Gen 7:11; 8:2; Mal 3:10).

Because the sea figured so prominently as an element within the created order, many ancient cultures personified it. The Mesopotamian sea monster Tiamat is one important example. Canaanite literature includes reference to others: Lady Athirat of the Sea, consort of the high god El (*UT* 49, 51, *ʿnt*); Prince Sea, a chaotic challenger of Baʿal the creator god (*UT* 129, 137, 68); and Lôtan (*UT* 67), a sea monster vanquished by Baʿal and widely held to be identical with the biblical Leviathan (Job 40:25—Eng 41:1; Ps 74:14; 104:26; Isa 27:1).

C. Sea as a Cultic Object

A large bronze basin (over 7 feet high and over 14 feet across) stood outside Solomon's temple in Jerusalem and was referred to as the "brazen (bronze) sea" (2 Kgs 25:13; 1 Chr 18:8; Jer 52:17), the "molten sea" (1 Kgs 7:24; 2 Chr 4:2), or "the sea" (1 Kgs 7:24; 2 Kgs 16:17). It was designed and cast by Hiram, a Phoenician craftsman from Tyre (1 Kgs 7:13–14) and was supported by twelve bronze bulls. The basin was full of water, and was probably used by the priests in connection with the animal sacrifice carried out on the great altar which stood across from it at the temple entrance. Apart from its practical function as a place to wash, the bronze sea probably symbolized the cosmic ocean, even as the temple itself represented the created order of the universe. The sea was dismantled when the Babylonians destroyed the temple in 586 B.C. See SEA, MOLTEN.

D. Sea in Symbolic Imagery

As part of creation, the sea was under the control of Yahweh; but it was also a consistent threat, pushing against the shores which held back its potentially violent force. The Hebrew writers viewed the sea with distinct ambivalence. They saw its waves as symbolic of fullness and regularity (Isa 48:18), its dimensions as expansive (Job 11:9), and its waters as the home of countless small animals (Ps 104:25). But they also spoke of its depths and the entangling vegetation therein as entrapment (Jonah 2:6—Eng 2:5). The sea, with its roaring and churning (Ps 93:3–4), had a dangerous power, so much greater than that of mankind that the Hebrews sometimes used marine imagery to speak of their enemies' attacks which they felt helpless to withstand without divine intervention (e.g., Jer 6:23). Accordingly, when describing their greatest victory in the tradition of the Exodus, the Hebrews referred to a parting of waters—specifically, the waters of the Red Sea. In this parting, Yahweh showed his ultimate authority over insurgent forces, both in nature and among men, an authority celebrated in the Song of the Sea in Exodus 15.

The theme of *Chaoskampf,* a battle between a creator god and a sea monster, appears in literature throughout the ANE. The Babylonian epic poem *Enuma Elish* presents one version of it. Whether remnants of it also appear in the OT is widely debated. The conquest of the Egyptians at the Red Sea is sometimes held to be a historicized version of *Chaoskampf,* "mythology come to life" (*CMHE,* 112–44). Also significant in this regard are references to Leviathan (particularly in Isaiah 27, which may quote an

ancient Canaanite poem about the sea monster *Lôtan*), Rahab (Job 26:12) and the dragon (Isa 27:1). See also DRAGON AND SEA, GOD'S CONFLICT WITH.

The book of Revelation refers to a "sea of glass mingled with fire" (15:2). Bowman sees this as a multifaceted reminiscence of OT traditions, including those of the cosmic sea, the temple's bronze sea, and the Exodus tradition of the victory at the sea, coupled with the fires of purification. See SEA OF GLASS, GLASSY SEA. Additionally, the Revelator speaks of a new order with "no more sea," (21:1), probably best understood as no more threat, even potentially, to God's authority and harmonious government of the universe.

SEA GULL. See ZOOLOGY.

SEA OF GLASS, GLASSY SEA [Gk *thalassa hyalinē* (θαλασσα ὑαλινη)]. The Sea of Glass is mentioned only in Rev 4:6 and 15:2. The context of the former is the vision of the throne of God and the Lamb (chaps. 4–5). The context of the latter is the vision of the victorious martyrs before the throne of God (15:1–4) which prefaces the vision of the seven bowls (chaps. 15–16). In both instances the Sea of Glass is an apocalyptic symbol used to describe a heavenly wonder. It is a simile, for what is envisioned is "like" a Sea of Glass, but not actually such a sea.

Although it lends majesty and awe to the description of the visions, the symbol of the Sea of Glass is not merely a stylistic device. The symbolism of a heavenly sea before the throne of God originates from diverse Jewish traditions of the creation, Exodus, and apocalyptic throne visions. The waters that were above the firmament, the counterpart of those below the firmament, were considered to be in heaven (Gen 1:7; Ps 148:4; *Jub.* 2:4; *T. Levi* 2:7; *2 Enoch* 3:3 [J]; Str-B 3.798–99), and God's chambers and his throne to be above the waters above the firmament (Ps 104:3; Ezek 1:26). The symbolism may also originate in the molten sea which stood before Solomon's Temple and was used for priestly purification, for it may have represented the waters above the firmament (1 Kgs 7:23–26; cf. Exod 30:17–21). The same may be represented by the ten bronze lavers around Solomon's temple used for the purification of sacrifices (1 Kgs 7:38–39; 2 Chr 4:6).

In 4:6 the Sea is described as being like crystal, a description having several possible origins. The seventy elders of Israel on Mt. Sinai saw God standing on "a pavement of sapphire stone, like the very heaven for clearness" (Exod 24:9–10, RSV). Ezekiel's throne chariot vision describes a firmament "shining like crystal" over the heads of the four living creatures (Ezek 1:22). *1 Enoch* describes God's throne as being like crystal and the floor beneath as crystal (14:12, 18). The Quran (27) relates that there was a glass floor before the throne of Solomon so clear that it was mistaken for water by the Queen of Sheba.

In 15:2 the Sea is described as "mingled with fire" (not to be confused with the lake of fire—Rev 19:20; 20:14). This description, too, has several origins. "Mingled with fire" may describe the reflection of the lightning which plays above the throne of God (Rev 4:5). Ezekiel's throne chariot vision describes the loins of God and below his loins as fire (Ezek 1:27; cf. 1:4, 13). Daniel's vision describes "his throne as fiery flames, its wheels were burning fire. A stream of fire issued and came forth from before him" (7:9–10). Enoch's vision relates that a stream of flaming fire issued from under God's throne (*1 Enoch* 14:19).

The context of 15:2 provides an important association for the Sea of Glass. The martyrs are singing the Song of Moses sung by Moses and the Israelites after their deliverance from Pharaoh at the Crossing of the Red Sea (Exod 15:1–18). The vision of the seven bowls (chaps. 15–16), of which 15:1–4 is a preface,

describes plagues very similar to those of Egypt prior to the deliverance of Israel (Exodus 7–12). Rabbinic tradition assumes that the Israelites beheld the Shekinah while crossing the Red Sea (*Mek.* Širah 3,37a to Exodus 15). The fiery sea may thus be an allusion to the deliverance at the Red Sea and the judgment of the enemy by water. The fiery sea may symbolize God's deliverance of his people in time of persecution and the judgment of their enemies that is about to be inflicted (cf. Rev 8:5).

SEA PEOPLES. A modern term referring to nine seaborne peoples mentioned in Egyptian sources (see Helck in Müller-Karpe 1977 and in Deger-Jalkotzy 1983) from the reigns of Merneptah (1212–1202 B.C.) and Rameses III (1182–1151 B.C.); the Egyptian consonantal spellings can be vocalized in some of the names with the help of cuneiform sources: *Šerdani, Lukka, Šklš, Trš, ʾq (y)wš* (perhaps *Aḫḫiyawa*), *Sikila, Danuna, Wšš,* and Plšt (the Philistines). Some of these warlike bands already occur in Hittite sources (see Güterbock 1981 on the Madduwatta text) and in the Amarna correspondence of the 14th century B.C. (on the Šerdani see Lehmann in Deger-Jalkotzy 1983; on the Lukka see Bryce 1974), both as pirates raiding the shores of Cyprus and Egypt and as mercenaries recruited to the Egyptian and other armies. However, the main thrust of the Sea Peoples to the Levantine coasts occurred in the late 13th and early 12th centuries B.C.

Several groups *(Šerdani, Trš, Šklš, ʾqywš, Lukka)* fought within the ranks of the Libyan armies in the W delta and were defeated by Merneptah in 1207 B.C. There are no pictorial representations, but according to the textual descriptions some of these Sea Peoples were circumcised, others were not.

About the turn of the 12th century (for the chronology see Singer 1987) seaborne raiders invaded the coasts of Cyprus (Karageorghis and Muhly 1984), Cilicia (Bittel in Müller-Karpe 1977 and in Deger-Jalkotzy 1983) and N Syria (for Ugarit see summaries in Young 1981) and eventually brought about the collapse of the Hittite Empire. Cuneiform sources from Ugarit (Astour 1965; Lehmann 1970) and from Hattuša (Otten in Müller-Karpe 1977 and in Deger-Jalkotzy 1983; Singer 1983 and 1985b) portray a situation of total confusion and inability of the imperial fleet and armies to cope with the "enemy," who, with one exception, are not mentioned by name. "The Sikila people, who live on ships" in an Ugarit text (Lehmann 1979) are probably identical with the *Skl* of the Eygptian sources (or else, with the *Šklš*).

After the collapse of the central Hittite government, some of the Sea Peoples settled along the shores of the N Levant and Cyprus, while others gradually continued to move farther S, toward Canaan (Schachermeyr 1982). In 1174 B.C., Rameses III attempted to block their advance at the N end of the Egyptian Empire, near the land of Amurru; the ensuing battles, both on land and in sea, are depicted on reliefs in the mortuary temple of Rameses III in Medinet Habu (Nelson 1930; 1932; Sandars 1978:117 ff.). In the sea battle two different types of Sea Peoples are shown on distinctive ships: the *Šerdani* wear horned helmets, whereas the Philistines and related groups *(Šikila, Danuna)* wear feathered headdresses. Only the latter are portrayed on the scene of the land battle; the fighters, three on each chariot, carry long spears, rounded shields, and swords. Their families follow in heavy carriages drawn by oxen. Despite the boastful descriptions of his victory (in the Medinet Habu inscriptions and in the Great Papyrus Harris), it is obvious that Rameses III was unable to stop the advance of the Sea Peoples. To make the best out of the inevitable, he settled them as mercenaries in Egyptian strongholds along the coast of Palestine (Alt 1944; Singer 1983). The Philistines settled on the fertile coast of Philistia, the Sikila seized the region of Dor in the Sharon Plain, and a third group, probably the Šerdani, settled in the Plain of Acco (Lehmann in Müller-Karpe 1977; Singer 1988). In addition to 11th-century Egyptian sources (the report of Wen-Amon and the Onomasticon of Amenope), abundant evidence for the settlement of the Sea Peoples is supplied by excavations (for recent summaries see Dothan 1982; Dothan and Gitin 1987; Brug 1985) in Philistia (Ashdod, Ashkelon, Ekron, Timnah, Tel Seraʿ, etc.) and N of it (Tell Qasile, Tell Jerishe, Tel Aphek, Tel Zeror, Dor, Akko, etc.). One of the distinctive features is a monochrome pottery (Mycenaean IIIC) of Aegean origins, found along the Levantine coast, from Cilicia to Philistia, and in Cyprus (Schachermeyr

in Deger-Jalkotzy 1983; Kling in Karageorghis and Muhly 1984). This early pottery of Aegean origins gradually adopted local traditions and developed into the characteristic Bichrome Philistine ware (A. Mazar 1985; Singer 1985a).

Of the Sea Peoples who settled in Palestine, only the Philistines are mentioned in the OT, probably because the other groups were already fully assimilated with the local populations by the end of the 11th century B.C. The Philistines, organized in five city-kingdoms, gradually became the leading force in Palestine and dominated the land until the reign of David (B. Mazar 1971 and 1986:63–82; Malamat 1971). They still kept their political autonomy and their national identity after the Israelite takeover, until the Babylonian exile.

Clear evidence for the origins of the Sea Peoples is still missing (survey of views in Singer 1988). Disregarding some farfetched theories, the admissible views may be roughly classified according to three main geographical zones. (a) The N Balkans, particularly Illyria on the Adriatic coast; the "Illyrian theory" is related with the identification of the Philistines (*Palaisti may be the original form of the name) with the Pelasgoi (sometimes spelled Pelastoi) of the classical sources, a pre-Hellenic people who inhabited the Balkans and the Aegean regions (Lochner-Hüttenbach 1960). (b) The W Aegean region, i.e., Greece, the Aegean islands, and Crete; this theory relies on archaeological (mainly ceramic) comparisons and on the biblical tradition, which brings the Philistines from the island of Caphtor, i.e., Crete. (c) The E Aegean, i.e., Anatolia and the offshore islands. This view, which is gaining increasing acceptance, is supported by the most solid and diversified evidence. (1) At least two out of the nine Sea Peoples mentioned in the Egyptian sources are undoubtedly located in Anatolia—the Lukka in Lycia and the Danuna in Cilicia; a third group, the *Trš,* is probably related to the Tyrsenoi (and biblical Tiras), who, according to Herodotus, migrated from Lydia to Etruria. (2) The few traces of Philistine words *(seren, q/kobah)* and names (Goliath, Achish) appear to be etymologically connected with Anatolian languages. (3) The Hittite texts provide ample evidence for serious upheavals in SW Anatolia (the Lukka lands) in the second half of the 13th century B.C., which can clearly be related with the emergence of the Sea Peoples (Singer 1983). (4) Some of the classical traditions on W Anatolian heroes who trekked eastward and eventually settled in Cyprus and the Levant (Teucros, Mopsus) may reflect dim echoes of the migratory movements of the Sea Peoples (Schachermeyr 1982).

Although the focal point of the turbulence appears to have been in SW Anatolia (still a poorly explored region), the 'tidal waves' soon affected the neighboring regions and disrupted the authority of the Hittite and the Mycenaean empires. The major cause for the economic and political breakdown, which motivated large populations to migrate, was probably the severe food shortage, amply documented in contemporary Near Eastern texts and also echoed in the classical and biblical sources. Whereas some of the Sea Peoples poured down along the Levantine coast in search of land and food, others turned westward and sailed as far as Sardinia *(Šerdani), Sicily (Sikila* or *Šklš),* and Etruria *(Trš/Tyrsenoi).* Archaeological evidence from the central Mediterranean, particularly from Sardinia, confirms the classical traditions on these movements (Sandars 1978, chap. 4). Quite extensive in itself, the diaspora of the Sea Peoples represents only a fraction of much larger population drifts, which encompassed vast territories in the E Mediterranean, the Balkans, Asia Minor, and the Levant, and radically changed the face of these regions in the transition from the Bronze Age to the Iron Age (see summaries in Deger-Jalkotzy 1983). Contrary to traditional views which conceived of the Sea Peoples as barbarian raiders spreading ruin and chaos, modern historical and archaeological research increasingly appreciates their cultural role in the merging of the Indo-European civilizations of the Aegean realm with the Semitic cultures of the Levant.

SEA, MOLTEN [Heb *yām mûṣāq* (יָם מוּצָק)]. Var. BRONZE SEA; SEA. Designations for a spectacular bronze appurtenance that is said to have stood in the courtyard of Solomon's temple. It is described in the temple text of 1 Kings (1 Kgs 7:23–26) and in the parallel account in Chronicles (2 Chr 4:2–5). Both 2 Kings (25:13) and Jeremiah (52:17) list the Sea among the temple vessels that were broken into pieces and carried off to Babylon when the temple was destroyed in 587.

The bronze Sea (Heb *yām hanněḥōšet*), like the other bronze vessels of the temple, was crafted by Hiram of Tyre, an expert in bronze work. The Chronicles preserves a tradition that the requisite metal for the sea and other vessels was part of spoils acquired by David (1 Chr 18:8; cf. 2 Sam 8:8). It apparently was made by casting, since the term "molten" derives from the Hebrew root *yṣq*, "to cast, pour" (as metal). According to the Kings account, it was a vessel of huge proportions: 10 cubits in diameter (ca. 15 feet), 5 cubits high (ca. 7.5 feet), and 30 cubits in circumference. When empty it would have weighed between 25 and 30 tons. Although it is not certain whether it was a hemisphere or a cylinder, its capacity would have been enormous. The Bible has two conflicting traditions about how much it held: 2000 baths in 1 Kgs 7:26, and 3000 baths in 2 Chr 4:5. Furthermore, it is not certain how baths were reckoned, and some have suggested that 1000 baths would be a better figure (Scott 1958:209–12). In any case, it can be estimated to have had a capacity of about 10,000 gallons of water (Paul and Dever 1973:257).

Just as spectacular as its size was its ornamentation. Under its rim was a series of cast decorations: two rows of "gourds." The rim ("brim") itself was made of lily work. Most amazing of all was the way it was supported on four sets of bronze oxen, with three oxen in each set. Each set of oxen faced a direction of the compass, with their "hinder parts" facing inward and supporting the basin.

The cultic purpose of this elaborate item among the courtyard appurtenances of the temple is not specified, except for a rather peripheral notation in 2 Chr 4:5 that it was "for the priests to wash in." Its use as a laver is dubious, since ten bronze lavers, also large and spectacular in design, were also part of

the courtyard furnishings. See LAVER. Furthermore, its height makes it difficult to imagine how it was used for lustrations. The cultic purpose of the Sea may lie more in its symbolic nature rather than as a ritual vessel. See also SEA.

One of the features of ANE temples was their utilization of artistic and architectural elements relating to the idea of the temple as the cosmic center of the world. The great deep, or cosmic waters, is one aspect of the array of cosmic attributes of such a holy spot. The temple of Marduk at Babylon, for example, had an artificial sea *(ta-am-tu)* in its precincts; and some Babylonian temples had an *apsû*-sea, a large basin. Such features symbolize the idea of the ordering of the universe by the conquest of chaos; or they represent the presence of the "waters of life" at the holy center. Ancient Israel shared in this notion of watery chaos being subdued by Yahweh and of the temple being built on the cosmic waters. The great "molten sea" near the temple's entrance would have signified Yahweh's power and presence. Furthermore, the bronze courtyard furnishings (including the large pillars Jachin and Boaz [1 Kgs 7:21]) were the only temple appurtenances visible to the public, which included both Israelites and foreigners in the cosmopolitan days of Solomonic reign. The role of these elaborate objects in providing visual messages about Yahweh's availability and power thus helped establish the legitimacy of the monarchy.

The great Sea did not survive intact until the Babylonian conquest. At the end of the 8th century, Ahaz partially dismantled it, an action that was one of several changes he made in the temple precincts. These changes can be seen as part of his political maneuvering with the Assyrians.
